I watched; it was an awful thing to have that red warnin' hung out against my leavin'; but I had to go. My sister Janie's hair streamed stormy

and black about her face and shoulders. And I never will forget the last look I had of her that mornin' in her wrinkled party

dress and ribbons.

Nobody was at Mr. Barrens' office that early 'cept the porter, who was sweepin' and dustin'. Then he went away and I brushed my clo's with the whisk broom and smoothed my hair. I wished I had on my stiff shirt 'stead o' the flannel one, and the

new necktie.

The two clerks came and after a while Ine two cierks came and after a while Mr. Barrens, who nodded and motioned me into his big private office, which had a door on the hall too. He sat down at his desk facin' me, without speakin'—he was always strickly business in that office—and between us was the piece o' carpet where ever body who stood lost his head.

Interpret on it and told him that I was

I stepped on it and told him that I was resigned as night caller. He wrinkled his brows at me and waited.

"You mustn't come to our house any more," I told him; then his hands gripped the arms o' the chair and his eyes stared.

"What damned impudence is this?" he

"What damned impudence is this?" he said. "You've been spoiled ——"
It was too late for him to fire me anyway,

so I still stood on the carpet.
"You mustn't come," I said, and the blood poured into his face like a guilty

man's.
"Did Janie send you?" he asked in a quick, low voice

I told him Janie had nothin' to say about

, me bein' the head o' the fambly. "You can blacklist me too," I said, so as

not to ask any favors.

There wasn't anything more to talk over:
so I went out by the hall door and then to
the savin's bank, where I'd put away the
last fifty dollars' insurance two days afore.

With the fifty dollars' ast fifty dollars' insurance two days afore. With the fifty in my pocket I went home and found Janie waitin'. Grover, sittin' on the floor in a corner with a crust, looked at me suspicious, 'cause the lantern was in against me. He hadn't even combed his hair or put on but one shoe.

"I told him he mustn't come any more." I splained, and Janie didn't answer; but there was a little streak o' blood under her lips where she'd bitten 'em.

lips where she'd bitten 'em.

"He's disgraced us all now!" she told
Grover, and pretty soon she went to be
room; and so as to be ready for anything I changed my clo's and put some things o' mine and Grover's in Pa's suitcase.

It was afternoon when Janie came out in her street clo's and carryin' her traveling. Grover and I was ready, too, though I'd had to be a little rough to make him put on the other shoe. He was mad, and when Janie come in said: "Cole wouldn't dast to jump on anybody his size, would he?

Janie looked s'prised to see us ready to travel, but sat down across the room to put on her gloves.

"Have you gone clear crazy?" she asked at last, and Grover nodded. I answered that us Flynns had to hold fast together and Janie tore one of her

gloves. "Do you mean to follow me? Well, I'll goin," she lose you in the city where I'm goin'," she said. "Do you think I'll stay here after you've meddled and disgraced me?"

I didn't answer any more and we all sat with coats and hats on a long time, Janie movin' only once to place the lantern is front of me. The storm, growin' heavier, rattled the windows and scattered showers o' dead leaves all that afternoon.
"I hate ever'thing!" Grover said.

Dusk came down early; and then Janie picked up her bag and went out, and Grover

and me followin'.

"Are you too crazy to lock up?" he asked; and I told him that it was no use. tramps would take the place anyway.

## ALL Ford Cars Are Equipped A With This Spark Plug.

The Ford "Manual" for Ford Agents says: "The make of plugs with which Ford engines are equipped when they leave the factory, are best adapted to the requirements of our motor, notwithstanding the opinion of various garage men to the contrary.'

The Special ½ in. Champion X the Ford Plug - sells for 75 cents everywhere.

Do not be misled. "Champion" on the porcelain means highest efficiency at the firing points.

That is why 75% of all American made cars, including the Ford, Overland, Studebaker, Maxwell and Metz, are equipped at their factories with specially designed "Champions."

Your dealer cantell you the Champion which will give the best results for your Motor Car. Motor Truck, Motorcycle, Stationary Motor or Aëroplane.

Janie cut right across the yards to the station and I knew she meant to take Number Nine, the four-thirty passenger, which was due in St. Louis next mornin'. There wasn't anybody in the waitin' room and no ticket agent came by traintime. I kept listenin' for its whistle and looked through the window toward Mr. Barrens' office, which was in the telegraph buildin' halfway up the platform. There was a light above his desk and I could see him walkin' up and

A long freight train pulled in from the East and the engine backed up to the roundhouse; but there was no switchin' done, and I noticed the yardmen lookin' out o' their shanty down the track. Next minute the wrecker drew up at the superintendent's office, where three men carryin' valises boarded her. All this meant a bad wreckthe three men bein' doctors.

"Maybe Number Nine is in trouble and we can't get out tonight," I said; but Janie

answered:
"Then they'll make up a train here.
I'll wait."

It seemed pretty strange for me to be sittin' there waitin' to buy a ticket like a passenger; but I knew Janie would never turn back now.

The depot porter had been sent out on some message o' the wreck, so the light hadn't been turned on; and just we three were sittin' there in the thick dusk when a cab came splashin' up to the entrance and a lady ran across the platform. She came into the waitin' room and stood near the

door a second, peerin' round.

"Cole, are you there? And Janie, and Grover!" she said.

"I am," answered Grover, and went up

to her, but for a minute I couldn't speak.

Miss Cloud took Grover's hand and said: "I'm so glad to find you! We're called East tonight and I went to the house to visit you. It was empty, with the danger lantern burning. I thought something had happened—and a neighbor said you'd all started over this way, with traveling bags."
"We're all movin' to the city," I splained

and she said:

"Cole! Without tellin' me good-by?"
"Here is Janie," I said; and I was 'fraid
Janie would forget her manners, but she
rose and said "Howdy-do?" and shook hands. It was so dusky we couldn't see each other's faces very well.

The door flew open and Mr. Barrens ran

inside through a storm o' rain.
"Miss Cloud," he said, uncertain if she
was there, "didn't I see you drive up just

I heard Janie's breath draw deep and touched her arm.

"Why, I've found the Flynns here; they're goin' away," said Miss Cloud. He came right on toward us.

"Janie, you mustn't go—you can't!
What has Cole told you?" he cried out.
Janie stood her ground.
"It's been decided!" She answered so cool I was proud o' her. "I will tell you

good-by now!" And she shook his hand— and dropped it. It was then the lights went up.

blinked; but Janie's eyes grew wider and she leaned for ard—she gripped my arm as though terribly afraid and her whole body

Then I looked at Miss Cloud too; her face was as sweet as any boy's mother's ever was, with only two tiny wrinkles—and her hair was almost gray. Somehow it made a tremendous change in things to find her so much older than all of us.

heard Mr. Barrens speakin': "Miss Cloud, I leave it to you-Am I bein' treated fair? I love this girl and want

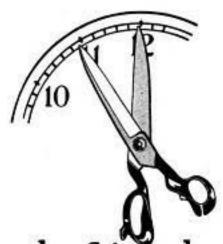

to marry her, and told her so; and she loves me. Now she wants to desert ——" "You didn't come!" said Janie faintly. "I ought to have told you, Janie! I didn't want Miss Cloud to know I was goin" to be married till I made good. You've meddled in this," he said to me, madder than I ever saw him, "and have nearly wrecked our lives. Let it be a warnin' to you forever!"

"He wouldn't manage me right—after I'd told him how too" splained Janie:

I'd told him how, too," splained Janie;
"and I'd lit the danger signal against him!"
They held fast each other's hands; so it

wouldn't make any difference, now that Janie wouldn't hold to me.

I'd only known Miss Cloud in the shadow and was 'fraid the light would change her, as it does so many; but she looked at those two and then at me, with cloudy gray eyes—and I looked back grinnin—she was just the same ever'where.

## A Cut and a Stitch that Save Time

LITTLE knife right by the side of the needle, that trims the cloth while it is being stitched. Another improvement that makes it possible to cut the cloth for twenty suits at once-and much more accurately.

Another that saves several minutes in marking the positions

Add up several hundred of these little savings and you have a big one that comes back to you in two ways-better workmanship and better quality of materials.

Go to the Clothcraft Store and try on one of the different models of No. 5130 Blue Serge Special. It represents the very best workmanship, style, comfort, fit and durability that we can put into a fifteen-dollar suit of men's clothes. It's the final result of sixty-eight years of the scientific clothes-making already mentioned.

This label on every Clothcraft Suit. Our signed guar-anty in the pocket of every cont.

We'll be glad to send you the New Style Book showing all Clothcraft models at \$10 and \$20, and a cloth sample of 5130 Blue Serge, and to give you a personal note of introduction to the nearest Clothcraft Store.

There is also a fall-weight Clothcraft Blue Serge Special at \$18.50 known as No. 41.50.

## Two Hundred Dollars a Month

URING May and June last year, Arthur B. Smith, High School Senior, earned \$425.00 in salary and commissions by securing subscriptions to The Saturday Evening Post, The Ladies' Home Journal and The Country Gentleman. As a result he is now attending Ohio

The same offer through which Mr. Smith earned this sum of money is open to you now. The conditions in your town are substantially the same as in his.

This advertisement is addressed to high school students and others who want to earn money this spring and summer. We will tell you how Mr. Smith and others have earned the money they needed. We will instruct you how to do it. If you are sincere in your efforts, we will stick by you and work with you to the finish. It is to our advantage as well as yours to help you make money.

You are invited to write for particulars. Address your letter to

Agency Division, Box 507

THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PA.

"Wish us happiness!" said Mr. Barrens; and she stood eyin' 'em and thinkin'.

The switch engine, which had taken the superintendent's chief clerk and the roadmaster to the wreck eight miles away, had come screechin' in with the engineer o' Number Nine aboard her; but we'd forgot all about wrecks and were s'prised when a battered man came in out o' the storm, huntin' Mr. Barrens. He was like the ghost o' wrecks-bloodstained, limpin', and as black as if he had wallowed under tons

o' coal.
"Superintendent," he said, "I quit!"
The men had such a fear o' Mr. Barrens that even this wounded one stood up straight and respectful. "I never have been called on the carpet," he said. Mr. Barrens answered cold as steel: "You have quit a day too late for our

The engineer's jaw sagged down; he nodded and turned away, bracin' himself by the backs o' the benches. Of a sudden he faced about and pushed himself clear of 'em; his body stopped swayin' and stif-fened on its feet.

"How 'bout quittin' too late for my own good?" he asked.

He grinned a wide grin and the teeth shone white in his black face.

"Get one of his friends to care for him,"

"Get one of his friends to care for him,"
Mr. Barrens told me.

"You stay where you are," said the engineer. "I'm signalin' danger. That's for you, superintendent; you're the big Mogul and you're runnin' wild, without orders, and takin' this division to hell with you—"

"Enough o' that! Down with you—out with you!" commanded Mr. Barrens with a look like a flame.

"Speak on, my man" said Miss Cloud in

"Speak on, my man," said Miss Cloud in her quiet voice. "I will listen." "I will," said the engineer. "Fire the cogs and belts and levers o' your machine, superintendent; it's their fault if the ma-chine don't run. The machinist, jammin' it and dammin' it, ain't to blame. Let rails split and ties fall out and trestles crack and operators sleep: 'Go to it!' you say; and operators sleep: "Go to it!" you say; and the best men go to it, and we wreck or run on time." He began swayin' in his tracks. "I've set me signal and thank God for it!" he said in a thickenin' voice. "Now blacklist me, damn you!" He started out. "That's twice today I've heard o' that blacklistin'," Mr. Barrens said, followin'. The other shot back:
"Well, it ain't you we're 'fraid of—it's your pull with old Cloud!"

He walked out pretty straight and then

He walked out pretty straight and then crumpled down on to the platform. I saw

one of the yardmen run to pick him up.
"I wish you happiness!" said Miss Cloud
to the superintendent and Janie. "You've
both fired your engineers and made good."

There was a still minute when nobody spoke; and then the lady said she'd been wonderin' exactly how I rode that powder car through the roundhouse and would like

to hear afore goin' away for good. She was the first one who'd asked me

She was the first one who'd asked me 'bout it; and I splained that I'd caught the ladder while the wheels were slippin', after Mr. Barrens dropped me out o' the cab. Then I swung round by the brake-rod and stood on the drawhead, where it wasn't dangerous. O' course somebody had to be round to see that the car was doused with water, in case Mr. Barrens got hurt and couldn't tend to it himself.

She said that I oughtn't to take risks with a fambly 'pendin' on me, and the only ex-

a fambly 'pendin' on me, and the only excuse I could make was that I hadn't taken any chances at all afore or since that one

"Ho, Charley Barrens—wasn't that the run you made good on?" asked Miss Cloud. Her voice was not loud, but it sounded cold and far through the room; and there was something threatenin' in her look. Janie said:

"Why, Cole, you never told me -and stopped still.

I was watchin' Barrens. He stood starin' at the floor: then, deadly white, but cool and steady, he bowed to Miss Cloud and, stoppin' to give my hand a hard grip, went

out.

"Cole, order out my special!" said Miss Cloud. "Come!" she told Janie, and picked up her bag. "I'll send the boys a housekeeper in your place."

Not once did Barrens look back; he swung up behind the curtain o' the switch engine and it started for the wreck. Janie watched him out o' sight and then drew back into the corner, sobbin' to herself.

"Do you cry because Barrens is on his way to make somethin" of himself without

stoppin' to look back?" asked Miss Cloud. 'He's been selfish and cruel enough. So have you!"

have you!"

Janie held up her head:
"Cole," she said, with a little gasp,
"what'll I do? It'll be whatever you say."
I thought she'd better go, 'cause she was
holdin' on to Mr. Barrens now and ought
to learn the ways o' his people. She said:
"Cole, can't I still hold on to you too?"
"What nonsense!" said Miss Cloud. She
took us all in her arms. "Didn't Barrens
make the great run without knowin' Cole

make the great run without knowin' Cole was aboard? Well, now he's makin' a greater one—and we'll all be aboard; but he won't suspect it till he pulls in safe, on time!"

We all made the run with Mr. Barrens. I made good by ridin' that powder car, even if he didn't—'cause Grover ain't 'shamed

o' me.

Sometimes he comes to the superintendent's office, where I'm beginning as clerk to warn me against takin' chances.

It's somethin' splendid to have a family, though there's only one left of 'em holdin' fast to you—specially when the white light o' day shows a clear line and proves everthing true which you'd only felt or wished for in the shadow.

## An Electric Spy

AN ELECTRIC spy, which reported at the end of each day to the manager of a business every mechanical act of all the em-ployees and all the machinery, recently roused much favorable discussion in the American Institute of Electrical Engineers. Applied to a newspaper office, for instance, it would tell the manager just when each page of type was locked up in the composing room, when it was received by the stereotypers or electrotypers, when they

delivered the plates to the pressmen, and when each press started and stopped. In a daily newspaper office near the time for starting the presses every second counts and each department is jealous of every second it is allowed. The electric spy would report to the fraction of a second on each department, so that no controversy about

time could occur.

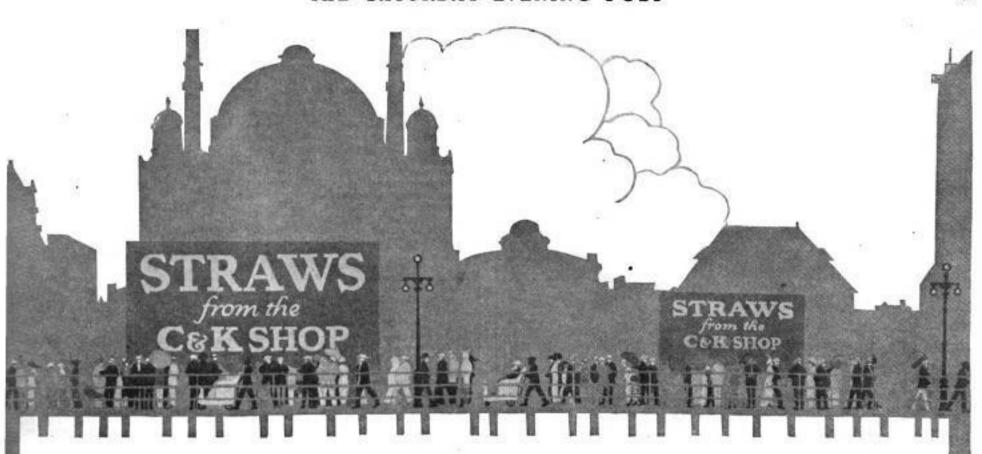

It has been tried in a cement mill for reporting on every act of every machine, so that delay in any place will be shown, with no possibility of concealment. In a factory, it has been suggested, it could be set to work so that it would report to the manager at the end of the day at exactly what second the machinery started up in the morning the operation or failure to operate of every machine, and even the opening and closing of the various doors, from room to room right up to the blowing of the whistle at night.

In an office building it could be made to report the visits of the cleaners to the office at night or the operation of the elevators during the day. So far the principal use of the electric spy has been calmly to report afterward exactly what happened in one of the wildly exciting times when highvoltage electricity starts on a rampage in a power house or distributing station.

So many protective and substitute de-vices are now used in a power house that when the trouble comes it may only cause a little dimming of electric lights out in the city, or darkness for two or three seconds: but in the power house everything happens at once, with the men jumping from switch to switch amid monster sparks and blinding flashes. When the trouble is all over it is often impossible to tell whether one break-down was the start of it all or one of the results of a series of other breakdowns, and the men who go through the battle can hardly tell what happened.

To know what did occur is to know how to prevent it in the future; so the electric spy was invented. On a wide ribbon of paper fifty pens make records, each per connected by a wire with a switch or a machine. The essential feature of the invention is that the ribbon of paper never moves until after one of the pens has made a record. Each time a pen makes a record the exact second is stamped on the edge of the ribben and the ribbon is moved along.

If two actions come almost simultaneously one is recorded and the other is held back until the first record is completed. which means for about a third of a second. In this way everything that happens is marked down in correct order; but if nothing happens there is no long ribbon of useless records accumulated.

# STRAWS from the C&K SHOP

Knapp-Felt Straw Hats are shown in a variety of smart styles and exclusive weaves. They are delightfully light in weight and are made with all the nice attention to detail that distinguishes the product of the C & K Shop.

A pleasant feature of the Knapp-Felt Straws, not to be found in any other make, is the unique transparent lining which is not only decorative, but practical. It keeps the interior presentable throughout the life of the hat.

Knapp-Felt Straw Hats are \$4. C & K Straw Hats are \$3. They are sold by the good stores.

## Writing for **the movies**

Players Fürn Company, and we shall see Maude Adams, John Drew, Ethel Barry-more and Billie Burke on the screen, Augustus Thomas long ago presaged the moving-picture tidal wave that was to en-

gulf the dramatic stage. A year ago he formed the All-Star Film Company; and, with Richard Harding Davis and a company of actors, he went to Cuba and filmed Soldiers of Fortune as a multiple-reel feature production.

Though every successful play of previous seasons and every successful novel is now being ground over into moving-picture feature productions, that but adds to the work and pay of the trained motion-picture

Let a novelist or playwright be as skilled in his line as he may, there is a marked dif-ference between writing a book or a play and visualizing it for motion-picture panto-mime purposes. A successful play may be shown in from three to five scenes, and the dialogue tells the story where the action does not; but to make a film drama of a stage play necessitates an augmentation of the action to a surprising extent.

On the stage an actor may enter and say: "I have just stabled Richard Knatch-laul! between the market house and the

bull, between the market house and the post office!" In the film drama, however, the stabbing of Richard Knatchbull must be depicted; in fact everything told in words in a play must be shown in pictures.

A moving-picture feature must run at least six reels if it is to comprise an entire show of itself. For each reel there must be from twenty-five to forty scenes. These scenes may be different incidents repeated in various scenic settings; but it has been found that no one scenic setting in which

retain the attention of an audience.

Some of the very short scenes or flashes, in fact, do not hold the screen for more than five or ten seconds. These flashes, as they are called, are explanatory and con-necting scenes. When the burglar is go-ing to break into a house he is flashed on the screen as he steals up the street in the shadow and moonlight - moonlight or night-time in general is indicated by greentinting the film—and as he climbs up to enter by the second-story window,

#### A Specimen Photoplay

In the same manner, when the heroine announces she is going away she must be shown on the film as leaving the house as well as leaving the room. It must be also weil as leaving the room. It must be also shown where she goes when she goes away; and also at intervals what she is doing while she is away. All this is shown by this has and cutbacks—that is, alternating short pictures—while the main action of the film drama is also intermittently shown.

So to dramatize for the motion-picture camera any play, novel or magazine story necessitates the service of a skilled photo-play writer who understands the technic of the photoplay and the limitations of the camera, as well as the wonders it can work. Thus, until such time as the average playwright and fiction author learn the technic of motion photography, those who already comprehend it will have the arranging for the film of photoplays from the stories and stage writings of others, as well as the entire photoplay construction of their own stories. So photoplay arranging and writ-ing remain and will remain for some time in the hands of the staff writers or the moving-picture authors.

The technical arrangement, so far as the mere writing of a photoplay is concerned,

follows a few simple rules.

A photoplay manuscript is divided into four parts: 1 The symposis or plot: 2—The cast and description of the same; 3—The arrangement of scenes; and 4—The s, or scene description and action of the characters consecutively arranged to tell

the story pantominically, Here follows a one-red comedy, the leadour roles of which were enacted by John Bunny and Flora Finelar

It "Needed Inventions" and "How to Get Your and Your Money." Raybours & Co., Dept. 137, March 187, Washington, D. C.

Scene: Interior of Mirauda's library. Mirauda and Dolly consult large dictionary.

Flash up on screen the definition of Numis-matist from dictionary in facsimile type.

8-Leader: A MONTH LATER

MIRANDA IS INTERESTED IN OLD COINS - AND THE PROFESSOR

Scene: Showing the professor in yellow flannel suit and sun umbrella on village street, looking anxiously around. He is being pursued by Miranda Mudge.

9—Professor hides behind tree and escapes Miranda. Dolly joins the professor and it can be seen that they are fond of each other.

10—Miranda's sitting room. She enters from street, angry and disappointed.
Servant girl comes in and tells her Dolly is with
the professor in the garden. Servant points out
of window. Miranda gets field glasses and looks,

11—Scene: Showing the professor and Dolly talking pleasantly under a tree or arbor.

12-Leader:

LAWYER SHARPE TELLS MIRANDA TO PIX UP SOME BREACH-OF-PROMISE EVIDENCE

Scene: Lawyer's office.
Sharpe, a shyster, gives Miranda a camera and shows her bow, by hiding it under a table and pulling a string and letting coins drop from her hand, she may get a picture of the professor on his knees, and so on.

13—Professor in his study, gloating over his coin collection, using magnifying glass. Goes to door and receives letter from postman. Flash letter on screen:

"My DEAR PROFESSOR: What you told me last night gave me great happiness. Yes; come this evening. Do not dis-appoint the one who is so fond of you. She will be expecting you. "As ever, yours "MIRANDA."

14—Scene: Miranda's sitting room, Miranda arranging camera under table, with string to its shutter. Camera tilted on line with sofa. Miranda goes to window, raises blind to admit strong light on sofa.

15—Close-up picture of Miranda's pet cat seen dozing on window sill.

16-Cutback to Miranda's sitting room.

10—Cutback to Miranda's sitting room.

Professor enters; is seen looking for Dolly and showing his disappointment at Dolly's absence. He shows coins and Miranda drops some of them. He kneels down to pick them up. Miranda reaches to pull the string attached to camera shutter, and just then Dolly enters with her dog, which chases the cut. The cat jumps on the professor's back, while the dog barks at it. Sofa upsets, with Miranda going backward, her whitestockinged skinny legs in the air. Miranda gets up and throws her arms round the professor's neck.

Cut in leader:

Cut-in leader:

"YES, SIMON; I WILL MARRY YOU!"

Cutback to scene.

Showing horror of the professor, dismay of Dolly and glee of Miranda, who grabs camera and runs out as though overcome by bashfulness. 17-Leader:

#### MIRANDA SUES THE PROFESSOR FOR BREACH OF PROMISE

Scene: Country courtroom. Persons of story characteristically present. Lawyer Sharpe pro-duces camera. Judge calls on village photog-rapher to develop the compromising picture. Village photographer sworn; exits with camera. 18-Leader:

THE VILLAGE PHOTOGRAPHER DEVELOPS

Photographic dark-room effect. Village photographer developing plate in red light—tint film. Photographer shown in silhouette for photographic novelty effect. Silhouette profile of photographer shows he is first astonished and then convulsed at what plate develops. Close-up photograph. photograph.

19—Cutback to country courtroom.

Enter photographer. Hands picture to judge, who laughs. Photograph is passed round to jury, lawyers, and finally to Miranda, who faints when she sees it.

20—Enlargement of photograph—a hand hold-ing it—filling screen. It is a still picture of Miranda on upset sofa, white-stockinged skinny legs in air, cat on the professor's back and dog barking at it.

21—Scene: Bedroom of the professor. Professor is seen sleeping and having night-mare of Miranda kissing him.

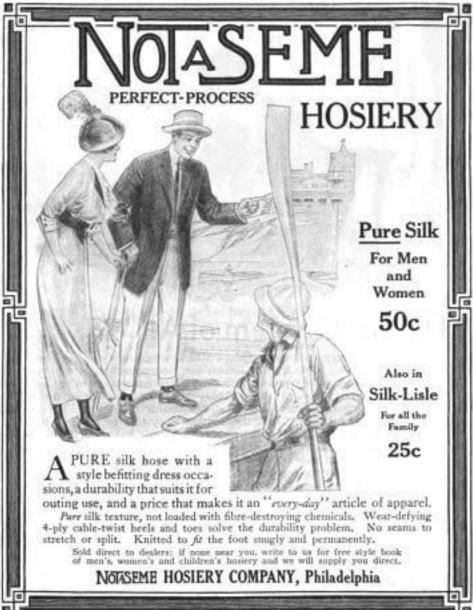

Leader: LOVE'S OLD DREAM

22-Scene: Bedroom of Miranda.
Miranda is sleeping, hair in curl papers, dreaming—vision in—she is kissing the professor. In her sleep she picks up the cat, sleeping by her on a pillow, and rapturously kisses it. She wakes up and throws the cat from her in great fury.

23-Close up bust picture of the professor and pretty Dolly as bride and groom, Dolly petting collie dog.

Close-up and enlarged picture of cat on fence, licking its paw.

This is the technical way to write for the movies. Your photoplay must tell its story without lagging or dragging; and the characters, the plot and its performance must "get over" by the sequence of pictures.

## "The Best System of All" Written by a Sales Manager

Every selling organization has to have one worker-and I am it. With five branch offices, forty salesmen, four crews of missionaries and one hundred demonstrators to urge along from day to day, I am probably the worst offender of the 15 hour law in America. Against my natural instincts, I have to be systematic. And the best little system of them all was wished onto me by a printer's salesman. As he put it, "a dif-ferent color for each office form." The daily sales sheet has a dominant color I can pick from a hundred papers. Each branch office has its own color for stationery reports, orders, etc.

The system saves an astonishing amount of time and worry. The printer's salesman showed me a fine, tough paper which comes in 12 attractive colors and white. Believe me, it was some order that he got-and he is sure of reorders. The

whole office has adopted the same system-the advertising manager especially finds it a

## When you go camping

-when you pack up your fishing kit,stuff your knapsack with blankets and cooking utensils and set out for the wild places, you'll need a good waterproof tent. Then it will make no difference to you whether the stars are winking through the branches overhead or a thunderstorm is drenching the woods around you. You'll be safe and sound—and dry. When you have a good tent for protection, why! camping is the greatest sport in the world—no matter what the weather.

You now can get the tent free of charge-a fine 7x7-foot wall-tent, complete with stakes, ropes and poles. This is one of the splendid prizes we award to our boys in exchange for their Rebate Vouchers.

How do they get Rebate Vouchers? By selling

The Saturday Evening Post The Ladies' Home Journal The Country Gentleman

Thousands of boys are earning from fifty cents to five dollars a week and in addition are receiving splendid prizes which they choose from our Book of Rebates.

This catalogue is one of the most interesting books you ever saw. A copy will be sent to you upon request. Don't miss it. Address your letter to

## Cutting Down Some Staple Unnecessaries

(Concluded from Page 9)

stale and the interest wanes. Then some-body naps, somebody did not know—and the unexpected happens.

By reason of the triviality and multiplic-ity of their causes accidents are apt to be

much stranger than fiction, and sometimes almost humorous in their variety and per-

versity.

Not long ago a London milliner brought suit against her former employer because he had discharged her. Why had he discharged her? Because she had lost a finger. How had she lost her finger? Why, she got leave to go down to Hendon and there went up in an aëroplane; and because one of her fingers was struck by the propeller, and she had to have it amputated, she lost her job. Because accidents are what they are, the

Because accidents are what they are, the Because accidents are what they are, the most promising way of dealing with them constantly up and down the line seems to be through the safety director and the safety committee—two agencies that are being developed as a result of experience.

The safety director works principally at the boss' end. He is probably an engineer, or a man of technical experience plus a knowledge of people, and his work is to safeguard the machines and bring about better

guard the machines and bring about better technical conditions generally

The safety committee works for the organ-ization. It is made up of men representing different sections of the organization, as a rule. The safety committee of a trolley company in the Middle West has on it just now the vice-president of the road, two engineers, an accountant, two motormen and two conductors. The first safety committee got together on a big railroad system was

made up of four track foremen.

These safety committees have long had their counterpart abroad in a big London gasworks, where, after every mishap, a jury of twelve men, drawn from both the wage and salary earners, sat to consider the cause and experience. and responsibility, and made such recommendations for improved methods or greater caution as seemed necessary. It brought about notable decreases in accidents.

#### Committee Inspections

The American safety committee, how-ever, deals chiefly with accidents before they happen. It is a body to which any employee may report bad working condi-tions or lax methods on the part of fellow employees, with the certainty that what he has to report will be taken up from the standpoint of safety above all other considerations. It also instructs employees what to look for and guard against, and keeps up the spirit that is so necessary in accident prevention.

Furthermore, the committee makes frequent trips of inspection, publishes reports about the old ties and scrap iron lying along the right-of-way, or the safety apparatus neglected or out of repair in a shop, with the result that usually there is an imme-

diate cleaning up and an improvement of organization tone.

It watches new employees, teaches the inexperienced, cautions the careless, and if necessary has them transferred. It keeps the score in accident prevention, so that all may see the totals from week to week and try to improve the showing. It considers safety suggestions, awards safety prizes, and in other ways brings about a common understanding between employer and men and the general effort for safe operations that is true accident prevention.

Editor's Note—This is the first in a series of arti-cles by James H. Collins. The second will appear in an early issue.

## Two for Five

SECRETARY GARRISON, of the War Department, boarded a horse car in New York. He had no change and gave the conductor a five-dollar bill. The conductor took the bill, walked to the front

end of the car and stood there.
"My change?" suggested Garrison.
"I can't change no five-dollar bill," the

conductor replied. "Then give me back my bill," demanded Garrison.

"Can't do that either, boss," the con-ductor replied; "but if you'll stay on the car until we get to the barn you can have the horses!"

## CHEAP AT A MILLION

to a particularly uncomfortable high-backed Circassian-walnut chair in the foyer, left the great little multimillionaire under the watchful eye of footman Number Two. This annoyed Mr. Merriwether. Nobody is altogether invulnerable.

The footman returned, with the card and

the tray.

"Madame is not at home, sir; but her brother would be glad to see you if you wish, sir. He is madame's man of affairs."

"Very well."

"If you please, sir, this way." And the

"If you please, sir, this way." And the footman led the way to the door of the library where Tom had been received often.
"Mr. Edward H. Merriwether!" The

emphasis on the first name made the little czar of the Southwestern roads think it was done in order to differentiate him from Mr. Thomas T. Merriwether. Even great men are not above thinking themselves very clever.

He entered the room and took in its character at one glance, just as Tom had done. He became cool, watchful, alert and observant, as he always did when he went into a fight. He looked at the man who was said to be the brother of the woman who had leased the house—the woman who had a daughter she wished to marry to a blond

with money and position.

The man had a square chin and, even in repose, suggested power and self-control. Mr. Merriwether met the remarkably steady, unblinking gaze of two extremely sharp eyes and recognized without any particular emotion that he confronted a man of strength and resource who moreover had the double strategical advantage of being in his own house and of not having sought this interview.

"Be seated, sir," said the man in the calm voice of one who is accustomed to

obedience, even in trifles. Mr. E. H. Merriwether sat down. He noticed little things as well as big. He noted, for instance, that he had begun by doing exactly what this man told him to do. The man intelligently waited for Mr. E. H. Merriwether to speak. Mr. E. H. Merriwether did so. He said:

"I called to see Madam Calderon."
"About?" The man spoke coldly.

Mr. E. H. Merriwether raised his eye-He did it in order not to frown. There is no wisdom in needless antagonisms. His only son was concerned.
"About my son," he said.
"Tommy?"

The great railroad magnate, accustomed only to deference, flushed with anger. Had things gone so far that such intimacy existed?

"I understand," he said, trying to speak emotionlessly, "that my son visits this

house. "Of his own volition, sir."

"I did not think there was physical coercion; but, of course, as his father ——"
He stopped in the middle of the sentence.

This never before had happened to this man, who always knew what to do and what to say, and always did it and said it with the least expenditure of time and words; but, as a matter of fact, what could he say, and how?

"That relationship," the man said calmly, "often interferes with the exercise of what people formerly called common sense. Will you please do me a very great favor, sir?"

"A favor?" Mr. M.

"A favor?" Mr. Merriwether, skillful diplomatist though he could be at times,

diplomatist though he could be at cance, now frowned in advance.

"Yes, Mr. Merriwether—indeed, two favors; or, rather, three. First: Will you please ask me no questions now? Second: Will you please return to this house at eleven o'clock tomorrow morning? And third: Will you promise not to speak to your son about your visit here until after you have paid your second call, tomor-

It flashed through Mr. Merriwether's mind that to grant the favors might expedite Tom's appalling marriage. He said decisively:

I cannot promise any of the things you

"Very well," said the man composedly.
"Then, I take it, there is nothing more to be said."

He rose politely and as he did so pressed a button on the table. The footman ap-peared and held the door open for Mr. Merriwether to pass out.

The autocrat of fifteen thousand miles of railroad, with unlimited credit in the money markets of the world, was not accustomed to being treated like this; but, precisely because he felt hot anger rising in tidal waves to his brow, he instantly became cool. He remained sitting and remarked very

politely: "If you will allow me, sir, to tell you that my reasons ——"
The man, who was still standing, held up

a hand and broke in:

"And if you will allow me to tell you that I am neither a criminal nor a jackass I shall then proceed to say that nobody in this house has any intention of entering into any argument or controversy with you. I am actuated much less by personal considerations of my own than by a desire to avert from you eternal regrets and-er-

unseemly displays of temper."

E. H. Merriwether knew exactly what he would like to do to this man. What he

said—very mildly—was:
"You must admit, sir, that your requests

"Oh, I see!" And the man smiled very slightly. "Well, suppose you take Tom to your office with you tomorrow morning and keep him there while you come here. Tell him to wait for you because you wish to have luncheon with him. I do not care to discuss my reasons—for example—for not wishing you to speak to Tom about this visit. I do not wish to wound your feelings; but I am not sure that you know Tom as well as a father ought to know his only son.
And there are times when a man must be
more than a father, when he must be a tactful man of the world and a psychologist."
Mr. Merriwether realized the force of
this so clearly that he winced, but said
nothing since he could not be such

nothing, since he could not admit such a thing aloud. The man proceeded coldly: "If you are both an intelligent man and

a loving father you will promise what I ask—not for my sake, for yours. There are many things, Mr. E. H. Merriwether, that money does not cure and that not even time can heal. Ask me nothing now; come here at eleven tomorrow morning, and in the mean time do not reach to Tomorrow. the mean time do not speak to Tom about himself-or your fears.

"If you were only not so—er—damned esterious——" And Mr. Merriwether mysterious -

mysterious ——" And Mr. Merriwether forced himself to smile pleasantly.

"Ah—if!" exclaimed the man, nodding.
"Do you promise?"

"Yes!" answered Mr. Merriwether.

He had made up his mind that Tom would not be abducted. As for worse things, if Tom had not already committed matrimony he could not very well do it in his father's private office. It was wise to keep Tom virtually a prisoner without his keep Tom virtually a prisoner without his knowledge. And parental opposition has so often served merely to add gasoline to the flame of love that one father would not even whisper his objections.

He bowed and left the room, angry that nothing had been accomplished, relieved that within twenty-four hours the matter would probably be settled, and not quite so confident of the power of money as he had been for many years.

TOM arrived at his home early enough to have his bath at the usual hour. Though he had never been asked to account for his movements he nevertheless made it a point to breakfast with his father. He would do so today. There was no occasion to say he had been to Boston or that he had slept in a Pullman.

As a matter of fact he had not slept well. The stateroom seemed full of those elusive flower-fragrances that always made him think of her, particularly sweet peas-a beautiful flower and of such delicate colors, of them for years. He really loved them, he now discovered. Their odor always tinged his thoughts with a vague spirit of romance; and this, in turn, in some subtle way ren-dered him more susceptible to the lure of adventure. It almost made him feel like a boy.

For all the stimulating reaction of his cold plunge Tom looked a trifle tired about

the eyes at breakfast.

Mr. Merriwether looked at his son with eyes that also looked tired, said "Good morning, Tom!" in his usual tone of voice, and hid behind his newspaper. Instead of reading about the absurd demands of the

Paint is not complete without

Zinc in paint enhances or improves every quality for which you paint. It improves the looks; it improves the wear; it improves the protection.

Witness the evidence of all the best paint manufacturers. They always use Zinc in their best paints.

Witness the practice of modern painters. They always paint with Zinc paints.

Are you interested? Then write for the book, "Your Move."

# A \$4.25 Quanty

The standard price for a high-grade tire a \$4.25 upiece. On course, leaser times sell at lower prices. But the several leading makes still cost you \$4.25 per

tire. In the Goodyear-Akron you get the simost quality for \$2.48 per tire. You get Goodyear quality—the best tires men can fuild. You get it for \$2.48 per tire because this is the world's largest tire plant. Enormous output and modern equipment have brought

cost down and down. And our average profit asst year was 612 per cent.

Remember that Goodvear Automobile tires hold top place in Tiredom. They outself any other. So do Goodyear Motorcycletires. The Goodyear-Akron. single-tube Bicycle tire is made by the same experts, in the same factory, and by the same Goodyear standards.

How to Get Them. Order from us direct. For the phin tread, send \$2.48 per tire. For the non-skid, send \$2.75 per tire. If we have a dealer near you, order will be filled through him. Otherwise we send by Parcel Post. We ask direct orders because so many dealers handle tires which pay them larger profits.

THE GOODYEAR TIRE & RUBBER COMPANY, Dept. 224, Akron, Ohio

GOOD

railroad workers all over the United States for higher wages he was thinking that he had never allowed anybody to do his work for him because he had always intended that Tom should succeed him. He had at one time fully intended to train Tom for the succession, to have him learn railroading from brokeman up. from brakeman up.

Indeed the boy, after leaving college, had seemed much taken with the idea and had seemed much taken with the idea and listened with interest to his father's talks about his plans and desires and hopes. But with the great boom, that wonderful era of amazing reorganizations and stupendous consolidations, the great little man had been swamped by the flood of gold that poured into Wall Street.

And gold, as usual, had been ruthless in its demands on the great little man's time, For years he had averaged a net personal profit of a million a month; but it was not that he wished to make more money. It was that his time no longer belonged to himself; it was not his family's, but his associates'—not his only son's, but his many syndicates'. And he had devoted himself to the welfare of his syndicates and had written a dazzling page in the annals of Wall Street.

But what about his son's present and the

But what about his son's present and the future of the Merriwether roads? If Tom died the Merriwether dream would follow him—but that would be a natural death at the hands of God. If Tom lived and re-fused to be a Merriwether the death of the Merriwether dreams would be by slow strangulation—in short, hell!

His promise to the brother of the woman

His promise to the brother of the woman who had a daughter that might prove to be the executioner of his dreams stared him in the face. The situation called for tact and skill and superhuman self-control. He liked to fight in the open; but this was not a battle for more millions; it involved more than the deglutition of a rival railroad.

McWayne had reported that Tom had acted like a lunatic when he could not se-

McWayne had reported that Tom had acted like a lunatic when he could not secure the room in the Hotel Lorraine that had been engaged by Mrs. Calderon and daughter. The only ray of light was that Tom had not talked to the ladies.

"Tom," asked Mr. Merriwether casually, "have you anything on special for this morning?"

Tom had in mind a visit to 777 Blank Avenue, at which he promised himself to

Tom had in mind a visit to 777 Blank Avenue, at which he promised himself to end the affair; but he answered: "N-no."

"I mean," said the father, speaking even more casually because he noted the hesitancy, "anything that could not be done just as well in the afternoon."

"Oh, no—I have nothing special; in fact, nothing at all," said Tom.

Mr. Merriwether saw in his reply merely Tom's way of not declaring his intention to see the girl.

see the girl.
"Then I wish you would come downtown with me. I have some papers I want you to look over, and we'll have luncheon together. What do you say?" A prisoner accused of murder in the first

degree does not listen to the jury's verdict with more interest than E. H. Merriwether waited for Tom's reply, for at this crisis he realized that he had not been in his

crisis he realized that he had not been in his son's confidence in those other important little crises of boyhood that breed in sons the habit of confiding in fathers.

"Sure thing!" said Tom cheerfully.

Though thus relieved of some of his fears there remained with E. H. Merriwether the determination that Tom had not volunteered any information. The little czar of the Pacific and Southwestern was so intelligent that generally he was fundamentally the Pacific and Southwestern was so intelli-gent that generally he was fundamentally just. He did not exactly blame Tom for not confiding in him, but, also, he did not blame himself. And this was because he had habituated himself to paying for his mistakes in dollars. What could not be paid off in dollars was never a mistake, though it might well be a misfortune. They went downtown together. Mr. Merriwether took Tom into one of his half-

Merriwether took Tom into one of his halfdozen private offices, made him sit down in one of those over-comfortable armchairs that you paradoxically find in busy Wall Street offices, and said to him very seriously:

"My son, here is the history of the Pacific and Southwestern System from its very start. It goes back to the early stageline days and is brought up to today. I had it prepared in anticipation of an ill-advised congressional investigation. I have thus far succeeded in staving off the investigation not because I was afraid of it or because it

not because I was afraid of it or because it might hurt me, but because the market was in bad shape to stand alarmist rumors.

"Other people would have quite unnecessarily lost money. As soon as the investigation cannot be used as a bear club I'll let up opposing it. I'll even help it. I want you to read this book because it is written with complete frankness in order to spike certain political guns. You will get in it the full story of what has been done and what we hope still to be allowed to accomplish. When you get through with it you'll know as much about the system as I do!"

The old man had spoken quietly and im-

The old man had spoken quietly and impressively. Tom was so pleased at having something to occupy his mind and keep it from dwelling on the girl he had never seen

from dwelling on the girl he had never seen and the exasperating scoundrel at 777 Blank Avenue that his face lighted up with joy. "You could not have given me anything to do that I'd like better, dad!" he said, with such obviously sincere enthusiasm that Mr. Merriwether felt profoundly grateful for this blessing.

Then came the inevitable reaction and with it the thought: "Have I gained a successor only to lose him to some..."

with it the thought: "Have I gained a successor only to lose him to some ——"

He shook his head, clenched his jaws and looked at his watch. It was not yet time to go to fight for the possession of his son. He had much to do before he left his office to go to 777 Blank Avenue.

"Tom," he said, "you stay here until I return—will you?"

"You bet!" smiled Tom, looking at the thickness of the system's history.

"I have a meeting or two before luncheon, but I'll try not to let them interfere."

"Any time before three, boss!" said his son cheerfully.

son cheerfully. His heir and successor—but, above all and everything, his son! There was no sacrifice he would not make for this boy to keep him from blighting his own career—and his father's hopes, he added, with the

selfishness of real love. Knowing that Tom was safely imprisoned

Knowing that Tom was safely imprisoned and could not marry at least for a few hours, he was able to concentrate his mind on his railroad's affairs. He disposed of the more urgent matters. At ten-forty he sent for McWayne.

"I'm going to 777 Blank Avenue."

"Again?" inadvertently said the private secretary. Mr. Merriwether looked at him. McWayne went on to explain: "I've had a man watching it since we found Tom called there—just before going to Boston."

"Right! I expect to be back in time to lunch with Tom; but if I should be delayed ——" He paused.

"Yes, sir?"

delayed ——" "Yes, sir?" - delayed beyond one o'clock, have luncheon brought from the Meridian Club and tell Tom I wish him to stay until I return. This is important."

"Yes, sir."

"I think that is all."

"I think that is all."

"If no word is received from you by ——"
McWayne paused. Mr. Merriwether finished: "By two o'clock, come after me.
But always remember the newspapers!"

"Yes, sir."

"I'll telephone before two in case I expect to stay beyond that hour."

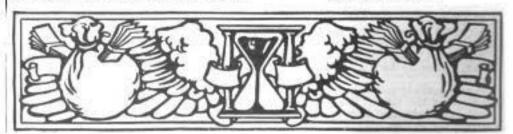

"Very well, sir."

E. H. Merriwether put on his hat, familiar to the world through the newspaper

miliar to the world through the newspaper caricaturists—and walked toward the door. Then he did what he never before had done—he repeated an order! He said to McWayne: "Look after Tom!" "Yes, sir."

Then he went to 777 Blank Avenue to learn whether Tom was to be his pride and successor or his sorrow and dream-slayer.

(TO BE CONCLUDED)

## AN AMERICAN VANDAL

(Continued from Page 19)

shops carry their wares on commission from the stocks of the same manufacturing jewelers; the old Ile de la Cité, with the second-hand bookstalls stretching along the quay, and the Seine placidly meandering between its manmade, manruled banks.

Days spent here seem short days; but that may be due in some part to the differ-ence between our time and theirs. In Paris, you know, the day ends five or six hours earlier than it does in America.

The two Palaces of Fine Arts are fine enough; and finer still, on beyond them, is the great Pont Alexandre III; but, to my untutored instincts, all three of these, with their clumpings of flag standards and their grouping of marble allegories, which are so aching-white to the eye in the sunlight, seemed overly suggestive of a World's Fair as we know such things in America. Seeing them I knew where the architects who designed the main approaches and the

who designed the main approaches and the courts of honor for all our big expositions got their notions for color schemes and statuary effects. I liked better the two ancient triumphal arches of St.-Martin and St.-Denis on the Boulevard St.-Denis, and much better even than these the tre-mendous sweep of the Place de la Concorde, which is one of the finest squares in the

which is one of the finest squares in the world—and the one with the grimmest, bloodiest history, I reckon.

The Paris to which these things properly appertain is at its very best and brightest on a sunny Sunday afternoon in the parks where well-to-do people drive or ride, and their children play among the trees under the eyes of nursemaids in the quaint costumes of Normandy—though, for all I know, it may be Picardy.

Elsewhere in these same parks the not-so-well-to-do gather in great numbers—

so-well-to-do gather in great numbers— some drinking harmless sirupy drinks at the gay little refreshment kiosks; some packing themselves about the man who has tamed the tree sparrows until they come at his call and hive in chattering, fluttering swarms on his head and his arms and shoulders; some applauding a favorite game of the middle classes that is being played in every wide and open space.

I do not know its name—could not find anybody who seemed to know its name—but this game is a kind of glorified battledore and shuttlecock played with a small, hard ball capable of being driven high and ar by smartly administered strokes of a nide-headed, rimmed device shaped like a ambourine. It would seem also to be equisive to its proper playing that each layer shall have a red coat and a full spade peard, and a tremendous amount of speed and skill. If the ball gets lost in anybody's whiskers I think it counts ten for the oppos-ng side; but I do not know the other rules.

#### The Red-Eared Artist

A certain indefinable, unmistakably fallic flavor or piquancy savors the life of he people; it disappears only when they ease to be their own natural selves. A roman novelist, American by birth, but a esident of several years in Paris, told me story illustrative of this.

The incident she narrated was so typical hat it could never have happened except Paris, I thought. She said she was one a Paris, I thought. She said she was one f a party who went one night to dine at a ttie café much frequented by artists and rt students. The host was himself an rtist of reputation. As they dined there ntered a tall, gloomy figure of a man with long, ugly face full of flexible wrinkles—uch a figure and such a face as instantly ommanded their attention.

This man slid into a seat at a table near

This man slid into a seat at a table near heir table and had a frugal meal. He had eached the stage of demitasse and cigarette hen he laid down cup and cigarette and, stehing a bit of cardboard and a crayon ut of his pocket, began putting down lines nd shadings; between strokes he covertly tudied the profile of the man who was

iving the dinner party.

Not to be outdone the artist hauled out is drawing pad and pencil and made a uick sketch of the longfaced man. Both nished their jobs practically at the same noment; and, rising together with low bows, hey exchanged pictures—each had done rattling good caricature of the other nd then, without a word having been poken or a move made toward striking ip an acquaintance, each man sat him lown again and finished his dinner. The lone diner departed first. When the party at the other table had had their coffee they went round the corner to a little circus—one of the common type of French circuses, which are housed in permanent wooden buildings instead of under tents. Just as they entered, the premier clown, in spangles and peak cap, bounded into the ring. Through the coating of powder on it they recognized his wrinkly, mobile face it was the sketchmaking stranger whose handiwork they had admired not half an hour before.

Hearing the tale we went to the same circus and saw the same clown. His ears were painted bright red—the red ear is the inevitable badge of the French clown—and he had as a foil for his funning a comic countryman known on the program as Auguste, which is the customary name of all comic countrymen in France; and, though I knew only at second hand of his artistic abilities, I am willing to concede that he was the drollest master of pantomime I

On leaving the circus, very naturally we went to the café where the first part of the little dinner comedy had been enacted. We encountered no artists, professional or amateur, of blacklead and bristolboard, but we met a waiter there who was an artist—
in his line. I ordered a cigar of him, specifying that the cigar should be of a brand
made in Havana and popular in the States.
He brought one cigar on a tray. In size
and shape and general aspect it seemed to answer the required specifications.

#### Some Sepulcher

The little bellyband about its dark-brown abdomen was certainly orthodox and reg-ular; but no sooner had I lit it and taken a couple of puffs than I was seized with the conviction that something had crawled up that cigar and died. So I examined it more closely and I saw then that it was a bad French cigar, artfully adorned about its middle with a second-hand band, which the middle with a second-hand band, which the waiter had picked up after somebody else had plucked it off one of the genuine articles and had treasured it, no doubt, against the coming of some unsophisticated patron such as I. And I doubt whether that could have happened anywhere except in Paris either. in Paris either.

B D-

That is just it, you see—try as hard as you please to see the real Paris, the Paris of petty larceny and small, mean graft intrudes on you and takes a peck at your purse. Go where you will, you cannot escape it.

You journey, let us assume, to the Tomb of Napoleon, under the great dome that rises behind the wide-armed Hôtel des Invalides. From a splendid rotunda you look down to where, craftily touched by the softened lights streaming in from high above, that great sarcophagus stands housing the bones of Bonaparte; and above the entrance to the crypt you read the words from the last will and testament of him who sleeps here: "I desire that my ashes may repose on the banks of the Seine, among the French people I have so well loved.'

And you reflect that he so well loved them that, to glut his lusting after power and yet more power, he led sundry hun-dreds of thousands of them to massacre and mutilation and starvation; but that is the way of world-conquerors the world over and has absolutely nothing to do with this tale. The point I am trying to get at is, if you can gaze unmoved at this sepulcher you are a clod! And if you can get away from its vicinity without being held up and gouged by small grafters you are lucky!

Not tombe por temples nor seneturies

Not tombs nor temples nor sanctuaries are safe from the profane and polluting feet of the buzzing plague of them. ou journey miles away from this spot to the great cemetery of Père Lachaise. You trudge past seemingly unending, constantly unfolding miles of monuments and mausoleums; you view the storied urns and animated busts that mark the final restingplaces of France's illustrious dead. And as you marvel that France should have had so many illustrious dead, and that so many of them at this writing should be so dead, out from behind De Musset's vault or Marshal Ney's comes a snoopy, smirky wretch to pester you to the desperation that is redeyed and homicidal with his picture post cards and his execrable wooden carvings and his mere presence!

## Facts upon Facts

furnish convincing evidence of METZ all 'round efficiency. U. S. Government engineers, employed at present on canal construction in eastern Washington, tested a number of makes to find the car that would travel the rough roads of that section; and they selected, and purchased, the METZ "22."

In the Australian "Reliability Trials," Sydney to Melbourne, a four days' contest, the METZ "22"

the METZ "22" made a perfect performance, scoring 600 points out of a possible 600. And here at home it won the Glidden Tour from Minneapolis to Glacier National Park, Mont., the three METZ cars being the ONLY cars that held perfect scores for the entire eight days of that contest.

## METZ "22"

One of the big features of the METZ "22" is its gearless transmission. With no clutch to slip and no gears to strip, it does away entirely

with gear trouble.

The METZ "22" is extremely economical in operation. It travels 28 to 32 miles on 1 gallon of gasoline, 100 miles on 1 pint of lubricating oil, and often does 10,000 miles on a single set

The METZ "22" climbs Prospect Hill, near Boston, on the high speed. This hill is nearly 1 mile long, with a grade of from 5 to 21 per cent.

The METZ "22" made a record non-stop run of 1,600 miles, Boston to Minneapolis, in 89h. 33m., without requiring a single adjustment to engine or any working part.

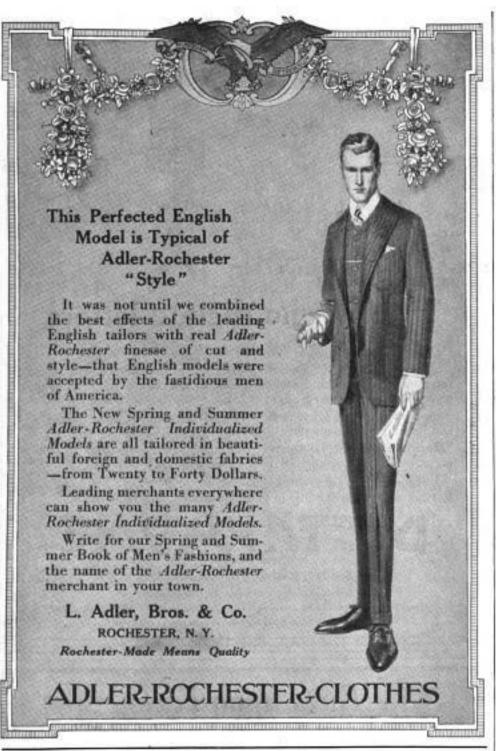

EQUIPMENT includes four-cylinder water-cooled motor. Boach magneto, wind shield, top, 5 lamps, artillery wheels, best quality Goodrich clincher tires, born, pump, tools, etc. Left hand drive, center control, \$475.00.

METZ "Speedster."—Wire wheels, individual seats, Prestolite tank, and other special features, \$500.00.

New illustrated Catalog "E" now ready. We want a repre-sentative in every city and town; write for special terms.

METZ COMPANY,

WALTHAM, MASS.

## \$25.00 a Week to Students This Summer

WE have several hundred positions for high school or college students who can devote all or a part of their time this summer to representing THE SATURDAY EVENING POST, THE LADIES' HOME JOURNAL and THE COUNTRY GEN-TLEMAN. Appointments are being made now, and any young man or woman student who wishes to make money and at the same time enjoy a pleasant vacation should apply at once.

## What Others Did Last Summer

MISS STELLA WILLIAMS, OF COLUMBIA UNIVERSITY, earned over \$2000.00 in fourteen weeks. Another year she plans financing a trip abroad by the same method.

VERSITY OF NEBRASKA, averaged UNIVERSITY OF CHICAGO, over \$100,00 a week during the months earned \$60,00 a week for several conof July and August alone.

LLOYD G. HALL, OF THE UNI-VERSITY OF CALIFORNIA, earned over \$2300.00 by three months work.

MISS MARY LODGE, DEFIANCE COLLEGE, OHIO, with only a little time at her disposal, earned over \$135.00 in less than six weeks.

THEODORE B. BUCHHOLZ, OF THE INDIANA NORMAL SCHOOL, PENNSYLVANIA, earned over \$400.00 in a single month. J. BACHORITCH, OF THEUNI- ELROY M. PHILLIPS, OF THE tinuous weeks.

HUNDREDS OF OTHERS earned from \$15.00 to \$100.00 a week during their summer holidays. Nearly all who worked actively made \$25.00 or more a week.

The work can be carried on in your home town, or you may travel alone or with other students, as you prefer. If you want to make your vacation a "worth-while" one, application should be made immediately.

Educational Division, Box 505

THE CURTIS PUBLISHING COMPANY, PHILADELPHIA

You fight the persistent vermin off and flee for refuge to that shrine of every Amer-ican who knows his Mark Twain—the joint ican who knows his Mark Twain—the joint grave\* of Hell Loisy and Abie Lard† and lo! in the very shadow of it there lurks a blood brother to the first pest! I defy you to get out of that cemetery without buying something of no value from one or the other, or both of them. The Communists made their last stand in Père Lachaise. So did I! They went down fighting. Same here! They were licked to a frazzle. Ditto, ditto!

Next, we will say, Notre Dame draws you. Within, you walk the clattering flags of its dim, long aisles; without, you peer aloft to view its gargoyled waterspouts, leering down like nightmares caught in the very act and frozen to stone. The spirit of the place possesses you; you conjure up a

the place possesses you; you conjure up a vision of the little maid Esmeralda and the squat hunchback who dwelt in the tower above—and at this precise moment a foul vagabond pounces on you and, with a wink that is in itself an insult and a smile that should earn for him a kick for every inch of its broadth his court its breadth, he draws from beneath his coat a set of nasty photographs—things which no decent man could look at without gag-ging and would not carry about with him

on his person for a million dollars in cash.

By threats and hard words you drive him
off; but seeing others of his kind drawing
nigh you run away, with no particular
destination in mind except to discover some spot, however obscure and remote, where

the wicked cease from troubling and the weary may be at rest for a few minutes. You cross a bridge to the farther bank of the river and presently you find yourself— at least I found myself there—in one of the very few remaining quarters of old Paris, as yet untouched by the scheme of improvement that is wiping out whatever is medieval

and therefore unsanitary, and making it all over—modern and slick and shiny.

Losing yourself—and with yourself your sense of the reality of things—you wander into a maze of tall, beetle-browed old houses with time mindows that lower at you from with tiny windows that lower at you from with tiny windows that lower at you from under their dormered lids like hostile eyes. Above, on the attic ledges, are boxes of flowers and coops where caged larks and linnets pipe cheery snatches of song; and on beyond, between the eaves, which bend toward one another like gossips who would swap whispered confidences, is a strip of sky.

Below are smells of age and dampness— and there is a rich, nutritious garlicky smell too; and against a jog in the wall a frowsy but picturesque ragpicker is asleep on a pile of sacks, with a big sleek cat asleep on his breast.

#### Villon's Unanswered Question

You pass a little church, sagged and lopped with the weight of the years; and through its doors you catch a vista of old pillars and soft half-lights, and twinkling philars and soft half-lights, and twinking candles set on the high altar. Not even the jimcrackery with which the Latin races dress up their holy places and the graves of their dead can entirely dispel its abiding, brooding air of peace and majesty. You linger a moment outside just such a

tavern as a certain ragged poet of parts might have frequented the while he penned his versified inquiry, which after all these centuries is not yet satisfactorily answered,

touching on the approximate whereabouts of the snows that fell yesteryear.

Midway of a winding alley you come to an ancient wall and an ancient gate crowned with the half-effaced quarterings of an ancient house, and you halt—almost expecting that the rusted hinges will creak a warning and the wooden halves begrudgwarning and the wooden halves begrudg-ingly divide, and that from under the slewed arch will issue a most gallant swashbuckler with his buckles all buckled

and his swash swashing—hence the name.

At this juncture you feel a touch on your shoulder. You spin on your heel, feeling at your hip for an imaginary sword. But 'tis not Master François Villon, in tattered doublet, with a sonnet. Nor yet is it a jaunty blade, in silken cloak, with a chal-lenge. It is your friend of the obscene photograph collection! He has followed you all the way from 1914 clear back into the Middle Ages, biding his time and hoping you will change your mind about investing in his nasty wares.

With your wife or your sister you visit-the Louvre. You look on the Winged Victory and admire her classic but somewhat

\*Being French, and therefore economical, those two are, as it were, splitting one tomb between

†Popular tourist pronunciation,

bulky proportions, meantime saying to yourself that it certainly must have been a mighty hard battle the lady won, because

she lost her head and both arms in doing it.
You tire of interminable portraits of the You tire of interminable portraits of the Grand Monarch—showing him grouped with his wife, the Old-fashioned Square Upright; and his son, the Baby Grand; and his prime minister, the Lyre; and his brother, the Yellow Clarinet, and the rest of the orchestra. You examine the space on the wall where Mona Lisa is or is not smiling her inscrutable smile, depending on whether the open season for Mona Lisas has come or has passed.

come or has passed.

Wandering your weary way past acres of the works of Rubens, and miles of Titians, and townships of Corots, and ranges of and townships of Corots, and ranges of Michelangelos, and quarter sections of Raphaels, and government reserves of Leonardo da Vincis, you stray off finally into a side passage to see something else, leaving your wife or your sister behind in one of the main galleries. You are gone only a minute or two, but returning you find her furiously, helplessly angry and embarrassed; and on inquiry you learn she has been enduring the ordeal of being ogled by a small, wormy-looking professional flirt. by a small, wormy-looking professional firt who has gone without shaving for two or three years in a desperate endeavor to resemble a real man.

Somebody will some day take a squirtgun and a pint of insect powder and destroy these little, hairy caterpillars who infest all parts of Paris and make it impossible for a respectable woman to venture on the streets unaccompanied!

#### Shaking Your Own Dust

Let us, for the further adornment and final elaboration of the illustration, say that you are sitting at one of the small round tables which make mushroom beds under the awnings along the boulevards. All about you are French people, enjoying themselves in an easy and a rational and an inexpensive manner. As for yourself, all you desire is a quiet half hour in which to

you desire is a quiet hair nour in which to read your paper, sip your coffee, and watch the shifting panorama of street life.

That emphatically is all you ask—merely that and a little privacy. Are you permitted to have it? You are not.

Beggars beseech you to look on their afflictions. Sidewalk venders cluster about you. And if you are smoking the spark of your cigar inevitably draws a full delegayour cigar inevitably draws a full delega-tion of those moldy old whiskerados who follow the profession of collecting butts and quids. They hover about you, watchful as chicken hawks; and their bleary eyes envy

chicken hawks; and their bleary eyes envy you for each puff you take, until you grow uneasy and self-reproachful under their glare, and your smoke is spoiled for you.

Very few men smoke well before an audience, even an audience of their own selection; so before your cigar is half finished you toss it away, and while it is yet in air the watchers leap forward and squabble under your feet for the prize. Then the winner emerges from the scramble and departs along the sidewalk to seek his next victim, with the still-smoking trophy impaled on his steel-pointed tool of trade. In desperation you rise up from there and

In desperation you rise up from there and flee away to your hotel and hide in your room, and lock and double-lock the doors. and begin to study timetables with a view

and begin to study timetables with a view to quitting Paris on the first train leaving for anywhere—the only drawback to a speedy consummation of this happy pros-pect being that no living creature can fathom the meaning of French timetables. It is not so much the aggregate amount of which they have despoiled you—it is the knowledge that every other person in Paris is seeking and planning to nick you for some sum, great or small; it is the realiza-tion that, by reason of your ignorance of the language and the customs of the land. the language and the customs of the land. you are at their mercy, and they have no mercy-that, as Walter Pater so succinctly phrases it, is what gets your goat-and gets it good!

So you shake the dust from your feetyour own dust, not Paris' dust-and you depart per hired back for the station and per train from the station. And as the train draws away from the trainshed you behold behind you two legends or inscriptions, repeated and reiterated everywhere on the walls of the French capital.

One of them says: English Spoken Here! And the other says: Liberality! Econ-

omy! Frugality!

Editor's Note-This is the seventh of a series of articles by Irvin S. Cobb. The eighth will appear in

## THE MEANING OF THE HAY-PAUNCEFOTE TREATY

(Continued from Page 4)

two Powers which before acted jointly, so that all other Powers must agree to ob-serve its rules on a plane of equality among themselves?

The Government of the United States objected to requiring all nations desiring the use of the canal to agree to observe its rules, on the ground that such an agreement would make those nations parties to the contract and thus give them contract rights in the canal. Mr. Hay proposed to change the reading of Lord Lansdowne's suggestion to "all nations observing these rules"; thus preserving the distinction already made plain in Lord Lansdowne's amendment between the nation adopting and the nations observing the rules, but without making them parties to the contract.

The question still remains: Did the as-sumption of the full control of the canal by the United States in any way affect the pledge of the United States Government in the first Hay-Pauncefote Treaty to accord to all nations terms of entire equality with

The change in the relations between the high contracting parties expressed in the new treaty seems to imply a change in this respect also; and Lord Lansdowne appears to have thought it did, for he proposed the insertion in the new treaty of the words, now for the first time suggested: "Such conditions and charges of traffic shall be just and equitable."

If it was clearly understood that the United States and all nations observing the rules were to be subject to identical conditions and charges of traffic, would there have been any occasion to demand of the United States that these should be just and equitable? Could the United States Government, on the assumption that "entire equality" applies to itself and other nations, have any motive for imposing conditions and charges of traffic that were not just and

equitable on its own citizens?

This new insertion apparently implies the conviction that entire equality with the United States was no longer, as in the first United States was no longer, as in the first Hay-Pauncefote Treaty, a prerogative of the other Powers, including Great Britain; and that the only way to guard against excesses by the United States was not, as might otherwise be expected, to write into the treaty the simple words, No other conditions or charges of traffic are to be demanded than those paid by vessels of the manded than those paid by vessels of the United States, but, instead, the far feebler proviso, quite meaningless if entire equality were already accorded: Such conditions and charges of traffic shall be just and equitable!

Undoubtedly Great Britain was, to use Lord Lansdowne's expression, making a "self-denying ordinance." The new treaty was radically different from the old. The compensation to Great Britain, however, was twofold. Without these changes the canal would probably never be built, and Great Britain was desirous that it should be built; but, in addition, Great Britain was relieved of responsibilities by placing the control exclusively in the hands of the United States.

Could Great Britain expect, under these circumstances, to obtain entire equality in all the advantages of the canal? What compensation in that case would the United States receive for assuming not only the cost of construction but the responsibilities

Great Britain thus evaded?

If the transaction is to be esteemed a fair bargain, such as should preserve the honor of both nations—and it is difficult to see how the honor of one can be involved without involving the honor of the other—it was just that the United States should receive some compensation for undertaking singlehanded to open a great waterway between the oceans that all nations observing its rules should use on equal terms. This was duly recognized by Lord Lansdowne, and there is not a word in the entire correspondence that is not inspired by a spirit of equity on both sides.

It would be as dishonorable to interpret unjustly the meaning of this treaty, and to insist that one side never really gave up anything, as to have made the treaty itself dishonorable or dishonoring to either side. In authorizing the signature of the treaty, as finally agreed on, Lord Lansdowne, in his final instructions to Lord Pauncefote, reverts to the words "all nations" and Mr. Hay's change in the form he had sug-

gested, by remarking:
"His Majesty's Government were pre-pared to accept this amendment, which seemed to us equally efficacious for the purpose which we had in view—namely, that of insuring that Great Britain should not be placed in a less advantageous position than other Powers."

It would seem absurd to claim for Great Britain all that was voluntarily surrendered in her self-denying ordinance. Her rights appear thereby to have been reduced to the use of the canal on terms of equality with all nations observing the rules, with the added proviso that "Such conditions and charges of traffic shall be just and equi-table." All other rights in the canal are accorded by the treaty now in force to the Government of the United States, whose only duties to foreign nations are defined in the following paragraph:

"The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality; so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions and charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable."

THE PRINCIPLE OF NEUTRALIZATION UN-AFFECTED—It was not intended that these changes in the treaty should affect the gen-eral principle of neutralization; and Mr. Hay, in recognition of the concessions made by Great Britain in the treaty of November 18, 1901, voluntarily proposed, and it was formally agreed in the fourth article, that no change of territorial sovereignty should affect the obligations of the high contracting parties under the present treaty.

Since the ratification of the second Hay-Pauncefote Treaty the United States has acquired by purchase from the Republic of Panama the right to exercise sovereign authority over the Canal Zone and the adjacent waters within the three-mile limit; but this in no way affects the general principle

of neutralization.

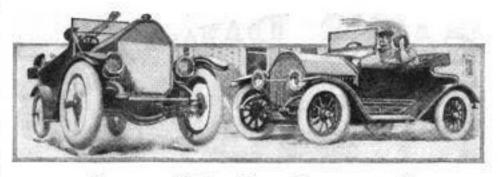

It is important, however, to comprehend the meaning of the term neutralization and the powers implied in the control of neutral-ized territory. Belgium, Switzerland and Luxemburg are neutralized states; but their domestic concerns are in no way affected by this fact. Their duty consists solely in maintaining and defending their neutrality as between foreign Powers. Their sover-eign rights are in no way abridged. Within their own territory all of these rights remain intact.

No other Power has a right to interfere with the relation between their treasuries and their domestic commerce. They are under a solemn obligation, voluntarily as-sumed, to treat other Powers alike, so far as privileges within their territory are con-cerned; and especially not to permit their territory to be used as a military base or source of supplies for belligerents. This is precisely what the Government of the United States is pledged to do in respect to all nations observing the rules of neutralization adopted by the United States-namely, to furnish equal treatment and equal service

If it were contended that the Government of the United States should enjoy no privileges in the canal other than those posessed by the nations observing its rules, there would be no historic example of neutralization and no intelligible definition of the term on which such a contention could be based. This contention would impose on the builders of the canal such servitude to noncontractants as was never yet imposed by any Power on the owner of any neutralized object.

What, under that interpretation, would become of the agreement in the second article, that "the said Government shall have and enjoy all the rights incident to such' construction, as well as the exclusive right of providing for the regulation and management of the canal"?

'It is true that all these rights are subject to the provisions of the present treaty; but 'they are not subject to theories and definitions not in harmony with these provisions, and they cannot be in any way legally

## In a "Tight Corner"

You flirt with disaster if you neglect brake lining. You cando without fancy "extras" on the car you drive - but for safety's sake you must have brake lining on which you can depend.

Brake lining must give uniform gripping power clear throughnot merely on the outside. Then it remains reliable till worn paperthin. Such is Thermoid.

Cut a strip of Thermoid open. Break open the ordinary. Compare their centers. You can see the difference in gripping power.

Hydraulic compression is the reason Thermoid has the most uniform gripping power. It ex-plains why its density is fixed. Why it cannot be burned outnor affected by oil, water, gasoline, dirt. Why it is used exclu-sively by so many makers of foremost cars, such as the Peerless, Lozier, White, American, Fiat, National, Marmon, etc.

# Thermoid HYDRAULIC COMPRESSED Brake Lining - 100%

Thermoid represents 60% more labor and contains 50% more material, size for size, than the ordinary.

Our Guarantee: Thermoid will make good - or we will.

\*ODAY, girls everywhere are waiting to be set to work. TODAY, girls everywhere are making to the property of the prop the ambitions and aspirations of normal girlhood, it is intolerable to be without an outlet for her energies and an income for her necessities. A very little experience of it shows her that

## EARNING IS MIGHTY CLOSE TO NOBODY

THE LADIES' HOME JOURNAL has a Club of girls who "The Girls' Club." You have doubtless heard of it. Since the first of October, 1913, its members have earned about \$58,000.00, and they have still bigger plans for the coming Summer months. Any girl who is tired of doing and earning nothing will learn what these plans are, and will receive a very cordial invitation to join the Club, by writing to the Manager. Ask her to send you (without charge) the little "Found: An Hour for The Girls' Club." Her address is

> MANAGER OF THE GIRLS' CLUB THE LADIES' HOME JOURNAL, PHILADELPHIA

limited, except by the clear and express stipulations of the treaty itself.

It has been claimed as a restriction on these rights that the preamble of the treaty now in force expressly states that its pur-pose is "to remove any objection which may arise out of the Convention of the ninethen the convention of the line-teenth of April, 1850, commonly called the Clayton-Bulwer Treaty, to the construction of such canal under the auspices of the Government of the United States, without impairing the general principle of neutral-ization established in Article VIII of that Convention"; and that, therefore, Article VIII of that treaty is still in force.

A careful examination of the article in question shows that this cannot possibly be the case; and that it is merely the general principle of neutralization, and not at all the specific form of neutralization presented in that article, which the second Hay-Pauncefote Treaty is designed not to impair. Article VIII of the Clayton-Bulwer Treaty

contemplates the construction of a canal by neither government, but by some company to be formed for that purpose, under the protection of both governments. The canal is, in return for this equal protection, to be "open to the citizens and subjects of the United States and Great Britain on equal

Both governments are pledged not to ex-ercise any control over this *tertium quid*. Suppose, then, such a company had built the canal, would there be any doubt about its right to pass its own ships freely through its own waterway? Would there be any im-

own waterway? Would there be any impairment of the general principle of neutralization so long as all the protectors of the canal were equally served?

The difference between the Clayton-Bulwer Treaty and the second Hay-Pauncefote Treaty consists precisely in this: In the Clayton-Bulwer Treaty the United States and Great Britain were joint protectors of a tertium quid, while in the second Hay-Pauncefote Treaty the United States Government becomes, by a new and special agreement with Great Britain, both the sole owner and the sole protector of a canal built owner and the sole protector of a canal built entirely at its own expense, while Great Britain ceases to bear any burden or accept any responsibility as protector of the canal.

That the right to equal treatment agreed on in the Clayton-Bulwer Treaty is based solely on participation in this obligation to protect the canal is evident from the last words of the article in question.

The article reads: " . shall also be open on like terms to the citizens and subjects of every other state which is willing grant thereto such protection as the United States and Great Britain engage to afford."

With the falling away of this protection, which in the first Hay-Pauncefote Trenty was still joint between the United States and Great Britain, and was to be shared by other Powers also, disappears entirely the specific form of neutrality embodied in the Clayton-Bulwer Treaty; and only the general principle, as already defined, remains—namely, that the owner grame entire equality to all nations observing the rules.

THE REMOVAL OF ALL AMBIGUITIES-If it be claimed that the language of the second Hay-Pauncefote Treaty is ambiguous, and that, therefore, the broadest possible construction should be placed on it, there is a very simple method of ending all controversy regarding the obligations of

the treaty.

Let it be assumed that the Government of the United States is in honor bound to treat the vessels of all nations precisely as it treats its own: what results from this cocession? If such conditions and charges of traffic are to be just and equitable, it is proper that every gross ton of shipping passing through the canal should bear in due proportion of the total interest charge and cost of maintenance, operation and

defense of the canal.

If it be a point of honor on account of the obligations of the treaty for the Government of the United States to accord to the vessels of all nations the same treatment that is accorded to its own vessels, it is also a point of honor for all nations availing themselves of the use of the canal to make good to the treasury of the United States their share of the cost of the service rendered

It would, therefore, be fitting for the Government of the United States, if this con-struction is to be placed on the treaty, is add a rule requiring the nations using the canal to pledge themselves, as a condition of enjoying its benefits, to pay from their respective treasuries such sums as may be necessary to meet any deficit in the annual budget of the canal, in proportion to the gross tonnage of the vessels sailing union their respective flags.

## Sense and Nonsense

## Cheap Cottages

THE five-hundred-dollar cottage is an ideal that just now is having a great amount of experiment and study in England in the campaign for better housing. One such cottage has been built under very favorable conditions and many have been constructed at near this figure.

Each one, after being finished, has been given wide attention, and its faults as a model home have been pointed out. The latest idea considered is to put up a frame-

work of structural steel, to hold grooved concrete slabs for walls and floors.

Slabs of a waterproof composition would be used for the roof.

It has been stoutly claimed that, made in quantities at prevailing prices in England, it would be possible to build cottages of ten thousand cubic fast each in this year for five thousand cubic feet each in this way for five hundred dollars.

#### Anything to Please

DIGBY BELL, the actor, says he was D once playing a short engagement in a small Middle Western city, when, about an hour before the curtain went up for the matinée, a messenger from the front of the theater came to him as he sat in his dressing room reading his mail.

"The house manager wants to know," said the emissary, "whether you expect him

to dress up this afternoon."
"Well," said Bell, "I understand the audience will be fashionable. Tell the manager for me that I think it would be well for him to dress as he always does for his big matinée houses,"

When the performance was over Bell slipped around to the box office to observe

the result of his advice.

The house manager stood at the door glorious in a dinner coat, dress waistcoat and broad white lawn tie.

## Dyeing Rocks

PUMPING dyes into rock is a new way T to discover whether the rock is solid or not, and hence whether it will make a good foundation. Holes are drilled in the rock intended for the foundation of a building and the dye is forced into the holes under pressure. More holes are then drilled near by, and if any rock dust comes up dyel the number and size of seams in the mass are then indicated.

#### The New Catechism

AWELL-KNOWN doctor of Savannah has two children—a little daughter. aged six, and a small son, aged four. One day he overheard the little girl putting be brother through an examination in Bible

history.

"Do you know who the first man and the first woman were?"

"Yeth, I do," lisped the boy.

"I'll bet you don't know their names," pressed the sister.

"I bet I do!" replied the little fellow.

"Well. what were their names, then Mr.

"Well, what were their names, then, Mr.

Smarty?"
"Edem and Ab!" answered the little boy.

## Refined Fish

BOB DAVIS, editor of Munsey's, was at the Hotel Cecil, in London. Glancing over the menu one morning at breakfast. he said to the waiter:

"What is a whiting?" "A whiting, sir," said the waiter, "is a

fish, sir."
"I know that," said Davis; "but what kind of a fish? How does it taste?"

The waiter pondered the matter for a

moment.
"I'll tell you, sir," he said: "A whiting is like a 'addock, sir-only more refined.

## HOW TO INTEREST INVESTORS

## By ROGER W. BABSON

THE young business man who has read the preceding articles of this series has now a fair idea of how money is borrowed temporarily on various forms of notes. I have also endeavored to describe some of the inside workings of a bank and to give readers some friendly and fatherly advice as to how to separate a banker from his money.

Many readers, however, desire to issue securities of a more permanent form, so as not to be disturbed every six months with note renewals. How to accomplish this feat will now be considered.

As was explained in a previous article, for many purposes money should only be raised through the issuance of additional capital stock to oneself or family; but there are other purposes for which the young business man is entitled to issue securities to the public, and the following three articles will be devoted to this phase of

the subject.

When a young business man goes to a banker for advice as to issuing bonds, preferred stocks, or some other form of securities to the public, the banker first asks the young man to describe to him the character of the business in which he is interested. All standard securities may today be grouped under one of the five following

1—Railroad securities; 2—Traction se-curities; 3—Other Public-Utility securi-ties; 4—Industrial securities; 5—Mining securities.

There are styles and fashions in stocks and bonds just as in hats and dresses. To catch the timid investor, one must issue securities to the public when his special class of business is popular, and lie low when his special class of business is unpopular. Some one class of securities is always in favor and some other class is always in disfavor. The fashions of investments change from year to year as does the ments change from year to year as does the cut of coats.

One year steam-railroad securities are unpopular and traction securities are very popular; another year traction securities are unpopular and industrials are very much in favor. As ninety-five per cent of the people are like sheep and blindly follow one another two conclusions can be drawn. one another, two conclusions can be drawn

from the above statement:

The young man desiring to solicit funds for traction property should wait until traction securities are popular and then issue said securities, whether or not he is then in immediate need of additional funds. The young man interested in an industrial proposition, however, should not sacrifice his securities when traction securities are popular, but wait until industrials again come into favor.

## The Psychological Moment to Sell

In other words, there is a psychological moment for the issuing of any one class of securities. As the wheel keeps going round, a man desirous of selling some one class of securities to the public should wait for the time when such class is in favor, and then "make hay while the sun shines." It is much easier for the man in need of funds to much easier for the man in need of funds to float with the tide of popular favor than to attempt to row against this great tide by endeavoring to sell—at any time—securi-ties of a class that for some reason is temporarily in disfavor.

Wise investors always seek to avoid purchasing that class of securities which are temporarily popular. When public-utility securities are popular and industrial securities are in disfavor, the wise investor avoids purchasing public-utility securities and purchases the much-despised indus-

Conversely, when the preferred stocks of industrial companies are very popular and railroads are in disfavor, then the wise investor avoids purchasing the popular industrials and—much to the disgust of his brokers and friends-buys the despised railroads.

Working with the tide the man in need of funds will be able to obtain his funds easier, at a lower rate and on better terms, and on the other hand the investor will be able to obtain better securities at the lower price, thus yielding a higher rate of interest, by rowing against the tide.

RAILROAD SECURITIES. The railroads of this country will probably some day be taken over by the Government at an appraised valuation, however much you and I may regret it. Practically speaking, this will take care of all the bond issues. With, however, a few exceptions, the bond and other obligations of the American railroads are worth all they are selling for today. Reorganizations are inevitable and the par value of certain issues will be cut down; but, in the writer's opinion, there is hardly an obligation of an American railroad today which, if an investor should purchase at present prices and hold on to it, will not

present prices and hold on to it, will not some time refund his money.

In the case of railroad stocks this is different. Much depends on the valuation of railroads now being carried on by the Government. Some stocks will be found to be worth more than par, while others will be found to be worth much less than par. If interested in the promotion of a railroad I should endeavor to keep the bonds myself and sell the stock to the public on a basis which will give these purchasers a handsome profit if the railroad gets a fair deal from the Government, and gets a fair deal from the Government, and placing on these people the loss in case the railroad does not get a fair deal.

#### The Tangible Property Basis

On the other hand, as an investor in railroads, I should endeavor to confine my purchases to the bonds and other obligations—especially certain four per cent bonds selling at a large discount—unless I were in a position to study fundamental conditions and buy stocks.

Traction Securities. At one time trac-tion securities were very much in favor and it was very easy to sell bonds or stocks issued by street-railroad companies. Now that the people are getting wise, however, the franchise question is becoming a serious proposition. As franchises expire it is difficult to make a profitable trade with the municipality involved. Moreover, the labor factor is to become a distinct detriment to the street-railroad business.

If the writer personally were engaged in the street-railroad business at the present time, instead of endeavoring to sell addi-tional securities, he would look round for something else to do, and become interested in some other line from which the cream had not been so thoroughly skimmed. However, this very fact that certain traction securities may be in disrepute during the next few years should make some of their bonds attractive to keen investors who have courage.

Investors, however, should be very particular to purchase only traction securities issued on a basis where they will be taken care of if the property is taken over by the state or the municipality at the actual value of the tangible property.

In other words, traction securities should not be purchased on the basis of the fran-chise value or even on the basis of earn-ings. Only actual tangible property should be considered by be considered by the investor in traction

OTHER PUBLIC-UTILITY SECURITIES. In this group I include the securities of lighting, water and power companies, which, for several reasons, have a number of advan-tageous features. The labor factor is very small in connection with lighting, water and power companies, and therefore, as wages increase, the expenses of these companies should not necessarily increase in any such proportion.

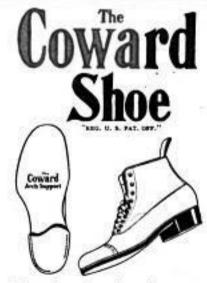

Moreover, the coming generation will probably use much more electricity and other modern conveniences than does even the present generation. Companies that derive their power from water should espe-cially be in favor as coal increases in price and as our streams and forests are conserved.

Promoters of such public utilities should have very little difficulty in placing additional securities at the proper time; and both promoters and investors are apt to

The Atwater Kent System is not new to engineers. Nine years of sturdy service have proved its worth. Over fifty thousand motorists are already enjoying the unique gain in flexibility and speed which it gives. Read what some of its users say:

"The Atwater Kent System is practically the only one with a successful automatic spark advance which reflexes the driver of all concern requeding the setting of the spark, and does its work as officiently at one speed as others." R. E. COLE, Ch. Engineer, Saxoes Moron Co.

"We get fully as much power with the Atwater Kent System at high speeds, and more at low speeds, in comparison with other devices. The automatic advance does away with all guesswork in setting the spark lever, thus parting notice and expert on a par. The Atwater Kent System is almost ideal for starting, and it cannot run down the battery if the switch is left on." J. C. McORK, Chief Engiseer. The Leximoton Howard Co. "The intensity of the spark down not vary with

"The intensity of the spark does not vary with the speed. This gives our motors wonderful power at low speeds under heavy loads." MAURICE WOLF, Pres. THE METHOR MOTOR CAR CO. "Your system stays fixed." There is no need

"Your system 'stays fixed." There is no need of continual adjustment, as is the case with a good many other systems." M. F. LEGG. Chief Engineer, Commert Automobile Co.

We will shortly be at liberty to announce other prominent users.

Will you be one of the fortunate 50,000 this year to gain the last word in ignition service? Write to the nearest agent of any of the above cars, or to us, for booklet telling why the Atwaler Kent Ignition System adds so enormously to motoring pleasure.

find them quite popular. The promoter, however, must not wait too long, but must sell them while they are in favor.

On the other hand, the investor must be very careful not to get caught while this class is popular, but rather wait until they are in disfavor, as they will have their turn like all others.

INDUSTRIAL SECURITIES. These probably fluctuate more than any other class in public favor. One year they are very popular and the next year they are very unpopular. The men engaged in industrial enterprises desiring to sell securities should plan to do so during these popular years; while investors should plan to buy industrial securities only during years when they are very much in disfavor. These cycles come about once in four years and may be readily recognized.

readily recognized.

Personally the writer would advise small investors to invest only a small proportion of their money in industrials; but when such money is invested, cumulative seven or eight per cent preferred stock—preferred also as to assets—is usually the most desirable.

When purchasing railroad or traction securities the wise investor prefers bonds, letting the other fellow have the stock; but when purchasing into industrial companies the wise investor sometimes purchases the preferred stock. The common stock is too much of a gamble and should be owned by those actively engaged in the business; but if the preferred stock is not good the bonds are usually not good either.

MINING SEXURITIES. This group contains both the most profitable and the most dangerous varieties of investments—if such a word can be used in this connection. There are certain classes of people who are bound to take a chance. If they cannot find mining stocks to buy they will play poker or gamble through a bucketshop in railroads. Those of my friends desiring to raise money for mining purposes I urge to hunt up such people.

to hunt up such people.

Do not try to sell bonds on a mine; do not sell any mining securities to widows or orphans. Go to business men who want to take a flyer with a specified proportion of their money. Tell them the truth—that if ore is struck they may make five dollars for every one dollar invested; while if not they will make a total loss. Business men are generally pleased by such frank statements, and it is often easy to interest them in mining propositions if one goes about it right.

I have not mentioned municipal securities in the above brief analysis, as most

I have not mentioned municipal securities in the above brief analysis, as most municipal bonds are perfectly good as to security, and the rate of interest simply depends on their convertibility. Bonds of well-known cities, which can quickly be sold, are issued at a lower rate than bonds of small towns, which have a limited market. Personally the writer prefers bonds of a medium-grade city in the Middle West. There is no use in investing in bonds that yield a very low rate, nor is it wise to purchase bonds of those very small towns that are almost impossible to sell.

#### Five Points for Investors

Investors, however, should be very particular only to purchase such municipal bonds as are secured by the entire municipality, and avoid so-called improvement bonds or assessment bonds, which hold only certain districts or streets.

The young business man can use for his selling talk the fact that every investor should have a certain proportion of his funds in the securities of each of the five classes mentioned above. This gives him an opportunity always to talk up his class—

whatever it may be—to every investor.

A striking illustration of the need for such distribution was furnished by certain fire-insurance companies after the San Francisco earthquake. It appeared that the companies' assets were largely invested in San Francisco real estate and enterprises where the bulk of its fire risks were concentrated. As a result, the very catastrophe that converted its risks into actual liabilities deprived its assets of all immediate value.

There are five different features that investors observe in the selection of investments which the young business man desiring to raise money should carefully note. These are given by a Wall Street authority as follows:

1—Safety of Principal and Interest. In the quality of safety there is a marked

difference between safety of principal and safety of interest. With some investments the principal is much safer than the interest, and vice versa. This can best be illustrated by examples

by examples.

The bonds of terminal companies, which are guaranteed as to interest under the terms of a lease by the railroads that use the terminal, are usually far safer as to interest than as to principal. While the lease lasts, the interest is probably perfectly secure; but when the lease expires and the bonds mature, the railroads may see fit to abandon the terminal and build one elsewhere if the city has grown in another direction; and the terminal may cease to have any value except as real estate.

2—RATE OF INCOME. A large part of the problem of investment lies in the careful selection of securities to meet one's actual requirements. The average investor does not thoroughly understand this point. He does not realize that a high degree of one quality involves a lower degree of other qualities. He may have a general impression that a high rate of income is apt to indicate less assurance of safety, but he rarely applies the same reasoning to other qualities.

When he buys securities he is quite likely to pay for qualities he does not need. It is very common, for example, when he wishes to make a permanent investment and has no thought of reselling, to find him purchasing securities that possess in a high degree the quality of convertibility. This is pure waste for him; and the young business man desiring to interest an investor in the unlisted and inactive securities of his company should preach this fact. A high degree of convertibility is only obtained at the sacrifice of some other quality—usually rate of income.

3—Convertibility divides investors into classes more sharply than any other quality. For some investors convertibility is a matter of small importance; for others it is the paramount consideration. Generally speaking, however, the young business man may assume that the private investor does not need to place much emphasis on the quality of convertibility—at least for the larger part of his estate.

On the other hand, for a business surplus ready convertibility is an absolute necessity; and in order to secure it something in the way of income must usually be sacrificed.

#### Well-Dressed Securities

4—Appreciation in Value. "Again, some investors are so situated that they can insist strongly on the promise of appreciation in value, while others cannot afford to do so. Rich men, whose income is in excess of their wants, can afford to forego something in the way of yearly return for the sake of a strong prospect of appreciation in value. Such men naturally buy bank and trust-company stocks, the general characteristic of which is a small return on the money invested, but a strong likelihood of appreciation in value."

5—STABILITY OF MARKET PRICE. Stability of market price is frequently a consideration of great importance. This quality should never be confused with the quality of safety. Safety means the assurance that the maker of the obligation will pay principal and interest when due; stability of market price means that the investment will not shrink in quoted value. These are very different things, though frequently confused in people's minds. An investment may possess assured safety of principal and interest, and yet suffer a violent decline in quoted price owing to a general change in monetary conditions.

The lesson to be learned here by business men desiring to sell securities is that they must always issue them on a basis which will compare favorably with the going market price of similar investments. If they offer too high a rate people will be afraid that the securities are unsafe; while if they offer too little they are wholly unattractive.

This is very important to remember; in fact, as I opened this article by referring to fashions in securities, advising you young business men to conform thereto, I now close by urging you to also adapt yourselves to rate changes and conditions.

Really, if your securities are safe, only two things are necessary in order to sell them—namely: Dress them up in style and make them pay the going rate of interest. DON'T SAY UNDERWEAR, SAY MUNSINGWEAR

### MEXICO: The Record of a Conversation With President Wilson

MY IDEAL is an orderly and righteous government in Mexico; but my passion isforthesubmerged eightyfive per cent of the people of that Republic, who are

now struggling toward liberty."

The President closed his fingers into a sinewy fist. He leaned forward in his chair—leaned forward as a man leans forward who is about to start on a race, his body taut, his muscles tense. I could see the cords stand out on the back of his neck. His eyes were narrowed, his lips slightly parted, his vigor and arnestness impressive.

Bang! He hit the desk with that clenched fist. The paper-knife rattled against the tray and a few open letters stirred a bit rom the jar of the blow.

"I challenge you," he aid, "to cite me an intance in all the history of he world where liberty vas handed down from bove! Liberty always is ttained by the forces torking below, undereath, by the great movement of the people. That, avened by the sense of rong and oppression and intertain by the forces of the people.

resident relaxed from his tense attitude and smiled.

"It is a curious thing," he continued, "that every demand for the establishment of

"It is a curious thing," he continued, "that every demand for the establishment of rder in Mexico takes into consideration, not order for the benefit of the people of fexico, the great mass of the population, but order for the benefit of the old-time régime, or the aristocrats, for the vested interests, for the men who are responsible for this very pudition of disorder. No one asks for order because order will help the masses of the cople to get a portion of their rights and their land; but all demand it so that the great where of property, the overlords, the hidalgos, the men who have exploited that rich cuntry for their own selfish purposes, shall be able to continue their processes undisturbed to the protests of the people from whom their wealth and power have been obtained. "The dangers that beset the Republic are held to be the individual and corporate

"The dangers that beset the Republic are held to be the individual and corporate oubles of these men, not the aggregated injustices that have been heaped on this vastly eater section of the population that is now struggling to recover by force what has ways been theirs by right.

"They want order—the old order; but I say to you that the old order is dead. It is y part, as I see it, to aid in composing those differences so far as I may be able, that e new order, which will have its foundation on human liberty and human rights, shall

We were sitting in the old Cabinet room, on the second floor of the White House, we changed to a library and workroom for the President. Two sides of the walls are sed with books, and opposite the mantel there hangs a great picture of the signing the Spanish War Peace Treaty, showing President McKinley gazing benignantly at cretary Day and the Spanish commissioner, who, seated side by side, are writing their mes on the document that formally ended the war of 1898. A great globe stands in the rner—a great blue globe, with many lines traced on it, many lines running from ashington to the South. There was a cluster of red roses in the corner, and a little eeze fluttered the curtains of the windows that looked out on the fountain, the wonderful isses of bloom on the flowering trees, the new, soft green of the leaves, and the velvet the grass. A searchlight played on the tip of the Washington Monument and, far back, a dome of the Capitol swam mistily in the silver light of the new moon.

Controlled, 2018, by The Cortis Publishing Continue. Convertely in Great Resisting

Secretary of State Bryan Being Interviewed in the White House Grounds

seventh, only a few hours
after word had come that
Huerta would accept the
offer of mediation made by the representatives of Argentina, Brazil and Chile, I can
state these conclusions, which will endure regardless of the outcome of mediation nego-

tiations. The settled policy of the President, in regard to Mexico, will be as follows:

FIRST—The United States, so long as Mr. Wilson is President, will not seek to gain a
foot of Mexican territory in any way or under any pretext. When we have finished with
Mexico, Mexico will be territorially intact,

Second—No personal aggrandizement by American investors or adventurers or capitalists, or exploitation of that country, will be permitted. Legitimate business interests that seek to develop rather than exploit will be encouraged.

THIRD—A settlement of the agrarian land question by constitutional means—such as that followed in New Zealand, for example—will be insisted on.

These are the materialistic ideals of President Wilson, the main points he has firmly in his mind. His future policy will rest on these foundations, regardless of what the moment may inject into the situation in the way of minor questions.

We talked for a few moments on that April evening of the historic associations of the portion of the White House where we were, which, until the time of President Roosevelt, was used by the Presidents as office and workroom by the clerical force, by the Cabinet, and as the public reception room. It was in this part of the White House that all the preliminaries of the Spanish War were decided on by President McKinley, and it was this portion of the White House that President Lincoln occupied as his office and workroom during the Civil War. Now it makes up a part of the home space in the White House; but in that library where we were sitting, and where McKinley's Cabinet debated the Spanish War and Lincoln's Cabinet debated the Civil War, a great many of the problems of Mexico, whether war problems or peace problems, have been and will be considered by President Wilson.

"Mr. President," I began, "I have recently been through the country somewhat, and I am constantly meeting men who have arrived from various states. I find and they find that, though the people of this country are patriotic and are loyally standing by the Administration, they do not, as a whole, know just what they are patriotic about."

"I have found that to be true, in a measure, myself," said the President; "and I am glad of an opportunity to explain my ideas and my ideals on the subject."

He stopped for a moment as though to select a place for beginning. I noticed that his face, instead of being pale, as it was the last time I saw him, was burned by the sun; that his eye was clear and bright, and his whole attitude that of a man who is strong and well. I noticed, too, that his hands were not burned by the sun; and as he talked I watched those hands and observed how he used them constantly-not in widespread gestures, but rather in supplementary and interpretative motions, as though he were a musician speaking the score of his music and playing the notes with his fingers as he went along. I doubt whether his hands, except when he thwacked the desk, moved more than twelve inches one way or the other; but they seemed almost a part of his speech, and expressed his various attitudes of mind and emotion when he proceeded as vividly as did the intonation of his voice and the emphasis of his words.

He sat back in his chair and half closed his eyes. His fingers laced and interlaced. Then he began to talk, clearly, simply, with a clarity of diction, a sequence of thought and a lucidity of expression that seemed even more remarkable than it really was when compared with the muddled speech of many of our statesmen. Now and then he used a colloquialism. Once or twice he dropped into slang. He spoke of some one "butting in," and he said "We must hump ourselves!" He marshaled his facts with such precision and presented his ideas so cogently that it was apparent his viewpoint was the result of a long and continuous study of every phase of the minor problems involved in the great problem: Why are we in Mexico and what are we going to do there?

"Every phase of the Mexican situation," the President said, "is based on the condition that those in *de facto* control of the Government must be relieved of that control before Mexico can realize her manifest destiny."

#### The Peons' Struggle for Freedom

THE President made it clear that the United States has no quarrel with the Mexican people and that the Mexican people should have no quarrel with us. He sketched the conditions in Mexico under Diaz and came to the underlying cause for all the unrest in that country for many years. This, he said, was a fight for the land—just that and nothing more.

He pointed out how the landed aristocracy, originally given control of vast tracts of land by Spanish grants, had during succeeding years, by coercion, absorption and by other methods of force and with the support of the Government, taken away from the small landowners most of their properties, and had created the feudal estates, where the people were virtually slaves.

These processes were followed by the passage of a general law which made legal the condemnation of all land to the state that was not secured by a title which complied with provisions in the law that made most of the titles of the properties the landed aristocracy wanted easy of annulment. Farm after farm passed into the control of the big landowners and there was no recourse for the former owners or for their families but to work at dictated terms and

practically as slaves on the land that had formerly been theirs.

"Fortunately for the peons, but unfortunately for himself," the President continued, "Diaz permitted the establishment of a public-school system. He himself said he raised up the instrument that brought about his own destruction—the school system."

Weak and incomplete as this school system was and is, it nevertheless had the effect of helping in great measure toward the partial education of a sufficient number of the peons to make it easy for agitators to start revolutions. Revolutions were started. Finally there came the successful revolution of Madero and his supporters, and the exile of Diaz. This was fol-lowed by the killing of Madero, and the assumption of power by Huerta. The present revolution, like all preceding revolutions, is primarily a revolution by the peons who want to regain their "To some extent," the President said, "the situation in Mexico is similar to that in France at the time of the Revolution. There are wide differences in many ways," he continued, "but the basic situation has many resemblances."

After the accession of Huerta the President definitely decided not to recognize that alleged Government and remained firm in that resolve. However, for many months, he has not been unaware that a situation was developing which would force him to make an active movement against Mexico, or the alleged Huerta Government of Mexico; and would bring about such a condition as existed at the time mediation was suggested.

"It has been a difficult situation," he said, "because so many elements of it have been without our control and our territory. In a domestic matter we can see our way clear, because ordinarily all the elements are within our view and consideration; but here was a trouble that had its active movements in another and an adjacent and a somewhat remote country, and we were forced to sit and watch, and await such developments as might be. I have known for months that some such thing could happen—was inevitable, in fact; and my prayer was that it might not be a calamity."

Then came the incident at Tampico. Rear-Admiral Mayo, resenting the insult to the flag, issued his demand for an apology, and the President and his Cabinet stepped in behind the Admiral.

"Really," said the President, "it was a psychological moment, if that phrase is not too trite to be used. There was no great disaster like the sinking of the Maine, and there was an adequate reason for our action in this culminating insult of a series of insults to our country and our flag."

The President followed with his emphatic declaration that his passion is for the great masses of the Mexican people, and his statement that his sole object in Mexico is to help the people secure the liberty which he holds is fully theirs by right.

"The function of being a policeman in Mexico has not appealed to me; nor does it appeal to our people," he said. "Our duty is higher than that. If we are to go in there, restore order and immediately get out, and invite a repetition of conflict similar to that which is in progress now, we had better have remained out.

"What we must do and what we hope to do are twofold. First, we hope to show the world that our friendship for Mexico is a disinterested friendship, so far as our own aggrandizement goes; and, second, we hope to prove to the world that the Monroe Doctrine is not what the rest of the world, including some of the countries in this hemisphere, contends—merely an excuse for the gaining of territory for ourselves.

"I hold this to be a wonderful opportunity to prove to the world that the United States of America is not only human but humane; that we are actuated by no other motives than the betterment of the conditions of our unfortunate neighbor, and by the sincere desire to advance the cause of human liberty."

The situation, he pointed out, is intolerable, and requires the strong guiding hand of the great nation on this continent

that, by every appeal of right and justice, and the lave for order and the hope for peace and prosperity, must assist these warring people back into the paths of quiet and prosperity. We have an object lesson to give to the rest of the world; an object lesson that will prove to the skeptical outsiders that this nation rises superior to considerations of added power and scorns an opportunity for territorial aggrandizement; an object lesson that will show to the people of this—our own—hemisphere that we are sincerely and unselfishly the friends of all of them, and particularly the friends of the Mexican people, with no other idea than the idea and the ideal of helping them compose the differences, starting them on the road to continued peace and renewed prosperity, and leaving them to work our their own destiny, but watching them narrowly and insisting that they shall take help when help is needed.

"I have not permitted myself to think of what will be the outcome of these plans for mediation," the President said. "I hope they may be successful. In any event we shall deem it our duty to help the Mexican people, and we shall continue until we have satisfactory knowledge that peace has been restored, that a constitutional Government is reorganized, and that the way is open for the peaceful reorganization of that harassed country."

#### The Possibilities of Self-Government

"WE SHALL not demand a foot of territory nor a cent of money—except, of course, the settlement of such claims as may justly be made by American citizens for damages to their property during these disturbance—individual claims. There will be no money demand in a national sense. Then we shall have shown the entire world that the Monroe Doctrine means an unselfish friendship for our neighbors—a disinterested friendship in the sense of not being interested in our aggrandizement—and thatour motives are only the motives inspired by the higher humanity, by our sense of duty and responsibility, and by our determination that human liberty shall prevail in our hemisphere."

The President paused. He had been intensely in earnest in his talk. He smiled, and his long white fingers were themselves in and out. Then, with a little gesture that betokened amused contempt, he continued:

"They say the Mexicans are not fitted for self-government; and to this I reply that, when properly directed, there is no people not fitted for self-government. The very fact that the extension of the school system by Diaz brought about a certain degree of understanding among some of the people which caused them to awaken to their wrongs and to strive intelligently for their rights makes that contention absurd. I do not hold that the Mexican peons are at present as capable of self-government as other people—ours, for example; but I do hold that the widespread sentiment that they never will be and never can be made to be capable of self-government is as wickedly false as it is palpably absurd."

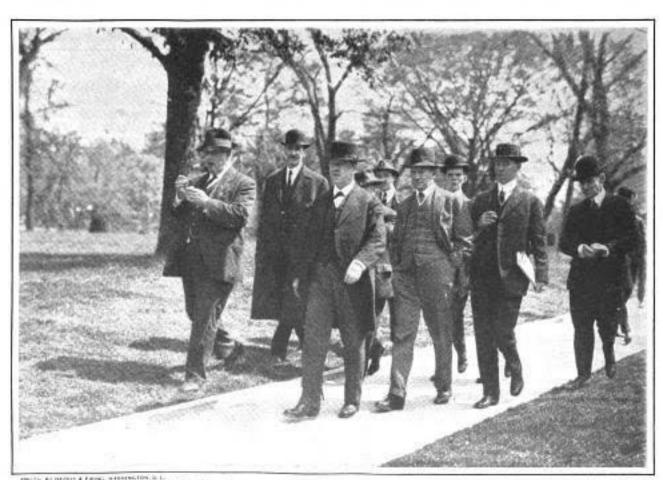

He paused again.

"Did you see that dispatch we gave out, from Consul-General Hanna, which detailed his experiences with the

army at Torreon? It was a sort of a diary of his adventures and a record of what he saw. We gave it all out; but the latter part of it was not widely printed, for the first part of it was full of bloody details of the battle. I suppose"-and he smiled whimsically again-"I suppose the editors felt there was no particular interest in the peaceful and gratifying information that was in the latter portion of the dispatch.

"Well, if you read that dispatch, you learned that Mr. Hanna was most agreeably surprised and greatly gratified by the treatment Villa's men gave their prisoners; how they endeavored to live up to the rules of civilized warfare: how they were constantly on the lookout for new in formation that would relieve them of the stigma of being barbarians. This merely shows that these people, if they get the chance are capable of learning at are anxious to learn. The President returned

to the question of mediation (Concluded on Page 71.

Secretary of the Navy Daniels Being Interviewed on the Way From a Cabinet Meeting

### SUSANNA AND HER ELDERS

# By RICHARD DEHAN

"I Say it is Beastly to be Expected to Marry Just Because Money Has
Got to be Brought Into the Family"

and imposing personage flushed from the nape of his neck to the high summit of his cranium—premature baldness figured among the family heredities-paced in creaking patent-leather boots up and down the castle library, a noble apartment of Tudor design lined with rare and antique volumes into which none ever looked. There were other persons present besides the dowager countess, and, to judge by the strainedly polite expression of their faces, the squeaking leather must have been playing havoc with their nerves; but nobody protested, and Lord Beaumaris continued his agitated perambulations, regularly turning as he reached the limit of the wornout rug.
"Gustavus," said his motherat length,

THE Earl of Beaumaris, a worthy

"you're an English peer in your own castle and not a pointsman on a Broadway block, unless I'm considerably mistaken. Sit down!"

"Mother, I will not be defied!" said Lord Beaumaris. "I will not be bearded by my own child—a mere chit of a girl! Had Susanna been a boy I should have mown how to deal with this spirit of a nsubordination. Being a girl—and, noreover, motherless—I abandon her to rou. She has many things to learn, but et the first lesson you inculcate be this—hat I positively refuse to be defied!"

"The child has, I gather, gone out to ake the air when she ought to have tayed in and taken a scolding," said ady Beaumaris. "Does anybody know f her whereabouts?"

Alaric Osmond-Orme, a languid, drabomplexioned, light-haired man of arisocratic appearance, never seen without he smoked eyeglass that concealed a labolic squint, spoke:

"I saw her, in a crimson golfing jacket and a white Tam 'Shanter, crossing the upper terrace. She carried an lpenstock and was followed by quite a pack of dogs incororated in the body of one extraordinary mongrel I have casionally observed about the stable yards. I gathered hat she was going for a climb on the cliffs. That was about alf an hour ago."

"Alaric, you have attended every family council I recolct since I became a member of this family, and have never efore opened your lips," said Lady Beaumaris, fixing the nfortunate Alaric with her eye, which was still black and happingly bright. "Make this occasion memorable by floring a suggestion. You really over us one!"

flering a suggestion. You really owe us one!"

Everybody present looked at Alaric, who smiled helpssly and dropped his eyeglass, revealing the physical eculiarity it concealed. The effect of the diabolic squint combination with his mild features and somewhat foolish opposition conveyed a general impression of reserve force, it is spoke, fumbling for the missing article, which had larged rapturously into his bosom, with long, trim fingers crusted with mourning rings.

"The question at issue is, unless I have failed in my ental digest of the situation, how to bring Susanna, Viseuntess Lymston—pardon me if I indulge a little my eakness for prolixity——"

The door creaked and Alaric broke off.

"My dear man," said the dowager, "I never before heard ou utter a sentence of more than two words' length!"

"—— to bring Susanna, who is just seventeen and fiercely rginal in her expressed aversion to and avoidance of ordiary everyday man, into compliance with your paternal ishes"—Alaric bowed to Lord Beaumaris—"where the accuragement of a suitor is concerned."

"I have appealed to her filial feelings, which do not pear to exist," said Lord Beaumaris. "I have appealed her reason; I doubt gravely whether the girl possesses by. 'There is too much landed property, there are too any houses and too many heirlooms, and there is not sough ready money to keep things going,' I said. Her ply was: 'Sell some of the land and some of the houses and all of the pictures, and then there will be enough to keep the rest.' 'My dear child, is it possible,' I said, 'that your age and occupying the position you occupy you are no idea of what is meant by an entail?'

"Then I made her sit down here in this library, opposite e, and laid plainly before her why it is necessary for her, my daughter, to marry, and to marry wealth, position ad title. Before I had ended she rose with a flaming face

and burst into a hysterical tirade that lasted ten minutes. I gathered that she was willing to marry Sir Prosper La Gai or the Knight of the Swan if either of those gentlemen proposed for her hand. Neither being available she intends, I gather, to write great poems or paint great pictures or go on the stage. . . . Go on the stage! My blood curdled at the bare idea. It is still in that unpleasant condition." Lord Beaumaris shuddered violently and pressed his handkerchief to his nose. "If you have any advice to give, Alaric," he said bluntly, "oblige us by giving it."

The drab-complexioned, light-haired Alaric responded:

"In my poor opinion—which may be crassly wrong—too much stress has been laid on the necessity of Susanna's marrying." At this point the contrast between the amiable vacuity of Alaric's face and the Mephistophelean intelligence of his monocled eye was so extraordinary as to hold his listeners spellbound in their chairs. "I think we may take it that the principal feature of the child's character is—call it determination amounting to obstinacy—"

"Crass obstinacy!" burst from the earl.
"Pigheadedness!" interjected the dowager.

"I think I remember hearing that in her nursery days the sure way to make her take a dose of harmless necessary medicine," pursued Alaric, his left eye fixed on the door, "was to prepare the potion, pill or what not, sweeten and then carefully conceal it from her. Were she my daughter, which heaven for—which heaven has not granted—I should make her take a husband in the same way."

"An utterance possibly inspired, but as obscure as the generality. I fear, my dear Alaric ——" Lord Beaumaris began. The dowager cut him short.

"Say, Gus, can't you let him finish? That's what I call real mean—to switch a man off just when he's beginning to grip the track."

"Mother, I bow to you," Lord Beaumaris said, purpling

with indignation. "Pray continue, Alaric!"
"Hum along, Alaric," encouraged the dowager.

Alaric, his countenance as the countenance of a little child, his right eye beaming with mildness and his left eye like the eye of an intelligent fiend, went on:

"Susanna has never yet seen the Duke of Halcyon, her cousin and the husband for whom you destine her. When she does see him I think I may be pardoned for saying ——"

"She'll raise Cain!" agreed Lady Beaumaris. "Girls think such heaps of good looks; I was like that myself before I married your father, Gus."

"My dear mother, granted that Halcyon's gifts, both physical and mental, are not"—the earl coughed—"not of the kind best calculated to impress and win a romantic, willful girl, he is, to speak plainly ——"

"A hideous little troglodyte!" nodded the dowager over her interminable Shetland-wool knitting. "Odd, considering that his mother, when Lady Flora MacCodrum, was, with the sole exception of myself, the handsomest young woman presented in the spring of 1845."

"Mother," said Lord Beaumaris, "delightful as your reminiscences invariably are, Alaric is waiting to resume."

"I had merely intended to suggest," said Alaric, twirling his eyeglass by its black ribbon and turning his demure, drab-colored countenance and balefully glittering left eye on the earl and the dowager in turn, "that the Duke of Halcyon, like the rhubarb of Susanna's infancy, should be rendered tolerable, agreeable and even desirable to our dear girl's palate by being forbidden and withheld. Ask him here in September for the partridge shooting—as I under-stand you think of doing—but let him appear not in his own character as a young English peer of immense wealth and irreproachable reputation, but as one of those literary and artistic ineligibles who are encouraged by society to take every liberty with it short of marrying its cousins, sisters or daughters. Let him encourage his hair to grow, and wear a velvet coat, a flamboyant necktie and silk stockings with tweed knickerbockers. Let him pay attention to Susanna-as marked as he choose.

"And do you, for your part"—he fixed Lord Beaumaris with his glearning left eye—"discourage those attentions and lose no opportunity of impressing on your daughter that she is to discourage them too. Given this tempting

opportunity of manifesting her independent spirit, you will find—or I know nothing of Susanna—that it will be, Pull baker, pull devil! And I know which will pull the hardest!"

Lord Beaumaris rose to his feet in superb indignation. He struck the attitude in which he had posed for his portrait by Millais, which hung at the upper end of the library, representing him in the act of delivering his maiden speech in Parliament, an address advocating the introduction of foot warmers into the upper house, and opened on Alaric.

"Your proposal—I do not hesitate to say it—is audacious. You deliberately expect that I—I, Gustavus Templebar Bloundle-Abbott Bloundle, ninth Earl of Beaumaris and head of this ancient family—should stoop to carry out a deception, and on my only child! That I should take advantage of her willful youth, her undisciplined temper, to—"

"To bring about a match that will set every mother's mouth watering and secure your daughter's son a dukedom and a hundred and thirty thousand a year ——"

"That's so; and I guess you'll do it, Gus!" said Lady Beaumaris. "You're a representative English peer, it's true; but on my side you've Yankee blood in you, and the grandson of Elijah K. Van Powler isn't going to back out of a little bluff that's going to pay. No, sir!" The dowager ran her knitting needles through her wool ball and rolled up her work briskly. "He'll do it, Alaric," she said.

"Mother!" exclaimed the earl in desperation. "You were my father's choice, and heaven forbid that I should fail in respect toward a lady he honored with his name; but when you suggest that, to bring about this most desirable union, I should wallow metaphorically in dirt —."

"It's pay dirt, Gus," said the dowager; "a hundred and thirty thousand a year, my boy!"

"Mother!" cried Lord Beaumaris. "If I brought myself to grovel in such infamy do you suppose for one moment that Halcvon ——"

"That Halcyon would tumble to the plot? There are no flies on Halcyon," said the dowager; "and you bet he'll worry through—velvet coat, orange necktie, forehead curls and all!"

"Then do I understand," said Lord Beaumaris helplessly, "that I am to ask him to accept my hospitality in a character that is not his own and appear at my table in disguise? The idea is inexpressibly loathsome and I cannot imagine in what character he could possibly appear."

"As a painter of the fashionable freeco brand engaged, if you like, to decorate your new ballroom!" put in Alaric in his level, expressionless tones.

"But he can't paint!" said the dowager. "That's where we're going to buckle up and collapse. He can't paint worth a cent! That takes brains, and Halcyon isn't overstocked with 'em, I must allow."

"Get a man who has the brain and the ability to do the work," said the imperturbable Alaric.

"Deception on deception!" groaned Lord Beaumaris.

"I have the very fellow in my eye," pursued Alaric; "remarkably clever A. R. A. and a kinsman of your own. Perhaps you have forgotten him," he continued as Lord Beaumaris stiffened with polite inquiry and the dowager elevated her handsome and still jetty eyebrows into interrogative arches. "Perhaps-it's equally likely-you never heard of him; but at least you remember his mother, Janetta Bloundle?"

"She married a person professionally interested in the restoration of perpendicular Gothic churches," said Lord Beaumaris; "and, though I cannot now recall his name, I remember hearing of his death and forwarding a brief

condolatory postcard to his widow."

"Who joined him—wherever he is—six months ago."
"Dear me!" said Lord Beaumaris. "This is quite too regrettable. However, it is too late in the day to send another postcard addressed to the surviving members of the family,"

There is only a son," said Alaric, "and he is the rising artist to whom I suggest that you offer a commission. He is strong in fresco and has just executed a series of wall cartoons for the new Naval and Military Idiot Asylum which will carry his name down to the remotest posterity."

"Might I—ah!—ask his name?" said Lord Beaumaris.
"Wopse," responded Alaric.

Lord Beaumaris shuddered.

"And the Christian prefix?" He closed his eyes in readiness for the coming shock.

"Halcyon."

Lord Beaumaris opened his eyes and the dowager uttered a slight snort of astonishment.

"A relationship existing on the mother's side between young Wopse and the ducal house of Halcyon," said Alaric, twirling his eyeglass faster, "it is not surprising that the poor lady should have improved on the homespun Anglo-Saxonism of Wopse by the best means in her power. At any rate the young fellow is well-looking and well-bred

enough to carry both names in a creditable fashion."
"You've taken considerable time about making it," said Lady Beaumaris, "but I'm bound to say your suggestion ain't worth shucks! Given the real artistic and Bohemian article to nibble at, is a girl like Susanna likely to swallow the imitation article? I guess not!"

"I concur entirely with my mother, Alaric," said Lord Beaumaris. "You propose, in the person of this young man, to introduce an element of danger into our limited September house party.

You could let this Mr. Wopse live in the garden chalet and commission the keeper's wife to attend to him," said the dowager; "but, even then, how are you to make sure

"That Susanna does not associate with him? There is a simple method of divesting the young man of all attraction for a young creature of our dear girl's temperament," said Alaric; "but for several reasons I shrink from recom-

mending its selection."
"Pray mention it," said Lord Beaumaris uneasily.
"Let's hear it!" said Lady Beaumaris.

"You have only," said Alaric with great distinctness, "to call this young fellow by his Christian name; to let him take Lady Beaumaris in to dinner; to put him up in your best room—the Indian chintz suite; and generally to foster the idea -

"That he is the Duke of Halcyon!" cried the dowager. "My stars! What a Palais Royal farce to be played under

this respectable old roof!"

"You suggest a double—a doubly infamous and objectionable deception! Not a word more! . hear it!" Lord Beaumaris rapped decidedly on the table, rose in agitation and strode on creaking patent leathers to the door. "The question is closed forever," he said, turning on the threshold. "Let no one refer to it again in my-

The door, which had occasionally creaked throughout this discussion, smartly opened from without and, acting on the earl's offended person as a battering-ram, caused him to run forward, tripping over the edge of the worn but still splendid Turkey carpet.

Lord Beaumaris saved himself by clinging to the high back of an ancestral chair, on the seat of which he subsided as the tall young figure of his daughter appeared on the threshold, her Tam o' Shanter cap, her long yellow locks and her red golfing jacket shining with moisture, her fresh cheeks red with the cold kisses of the March winds,

"It began to snow like Happy Jack," said Susanna, pulling off her rough beaver gauntlet gloves; "so I came home. Well, have you all done plotting? You look like conspirators-all-with the exception of Alaric."

This was true, for though the earl, his mother, and three other members of the family council whom we have not found it necessary to describe, wore an air of somewhat guilty perturbation, the drab-colored, mild countenance of Alaric, its diabolical left eye now blandly shuttered with its tinted eyeglass, alone appeared guiltless and unmoved.

"We've been discussing the September house party," exclaimed this Catesby as Susanna sat on the elbow of his chair and affectionately rumpled his sparse, light-colored

"And husbands for me!" said Susanna, half throttling

Alaric with her strong young arm.
"Susanna!" cried her father. "I am surprised! I say

no more than that I am surprised!"

"And I say," retorted Susanna, in clear, defiant, ringing accents, as she swayed herself to and fro on her narrow perch, "that it is beastly to be expected to marry just because money has got to be brought into the family. 00 course I shall marry one day-I don't want to study law or be a hospital nurse like that idiotic Laura Penglebury; but I don't want to be a married woman until I'm tired of being a girl. I want to have lots of fun and do lots of things, and see lots of people, and make my mind up for my own self. And

Lord Beaumaris, who had long been fermenting, frother

"When you form an alliance, my child, you will form i with my sanction and my approval; and the husband you honor with your hand will be a person selected and approve of by me. By me! I will choose for you -

'And suppose I choose for myself afterward!" crie-Susanna, blue fire flashing from her defiant eyes.

"Every woman is at heart—ahem!" muttered Alarie; Lord Beaumaris strove with incipient apoplexy.

Susanna continued with a whimper in her voice: "The young men you and grandmother point out to n as nice and eligible, and all that, are simply awful! The have no chins, or too much; and no teeth, or too man; and they don't talk at all, or they gabble all the time abou nothing. They never read; they don't care for art poetry-they aren't interested in anything but bridge at racing; and if you told them that Beethoven compos The Honeysuckle and the Bee, or that Chopin wrote Wh I Marry Amelia, they'd believe you. They like marri women better than girls, and people who dance at theate better than the married women

### THE SPRING SONG

NE city block, and a social chasm deeper than the city block is long, separate the shiny serge of Sixth Avenue from the shiny silk of Fifth Avenue. The tropic between the Cancer of Sixth Avenue and the Capricorn of Fifth is an unimaginary line drawn with indelible pencil by trusts and tailors, classes and masses, landlords and lords of land.

Such a line drawn through a marble-façaded, Louis-Quinze, thousand-dollars-a-month establishment on Fifth Avenue would enter the back door of a thirty-three-dollars-thirty-three-and-one-thirdcents-a-month shop on Sixth Avenue and bisect the lowest of the three gilt balls suspended above the

A mauve-colored art dealer's shop, where thirty canvas inches of Corot landscape rivaled in price thirty golden feet of Fifth Avenue acreage, rubbed shoulderblades and ashcans with Madam Epstein's Sixth Avenue Emporium - Slightly Used Gowns. The rear of the De-Luxe Hotel, eight dollars a day and up, backed so imminently on the rear of the Hoffheimer Delicatessen Shop that Mrs. Hoffheimer's three-for-five dill pickles and three-for-fifteen herrings, exchanged raciness with the quintessence of four-dollars-a-portion diamondback terrapin and attar of redheaded duckling.

Thus the city's million dramas are crowded into a million crowded theaters. The society comedy drinks tea round the corner from the tenement tragedy of a child being born with no name and a crooked back; a flat-breasted Hedda Gabler, with eyes as meaningless as glass, throws herself before the black rush of a Subway train; and within that same train a beardless juvenile slips his hand into the muff of the blonde ingenue beside him, and at the meeting of fingertips their blood dances to a whole orchestra of emotions.

In the third-floor, nine-room de-luxe suite of the De-Luxe Hotel, Madame Lina Feraldini, famous diva, abroad on her sixth farew juggled coloratura trills that were as fun

"She Asked That I Should Jing Some Tenier Up and Down, Like I Did This Morning Over the Dithes"

### By Fannie Hurs

iridescent bubbles blown upward from a soap pi In the delicatessen shop, across the figurative chair Mrs. Hoffheimer plunged a large workaday : elbow deep into a barrel of brine and brou up three warty pickles, whitish with rime dripping wet.
"Ray," she cried, holding them at arm's len

and shaking their brine to the sawdust-covered fi "did you tell papa when Heyman comes in to he should order a barrel of large dills, and no salty?"
"Yes, mamma."

Mrs. Hoffheimer built a neat pickle pyramid wooden dish, wrapped it in a double thickness brown paper, and tossed the package into a wi delivery basket.

"You finish for me the Spritzes' order, Ray: when Abie comes back from his morning delivhave him take it over to 'em."

"Where's the slip?"

"Here-ten cents butter; an egg; half a loat bread; two frankfurters, and three cents milk. such a order she don't need to wear no pony cost, sin't it? I always say the Americans pu on their backs and nothing in their icebs Ponyskin coats she has to have yet, and egg buys by the yolk."

Yes, mamma."

Miss Ray Hoffheimer slid from her high s legged stool in the cashier's cage, plunged on into the patch pocket of her gray coat aweater with the other reached into a sausage-and-ch lined glass case,

Gentle reader, if you have a semblance of gentility so insistently and unanimously gra you by the society of scribes, raise not your fa ious eyebrows at Miss Ray, busying her appeti rosy-tipped fingers with a necklace of frankful nor wrinkle your esthetic nose at the whil bologna or Camembert. Remember that a blu once grew between prison bricks; that the ge orchards of Pomona were sprung from dung and that Love—fat, naked little fellow—is as rosy in a damp Is as he is in a blue-and-gold, period drawing room.

Beids, gentle reader, Mrs. Hoffheimer's bologna was a rak and spicy triumph of the abattoir; her Camembert sequisitely runny as dough in the kneading-it overfood of its own creaminess and immediately congealed gain of that same sheer creaminess.

And as the bluebell bloomed between bricks and the disers blossomed on the dunghills, so Ray Hoffheimer, vice hair was as black as the streak of a raven's wing gainst a white sky, and whose bosom was as high and grang and snowy as Hebe's, flowered in the shadow of the Soth Avenue Elevated trains, trilled little songs that rose here the jangle of her cash register, and watched the tenutions of eggs, the strength and weakness of butter, with the same anxious eyes that a juggler follows the rise and fall of his daggers.

Polinis telephoned for a can of corn and half a pound

" tolled ham, mamma. Shall we take a chance?"
"Chance! You tell Abie he don't let the order out all is hand till in it he gets the money. That's the and of a chance we take with them Polinis! Four naths we were giving 'em board and all we thought was giving 'em was credit. Not till he gets the mory in his hand, and his mitt on over it, should he leave the order."

Miss Hoffheimer trilled in her throat like a bird that feels the first kiss of spring in the air, placed an gravefully within a bag and twisted the paper neck. Tra-la! Tra-la-la-la-la-la! Tra-la-la-la!

Trada-la-la-la!" Sh-h-h-h! A customer can come in any minute! Bit I told you this ain't no birdstore? You renid me of old man Klopsky-he used to make ink Louis stand behind the door and make a noise lie a canary when a customer came in for a good inger. Thank kimmel, for boiled tongue we don't sed no ventril'quist in the family!"

"Aw, mamma, am I hurting anybody? Miss uson says if I sing low like that in my throat it seps the muscles easy."

"Always Miss Anson! For seventy-five cents a see with her you sing worse now as before. Papa build know out of what I save I give you one lesson attweek. And for what? Before you had lessons would sing a tune; now you sing like I play the and down with one finger."

"Aw.mamma, ain't I told you often enough when a study right you got to sing scales? Don't you # Feraldini, the greatest soprano in the world, an 'em over in the De-Luxe Hotel every mornt! Didn't I have to pay a dollar to stand up at tSaturday matinée and hear her sing Marguerite! she's got to sing scales, ain't I?"

"Papa should know that for what you can hear tothing from her room over in the hotel you I a dollar yet. Nothing but spend money that ld has on her mind!"

"To hear her sing I would pay all I —

What!" 'Nothin' !"

An Hoffheimer drew the upper half of herself from the pungent black mouth of a barrel and ped her wet hands again.

Papa should order from Heyman a barrel of fiscurs too. Such pickles as we get from that we never had before! Where papa stays so this morning, I wonder? He only went down etrad's fire sale on canned goods.

Papa ain't so fast to buy; you know how he ars and dickers."

Not so fast to buy as you to spend! All I say at he should know that seventy-five-cents singlessons you have to have yet, and the other #.when Heyman asked you to sing, you couldn't use your teacher don't want no more tunes!"

So mad I was I could have busted! My good # 1 spend for no more tunes; and me and Hor ten years don't feel like we could spend the money age fifty-six for a trip to the country.

lw. mamma, ain't I begged you to spend it, and -Plat we don't want the country don't make it no dif-II; but Heyman asks her to sing, and -

ay, mamma, when I sing like Feraldini for dollars each time, you'll be sorry -

There's the telephone, Ray. If it's Yetta O'Byrne tell this's late with the deliveries today; but I'll send over berwurst and Shamrock herrings just so soon as he tack. For a mixup marriage like hers I wouldn't want the marketing."

nde trickled in and out; thin spring sunshine, wan as Walid lady's smile and as timid, ventured into the show low, brightened the platters of tender pink ham, and wooden dishes of yellow potato salad, crowned with Besof trembling calves'-foot jelly. With each customer \*putleinrushes of spring air, carrying hints of rising sap earthy whiffs of far-off meadowland, cracked with the pushing life beneath. Up and down Sixth Avenue, second and third and fourth story windows were flung to their height, with winter-grimed lace curtains blowing languidly inward, and blankets and blue-and-white striped pillows and quilts of a thousand colors draped across the sills.

"Mamma, today we can leave the door open. Where's that carpet-covered brick from last spring?'

"There, under the counter."

"Gee! Just smell the air, mamma! How happy and full of sunshine it makes you feel inside! Like your heart was blooming inside of you, like them crocuses over in Schmid's window! Ain't it dandy and warm! Look at the kids spinning their tops already! Look at Selma Levis hanging out of her window! Tra-la-la-la-la-la-la-la! Tra-la-la-la-la!

"Pickled onions went good this time last March. Papa should order some from Heyman; we-

"Sh-h-h-h! Listen, mamma! Listen! Feraldini's singing-singing the Spring Song that I was just feeling inside of me. Listen! Oh, mamma, listen!"

"Listen, Mamma! She's Singing it Over—the Spring Jong—Listen!"

"Grand! And for nothing we can hear what they pay five dollars a seat for in the opera house!"

"Always she limbers up for real opera practice with the

Spring Song, Miss Anson says."

"Hand me them knifes, Ray. Ain't papa told you often to leave them laying next to the name: Always keep the knifes next to the tongues and hams; it saves time. For six years, since you was old enough to help down in the store, we been telling you that!"

"Sh-h-h! Mamma, sh-h-h-h!"

"Don't sh-h-h me neither! In my own store I talk when I want. I'll be glad when the opera business is over! Seventy-five cents a lesson is what listening to her put in your head. Himmel! How high she goes! But if I say so myself, Ray, your voice is just so good. Ach, listen how high and soft she goes, till it gets far off like a train whistle!"

"Oh! If I-if I could sing like that! If I could!" Like the rapid rise of the most joyous lark that sings; like the thrill of breezes sweeping an Eolian harp; like the first gurgling of ice-bound streams to the kiss of spring-so mounted the voice, rippling as silk in a breeze, firm as a rock in a gale.

"At my last lesson Miss Anson said my voice-"There's papa now! And look, will you? From the other way comes Heyman!"

"Sure enough!"

"What for are you blushing, Ray! You bad girl, you! For papa I know you don't blush! Tell mamma
"Aw, mamma!"

"Fix your hair! Pull it down over your ears, curlylike. apa says it always pays to look prosperous in the store. What you hiding for? Don't go back there! Heyman won't est you!"

"Aw, mamma!"

"If you got to be ate I wish it was a young man like Sol Heyman should do it. Stay out here in front and make yourself sociable-that singing will keep. Ask him what he's got in pickled spring onions."

"In a minute, mamma. Can't I go back and hear how she takes them arpeggios? Miss Anson

"Ach, what a stick she is! Hello, papa! We thought you was canning the goods yourself you was gone so long! Wie gehts, Heyman; wie gehts? Make yourself to home on that kraut barrel

"How-do-do, Mrs. Hoffheimer? The old man's got spring fever, I guess-not?'

Mr. Heyman showed all his teeth, rubbed his firm hands together, and glanced expectantly about him.

"You're right, Heyman! Well, papa, was them tomatoes what they said they was? I forgot to tell you not to buy cans with the labels burnt off. Last year, when Sopinsky's burnt out we took a chance and they all turned out to be navy beans, when just so good they could have been asparagus.

"Well, mamma, wait! Don't get excited!" Mr. Hoffheimer slid out of his shiny lined coat into a shiny unlined one and stroked his thin chin whiskers with fingers that were gnarled at the knuckles; his burnt-out eyes were screwed small with the squint of satisfaction. "I bought such bargains, mamma, you won't believe!-two hundred cans of mixed soups, mamma, from chicken-gumbo to oxtail, so cheap we can afford to have a fire sale ourselves -

"Papa!"

"Why not? They all do it! Cheaper as you can sell'em in a hundred years, Heyman.'

"Ach, Mr. Hoffheimer, such goods my firm won't

even carry!"

"What I say I mean! You don't do no business with me today, you scalawag! On that pickled goods order I gave you last week I paid like a drug store. Them same pickled peppers I paid you three cents for I seen down there for two, so help me, mamma, if I didn't!"

Mr. Heyman swung himself atop a barrel and pushed his derby hat back off his warm brow. Then he flashed his teeth again—firm, milk-white teeth toward Mrs. Hoffheimer, recumbent over the sausage case, and stroked his shaved-to-the-blood jowl.

"Listen to him, Mrs. Hoffheimer! He compares my goods with a shyster house down on Delancey Street-a house that would carry second quality if they could get first just as cheap! He compares my asparagus with the slatepencils he gets down there!"

"For your fat asparagus I pay fat prices; I -"I ask you, Mrs. Hoffheimer, me and your husband don't do business together so well as you and me and Miss Ray-so excited he gets! But I ask you, Mrs. Hoffheimer,

right here before him, have you ever had a complaint on a can of my goods or a keg of kraut you got off my firm? Has a pickled herring ever come back on you from a customer? I ask you!"

Mrs. Hoffheimer planted her hands on her wide, uncorseted hips in the termagant pose of a Hecate; but her smile, snag-toothed and slightly sunk, deepened into the wrinkled chirography of kindliness,

"For what fancy prices we pay, Heyman, papa thinks we should get good goods, ain't it, papa! My husband talks a lot, Heyman; but he don't mean lots what he says,

Mr. Hoffheimer slid on a pair of veteran spectacles, which straddled his nose halfway down, and waggled his

"Look right here in this showcase once at them fancypriced imported bockwurst you sold us! Did I want 'em? No! But between you and mamma and Rachel I bought 'em—and look how we got stuck on 'em!'

'Aw, Mr. Hoffheimer, give 'em a chance and you'll sell 'em! That's as fine a link sausage as there's on the market, I

"Didn't I tell you we ain't got the fancy trade with the fancy teeth for such stuff? Nineteen cents a pound, and

most of it gold paper, for stuff we can't sell for nine! Not even on my own table can we get rid of it."

Mr. Hoffheimer threw out his hands palm upward, wagged his bald head from side to side, and strangled over his denouncements.

"Next time what you and Ray and mamma got to say makes no never mind with me-you scalawag, you!-with your holdup prices! Just like you play pinocle you sell goods, you scalawag, you!"

Mr. Heyman swung his head backward, laughed, whacked delightedly at his leg, and reached for his hip pocket and order book.

"Listen to him, Mrs. Hoffhelmer! That a man with such a good nature should growl like a bear!"

"Always he was like that, Heyman!"

"Already I got him down for a keg of pickled spring tripe and a barrel of large dills. I ain't foolin', Hoffheimer; for spring goods you can't beat 'em."

"How much a hundred?"

"Aw, what's the difference, Mr. Hoffheimer? You know I do the right thing by you. That's right, Mrs. Hoffheimer; open the door wider and let in the springtime. Smell a little of that sunshine and see if you ain't got to begin thinking of spring stock-eh, Mrs. Hoffheimer?"
"You're right!"

"Such pickled tomatoes as we're delivering this week you never tasted! Twice already Shapiro across the street renewed his order—here, look in my book! I can show it to you. Smell that sunshine! Look at them kids spinning tops right at your door! Soon they'll be comin' in for penny sweet pickles on a slatepencil, and you won't have 'em.

"Ach, such a boy! But he's right, papa. Ray said this

morning it was time -

"Miss Ray-where-where is Miss Ray this morning?

"Ray! Rachel! Somebody out here wants you. She knows better as her papa and me what's in stock. Back there she stands listening to the singing-like she couldn't sing just as good herself! Rach-el! Come out here! What was it you was telling me about green onions this morning?"

"Comin', mamma!" Mr. Hoffheimer slouched toward the stock shelves, his feet scraping painfully along the floor, as though rheumatic muscles would not lift them, and his back curved to that same rheumatic hunch.

"Two dozen them apex brand string-beans we need, Heyman, but not a cent over a dollar-ten I pay for them!"

A dollar-twenty-five, Mr. Hoffheimer, and then you got the cheapest string-bean in the state of New York." 'A dollar-ten! So help me, not a cent over!'

"All right, then, for you I do it; but I pay the difference out of my own pocket. My firm should know I make you such prices! They should know it!"

"I should worry! Three dozen Melba freestone peaches, small cans, but not a cent, so help me, over a dollar-ninety. Last time you skinned me enough off 'em. Down by Conrad's that same peach I seen for

"Aw now, Mr. Hoffheimer, you're a business man and so am I; and if you can show me a freestone like the Melba for the money, then I give you -

"Ach, you two with your arguments! Wait, I call Ray. Where that girl stays I don't know! Rach-el!

Mrs. Hoffheimer bustled rearward into the dull shadows of kegs and stacked boxes. In the frame of the open window her daughter leaned out to the soft blush of spring, her hands clasped until the nails sprang white, and her eyes raised like a worshiping virgin to the third-floor suite of the De-Luxe Hotel.

"Listen, mamma! She's singing it over-the Spring Song-listen! The paper says it's her favorite encore. Listen, mamma!"

"Ray! Ain't you got no manners? You-such a mortification! Twice out there he asked for you, till I don't know what to say no more."

"Tell him I -

"I wish I had never heard the name singing—it's been our ruination! A lesson a week, and two she wanted at first-one not enough! Where such a child gets such

"Sh-h-h, mamma!"

"Go out front, I say once more, Ray. I ask you again. How that child minds! Twice he asked for you. Fix your hair over your ears. Ach, that a girl should worry her mother like that!"

"I'm going, ain't I! Honest, mamma, you fuss and fuss!" Miss Hoffheimer emerged from the gloomy rear like a charming Saskia walking out of the brown air of a Rembrandt; the pools of her eyes were deep and shining, and her black hair curled to her neck like tendrils overgrowing a bit of marble column.

"Hello, papa! Hello, Heyman!"

"Ah, Miss Ray, how are you?"

"Fine and dandy. How's yourself? How'd you got over last night, Heyman? You should 'a' seen, manning. such a picture show he took me to! Staler than the note crackers he sells us!"

"Not a word about last night did she tell me a Heyman. Secrets you two must have togethe

"Such a bum show you don't need to hear about, mamma!" Mr. Heyman slid off the barrel; and as the sun opens the fans of a palm tree so his geniality expanded in the warmth of her presence. Red ran high in his face, and his collar seemed suddenly to tighten, as though bent on strangulation. He writhed and stretched his chin above it.

"Miss Ray! Honest, the minute she sets eyes on me she begins to kid me along! Honest, Mrs. Hoffheimer, for how she treats me I ought to charge you three dollars a dozen for Melbas. I ask you, could I help it the show was no good? I ask you, too, Mr. Hoffheimer."

"She's a good one, not, Heyman! How much you think I take for her? Not ten thousand dollars if you pay me cash! Ain't it, mamma?"

"Ach, Hoffheimer, how you talk! A little baby he thinks she is yet, Heyman. Better fathers as papa even give up their daughters when Mr. Right comes along-ain't it, Heyman?"

"I should say so!"

Like Spinoza, who was cut off from his people because he could see nothing but God everywhere, Mr. Hoffheimer retreated within himself.

"Ach," he said, "wimmin, the whole lot of 'em, make me sick!"

Mr. Heyman inclined toward Ray, with eyes that leaped and danced as forest fires leap and dance in the wind. "I—I dare you to go to another show with me tonight,

Miss Ray! I show you I can pick a good one. "On Saturday nights I stay in the store and help,

Heyman; and then I go upstairs and practice."
"Don't you believe it, Heyman! Me and papa get along better in the store without her. Overweight she gives like it cost nothin'. Saturday night business ain't so big

"See, Miss Ray, what your mother says?"

"You go, Ray, I say again. At night you shouldn't practice neither. Becky Kopf, next door in the apartments, says she can hear you like day when the windows are open. Do you want that you should get the neighbors down on you and get Becky's tongue going by waking up her baby? You go, Ray. Becky Kopf I'd rather have for a friend than an enemy.

"That's right! Next door from you all the Kopfs live, don't they? Last week Moe Kopf took me home with him to supper. Nice little place they got there, and such a kid! Honest, the cutest little shaver, with big ears like his pop!"

"Cute ain't no name for him! And crazy for our Ray! Even when he first sees her come in the room he begins

"Nice little flat they got there too, Mrs. Hoffheimer. How they remodeled that whole building is wonderful; even the plumber downstairs has a new front."

"Yes; them new flats are grand. There's an empty one the third floor, right over Becky's-so cheap too!

Twenty-two dollars! I said to paps if we didn't dread a to move we'd take it ourselves; but it ain't so handy a right over the store for papa-him, with his rheumatism having to run in and out in winter.

"Twenty-two dollars! I should say cheap! If I could find some girl that would have me I'd take it myself."

"Ach, Heyman, a grand young man like you don't nee to worry. You can have your pick from the best. For young married couple it would be grand-steam heat an a washtub built right in the kitchen. Ray, you and Hey man stay here and watch store for a minute; I want pag should go down cellar with me and see what we need i pickled goods."

"I go for you, mamma."

"So you should get your hands all mixed with be rings and smoked tongues! That don't go with no sevent five-cents singing lessons. Your papa should know i Come, papa, down cellar when you're finished with the

The sudden silence of restraint fell over the little sho Without, the noon high tide of Sixth Avenue surged ps like a spring torrent-men, with overcoats flung backwa and dropping from their shoulders, mopped at their h bands; the brilliant plumage and foliage of new millines truest harbingers of spring, flashed like whole flocks flamingoes past the window. A school child begged a cross from the florist across the street and pinned it on I dirty apron; a draydriver yawned, shed his coat and : on it, and a traffic policeman swore at him and smil-Park benches, the tops of omnibuses and perambulat bloomed in an hour.

Mr. Heyman drew his initials on the sawdust-sprink

floor with the toe of his shoe.

"Hot, ain't it?" "Yeh; it is, Heyman."

Silence.

"Heyman, did mamma order some of them pickled spr

"Yeh."

Silence.

"Look, Heyman, at them kids, will you? Ain't wonder more of 'em ain't run over spinning tops in street?'

"Gee, this sweater's hot!"

"Don't-don't take it off, Miss Ray. It-it looks gr

on you."
"I should die of heat so I can look grand!" She drag it back off her shoulders and regarded him from the cor

of sparkling eyes. "Mad cat!" "Aw, Miss Ray, quit your teasin' me! After the you treated me last night I didn't sleep a wink-ho

Miss Ray, not a wink!' "Like I did anything to you!"

"If you'd only let me talk and listened to me in

"I-I ain't a good listener."

He advanced toward her and his order book fell to floor face downward on its crumpled pages. She be defensively against the stock shelves, like Barbara ho her tower.

"You mustn't!"

"Miss Ray-Ray!"

"Not here-not here! This ain't the place!" "Ray, I can't keep it in how much I love you! 1 won't let me tell you I'll tell you anyhow-I love

Right here I say it in your face-I love you, and know it!" "I—I never said I didn't, Heyman; but I—I ain't !

ing of getting married, Heyman. My teacher said. my voice, it would be a madness for me. If I tree voice right and study right, she says—she says t nothing I can't do with it. I want to learn to sing, He how much I can't begin to tell you!

"Ray, with me you can sing too, why not? You have it easy enough. Ain't I got a good position, Don't my firm raise me every two years? Don't I

"All night, Heyman, I lay in bed awake, and I myself, I mustn't! I mustn't! I mustn't! All night I

"Ray, when you look at me like that I -"Sh-h-h-h1"

"I'm in love with you, little canary bird! I just

think of nothing else." "I-I mustn't!" "Is it like me to forget things like putting an order in my book, Ray? Yesterday twice I did it for thin

you. My firm should know it! I just can't think of "I mustn't listen to you, Heyman. There comes ma Sh-h-h! Don't forget, Heyman, the small-size | onions, the kind we-

"Rachel, I can see it in your eyes you don't-don me. I-ach, Mrs. Hoffheimer, come here; I ain't | for you.'

Heyman! Don't! Don't-not now-not-no "Mrs. Hoffheimer, I ain't ashamed for you. I'm Mrs. Hoffheimer. I know I ain't got the right to girl, but I'm in love with your Ray; and-and what's the use trying to say it all? I guess you ain't ne let me neither, huh? Who am I that such a girl like far should want me? Who am I?

Mr. Heyman leaned against the barrel, his words bitter s tany on his lips. Tiny globules of perspiration sprang est on his brow like a bandeau of beads.

Mrs. Hoffheimer crossed her hands at her waistline and regarded the young couple with a smile rayed over her face to the deepening creases, and her head nodding from left to right like a toy in a confectioner's window.

So this is what happens when me and papa ain't looks -he comes and steals our baby! Ach, you bad biy, you!"

Mamma, I

Rach-el! Ach, my little baby that's grown up!"

"Mamma, please

"[-]'m so happy I don't know what to say to you, didren. Such happiness she brings to us! Kiss me, ribiren, both of you!"

lfiss Hoffheimer crept into her mother's embrace, with ges as brilliant as barbaric jewels, and her tremulous indecision cloyed her speech.

"Imistn't, mamma. It's like I told Heyman-all night bem saying to myself I mustn't!"

To myself I said last night, something that child has get up her sleeve when she comes home so excited-like. in my baby, them six new blue-and-white dish towels I sid to your trousseau."

Igot a voice for opera, mamma. Miss Anson and everybody that's heard it says the same thing. I feel it inside m. nimma. In the middle of the night I wake up, and it's something soprano, here inside my throat, is beggin' to sing, beggin' to sing as high as the sky, as high as Feddini! And now Heyman comes; and I can't help it that that I-I like him; but I mustn't, I mustn't!"

A rish of tears flowed over her words; but to Mr. Hyman was suddenly flashed the message of hope, just as the news of the return of Agamemnon was flashed to legs. The stock shelves, the battalions of ketchup bottles, my labeled cans and jars of transparent jellies, and Mrs. Ediciner's wet and happy face, wavered at him for a most. And out of the chaos his courage came teetering levard; and he crossed over to the sour-pickle barrel, tok the unresisting little figure from her mother's arms, tied her head backward and kissed her solemnly and mountally. Sobs trembled up through her, and the ready bus would flow.

"I mustn't!"

"My little canary !"

With my voice and all, Heyman, it ain't right I-I todá love you so!

'Children! Children! Such a happiness! Kiss me gait-both of you."

My new mamma!"

"Papa! Papa, come out here; them pickles don't need sh brine today. We got excitement in the family for

w: Come out. I take hit customer. Stay here, hidren, and tell papa-in misute I come back."

Mr. Hoffheimer hobbled rvari, patting his moist and one against the other. "Heyman, for seventy-

weents a hundred I order mehundred dills and two indred sweets; but, so help All pay one cent more

"Papa, wait: Heyman's # something to tell youask you."

"It's about me and your sy. Mr. Hoffheimer. - - we want to -Inmediate caution tied into Mr. Hoffheim-The: he wagged a bent d sly forefinger.

"No, you don't! No, you a't! Last week the two put together got me to in an order of imported thought that I can't get of even on my own table. you don't! You two shraps, you! We ain't thing to Sixth Avenue imamico's,"

Page -Just listen a minute, Mr. finer. What I want my a that me and your uther Ray

'No. you don't! I know if what,"

We-want to get married, Hoffbeimer-married!" Huh?"

"Married, papa, is what Heyman said. Don't you understand we want to be engaged—engaged to be married?"

Her voice rose above the orchestral murmur of the streets, plangent as surging waves beating against his slow comprehension; his toil-stooped shoulders slumped and his slightly palsied hand fumbled at one coat lapel.

"Not -

"Yes, papa, yes!"

"Not our little Rachel-sha! She ain't nothing but a baby yet! Run along, Heyman, you scalawag, you, and tend to business. For children's nonsense I got no time. For three hundred dills, Heyman, I pay you not a cent

"You don't understand, papa. Listen once to Heyman!" "Me and Ray ain't fooling, Mr. Hoffheimer. I know I ain't good enough for her; but I love her, Mr. Hoffheimer; and you know, with my position and a raise every two years, I can take care of her right. Rachel ain't no baby any more, Mr. Hoffheimer, she's twenty; and when a girl's twenty

Twenty! Ach, only yesterday she didn't come up to the top of the kraut barrel. Right upstairs over-this store is her little baby chair, and now-now you come and take her away from me and mamma. Now-

"Not take her away, Mr. Hoffheimer, only

"Singin', I thought, was all she cared about. A lesson a week I have to give her; singin' seventy-five cents a week but on the sly, so her mother wouldn't know it. She should know that I humor her on such nonsense! So henpecked I am as that, Heyman, on the sly I have to do things. And you, when you see such, you want to get married too!"

"Yes, Mr. Hoffheimer, I want to get pecked too-ain't it, Ray?"

"Silly!"

"Always she's been her papa's girl, Heyman; and now you come and want to steal her! To anybody but a good honest boy like you, I -

"I know it, Mr. Hoffheimer-papa! I ain't half good enough for her-eh, little canary?"

"Too good, Heyman!"

She was like a tearose swaying in conflicting breezesher one hand in the caress of her lover's, her other seeking the gnarled palm of her father's.

Ach, papa - Heyman, if I did the right thing I'd -On the tidal wave of excitement Mrs. Hoffheimer returned, her thin salt-and-pepper coil of hair lopping

"Ach, such excitement! Feel, Ray, my heart beating on the outside. Have they told you, papa? Grand, ain't it?'

"When he's our son-in-law, mamma, he'll overcharge just like when he ain't."

Laughter.

"Tonight we close the store and upstairs we have a party," said Mrs. Hoffheimer.

"That ain't necessary, neither, mamma. Every day children like ours get engaged."

"Imported bockwurst and beer we have—I ask over the Kopfs and Birdie Levis."

My son-in-law sells me imported bockwurst when, even on my own table -

"Heyman, if you're smart you'll get that flat over Becky Kopf's. Don't let the landlord bluff you-twenty dollars he'll take for it too."

"Yes, mamma."

"Ach, even a hour ago when I talked little did I think our Ray would be the one to have it! Such a march she steals on her parents-not, papa?"

"Such a march!"

"Let me tell you he got from us the best order we ever gave any one that ever came in this store—not, papa?

"You got our baby from us, you scalawag, you, and me and mamma getting old and -

"Ach, he talks like a funeral, ain't it? If we're going to have a funeral I want that we should have a son-in-law to come to it. Next month you get married, and then Aunt Hanna should come and keep store while papa and I take that vacation in the country we've been talking about for

ten years on poor Grandma Hoffheimer's money." Yes, mamma; you should go now. Since I was a child

I been hearin' it.

"Yes; that fifty dollars we got stuck between page fiftysix in poor grandma's Bible we should spend now-not, children? Papa, we go in the country for a vacation when the children get settled."

"For my rheumatism I go, but for my pleasure-no! Where does it come in, vacation I got to have!"

"And now, children, you should go out for a while together-not, papa? The day they get engaged they should take a vacation! Such a day like this, warm like summer, they should both go."

"For my part, yes; but Heyman should first telephone that order for them onions-three calls already we had for them today. From a son-in-law I get better prices, eh, you scalawag, you? Family prices, eh?'

"I-I ought to stay home and practice a while this afternoon, Heyman. Miss Anson says

"The day she gets engaged she wants to sing yet! Gott sei Dank, you'll soon be safe married and with such nonsence out of your head!'

'Mamma, I -

"Go take that customer, papa. I'll take old lady Sonnstein, just coming in; she wants to fuss with me again that her weight ain't right. She should start something with me!"

Left alone, Mr. Heyman and Miss Hoffheimer smiled at each other with the mysterious eyes of lovers, and he lifted her hand gently and placed his own over it.

"Come, little canary, let's me and you get on a car and ride out where there's country, huh? Let's get where the

green smell in the air comes from, my little Rachel-sha!"

"Yes, Heyman." "My little canary!"

She slid out of her sweater coat and into her hat and jacket; the little curly tendrils caught in her collar and he must fish them out tenderly.

There, petsie! Petsie!" "Thanks, Heyman, thanks.'

"Such curls, soft like a baby's!"

Tra-la-la-la!"

"What did you say, petsie?"

"Nothin'."

"'Nothin',' she says, and I seen her pretty lips move! Bashful like a baby she is."

"I-I was only singing, Heyman."

'Singing?"

"Yes, to myself."

"Singing what, my little canary?

"Singing-the Spring Song."

The tyranny of home is as insidious as the fatal hand of marsh fever. It steals out of the lush of dreaming nights and punctures the veins with a hypodermic injection of lassitude. It is as gentle as the threnody of rain falling on flood-stricken roofs; it is as mysterious as a long, low jaguar stretched

(Continued on Page 40)

"Bad Luck! When for Nothing, With No Expenses, She Will Make Out of Me a Great Singer!"

### AN AMERICAN VANDAL

### As Done in London-By Irvin S. Cobb

JOHN

London is essentially a he-town, just as Paris is indubitably a she-town. That untranslatable, unmistakable something which is not to be defined in the plain terms of speech, yet which sets its mark on any long-settled community, has branded them both—the one as being masculine, the other as being feminine. For Paris the lily stands, the conventionalized, feminized lily; London is a lion—a shag-headed, heavy-pawed British lion.

One thinks of Paris as a woman, rather pretty, somewhat regardless of morals and decidedly slovenly of person; craving admiration, but too indolent to earn it by keeping herself presentable; covering up the dirt on a piquant face with rice powder; wearing paste jewels in her earlobes in an effort to distract criticism from the fact that the ears themselves stand in need of soap and water.

London, viewed in retrospect, seems a great, clumsy, slow-moving giant, with hair on his chest and soil under his nails; competent in the larger affairs and careless about the smaller ones; amply satisfied with himself and disdainful of the opinions of outsiders; having all of a man's vices and a good share of his virtues; loving sport for sport's sake and power for its own sake and despising art for art's sake.

You do not have to spend a week or a month or a year in either Paris or London to note these things. The distinction is wide enough and plain enough to be seen in a day—yes, or in an hour. It shows in all the outward aspects. An overtowering majority of the smart shops in Paris cater to women; a large majority of the smart shops in London cater to men. It shows in their voices—for cities have voices just as individuals have voices.

#### The Grinding Bass of London

NEW YORK is not yet old enough to have found its own sex. It belongs still to the neuter gender. New York is not even a noun—it's a verb transitive; but its voice is a female voice, just as Paris' voice is. New York, like Paris, is full of strident, shrieking sounds, shrill outcries, hysterical babblings—a women's bridge-whist club at the hour of casting up the score; but London now is different.

London at all hours speaks with a sustained, sullen, steady, grinding tone, never entirely sinking into quietude, never rising to acute discords. The sound of London rolls on like a river—a river that ebbs sometimes, but rarely floods above its normal banks; it impresses one as the necessary breathing of a grunting and burdened monster who has a mighty job on his hands and is taking his own good time about doing it.

In London, mind you, the newsboys do not shout their extras. They bear in their hands placards with black-typed announcements of the big news story of the day; and even these headings seem designed to soothe rather than to excite—saying, for example, such things as Special From Liner, in referring to a disaster at sea, and Meeting in Ulster, when meaning that the northern part of Ireland has gone on record as favoring civil war before home rule.

The street venders do not bray on noisy trumpets or ring with bells or utter loud cries to advertise their wares. The policeman does not shout his orders out; he holds aloft the stripe-sleeved arm of authority and all London obeys. I think the reason why the Londoners turned so viciously on the suffragettes was not because of the things the suffragettes clamored for, but because they clamored for them so loudly. They jarred the public peace—that must have been it.

T.

MeCUTCHEON

I can understand why an adult American might go to Paris and stay in Paris and be satisfied with Paris, if he were a lover of art and millinery in all their branches; or why he might go to Berlin if he were studying music and municipal control; or to Amsterdam if he cared for cleanliness and new cheese; or to Vienna if he were concerned with surgery, light opera, and the effect on the human lungs of doing without fresh air for long periods of time; or to Rome if he were an antiquarian and

interested in ancient life; or to Naples if he were an entomologist and interested in insect life; or to Venice if he liked ruins with water round them; or to Padua if he liked ruins with no water anywhere near them—no: I'm blessed if I can think of a single good reason why a sane man should go to Padua if he could go anywhere else!

But I think I know, good and well, why a man might spend his whole vacation in London and enjoy every minute of it. For this old fogy, old foggy town of London is a man-sized town, and a man-made, man-run town; and it has a fascination of its own that is as much a part of it as London's grime is; or London's vastness and London's pettiness; or London's wealth and its stark poverty; or its atrocious suburbs; or its dirty, trade-fretted river; or its dismal back streets; or its still more dismal slums—or anything that is London's.

To a man hailing from a land where everything is so new that quite a good deal of it has not even happened yet, it is a joyful thing to turn off a main-traveled road into one of the crooked byways in which the older parts of London abound, and suddenly to come, full face, on a house or a court or a pump which figured in epochal history or epochal literature of the English-speaking race.

It is a still greater joy to find it—house or court or pump or what not—looking now pretty much as it must have looked when good Queen Bess, or little Dick Whittington,

or Chaucer the scribe, or Shakspere the player, came this way. It is fine to be riding through the country and pass a peaceful green meadow and inquire its name of your driver and be told, most offhandedly, that it is a place called Runnymede. Each time this happened to me I felt the thrill of a discoverer; as though I had been the first traveler to find these spots.

I remember once that through an open door I was marveling at the do-

mestic economies of an English barber shop. I use the word economies in this connection advisedly; for, compared with the average highpolished, sterilized and antiseptic barber shop of an American city, this shop seemed a torture cave. In London, pubs are like that, and some dentists' establishments and law offices-musty, fusty dens very unlike their Yankee counterparts. In this particular shop now the chairs were hard, wooden chairs; the looking-glass-you could not rightly call it

a mirror—was cracked and bleary; and an apprentice boy went from one patron to another, lathering each face; and then the master followed after him, razor in hand, and shaved the waiting countenances in turn. Flies that looked as though they properly belonged in a livery stable were buzzing about; and there was a prevalent odor which made me think that all the sick pomade in the world had come hither to spend its last declining hours.

I said to myself that this place would bear further study—that some day, when I felt particularly hardy and daring, I would come here and be shaved, and afterward would write a piece about it and sell it for money. So, the better to fix its location in my mind, I glanced up at the street sign and, behold! I was hard by Drury Lane, where Sweet Nelly once on a time held her court.

Another time I stopped in front of a fruiterer's, my eye having been caught by the presence in his window of half a dozen weary-looking, wilted roasting ears decorated with a placard reading as follows:

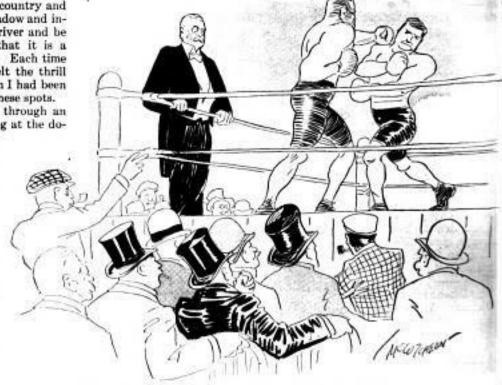

#### AMERICAN MAIZE OR INDIAN CORN A VEGETABLE—TO BE BOILED AND THEN EATEN

I was remarking to myself that these Britishers were surely a strange race of beings—that if England produced so delectable a thing as green corn we in America would import it by the shipload and serve it on every table; whereas here it was so rare that they needs must label it as belonging to the vegetable kingdom, lest people should think it might be an animal—when I chanced to look more closely at the building occupied by the fruiterer and saw that it was an ancient house, half-timbered above the first floor, with a queer low-browed roof.

#### In the Abbey and St. Paul's

INQUIRING afterward I learned that this house dated straight back to Elizabethan days and still on beyond for so many years that no man knew exactly how many; and I began to understand in a dim sort of way how and why it was these people held so fast to the things they had and cared so little for the things they had not.

Better than by all the reading you have ever done you absorb a sense and realization of the splendor of England's past when you go to Westminster Abbey and standfiguratively—with one foot on Jonson and another of Dryden; and if, overcome by the presence of so much dead-and-gone greatness, you fall in a fit you commit a trespass on the last resting-place of Macaulay or Clive, or somebody of equal consequence. More imposing even than Westminster is St. Paul's. I am not thinking so much of the memorials or the tombs or the statues there, but of the tattered battleflags bearing the names of battles fought by the English in every crack and cranny of the world, from Quebec to Ladysmith, and from Lucknow to Khartum.

Instead of Being Inside the Ring, the Referee, Dressed in Evening Clothes, Was Outside the Ropes

Beholding them there, draped above the tombs, some aded but still intact, some mere clotted wisps of ragged ilk dinging to blackened standards, gives one an uplifting exception of the spirit that has sent the British soldier orth to girth the globe, never faltering, never slackening ace, never giving back a step today but that he took two teps forward tomorrow; never stopping—except for tea!

The fool hath said in his heart that he would go to ingland and come away and write something about his mpressions, but never write a single, solitary word about he Englishman's tea-drinking habit, or the Englishman's ricket-playing habit, or the Englishman's lack of a sense f humor.

I was that fool. But it cannot be done. Lacking these hings England would not be England. It would be Hamlet ithout Hamlet or the Ghost or the wicked Queen or mad phelia or her tiresome old pa; for most English life and the bulk of English conversation center about sporting spics, with the topic of cricket predominating. And at given hour of the day the wheels of the empire stop, and verybody in the empire—from the king in the counting suse, counting up his money, to the maid in the garden, anging out the clothes—drops what he orshe may be doing ad imbibes tea until further orders. And what oceans of a they do imbibe!

There was an old lady who sat near us in a teashop one ternoon. As well as might be judged by one who saw her a sitting posture only, she was no deeper than any other d lady of average dimensions; but in rapid succession s tilted five large cups of piping hot tea into herself and as starting on her sixth when we withdrew, stunned by

e spectacle. She must have been fearfully ng-waisted! I had a mental vision of her terior decorations—all fumed-oak wainotings and buff-leather hangings.

Still, I doubt whether their four-o'clocka habit is any worse than our five-o'clockektail habit. It all depends, I suppose, on bether one prefers being tanned inside to ing pickled. But we are getting bravely wrour cocktail habit, as attested by figures d the visual evidences, while their tea habit growing on them—so the statisticians say.

#### The Vulgarity of Laughter

S FOR the Englishman's sense of humor, Lor his lack of it, I judge that we Ameras are partly wrong in our diagnosis of that ase of British character and partly right, cause he is slow to laugh at a joke, we nk he cannot see the point of it without isgram and a chart. What we do not take o consideration is that, through centuries self-repression, the Englishman has so lled himself into refraining from laughing public—for fear, you see, of making him-feonspicuous—it has become a part of his lure. Indeed, in certain quarters a prejue against laughing under any circumnees appears to have sprung up.

was looking one day through the pages of of the critical English weeklies. Nearly

British weeklies are heavy, and this is the heaviest of lot. Its editorial column alone weighs from twelve to iteen pounds, and if you strike a man with a clubbed y of it the crime is assault with a dull blunt instrument, hintent to kill. At the end of a ponderous review of the t Indian question I came on a letter written to the editor by a gentleman signing himself with his own name, and reading in part as follows:

No; it is very seldom that happiness is refined or pleasant to see merriment that is produced by wine is false merriment, and there is no true merriment without it. . . . Laughter is profane, in fact, where it is not ridiculous.

On the other hand the English in bulk will laugh at a thing which among us would bring tears to the most hardened cheek and incite our rebellious souls to mayhem and manslaughter. On a certain night we attended a musical show at one of the biggest London thea-

ters. There was some really clever funning by a straight comedian, but his best efforts died a-borning; they drew but the merest ripple of laughter from the audience.

Later there was a scene between a sad person made up as a Scotchman and another equally sad person of color from the States. These times no English musical show is

And at a Given Hour Everybody Imbibes Tea Until Further Orders

complete unless the cast includes a North American negro with his lips painted to resemble a wide slice of ripe watermelon, singing ragtime ditties touching on his chicken and his Baby Doll. This pair took the stage, all others considerately withdrawing; and presently, after a period of heartrending comicalities, the Scotchman, speaking as

though he had a mouthful of hot oatmeal, proceeded to narrate an account of a fictitious encounter with a bear. Substantially this dialogue ensued:

THE SCOTCHMAN—He was a vurra fierce grizzly bear, ye ken; and he rushed at me from behind a jugged rock.

THE NEGRO—Mistah, you means a jagged rock, don't you?

THE SCOTCHMAN-Nay, nay, laddie-a jugged rock.

THE NEGRO—Whut's dat you say? Whut—whut is a jugged rock?

THE SCOTCHMAN (forgetting his accent)—Why, a rock with a jug on it, old chap. (A stage wait to let that soak into them in all its full strength.) A rock with a jug on it would be a jugged rock, wouldn't it—eh?

The pause had been sufficient—they had it now. And from all parts of the house a whoop of unrestrained joy went up.

If You Have Brought Any Heavy Baggage You Go Back and Pick it Out

Witnessing such spectacles as this, the American observer naturally begins to think that the English in mass cannot see a joke that is the least bit subtle. Nevertheless, however, and to the contrary notwithstanding—as Colonel Bill Sterritt, of Texas, used to say—England has produced the greatest natural humorists in the world

and some of the greatest comedians, and for a great many years has supported the greatest comic paper printed in the English language—and that is Punch.

Also, at an informal Saturday-night dinner in a well-known London club I heard as much spontaneous repartee from the company at large, and as much quiet humor from the chairman, as I ever heard in one evening anywhere; but if you went into that club on a weekday you might suppose somebody was dead and laid out there, and that everybody about the premises had gone into deep mourning for the deceased.

If any member of that club had dared then to crack a joke they would have expelled him—as soon as they got over the shock of the bounder's confounded cheek. Saturday night? Yes. Monday afternoon? Never! And there you are!

#### The Bond of Red Meat

SPEAKING of Punch reminds me that we were in London when Punch, after giving the matter due consideration for a period of years, came out with a colored jacket on him. If the Prime Minister had done a Highland fling in costume at high noon in Oxford Circus it could not have created more excitement than Punch created by coming out with a colored cover.

Yet, to an American's understanding, the change was not so revolutionary and radical as all that. Punch's wellknown lineaments remained the same. There was merely a dab of palish yellow here and there on the sheet; at first glance you might have supposed somebody else had been reading your copy of Punch at breakfast and had been careless in spooning up his soft-boiled egg.

They are our cousins, the English are; our cousins once removed, 'tis true—see standard histories of the American Revolution for further details of the removing—but they are kinsmen of ours beyond a doubt.

Even if there were no other evidences, the kinship between us would still be proved by the fact that the English are the only people except the Americans who look on red meat—beef, mutton, pork—as a food to be eaten for the taste of the meat itself; whereas the other nations of the earth regard it as a vehicle for carrying various sauces, dressings and stuffings southward to the stomach. But, to the notice of the American who is paying them his first visit, they certainly do offer some amazing contradictions.

In the large matters of business the English have been accused of trickiness—which, however, may be but the voice of envious competition speaking; but in the small things they surely are most marvelously honest. Consider their railroad trains now: To a greenhorn from this side the blue water, a railroad journey out of London to almost any point in rural England is a succession of surprises—and all pleasant ones. To begin with, apparently there is nobody at the station whose business it is to show you to your train or to examine your ticket before you have found your train for yourself. There is no mad scurrying about at the moment of departure, no bleating of directions through megaphones. Unchaperoned you move along a long platform under a grimy shed, where trains are standing

with their carriage doors hospitably ajar, and unassisted you find your own train and your own carriage, and enter therein.

Sharp on the minute an unseen hand—at least I never saw it—slams the doors and—you might almost say secre-

tively—the train moves out of the terminal. It moves smoothly and practically without jarring sounds. There is no shrieking of steel against steel. It is as though the rails were made of rubber and the wheel-flanges were faced with noise-proof felt. No conductor comes to punch your ticket, no brakeman to bellow the stops, no train butcher bleating the gabbled invoice of his gumdrops, bananas and other best-sellers.

Glory be! It is all so peaceful and soothing—as peaceful and as soothing as the land through which you are gliding when once you have left behind smoky London and its interminable environs; for now you are in a land that was finished and plenished five hundred years ago and since then has not been altered in any material aspect whatsoever. Every blade of grass is in its right place; every wayside shrub seemingly has been restrained and trained to grow in exactly the right and the proper way.

#### The Honor System on Trains

STREAMING by your car window goes a tastefully arranged succession of the thatched cottages, the huddled little towns, the meandering brooks, the ancient inns, the fine old country places, the high-hedged estates of the landed gentry, with rose-covered lodges at the gates and robust children in the doorways—just as you have

always seen them in the picture books. There are fields that are velvet lawns, and lawns that are carpets of green cut-plush. England is the only country I know of that lives up—exactly and precisely—to its storybook descriptions and its storybook illustrations.

Eventually you come to your stopping point—at least you have reason to believe it may be your stopping point. As well as you may judge by the signs that plaster the front, the sides and even the top of the station, the place is either a beef extract or a washing compound. Nor may you count on any travelers who may be sharing your compartment with you to set you right by a timely word or two. Your fellow passengers may pity you for your ignorance and your perplexity, but they would not speak—they could not, not having been introduced.

A German or a Frenchman would be giving you gladly what aid he might; but a well-born Englishman who had not been introduced would ride for nine years with you and not speak. I found the best way of solving the puzzle was to consult the timecard. If the timecard said our train would reach a given point at a given hour, and this was the given hour, then we might be pretty sure this was the given point. Timetables in England are written by realistists, not by gifted fiction writers of the impressionistic school, as is frequently the case in America.

So, if this timecard says it is time for you to get off you get off, with your ticket still in your possession; and if it be a small station you go yourself and look up the station master, who is tucked away in a secluded cubbyhole somewhere absorbing tea, or else is in the luggage room fussing with baby carriages and patent churns. Having ferreted him out in his hiding-place you hand over your ticket to

him and he touches his capbrim and says "Kew" very politely, which concludes the ceremony so far as you are concerned.

Then, if you have brought any heavy baggage with you in the baggage carpardon, I meant the luggage van-you go back to the platform and pick it out from the heap of luggage that has been dumped there by the trainhands. With ordinary luck and forethought you could easily pick out and claim and carry off some other person's trunk, provided you fancied it more than your own trunkonly you do not. You do not do this any more than, having purchased a secondclass ticket or a third-class, you ride first-class; though, so far as I could tell, there is no check to prevent a person from so doing. At least an Englishman never does. It never seems to occur to him to do so. The English have no imagination.

I have a suspicion, though, that if one of our railroads tried to operate its train service on such a basis of confidence in the general public there would be a most deficitful hiatus in the receipts from passenger traffic to be reported to a distressed group of stockholders at the end of the fiscal year. This, however, is merely a supposition on my part. I may be wrong.

To a greater degree, I take it, than any other race the English have mastered the difficult art of minding their own affairs. The average Englishman is tremendously knowledgeable about his own concerns and monumentally

FRIGHTFUL DISTRESSING SUBURBAN INCIDENT DISASTER

In Landon, Mind You, the Newsboys Do Not Jhout Their Extras

ignorant about all other things. If an Englishman's business requires that he shall learn the habits and customs of the Patagonians or the Chicagoans or any other race which, because it is not British, he naturally regards

as barbaric, he goes and learns them—and learns them well. Otherwise your Britisher does not bother himself with what the outlander may or may not do.

An Englishman cannot understand an American's instinctive desire to know about things; we do not understand his lack of curiosity in that direction. Both of us forget what I think must be the underlying reasons-that we are a race which, until comparatively recently, lived wide distances apart in sparsely settled lands, and were dependent on the passing stranger for news of the rest of the world, whereas he belongs to a people who all these centuries have been packed together in their little island like oats in a bin.

London itself is so crowded that the noses of most of the lower classes turn up—there is not room for them to point straight ahead without causing a great and bitter confusion of noses; but whether it points upward or outward or downward the owner of the nose pretty generally refrains from ramming it into other folks' business. If he and all his fellows did not do this; if they had not learned to keep their voices down and to muffle unnecessary noises; if they had not built tight covers of reserve about themselves, as the oyster builds up a shell to protect his tender tissues from irritation—they would long ago have become a race of nervous wrecks instead of being what they are, the most stolid beings alive.

In London even royalty is mercifully vouchsafed a ressonable amount of privacy from the intrusion of the ginlet eye and the chisel nose. Royalty may ride in Rotten Row of a morning, promenade on the Mall at noon, and shop in the Regent Street shops in the afternoon, and at all times go unguarded and unbothered—I had almost said unsticed. It may be that long and constant familiarity with the institution of royalty has bred indifference in the London mind to the physical presence of dukes and princes and things; but I am inclined to think a good share of it should be attributed to the inborn and ingrown British faculty is letting other folks be.

One morning as I was walking at random through the aristocratic district, of which St. James is the solar plexus and Park Lane the spinal cord, I came to a big mansion where footguards stood sentry at the wall gates. This house was further distinguished from its neighbors by the presence of a policeman pacing alongside it, and a newspaper photographer setting up his tripod and camera in the road, and a small knot of passers-by lingering on the opposite side of the way, as though waiting for somebody to come along or something to happen. I waited too.

In a minute a handsome old man and a well-set-up young man turned the corner afoot. The younger man was leading a beautiful stag hound. The photographer touched his

> hat and said something, and the younger man, smiling a good-natured smile, obligingly posed in the street for a picture. At this precise moment a dirigible balloon came careening over the chinneypots on a cross-London air jaunt; and at the sight of it the little crowd left the young man and the photographer and set off at a run to follow, as far as they might, the course of the balloon

#### A Good Natured Prince

NOW in America this could not have occurred for the balloon man would not have been aloft at such an hour. He would have been on the earth; moreover he would have been outside the walls of that mansion house, along with hal a million, more or less, of his patriotic fellow countrymen, tearing his own clothes off and their clothes off, trampling the weak and sickly underfoot, bucking the doubled and tripled police liber in a mad, vain effort to see the flagpole on the roof or a corner of the rear garden wall—for that house was Clarence House, and the young man who posed so accommodatingly for the photographer was none other than Prince Arthur & Connaught, who was getting himself married the very next day.

The next day I beheld from a short distant the passing of the bridal procession. Though there were crowds all along the route followed by the

wedding party, there was no scrouging, no shoving, no fighting, no disorderly scramble, no unseemly congestion should the chapel where the ceremony took place. It reminded to

is for a party tonight she's practicing," she faltered. and her say so in the hallway. And, Homer," added Drum, "I don't think you high-kick when you trot. sadly take your feet off the floor."

Drum, who had picked up his paper, at once laid it "How do you know?" he instantly demanded; and

it in the paper. I guess I wouldn't have learned it bees else, would I?"

should hope not!" Mr. Drum rejoined, with convic-"If you were like that woman upstairs I'd hate to what I'd do! Just look at her! Out day and night, ng from one tango tea to another!"

a Drum had never in her life even seen one. She I hardly have known what a tango tea looked like. er, Mr. Drum's speech was not the less impressive.
er; isn't it offle?" she assented hurriedly. "Last the was out twice; and here it's only Thursday and going out again. I c'n see how you'd hate it!"

= was an air about Mrs. Drum that to a stranger there seemed submerged, but Mr. Drum did not

### By Maximilian Foster

There Followed a Steady Thumping, Which Made the Gas Fixtures Rattle and Sway

notice it. He was busy folding the newspaper so that he could put it into his pocket. Mrs. Drum sat watching him. She would have liked to read the morning paper, but Mr. Drum did not approve of it. He thought newspapers demoralizing to women. However, having now stuffed his into his coat pocket, he helped himself sparingly to a mouthful of water.

"That's right," he observed, his tone oracular; "the whole trouble is you women nowadays have too much time on your hands! If it wasn't for that there wouldn't be half of this talk about the vote and woman's sphere. Not much!"

"Yes; I guess so!" Mrs. Drum hurriedly agreed.

"And dancing their lives away!" continued Mr. Drum.
"Cutting up high jinks everywheres in creation! It's
enough to make you sick!"

"Yes; isn't it?" affirmed Mrs. Drum.

With a final snort Mr. Drum arose. Brushing the crumbs from his waistcoat he sauntered toward the door.

"Well, I must be off," he said, his voice again assuming that note of large, buoyant heartiness so often admired in the trade. "And remember, little woman, dinner early! This is my club night. You won't forget?

Mrs. Drum said she would not. Her husband was a member of the Knights of Zanzibar, a fraternal benevolent order that met once a week at a bowling alley. The week before she had delayed him by forgetting to have the dinner on in time. In consequence, as he now reminded her, he had been greatly put out.

"Yes; I know," she placated. "Good-by, Homer."

"Good-by," nodded Mr. Drum.

He went out briskly, loudly clearing his throat; and for moment Mrs. Drum sat back, staring down her nose, Then, as the door slammed, she suddenly rose.

The music upstairs had stopped, but scuffling to the airshaft window she threw it open. There, for a period, she leaned forth listening. All was silent, though; and, with a sniff—a slight echo of disgust, one had thought—she lowered the window; then slipslopped back to her place at the table. A long while passed; and, with her hands in her lap, Mrs. Drum sat staring at the carpet.

Mr. Drum would not have liked to see her. Marriage, as he often pointed out, was strictly business. "Sure!" he would say. "You 'nd me are partners, a regular firm!" Then he would warn her, if she "reneged on the job" the firm would dissolve. "Yes; you gotta do your work!" he

No doubt this was in her mind now; for, rising presently, Mrs. Drum began to go about her morning tasks.

It was not the first time she had heard idleness was woman's curse. No, indeed! And as Mrs. Drum washed and put away the breakfast dishes, made the beds and tidied up the bedroom, her mind dwelt on Mr. Drum's sage words. Curiously the thought lingered while she dusted the parlor and bedroom, swept

the hall, scrubbed the kitchen floor, steamed out the ice-box, and made a pie for dinner and a shirt for Mr. Drum. But, then, that is the way with most apt sayings; they stick like wax in one's head. And as Mrs. Drum next darned four or five pairs of her husband's socks and mended three suits of his underflannelsshe wasstill reflecting on the folly and frivolity of hersex.

However, ere long the thought began to fade. Having cleaned and filled four kerosene lamps she was just about to clean and fill a fifth when all at once she remembered she had yet to do the marketing as well as to take a pair of Mr. Drum's shoes to the cobbler; after which she must get his silk hat ironed, then go to the cleaner's for a coat he might wish to wear that night. Of course this would

take all her leisure until long past the luncheon hour; but, then, Mrs. Drum did not think of lunching. She seldom did. What now occupied her mind was her back. It felt singularly as though some one had thrust into it a carving knife, kitchen size; and with one hand on the ache, her head lolled over on her shoulder, she was just limping out of the dining room when she paused abruptly, her ear cocked up, her manner alert.

The woman in the flat overhead had again put a new needle in the machine and started it to playing!

The effect was electrical. Mrs. Drum stood poised, her figure rigid; and the change that stole into her expression was curious. Saint Cecilia could not have looked more rapt. It was only for a moment, though. Darting to the airshaft window she flung it open. At once, with all its tantalizing seductiveness, the strains of Too Much Mustard came floating in; and scuffling to the sideboard Mrs. Drum yanked open a drawer. From this she produced a newspaper clipping, an article embellished with a series of cabalistic designs. However they seemed quite clear to Mrs. Drum, for, after a brief glance at the text, she turned and, with a vigorous shove, pushed the dining-room table into a corner. Next, having again studied the clipping, she pinned it conveniently to the wall paper and backed away. Then, had Mr. Drum been present, it is possible he might have suffered a momentary shock.

Mrs. Drum had begun to sway. Her figure, melting from its former rigidity, oscillated in time to the music. Left foot forward, her skirts raised high enough to disclose a pair of spinsterlike ankles, she advanced across the room.

"One, two, three, four, five, six-dip!" said Mrs. Drum, and did it. "One, two, three-dip! One, two, three!"

It is well Mr. Drum was not present. Fancy John the Baptist eying Herodias from his platter! Meantime overhead the dulcet strains continued, when in earnest, solemn succession Mrs. Drum did the Horse Trot, the Castle and the Kitchen Sink. Then, after again consulting the diagram, she next essayed the Lame Duck, the Fireplug, the Billy and Lillian, the Huckaback Hug and the Can of Worms. Flushed and animated, the light of youth, long submerged, once more dawning in her eyes, she was just taking a try at the Grapevine Dip when overhead the music abruptly ended.

"Shuh!" said Mrs. Drum. She waited eagerly, but those strains from above did not start again. Instead, a door slammed a moment later and all was still. Visibly her face fell. "Lord!" sighed Mrs. Drum; and she was mopping her face with her apron when she paused, her eyes fastened on the wall above the fireplace.

A colored decoration hung there-a motto. The thing was one of those worsted and cardboard art creations of

the mid-Rutherford B. Hayes period, its frame of black walnut carved to represent rustic work. Mr. Drum had contributed it to the household. Its sentiment seemed inspired:

#### THERE IS NO PLACE LIKE HOME

Her posture intent, Mrs. Drum pored over the inscription. One would have thought her air now more curious than ever. It was together profound and quizzical; at once mirthless, yet amused. La Gioconda might have gleamed like that some time at Mr. Gioconda. It was not for long, though.

As she lowered the airshaft window and pushed the table back into place she remembered, with a pang of what may have been conscious shame, that the Knights of Zanzibar met that night, that Mr. Drum's silk hat had yet to be ironed, that she still had to go to the cleaner's for his coat.

No place like home?

"I'll bet not!" said Mrs. Drum.

The hours passed. Noon merged into one o'clock; then came two, lagging onward with heavy feet. Mrs. Drum was still at her household tasks, limping from one to the other. The knife in her back she no longer felt now. It had become a sword, a saber; and subconsciously she waited for it to saw her spine in twain. As this idle thought flitted vaguely through her mind the clock struck half past three. It is the hour when the fiddles at the first thes dansants begin tuning up;

she had read about it in the paper. However, Mrs. Drum had no time to think of that. Mr. Drum had ordered

dinner early!

Just then the doorbell rang; and, with her hand on her ache, her air indifferent, Mrs. Drum went limping along the hall. A young woman stood on the landing outside and Mrs. Drum, as she opened the door, gave a little gasp. It was the lady from upstairs! She had a flat paper parcel in

her hand and she was smiling. Though Mrs. Drum had often seen her neighbor, she had never spoken to her. Mr. Drum, she knew, would not approve of it. Besides, there was something about the lady subtly alarming to Mrs. Drum herself. What it was, though, Mrs. Drum could not have told. It may have been her manner; possibly it was her clothes. Somehow they gave the impression that she had just stepped into them or was just stepping out of them. This was due either to the slash in her skirt or the V in her waist. Mrs. Drum could not tell which. To her dazed view they seemed to meet. The lady's smile, though, was dazzling. "Say, Mrs. Drum," she said, with informal directness,

"I was wund'ring if you wooden do sumpin f' me? I'm Miss La Ray I'm upstairs; you know me, don't yuh? Liane La Ray-yeah. We haven't b'en interduced-bean, I mean-only I guess you know me. I'm on at th' Winter Garden, y'know; yes, the fourth from the end in that front row bunch of broilers."

"Huh?" inquired Mrs. Drum.

"Yeah, the squab chorus," explained Miss La Ray, adding: "I'm the one that has that line: 'Oh, Benny, see how late it is! The clock on the taxi says eleven dollars and a quarter!' You've heard me, haven't yuh?"

Mrs. Drum had not, but that did not in the least dash

her visitor's exuberant spirits.

"Lissen, dearie!" she beamed. "You wooden mind, would yuh, giving this dress to the tailor when he comes? They've got us called f'r a rehoisal this afternoon and I gotta have my dress done so's I c'n wear it t'night. The braid's all kicked off the hem f'm doing the M'shish.

There must have been something in Mrs. Drum's face that expressed bewilderment, for again Miss La Ray explained:

'Yes; you know—that Cuban dance they used to call the McSix, on'y that ain't right. The name's Mexican, a gen'l'man told me. He used to work on the Canal, where they talk it." As she spoke Miss La Ray had unwrapped the dress. "And, say," she added, "when you see that tailor just ask him to open up the slit a little, won't you? There's a dear! I juss hate my clothes if they hamper me, don't you?" With this she thrust the dress into Mrs. Drum's startled hands. "Thanks offly!" bubbled Miss La Ray. "Remember now; any time you want a favor off

Still piping thanks she flitted, darting down the stairs; and shutting the door in a dream Mrs. Drum wandered up the hall, Miss La Ray's dress held dangling 'twixt her thumb and forefinger.

It was to the parlor that Mrs. Drum headed. Arriving there she flung the dress over the back of a convenient chair and was solemnly departing when, with a grunt, she halted. Something in the dress seemed to arrest her. She turned. With an energetic hand she twitched up the window shade. Then backing off a bit Mrs. Drum stood poring over the lace and charmeuse creation, much as a naturalist might pore over some startling sport of Nature.

The dress was what a modiste would have termed a dernier cri. In Mrs. Drum's parlor, though, rather than a

"I Just Hate My Clothes if They Humper Me, Don't You?"

mere cry it became a shout. Maybe the thought occurred to Mrs. Drum, too, for she looked about her covertly, her glance curious.

Portraits in crayon of Mr. Drum's dead parents adorned the wall. Father Drum, one saw, had worn whiskers à la Brigham Young, his upper lip being shaved. As for Mrs. Drum, senior, she had her hair dressed straight back from her brows; besides which she wore spectacles. In keeping with these art works was the furniture. It included a horsehair sofa, the last of its kind probably in any New York flat; and there was also a marble-topped center table as well as a corner whatnot.

A crocheted worsted mat covered the center table, and on this stood a kerosene lamp with a green shade. On the whatnot was a large seashell, a piece of transparent quartz, three flint arrowheads, a plush photograph album, an ornamented mustache cup, several books, and a glass paperweight with a snowstorm inside. All these Mrs. Drum took in with a quick, comprehensive glance, when again there stole into her face that faint, covert air of jocundity. Then, roving from Mr. Drum's treasured heirlooms, her eyes leaped swiftly again to the dress.

The next instant she had snatched it up!

It was again well that Mr. Drum was absent. Her hands, eager and as avaricious as a miser's, played over the gown, fingering every inch of its soft, alluring finery. She wet her lips. Her eyes sparkled. She bent above it, her breath coming swiftly. She felt, appraised, reveled in the filmy softness of its lace. Her touch ran gloatingly along the fabric's sleek, exquisite surface. Her fingers, horny and rough from want of care, plied like a caress over its braid, even its buttons. She patted down its wrinkles. With quick, birdlike gestures she smoothed it here and there.

A mother crooning over a babe could not have expressed a keener, more joyous tenderness. She had held up the dress, draping it against her figure, when all at once there swam into Mrs. Drum's face a quick, still more extraordinary air. It illuminated all her features like a halo.

There was a mirror hanging tilted against the wall. She turned swiftly to it. One had but to give her a look instantly to guess her purpose. Already her fingers had begun snatching at the buttons of her waist. In not more than three minutes at the most, her own dress discarded and kicked beneath a chair, Mrs. Drum stood before the glass clad in the charmeuse tango gown of the lady from overhead. The transformation was complete!

The former Mrs. Drum seemed somehow to have disappeared. She no longer looked scrawny and stoopshouldered; she did not look submerged. Instead, there posed before the mirror a slim, erect figure, not the least middle-aged. Only the way her hair was dressed reminded one of Mrs. Drum of old. It still was dressed the wa Mr. Drum liked it dressed; and she gave it a sadde glance.

"Ugh!" said Mrs. Drum; and she jabbed it, in one way, then the other. Afterward for a moment in regarded herself critically in the mirror, when for second time that morning Mrs. Drum backed a across the room, at the same time daintily raising is skirts above her ankles. "One, two, three-dip!" a Mrs. Drum, and again did it. "Dip!"

This time, however, when she dipped she held to pose; and twisting her head over her shoulder in peeped down at herself. A neat ankle, now less spin sterlike than shapely, was revealed to her. She gaze at it an instant; then she blushed. It was with pieus ure, though; with pride, not shame. The ache in he back was forgotten. She rejoiced that she was gill slender, that age and toil had yet really to tell on he Just then the clocks outside struck four; and from in an attitude of tense attention, Mrs. Drum stands herself in the glass.

In two hours to the minute Mr. Drum's latchie would rattle in the latch. In just two hours 1/2 Drum's dinner must be on the table! Mrs. Drum eyes dropped suddenly. She stood looking at be

"Good Lord!" shee jaculated. "Aren't they awful! The next moment, seated on the floor, she beggs hurriedly to unbutton them. An instant later she we flitting down the hall. Presently a door slammed then silence fell.

In the religious-works book trade Mr. Drum's min was a synonym of all that is punctilious, all that methodical. It was especially so in the way MI Drum made use of his time. At home he was th same as at his office. Winter or summer Mr. Dru let nothing ever vary his schedule.

Punctually at seven-thirty he rose. At expromptly he sat down at the breakfast table. Then on the minute, as he expected, Mrs. Drum had th meal ready for him. As they did not keep a serun Mr. Drum's mother never having had one, Mrs. Dru was enabled always to be on time by rising at a o'clock. However, having breakfasted, Mr. Dru read the newspaper until half past eight. At eigh thirty-five he left the house. Each morning ever

day in the year, the clocks were striking nine as he enter the book concern.

There, until half past twelve, Mr. Drum was engage with the visiting trade. At twelve-thirty-one he was not seen departing to his luncheon, from which he return regularly at one-twenty-nine. One-thirty to the dot so him at his desk, where he labored until five-one. He is then to walk home. Every weekday evening in the year arrived there promptly on the minute of six.

Tonight was no exception. The clocks were just strike as he put his key in the lock. Then, in conformity with usual routine, Mr. Drum loudly cleared his throat.

Mrs. Drum's given name was Lucy. Mr. Drum, hot ever, never used it. It was too girlish, not to say undin fied, for a married woman; especially one who was his will His mother's name had been Eliza.

"Mrs. Drum!" called Mr. Drum, his voice booms buoyantly down the hall.

There was no reply. The house seemed strangely qui Smiling indulgently Mr. Drum stepped up the hall tors the horsehair parlor.

"Hello, there!" he cried, raising his voice a little high "Is every one dead here?" Enjoying this spirited within he had begun good-naturedly to chuckle, when all st = the silence seemed to sink on and engulf him. At a instant, entering the parlor, Mr. Drum's eyes fell 🕾 🗵 Drum's discarded housedress. It lay where she had it-that is, kicked beneath a chair. "What's this inquired Mr. Drum; and, leaning forward to peer at it. next observed the street shoes she had also cast aside.

By now Mr. Drum was frowning darkly. He did > like the look of things in the least. It was not the first he had felt it necessary to chide Mrs. Drum for her until ness; and as he stepped inquiringly toward the kitch Mr. Drum's brows were wrinkled more than ever. If cleared his throat.

"Mrs. Drum! I say, there!" he called again.

Silence still answered; and pushing back the kitchen day Mr. Drum stalked into the kitchen. He knew install something was wrong!

The gas range was lit; there were pots and para on a but no pot or pan gave forth its worited fragrance. 2 grateful incense of dinner to be. Instead there filters through the air a thin, acrid smoke, the odor of scords meat and burning vegetables. A cry of horror but is expressed burst from Mr. Drum. Mingled with it was tone of stern rebuke:

"Mrs. Drum! Mrs. Drum!"

Shutting off the gas, his brows austere, his lips preset firmly together, Mr. Drum stalked out of the kitches. Be called no more now. As clearly as though Mrs. Domi erself had confessed it he now realized the situation. In irect disregard of every duty he expected of her she had illfully run out somewhere, leaving his dinner to burn!

It made little difference to Mr. Drum that this was the est occurrence of its kind. He would see to it, he assured mself, that it should be the last! Armed with this decion he was crossing the dining room to the hall when he iddenly paused.

It was some effect in the room that had halted him. A lange had taken place he was subtly aware. What it was, ough, he could not tell. Then his eye roving about him thted all at once as it reached the fireplace. The wall pove it was blank! The worsted motto was gone! A ctangle of faded wall paper was now all that occupied e place once sacred to that household sentiment:

#### THERE IS NO PLACE LIKE HOME!

Bewildered, Mr. Drum gaped on the vacancy. He emed dumfounded. The disappearance of that emblem as vaguely ominous. However, ere long his wits returned. id with his mouth set, the Jovian wrath again seated on s brow, he stalked up the hallway to the parlor. There, th a grim solicitude, he picked up both Mrs. Drum's ess and Mrs. Drum's shoes. Next Mr. Drum placed on e sofa both shoes and dress.

Their presence there was conspicuous. However, this parently was what he wished, for, backing away a bit, he itically studied their appearance.

Then, drawing up a chair, Mr. Drum grimly seated him-If where he could command a free, unobstructed view of

e door-of that and any one who might enter by it. His face was fixed. As he told himself, he must of course strain his temper. Her fault naturally was one he could st condone; but at the same time he must not forget his gnity. He must be firm, not harsh; severe, yet not just. Nor must he fail to be kindly, either. That would due from him as the stronger mind, as the superior in x. Yes: that must be his manner—firm yet kindly! ace he had sufficiently rebuked her, he would make her e the largeness of his nobility. He would show her he

as ready to forgive, to forget—that is, if she did not repeat e offense. However, though he knew himself to be nerous, Mr. Drum was fully aware of the gravity of his de's misdoings.

It was at this instant the doorbell rang. The first tinkling of that summons had hardly echoed rough the flat ere Mr. Drum was on his feet. Then, as he uted toward the hall, he recalled his resolution. He ust not forget himself. There must be no scene. His gnity he must remember. Outside, the bell rang again; it Mr. Drum halted. He must first compose himself. Drawing out his watch he exactly noted the time. It

is sixteen minutes to seven. For all purposes that eant his meal already was an hour late. Next, turning to e mirror Mr. Drum carefully noted his appearance. In s emotion his necktie had become disarranged. He fixed

TENET EPL

cleared his throat. Firm, not harsh! Severe, yet not unjust! Yes, that was the idea; and, his face grave, his shoulders erect, Mr. Drum strode down the hall.

Flinging open the door he stood there in silence waiting, his finger leveled, pointing toward the parlor. A pause followed.

"S-a-y!" a voice drawled then, stretching out the word; and, gaping, Mr. Drum looked outside.

"Huh?" he inquired.

It was not Mrs. Drum at all! It was Miss La Ray, the lady from overhead. Indicating the finger, which Mr. Drum still rigidly extended, she inquired in Broadway's happy argot:

"Hey? What's th' plot?" And instantly Mr. Drum assumed a less theatrical pose.

"What is it you wish, madam?" he asked freezingly. Miss La Ray wished to see Mrs. Drum. What is more, she wished to see her forthwith. One gathered from her tone that Miss La Ray was not quite pleased. In return, Mr. Drum raised his brows. It was not his intention that any such neighbor should force her acquaintance on his wife.

'Mrs. Drum is not at home," he said.

"Not at home!" echoed Miss La Ray. "Well, where's she went?"

As haughtily as he could Mr. Drum said he did not know, at which the visitor gave a loud exclamation. "Say, this is a swell chance!" she cried, dismayed. "What's she did with my clothes?"

"Your clothes?" repeated Mr. Drum, the inflection

"You said it," returned Miss La Ray; "my dress! The man that called for it says he was all the afternoon trying to get it off her.'

"Off her?" echoed Mr. Drum, starting.

"Away I'm her," Miss La Ray corrected, her voice

Mr. Drum had now perceived the situation. Obviously this female had left with Mrs. Drum a dress that was to be called for by a tailor. The knowledge irritated him. In the first place, Mrs. Drum had her own duties to fulfill. Then again, had he not warned her she must not make indiscriminate acquaintances? Miss La Ray's occupation he knew too; and he did not in the least approve of it. Least of all did he approve of her ringing his doorbell. What if any one should see her there talking to him like this!

"I know nothing about your dress. You must excuse me!" said Mr. Drum, his tone icier than ever; and he was closing the door when Miss La Ray, in desperate ire, put her shoulder to it and pushed. Meantime her speech flowed on undiminished.

"Hey!" she shrilled. "What's th' idee? Are you tryin' to put sumpin' over on me? . . . Awr, you stop yer shoving—y' hear! I want my dress! Hey, you quit that

Mr. Drum had his back to the door, his feet braced against the wall opposite. Subconsciously he felt the

Then, his eyes on himself in the glass, Mr. Drum loudly "Ever Since We Walked to the Altar You've Been Doing All the Talking; and Now I Mean to Do a Little Too'

posture to be undignified, especially for one of his position in the religious-works book trade. It was no time to cavil, however. He shoved. Success crowned the effort. The door gave, it shut; and as the latch clicked Mr. Drum breathed a sigh of relief.

His satisfaction, however, was short. A brief lull followed. Then the silence was succeeded by a storm of blows on the panel; and at the sudden uproar Mr. Drum turned pale. What if the woman roused the house?

His brow moist, Mr. Drum reflected on the consequences. A scandal like that might smirch any one, no matter who! Not even his known respectability could save him! Think of it! His name would be coupled to a woman's! And such a woman too-a public singer! Worse, they might even have dancing at the Winter Garden!

Leaning over suddenly he shouted through the keyhole: "Have a care, young woman! Have a care or I shall

report you to your employers!"

The threat seemed effective. Silence, at any rate, followed; and during it Mr. Drum congratulated himself on his sagacity. Naturally any large public enterprise like the Winter Garden would not care to hear of such carryings-on among its employees. He was just about to order her off about her business when he heard her speak.

"You'll do what?" she called in awed tones. When he repeated the warning he was stupefied to hear a shout of ironic laughter. "Say, is that a promise?" she cried; and then: "'Phome it to the press agent, will yuh?" Again a' shower of blows rained on the door panels. "Hey! You gimme my property!" he could hear her shrill; and, with her mouth pressed to the keyhole, she was threatening to have in the police when all at once she stopped.

Mr. Drum laid his ear to the woodwork. On the floors above and below doors had begun to open; to his dismay hurried footfalls sounded on the stairs. A moment later a murmur of voices arose; and, mute with agony, Mr. Drum realized that the scandal now was public.

"Has your clothes, has he?" some one said. "And he won't give 'em up? There, Albert; I always said he looked like a criminal!

Mr. Drum recognized the speaker. It was his neighbor across the hall, a Mrs. Schnabel. Her husband was in the retail wall-paper trade; and once Mr. Drum had complained to the landlord about the noise they made. "Piano playing after ten o'clock was not respectable," he had written. Mrs. Schnabel spoke again.

"Say," she suggested hopefully, "why don't you have him summonsed?"

Mr. Drum started. Summonsed? Why, she would not dare! It would be perjury to swear he had her dress. He had never laid eyes on it; and besides

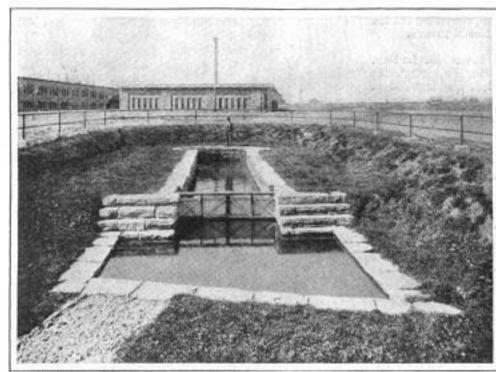

"Yeah; but that ain't the half of it!" Miss La Ray's voice all at once proclaimed. "When I sez to him, 'You big gloom! You gimme my dress!' didn't he take and shove me out of there! The idea of him dasting to lay hands on me!"

Mr. Drum heard her open-mouthed.

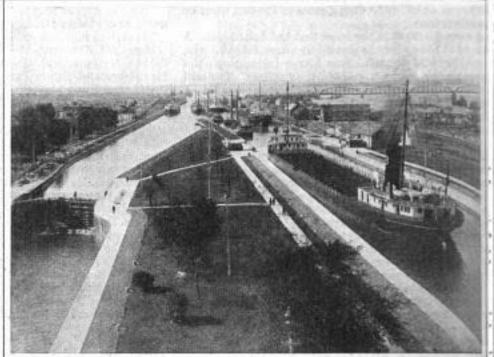

"You don't want a summons-what you want's a warrant!" Mrs. Schnabel was now suggesting; and Mr. Drum wiped his clammy brow.

### The Inside of the Pork Barrel

Present Locks at Jaint Marys Palls. A Third and Larger Lock is Under Construction

In A FEW days Congress is going to pass an omnibus Rivers and Harbors Bill; and then in a few more days the newspapers will be discoursing on the evils of the Pork Barrel—and why not? Heaven knows they frequently discourse on much worse things, though rarely, it must be admitted, on topics about

Heaven knows they frequently discourse on much worse things, though rarely, it must be admitted, on topics about which they really know quite so little.

The first thing one does when he leaves the grammar school is to forget his geography. Why should these gentlemen who write editorials for our great newspapers, and who

know about tariffs and things, burden their minds with mere geography? Why bother about Raccoon Creek when it is so easy to remember the Suwanee River? Why keep such prosy old names as Pollock Rip and Cooper River in mind when it is so much pleasanter to let one's thoughts rest on The Banks of the Wabash, or Where Rolls The Oregon?

Oregon?

A good Massachusetts friend, for many years a member of the Rivers and Harbors Committee, told us that a Harvard man took him to task on one occasion for wasting money on so many insignificant and worthless streams. "Why," he replied, "the trouble is not with the legislation—it is with you; you don't know the geography of your country." Naturally this was protested. "Well, I will name a river in this country navigable for 300 miles that you never heard of." And naturally enough this, too, went to protest. "The Coosa!" And his friend owned up.

When the new man comes to Congress he has to start

When the new man comes to Congress he has to start something—so many of them believe; and about the surest way to the headlines is to denounce the Pork Barrel. A very wise old man told me many years ago, down in Mississippi, when I was beginning to look round politically and take notice, that the very best thing a young man, so intentioned, could do was to get into a fight with the devil. "It does not make much difference what devil it is. An imaginary one will answer the purpose, just so you fight him loud!" Since that day I have come to believe that this old sage has lectured pretty generally round this country.

#### The Intracoastal Canal

WHEN the Rivers and Harbors Bill was before Congress a year ago one of this old teacher's pupils grew almost eloquent—at any rate he fought loud—denouncing the Pork Barrel. Naturally he was requested to indicate the particular project he wished to have eliminated; so he concluded to read the bill and try to guess the answer. The House adjourned over Sunday and when we resumed consideration of the bill on Monday he was ready to specify. Somebody has had a big map of the United States printed, with a broad blue strip running from Boston a short distance inland along the whole Atlantic Coast, across Florida round the Gulf to the Mexican border.

This is supposed to indicate the course of the Intracoastal Canal. The usual amount of study devoted to this project consists of a more or less casual glance at the map and a somewhat more definite "Well, I'll be darned!" The real project for this inland route may be stated in a few words, and a somewhat careful examination of the map will probably suggest the thought that it is manifestly feasible, A cut across Cape Cod—and private enterprise is now making it—gives a protected course behind Long Island into

### by B. G. Humphreys

New York from Boston. The tonnage actually carried now and subjected to the dangers of the passage through Marthas Vineyard and round Cape Cod is difficult to ascertain with exactness. It is very large—just how many millions can only be roughly estimated, but certainly larger than the tonnage that passes through the Suez Canal; and the passenger traffic is enormous.

Surely it would not be a foolish thing to make the way safe. The next cut is across New Jersey from Raritan Bay to the Delaware River, and private enterprise dug that many years ago. The next cut is across Delaware from the river to Chesapeake Bay; and there, too, private enterprise has long since constructed the Delaware & Chesapeake Canal. Running down this protected course several hundred miles through Chesapeake Bay, the next cut is from the Chesapeake to Albemarle Sound.

Strangely enough, these two waters are already connected by two privately dug canals—one through the Dismal Swamp; the other known as the Chesapeake & Albemarle Canal. The traffic carried through both these canals, though the depth is only six feet, was given as seven hundred thousand tons the year before Congress purchased the last named. All of it, of course, was compelled to pay toll to the companies that owned and operated them. It would require an ordinary freight train of thirty loaded cars two trips daily every day in the year to transport this tonnage.

Just what the saving to the commerce of the coast will amount to when this canal is deepened and widened and made a free waterway can only be guessed; but the engineer corps of the army, after a very thorough study of the question, reported that the expense of the improvement, including the purchase price, was justified by the needs of commerce, and thereupon Congress adopted the project. It will enable the smaller craft engaged in the coastwise trade to avoid the storms and hidden reefs off Cape Hatteras, the most dangerous point on our Atlantic seaboard, where many fortunes and human lives are annually lost.

From Beaufort to Savannah the difficulty will be greater, but future Congresses may find it worth while to undertake this section. From Savannah to Key West the project will require little excavation and the cost will be small.

Along the Gulf of Mexico, Nature has providently so disposed the sea islands as to provide this section of the canal almost without the necessity for human activities to amplify. Look at the map if your curiosity or interest is roused.

However, as one of those immortals who used to gather round the table at the Coffee House and hear Doctor Johnson's long sentences expressed it, "This is going far afield." I must return to our friend the orator. To use expressive slang, the Intracoastal Canal "got its!" It was the biggest and the greasiest piece of pork in the barrel! When Clearwater Harbor was reached in the bill it must be stricken out. The chairman explained that this was not a part of this inland waterway.

"Judging from its name I had assumed that it must be some distance inland," the objector explained. Most natural assumption. How could Clearwater Harbor be near the ocean? Traversing the broad prairies from the land of the cactus on his triumphal march to the nation's capital, he had crossed many rivers—tis Red, the Arkansas, and even the Father of Water.

All were rushing in tawny currents on and into the sea, and surely this common receptacle of so much silt must be the muddlest hole in Christendom. Clearwater Harbor near the Ocean—the idea!

The rivers whose improvement and maintenance are provided for in the bill now pending in Congress floated last year a commerce amounting to 203,313,128 tons. This is exclusive of the traffic on the rivers connecting the Great Lakes, and does not include the tonnage of our harbors These figures will be more readily understood when conpared with the tonnage of other transportation routs which hold a prominent place in the public mind. Mr. Emery Johnson, the official expert upon whose figures the House relied when the rate of tolls was fixed for the Panana Canal, estimated that the total tonnage which would pass through the Canal in 1915 would be ten and a half million tons. The tonnage of the Suez Canal for 1912 was 20,125. 120 tons. The freight carried from coast to coast by all our transcontinental railroads combined is three million tons. It is estimated that the coastwise traffic which will pass through the Canal will be 1,250,000 total annually, and it is the exemption or nonexemption this million and a quarter tons from the payment of tolls which has caused so much acrimonious debate. In other words the rivers, large and small, for which we are providing in our Rivers and Harbors bills, float nearly as much tonnage annually as will pass through the Panama Canal and the Suez Canal, plus the cross-continent tonnage of all the railroads during the next ten years.

#### Senator Burton's Change of Tune

THEN the creeks and the insignificant rivers—what of the money wasted in their improvement? Surely this is pork, and distributed, too, among the members in such fashion as to make the passage of the barrel certain. What a curious notion, that a Congressman could gain favor at home by securing appropriations of money to waste on worthless creeks! Surely this could gain votes only in the immediate vicinity of the miserable creek, and there better than anywhere else would it be known that the money was in fact being wasted. Are the people dunces? Do these creeks if flow through the grounds of some insane asylum? Otherwise how could a Congressman gain popular favor by needless expenditures of the tax-raised money on impossible and worthless creeks?

Senator Burton was chairman of the Rivers and Harbon Committee for ten years. During that time he spent much money on the Great Lakes and viewed the magical growth of commerce there with commendable pride. He also speid much money on the ridiculous creeks, and was severer purhaps than any one else in his judgment and in his criticism of those who spoke of the Pork Barrel. When the first Rivers and Harbors Bill, after he reached the Senate, was reported to that body, word came over to the House that he was making a most vigorous attack on it. Pork Barrel in fact, had been one of the phrases used.

D. S. Alexander, one of the most conscientious patrices who ever served in Congress, and certainly one of the most

wable of men, had been Mr. Burton's pupil for those ten ears and now had succeeded to the chairmanship of the ouse committee. He had framed this bill on the identical ges so long laid down and so well defended by Mr. Burton id he refused to believe the story. The old members folwed him posthaste to the other chamber, to be resolved Brutus so unkindly knocked or no. Which particular he he was essaying, Brutus or Casca, nobody knew. All on were aware, however, that he was knocking, and locking hard at that.

The Brazos, the Trinity, and some other projects that ere the children of his own brain-or at least had been hered into this breathing world under his skillful legistive attention—shared the shafts of his forceful criticisms. this he seemed to be playing no favorites, whatever else

might be playing.

Alexander was speechless; but being a member of the ouse, and at the moment only a visitor de gratia in the mate, this was not surprising; the rules required it. He d known Saul of Tarsus, but this was Paul! After it was er he led his committee colleagues back to the House, a adder if not a wiser man. They believed the great sena-, at whose feet they had learned how to frame River and arbor bills, had for some reason put an antic disposition The charge of Pork Barrel, however, had been revived, d this time sponsored, by a man whose opinion was orth something and whose words carried weight.

The old adage says that bad news travels fast. There some stories that are hardly to be classed as bad news, t that are nevertheless entitled to honorable mention in ese speed contests. Videlicet: Once upon a time there s an old priest, Abbé Huc, who visited China and wrote book, in which he said the Yellow River had, by reason

the levees along its banks, filled its annel until the bottom of the river s higher than the adjacent territory. ere was no truth in the story; but it ok the wings of the morning and flew the uttermost parts of the earth.

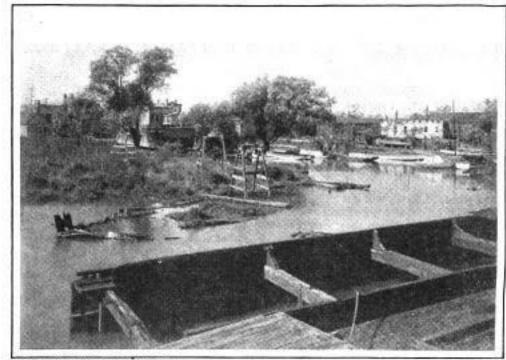

#### Work on the Trinity

OW very many people have heard I it, and how very few people ever id the book or heard of the abbé! So th the Trinity River. Dallas, Texas, is this river, a few miles above its conence with the East Fork. There has rely been a situation where a competing ter route to the sea was more clearly licated, as the doctors say, than at illas. In the center of the greatest tonbelt in the world it was actually ng strangled by the railroads. It was sposed to improve the Trinity; but in the question was raised whether re was sufficient water in the short etch down to the point where the two ks united to maintain the required oth if a lock and dam were put there. In an unhappy moment an engineer gested that if there were any doubts this point artesian wells could be ik to supply the deficiency! How

it tale spread and how it has grown and waxed fat repetition as well as distance lent enchantment! It t few who have not heard at least one version of it.

The very matter-offact business men of Dallas were confronted with the condition, while the theory was cutting its fantastic tricks as clever paragraphers about the country gave it additions and much currency. Everybody smiled when the Trinity was mentioned; and so these selfsame business men went down into their pockets and dug up some sixty-six thousand dollars wherewith to construct a lock and dam to demonstrate that there was ample water in this short section of the river. This they did to everybody's satisfaction and Congress thereupon adopted the project. It was understood from the very outset that no commerce could develop until the series of locks and

dams were completed to the Gulf. There was nothing stranger in this than that there would be no commerce at Panama until the canal was completed. In a few years the improvement of the Trinity will be completed and this

Old Canal Boat Construction Yard, Delaware and Raritan Canal

the people's money on ridiculous creeks. How I have heard the changes rung on these worthless creeks!

A party of Congressmen were riding round Boston Harbor some years ago. We were being shown the shipping

and the wonderful facilities of that great port by one of the jolliest and cleverest sons of the Old Bay State. We passed a curious old hulk lying in a rather neglected nook of the harbor, when our guide pointed it out as the old Constitution and really grew eloquent in his recount of its heroic achievements. We were charmed!

Then another less imaginative Bostonian broke into explain that this was all a mistake! So far from being the Constitution, it was nothing more than an unworthy barge converted into a houseboat! Turning on this iconoclast our host shouted:

"Well, I knew that all along; but it was serving the purpose most excellent well, and now you have converted this delightful surprise into the biggest disappointment of the morning-and that, too, simply for the sake of uninteresting

#### The Tonnage of the Creeks

IFIT were not for the fact that it would be doing ill service to the cause of waterway improvement, by poisoning the public conscience with palatable though thoroughly unwholesome fallacies, I would not break this insignificant-

creek idol; but I must. Let us, therefore, consider some

dry though very pertinent facts.

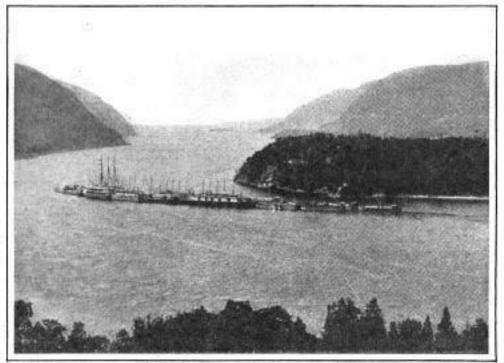

During the past four years Congress has passed four Rivers and Harbors appropriation bills. The total carried in those four bills for the improvement of creeks, all told, was nine hundred and one thousand dollars. These same bills carried, for all rivers and all harbors, something more than one hundred million dollars. Of this sum the creeks got something less than one per cent. During those same four years those same creeks, counting all, floated in commerce among our people a tonnage officially valued at one billion dollars.

The Ohio River runs for a thousand miles through one of the busiest valleys of this turbulent earth. We are now hurrying to completion a project there for a nine-foot depth from Pittsburgh to the Mississippi River, where it will connect with another nine-foot channel out to the Gulf. We are going to spend on this Ohio River project sixtythree million dollars and everybody applauds the enterprise, as everybody must. The tonnage of the Ohio River is about ten millions annually.

Those creeks, which cost us less than one million in four years, bear an annual commerce of nearly seven million tons. How many railroads are there in these United States that can carry a billion dollars of commerce with a trackage maintenance charge of nine hundred and one thousand dollars? Our maintenance charges at Panama, military included, are going to be some twenty-five or thirty million dollars annually.

Is there any poet now in captivity who expects to see thirty thousand million dollars of commerce pass through the Panama Canal annually? If it does not, then the creeks will show better in the comparison.

greatest cotton-producing section of the world will then be enabled to use it. Until that good day comes, however, it s been repeated in infinite variations until there are must serve our orators and editors as an illustration of the

wicked waste involved in the annual Pork Barrel, where money is spent on a stream that bears no commerce!

The Brazos has to run this same gauntlet until its progressing improvement brings Waco in touch with the Gulf of Mexico.

These are the bright particular spots that illumine every article on the Pork Barrel, and they are the horrible examples pointed to by the orators who fight this same devil—that is, by those who happen to know these projects are being provided for. As a rule, of course, your political orator does not labor under the handicap of accurate information.

The climax of Pork Barrel orations and editorials usually, almost invariably, finds its fitting cap in the waste of

Cascades Canal and Locks, Oregon

### THE BUSHER COMES BACE

San Francisco, California, May 13.

\*\*RIEND AL: I suppose you and the rest of the boys in Bedford will be supprised to learn that

I am out here, because I remember telling you when I was sold to San Francisco by the White Sox that not under no circumstances would I report here. I was pretty mad when Comiskey give me my release, because I didn't think I had been given a fair show by Callahan. I don't think so yet Al and I never will but Bill Sullivan the old White Sox catcher talked to me and told me not to pull no boner by refuseing to go where they sent me. He says You're only hurting yourself. He says You must remember that this was your first time up in the big show and very few men no matter how much stuff they got can expect to make good right off the reel. He says All you need is experience and pitching out in the Coast League will be just the thing for you.

So I went in and asked Comiskey for my transportation and he says That's right Boy go out there and work hard and maybe I will want you back. I told him I hoped so but I don't hope nothing of the kind Al. I am going to see if I can't get Detroit to buy me, because I would rather live in Detroit than anywheres else. The little girl who

got stuck on me this spring lives there. I guess I told you about her Al. Her name is Violet and she is some queen. And then if I got with the Tigers I wouldn't never have to pitch against Cobb and Crawford, though I believe I could show both of them up if I was right. They ain't got much of a ball club here and hardly any good pitchers outside of me. But I don't care.

I will win some games if they give me any support and I will get back in the big league and show them birds something. You know me, Al. Your pal, JACK.

LOS ANGELES, CALIFORNIA, MAY 20.

AL: Well old pal I don't suppose you can find much news of this league in the papers at home so you may not know that I have been standing this league on their heads. I pitched against Oakland up home and shut them out with two hits. I made them look like suckers Al. They hadn't never saw no speed like mine and they was scared to death the

minute I cut loose. I could of pitched the last six innings with my foot and trimmed them they was so scared.

Well we come down here for a serious and I worked the second game. They got four hits and one run, and I just give them the one run. Their shortstop Johnson was on the training trip with the White Sox and of course I knowed him pretty well. So I eased up in the last inning and let him hit one. If I had of wanted to let myself out he couldn't of hit me with a board. So I am going along good and Howard our manager says he is going to use me regular. He's a pretty nice manager and not a bit sarkastic like some of them big leaguers. I am fielding my position good and watching the baserunners to. Thank goodness Al they ain't no Cobbs in this league and a man ain't scared of haveing his uniform stole off his back.

But listen Al I don't want to be bought by Detroit no more. It is all off between Violet and I. She wasn't the sort of girl I suspected. She is just like them all Al. No heart. I wrote her a letter from Chicago telling her I was sold to San Francisco and she wrote back a postcard saying something about not haveing no time to waste on bushers. What do you know about that Al? Calling me a busher. I will show them. She wasn't no good Al and I figure I am well rid of her. Good riddance is rubbish as they say.

I will let you know how I get along and if I hear anything about being sold or drafted. Yours truly, JACK,

SAN FRANCISCO, CALIFORNIA, JULY 20.

FRIEND AL: You will forgive me for not writeing to you oftener when you hear the news I got for you. Old pal I am engaged to be married. Her name is Hazel Carney and she is some queen, Al—a great big strapping girl that must weigh one hundred and sixty lbs. She is out to every game and she got stuck on me from watching me work.

Then she writes a note to me and makes a date and I meet her down on Market Street one night. We go to a nickel show together and have some time. Since then we been together pretty near every evening except when I was away on the road.

Night before last she asked me if I was married and I tells her No and she says a big handsome man like I ought not to have no trouble finding a wife. I tells her I ain't

By Ring W. Lardner

ILLUSTRATED BY ARTHUR WILLIAM BROWN

She Was All Broke Up But I Told Her I Didn't Have Enough Dough to Get Married

never looked for one and she says Well you wouldn't have to look very far. I asked her if she was married and she said No but she wouldn't mind it. She likes her beer pretty well and her and I had several and I guess I was feeling pretty good. Anyway I guess I asked her if she wouldn't marry me and she says it was O. K. I ain't a bit sorry Al because she is some doll and will make them all sit up back home. She wanted to get married right away but I said No wait till the season is over and maybe I will have more dough. She asked me what I was getting and I told

her two hundred dollars a month. She says she didn't think I was getting enough and I don't neither but I will get the money when I get up in the big show again.

Anyway we are going to get married this fall and then I will bring her home and show her to you. She wants to live in Chi or New York but I guess she will like Bedford O. K. when she gets aquainted.

I have made good here all right Al. Up to a week ago Sunday I had won eleven straight. I have lost a couple since then, but one day I wasn't feeling good and the other time they kicked it away behind me.

I had a run in with Howard after Portland had beat me. He says Keep on running round with that skirt and you won't never win another game.

He says Go to bed nights and keep in shape or I will take your money. I told him to mind his own business and then he walked away from me. I guess he was scared I was going to smash him. No manager ain't going to bluff me Al.

So I went to bed early last night and didn't keep my date with the kid. She was pretty sore about it but business before plesure Al. Don't tell the nothing about me being engaged. I want to sup them. Your pal,

SACRAMENTO, CALIFORNIA, AUGUST FRIEND AL: Well Al I got the supprise of my life night. Howard called me up after I got to my and tells me I am going back to the White Sox. Cor find out, when they sold me out here they kept a o on me and yesterday they exercised it. He told melv have to report at once. So I packed up as quick as I and then went down to say good-by to the kid. She all broke up and wanted to go along with me but I her I didn't have enough dough to get married. She she would come anyway and we could get married i but I told her she better wait. She cried all over my s She sure is gone on me Al and I couldn't help feeling for her but I promised to send for her in October and everything will be all O. K. She asked me how much going to get in the big league and I told her I would lot more money than out here because I wouldn't I I didn't. You know me Al. I come over here to Sacramento with the club this

ing and I am leaveing tonight for Chi. I will get next Tuesday and I guess Callahan will work me away because he must of seen his mistake in letting by now. I will show them Al.

I looked up the skedule and I seen where we p
Detroit the fifth and sixth of September. I hope th
let me pitch there Al. Violet goes to the games and
make her sorry she give me that kind of treatment
I will make them Tigers sorry they kidded me last:

I ain't afraid of Cobb or n

them now, Al. Your pal, J.

CHICAGO, ILLINOIS, AUGUS

AL: Well old pal I guess I
in right. Did you notic
I done to them Athaletics, t
ball club in the country?
Violet wishes she hadn't cal
no busher.

I got here last Tuesday up in the stand and watch game that afternoon. Wash was playing here and J pitched. I was anxious to him because I had heard a about him. Honest Al he

him because I had heard s about him. Honest Al he fast as me. He shut them out, but they never we of a hitting club. I went to the clubhouse after the and shook hands with the bunch. Kid Glear assistant manager seemed pretty glad to see me says Well have you learned something? I says Ye I have. He says Did you see the game this aftern says I had and he asked me what I thought of J I says I don't think so much of him. He says guess you ain't learned nothing then. He say was the matter with Johnson's work? I says He nothing but a fast ball.

says Yes and Rockefell got nothing but a hundred bucks.

Well I asked Callahan i going to give me a chance and he says he was. But the bench a couple of day didn't ask me to do noth nally I asked him why no says I am saving you against a good club, the At Well the Athaletics con guess you know by this ti I done to them. And I has

against Bends but I ain't a none of them

omething and they handed Oldring a twobase hit on a ball hat Weaver had to duck to get out of the way from. But I on't care nothing about reporters. I beat them Athaletics ad beat them good, five to one. Gleason slapped me on he back after the game and says Well you learned somehing after all. Rub some arnicky on your head to keep he swelling down and you may be a real pitcher yet. I ays I ain't got no swell head. He says No. If I hated iyself like you do I would be a moveing-picture actor. Well I asked Callahan would be let me pitch up to Detroit nd he says Sure! He says Do you want to get revenge on hem? I says, Yes I did. He says Well you have certainly ot some comeing. He says I never seen no man get worse eatment than them Tigers give you last spring. I says Tell they won't do it this time because I will know how to itch to them. He says How are you going to pitch Cobb? I says I am going to feed him on my slow ne. He says Well Cobb had ought to make a good meal f of that. Then we quit jokeing and he says You have sproved a hole lot and I am going to work you right along gular and if you can stand the gaff I may be able to use ou in the city serious. You know Al the White Sox plays city serious every fall with the Cubs and the players akes quite a lot of money. The winners gets about eight

undred dollars a peace and se losers about five hundred. e will be the winners if I have wthing to say about it.

I am tickled to death at the mance of working in Detroit id I can't hardly wait till we 4 there. Watch my smoke Al.

Your pal, JACK. P. S. I am going over to ilen's flat to play cards a hile tonight. Allen is the leftunder that was on the training ip with us. He ain't got a ing, Al, and I don't see how gets by. He is married and swife's sister is visiting them. e wants to meet me but it m't do her much good. I en her out to the game today d she ain't much for looks.

etroit, Mich., September 6. TRIEND AL: I got a hole lot to write but I ain't got ich time because we are gog over to Cleveland on the at at ten P. M. I made them gers like it Al just like I said would. And what do you nk Al, Violet called me up er the game and wanted to me but I will tell you about game first.

They got one hit off of me d Cobb made it a scratch gle that he beat out. If he dn't of been so dam fast I ald of had a 0 hit game. At it Weaver could of threw him t if he had of started after ball in time. Crawford in't get nothing like a hit and hiffed him once. I give two lks both of them to Bush but is such a little guy that you i't pitch to him.

When I was warming up bee the game Callahan was nding beside me and pretty m Jennings come over. Jen-

gs says You ain't going to pitch that bird are you? And llahan said Yes he was. Then Jennings says I wish i wouldn't because my boys is all tired out and can't the bases. Callahan says They won't get no chance lay. No, says Jennings I suppose not. I suppose he l walk them all and they won't have to run. Callahan 8 He won't give no bases on balls, he says. But you ter tell your gang that he is liable to bean them and they ter stay away from the plate. Jennings says He won't zer hurt my boys by beaning them. Then I cut in. Nor a neither, I says. Callahan laughs at that so I guess I st of pulled a pretty good one. Jennings didn't have comeback so he walks away.

Then Cobb come over and asked if I was going to work. llahan told him Yes. Cobb says How many innings? llahan says All the way. Then Cobb says Be a good fel-Cal and take him out early. I am lame and can't run. utts in then and said Don't worry, Cobb. You won't re to run because we have got a catcher who can hold m third strikes. Callahan laughed again and says to You sure did learn something out on that Coast.

Well I walked Bush right off the real and they all gun to holler on the Detroit bench There he goes again.

Vitt come up and Jennings yells Leave your bat in the bag Osker. He can't get them over. But I got them over for that bird all O. K. and he pops out trying to bunt. And then I whiffed Crawford. He starts off with a foul that had me scared for a minute because it was pretty close to the foul line and it went clear out of the park. But he missed a spitter a foot and then I supprised them Al. I give him a slow ball and I honestly had to laugh to see him lunge for it. I bet he must of strained himself. He throwed his bat away like he was mad and I guess he was. Cobb comes pranceing up like he always does and yells Give me that slow one Boy. So I says All right. But I fooled him. Instead of giveing him a slow one like I said I was going to I handed him a spitter. He hit it all right but it was a line drive right in Chase's hands. He says Pretty lucky Boy but I will get you next time. I come right back at him. I says Yes you will.

Well Al I had them going like that all through. About the sixth inning Callahan yells from the bench to Jennings What do you think of him now? And Jennings didn't say nothing. What could he of said?

Cobb makes their one hit in the eighth. He never would

of made it if Schalk had of let me throw him spitters instead of fast ones. At that Weaver ought to of threw him out. I Am a Belikop and the Big Rube With Me is Nothing but a Pitcher

> Anyway they didn't score and we made a monkey out of Dubuque, or whatever his name is,

ABTHUR WILLIAM BROWN

Well Al I got back to the hotel and snuck down the street a ways and had a couple of beers before supper. So I come to the supper table late and Walsh tells me they had been several phone calls for me. I go down to the desk and they tell me to call up a certain number. So I called up and they charged me a nickel for it. A girl's voice answers the phone and I says Was they some one there that wanted to talk to Jack Keefe? She says You bet they is. She says Don't you know me, Jack? This is Violet. Well, you could of knocked me down with a peace of thread. I says What do you want? She says Why I want to see you. I says Well you can't see me. She says Why what's the matter, Jack? What have I did that you should be sore at me? I says I guess you know all right. You called me a busher. She says Why I didn't do nothing of the kind. I says Yes you did on that postcard. She says I didn't write you no postcard.

Then we argued along for a while and she swore up and down that she didn't write me no postcard or call me no busher. I says Well then why didn't you write me a letter when I was in Frisco? She says she had lost my address. Well Al I don't know if she was telling me the truth or not but maybe she didn't write that postcard after all. She was crying over the telephone so I says Well it is too late for I and you to get together because I am engaged to be married. Then she screamed and I hang up the receiver. She must of called back two or three times because they was calling my name round the hotel but I wouldn't go near the phone. You know me Al.

Well when I hang up and went back to finish my supper the dining room was locked. So I had to go out and buy myself a sandwich. They soaked me fifteen cents for a sandwich and a cup of coffee so with the nickel for the phone I am out twenty cents altogether for nothing. But then I would of had to tip the waiter in the hotel a dime.

Well Al I must close and catch the boat. I expect a letter from Hazel in Cleveland and maybe Violet will write to me too. She is stuck on me all right Al. I can see that. And I don't believe she could of wrote that postcard after Yours truly,

BOSTON, MASSACHUSETTS, SEPTEMBER 12.

OLD PAL: Well Al I got a letter from Hazel in Cleveland and she is comeing to Chi in October for the city serious. She asked me to send her a hundred dollars for her fare and to buy some cloths with. I sent her thirty dollars for her

fare and told her she could wait till she got to Chi to buy her cloths. She said she would give me the money back as soon as she seen me but she is a little short now because one of her girl friends borrowed fifty off of her. I guess she must be pretty soft-hearted Al. I hope you and Bertha can come up for the wedding because I would like to have you stand up with me.

I all so got a letter from Violet and they was blots all over it like she had been crying. She swore she did not write that postcard and said she would die if I didn't believe her. She wants to know who the lucky girl is who I am engaged to be married to. I believe her Al when she says she did not write that postcard but it is too late now. I will let you know the date of my wedding as soon as I find out.

I guess you seen what I done in Cleveland and here. Allen was going awful bad in Cleveland and I relieved him in the eighth when we had a lead of two runs. I put them out in one-two-three order in the eighth but had hard work in the ninth due to rotten support. I walked Johnston and Chapman and Turner sacrificed them ahead. Jackson come up then and I had two strikes on him. I could of whiffed him but Schalk makes me give him a fast one when I wanted to give him a slow one. He hit it to Berger and Johnston ought to of been threw out at the plate but Berger fumbles and then has to make the play at first base. He got Jackson all O. K. but they was only one run behind then and Chapman was on third base. Lajoie was up next

and Callahan sends out word for me to walk him. I thought that was rotten manageing because Lajoie or no one else can hit me when I want to cut loose. So after I give him two bad balls I tried to slip over a strike on him but the lucky stiff hit it on a line to Weaver. Anyway the game was over and I felt pretty good. But Callahan don't appresiate good work Al. He give me a call in the clubhouse and said if I ever disobeyed his orders again he would suspend me without no pay and lick me too. Honest Al it was all I could do to keep from wrapping his jaw but Gleason winks at me not to do nothing.

I worked the second game here and give them three hits two of which was bunts that Lord ought to of eat up. I got better support in Frisco than I been getting here Al. But I don't care. The Boston bunch couldn't of hit me with a shovvel and we beat them two to nothing. I worked against Wood at that. They call him Smoky Joe and they say he has got a lot of speed.

Boston is some town, Al, and I wish you and Bertha could come here sometime. I went down to the wharf this morning and seen them unload the fish. They must of been a million of them but I didn't have time to count them. Every one of them was five or six times as big as a blue gill,

Violet asked me what would be my address in New York City so I am dropping her a post card to let her know all though I don't know what good it will do her. I certainly won't start no correspondents with her now that I am engaged to be married. Yours truly,

NEW YORK, NEW YORK, SEPTEMBER 16.

FRIEND AL: I opened the serious here and beat them easy but I know you must of saw about it in the Chi papers. At that they don't give me no fair show in the Chi papers. One of the boys bought one here and I seen in it where I was lucky to win that game in Cleveland. If I knowed which one of them reporters wrote that I would punch his jaw.

Al I told you Boston was some town but this is the real one. I never seen nothing like it and I been going some since we got here. I walked down Broadway the Main Street last night and I run into a couple of the ballplayers and they took me to what they call the Garden but it ain't like the gardens at home because this one is indoors. We sat down to a table and had several drinks. Pretty soon one of the boys asked me if I was broke and I says No. why? He says You better get some lubricateing oil and loosen up. I don't know what he meant but pretty soon when we had had a lot of drinks the waiter brings a check and hands it to me. It was for one dollar. I says Oh I ain't paying for all of them. The waiter says This is just for that last drink.

I thought the other boys would make a holler but they didn't say nothing. So I give him a dollar bill and even then he didn't act satisfied so I asked him what he was waiting for and he said Oh nothing, kind of sassy. I was going to bust him but the boys give me the sign to shut up and not to say nothing. I excused myself pretty soon because I wanted to get some air. I give my check for my hat to a boy and he brought my hat and I started going and he says Haven't you forgot something? I guess he must of thought I was wearing a overcoat.

Then I went down the Main Street again and some man stopped me and asked me did I want to go to the show. He said he had a ticket. I asked him what show and he said the Follies. I never heard of it but I told him I would go if he had a ticket to spare. He says I will spare you this one for three dollars. I says You must take me for some boob. He says No I wouldn't insult no boob. So I walks on but if he had of insulted me I would of busted

I went back to the hotel then and run into Kid Gleason. He asked me to take a walk with him so out I go again. We went to the corner and he bought me a beer. He don't drink nothing but pop himself. The two drinks was only ten cents so I says This is the place for me. He says Where have you been? and I told him about paying one dollar for three drinks. He says I see I will have to take charge of you. Don't go round with them ballplayers no more,

When you want to go out and see the sights come to me and I will stear you. So tonight he is going to stear me. I will write to you from Philadelphia.

Your pal,

PHILADELPHIA, PA., SEPTEMBER 19. FRIEND AL: They won't be no game here today because it is raining. We all been loafing round the hotel all day and I am glad of it because I got all tired out over in New York City. I and Kid Gleason went round together the last couple of nights over there and he wouldn't let me spend no money. I seen a lot of girls that I would of liked to of got aquainted with but he wouldn't even let me answer them when they spoke to me. We run in to a couple of peaches last night and they had us spotted too. One of them says I'll bet you're a couple of ballplayers. But Kid says You lose your bet. I am a bellhop and the big rube with me is nothing but a pitcher.

One of them says What are you trying to do kid somebody? He says Go home and get some soap and remove your disguise from your face. I didn't think he ought to talk like that to them and I called him about it and said maybe they was lonesome and it wouldn't hurt none if we treated them to a soda or something. But he says Lonesome! If I don't get you away from here they will steal everything you got. They won't even leave you your fast ball. So we left them and he took me to a picture show. It was some California pictures and they made me think of Hazel so when I got back to the hotel I sent her three postcards.

Gleason made me go to my room at ten o'clock both nights but I was pretty tired anyway because he had walked me all over town. I guess we must of saw twenty shows. He says I would take you to the grand opera only it would be throwing money away because we can hear Ed Walsh for nothing. Walsh has got some voice Al a loud high tenor.

Tomorrow is Sunday and we have a double header Monday on account of the rain today. I thought sure I would get another chance to beat the Athaletics and I asked Callahan if he was going to pitch me here but he said he thought he would save me to work against Johnson in Washington. So you see Al he must figure I am about the best he has got. I'll beat him Al if they get a couple of runs behind me. Yours truly.

P. S. They was a letter here from Violet and it pretty near made me feel like crying. I wish they was two of me so both them girls could be happy.

Washington, D. C., September 22.

DEAR OLD AL: Well Al here I am in the capital of the old United States. We got in last night and I been walking round town all morning. But I didn't tire myself out because I am going to pitch against Johnson this afternoon.

This is the prettiest town I ever seen but I believe they is more colored people here than they is in Evansville or Chi. I seen the White House and the Monumunt. They say that Bill Sullivan and Gabby St. once catched a baseball that was threw off of the top of the Monumunt but I bet they couldn't catch it if I throwed it.

I was in to breakfast this morning with Gleason and Bodie and Weaver and Fournier. Gleason says I'm supprised that you ain't sick in bed today. I says Why?

He says Most of our pitchers gets sick when Cal tells them they are going to work against Johnson. He says Here's these other fellows all feeling pretty sick this morning and they ain't even pitchers. All they have to do is hit against him but it looks like as if Cal would have to send substitutes in for them. Bodie is complaining of a sore arm which he must of strained drawing to two-card flushes. Fournier and Weaver have strained their legs doing the tango dance. Nothing could cure them except to hear that big Walter had got throwed out of his machine and wouldn't be able to pitch against us this serious.

I says I feel O. K. and I ain't afraid to pitch against Johnson and I ain't afraid to hit against him neither. Then Weaver says Have you ever saw him work? Yes, I says, I seen him in Chi. Then Weaver says Well if you have saw him work and ain't afraid to hit against him I'll bet you would go down to Wall Street and holler Hurrah for Roosevelt. I says No I wouldn't do that but I ain't afraid of no pitcher and what is more if you get me a couple of runs I'll beat him. Then Fournier says Oh we will get you a couple of runs all right. He says That's just as easy as catching whales with a angleworm.

Well Al I must close and go in and get some lunch. My arm feels great and they will have to go some to beat me Johnson or no Johnson. Your pal,

ACTION WILLIAM DEOWN -

Rub Some Arnicky on Your Head and You May be a Real Pitcher Yet

WASHINGTON, D. C., SEPTEMBER 22. FRIEND AL: Well I guess you know by this time the they didn't get no two runs for me, only one, but I bet

him just the same. I beat him one to nothing and Callaba was so pleased that he give me a ticket to the theater. just got back from there and it is pretty late and laired have wrote you one letter today but I am going to sit an and tell you about it.

It was cloudy before the game started and when I was warming up I made the remark to Callahan that the dark day ought to make my speed good. He says Yes and d course it will handicap Johnson.

While Washington was takeing their practice ther me coachers Schaefer and Altrock got out on the infield and cut up and I pretty near busted laughing at them. The certainly is funny Al. Callahan asked me what was laughing at and I told him and he says That's the first time I ever seen a pitcher laugh when he was going to vori against Johnson. He says Griffith is a pretty good fellow to give us something to laugh at before he shoots that go at us.

I warmed up good and told Schalk not to ask me for m spitter much because my fast one looked faster than I ere seen it. He says it won't make much difference what you pitch today. I says Oh, yes, it will because Calaba thinks enough of me to work me against Johnson and I want to show him he didn't make no mistake. Then Giesen says No he didn't make no mistake. Wasteing Circle or Scotty would of been a mistake in this game.

Well, Johnson whiffs Weaver and Chase and mice Lord pop out in the first inning. I walked their first gap but I didn't give Milan nothing to bunt and finally is flied out. And then I whiffed the next two. On the best Callahan says That's the way, boy. Keep that up and we got a chance.

Johnson had fanned four of us when I come up with two out in the third inning and he whiffed me to. I fouled see though that if I had ever of got a good hold of I would d knocked out of the park. In the first seven inning as didn't have a hit off of him. They had got five or six hear ones off of me and I had walked two or three, but I at loose with all I had when they was men on and they could? do nothing with me. The only reason I walked so many was because my fast one was jumping so. Honest Alit was so fast that Evans the umpire couldn't see it half the time and he called a lot of balls that was right over the burn

Well I come up in the eighth with two out and the search still nothing and nothing. I had whiffed the second time as well as the first but it was account of Evans mising one on me. The eighth started with Shanks muffing a fig ball off of Bodie. It was way out by the fence so he put two bases on it and he went to third while they was throwing Berger out. Then Schalk whiffed.

Callahan says Go up and try to meet one Jack. It might as well be you as anybody else. But your old pal did:

whiff this time Al. He gets two striks on me with fast ones and then I passed up two bad ones. I took my healthy at the next one and slapped it over in: base. I guess I could of made two base on it but I didn't want to tire myself out. Anyway Bodie scored and I had then beat. And my hit was the only one == got off of him so I guess he is a pretty good pitcher after all Al.

They filled up the bases on me will one out in the ninth but it was pretty dark then and I made McBride and the catcher look like suckers with my spec-

I felt so good after the game that drunk one of them pink cocktails don't know what their name is. And the I sent a postcard to poor little Violet I don't care nothing about her but it dea't hurt me none to try and cheer bet @ once in a while. We leave here Thursday night for home and they had ought to be two or three letters there for me iron Hazel because I haven't heard from her lately. She must of lost my road address: Your pal. Jack.

P. S. I forgot to tell you what Callhan said after the game. He said I was a real pitcher now and he is going to a me in the city serious. If he does Al W will beat them Cubs sure.

CHICAGO, ILLINOIS, SEPTEMBER 7 FRIEND AL: They wasn't no letter here at all from Hazel and I guess sto must of been sick. Or maybe she did think it was worth while writeing = local as she is comeing next week.

I want to ask you to do me a favor ! and that is to see if you can find me a house down there. I will want to move in with Mrs. Keefe, don't that soul

(Continued on Page 61)

#### By Edwin Lefèvre CHEAP AT A MILLION

LLUSTRATED BY WILL GREFÉ

H. MERRIWETHER drove to the house of mystery in me the the chauffeur to wait and rang the il. One of the overintelligent-looking otmen opened the door.

"I wish to see Mr. - whoever is master this house."

"Yes, sir!"

The footman led the way. At the door the library he knocked twice sharply. en after a pause once, and then twice ain. He waited; and presently, having idently heard some answer not audible the financier, he opened the door and

"Mr. E. H. Merriwether!"

Why had there been any necessity for mals? Why such cheap theatrical clapap? To make him think things? These estions in Mr. Merriwether's mind showed at the mysterious master of the house ew the advantage of suggesting the imrtant sense of difference.

"Good morning, sir."

"Good morning," answered E. H. Merrither, and looked about the room.

It began to irritate him. The man insified the feeling by speaking very delibstely, as one to whom time is no object: "Pray be seated, Mr. Merriwether."

"I am a very busy man," began the autocrat of fifteen ousand miles of railroad.

"Sit down anyhow," imperturbably suggested the man. The autocrat sat down. He said:

"But please understand that." "I won't keep you any longer because you are sitting.

all we get down to business?" "Yes."

"Mr. Merriwether"—the man spoke almost dreamily lo you know why I asked you to call today at eleven?" "No."

"Because when you were here yesterday it was after

"And?" The little czar was in a hurry to finish.

"You, Mr. Merriwether, are one of those fortunate artals about whom the newspapers do not lie."

"Oh, am I? I take it you haven't seen a newspaper in eive years." Mr. Merriwether, after all, was an Amern. His sense of humor helped to make him great.

"I've read every line that has ever been printed about u-I had to, in order to study you exhaustively. I find at you are acknowledged by both friends and foes to be intelligent man."

"Oh, yes!"

"A very intelligent man!" continued the man.

"And therefore?" said the very intelligent man.

"And therefore I now ask you to give me one million llars."

Mr. E. H. Merriwether never so much as batted an eye-He kept his eyes fixed on the stranger's eyes. He eated, a trifle impatiently: "And?"
"A certified check will do."

"Come to the point-I am a busy man," said Mr. erriwether.

The man looked at the little financier admiringly. Then said: "You mean you wish to know why you should the million, or what you will get for it?" "Either! Both!"

"You should give it because it is I who ask it. You will t for it what is very, very cheap at a million." "My dear sir, we'd do business quicker if you'd play

Now that it was a matter of money, of paying, of trading, m's father felt a great sense of relief. Still, there was

m's unhappiness to consider. Poor boy! 'I want you to give me a million so that in r

'e you a daughter-in-law." "You mean you will not give me a daughter-in-law if I

w you a million-don't you?"

"I am in the habit of meaning what I say. The sooner u learn that, the quicker we'll close the deal. I mean at for a million dollars I'll give you a daughter-in-law." Mr. Merriwether shook his head. It was plainly to be m on his face that every moment spent in this room was and waste of time.

"Isn't it worth a million to you?" asked the man, as if knew it was.

Mr. Merriwether proceeded to look as though it were orth even less than a Santo Domingo mining concession. ten he said, with finality: "No!"

The man rose.

"I am Going to Lick You With This Whip!"

"Then"-he spoke indifferently-"come back when it is. I'll ask you to excuse me. I, also, am a busy man. Good

Mr. Merriwether rose and bowed. He looked straight into the man's very shrewd eyes, smiled very slightly-and sat down again.

"Do you mean," he asked very pleasantly, for his bluff had been called, "Miss Calderon?"

The man sat down.

"Oh, no!" he answered unsmilingly.

"No? Then?" Mr. Merriwether was so surprised that he forgot not to show it.

"I am sorry you are a busy man, because what I have to say cannot be hurried. First, you must chase from your mind all thoughts of Wall Street, high finance, railroad systems-and fill it with love!"

Mr. Merriwether looked alarmed. Would it all end with a Biblical text and an exhortation to endow some Home?
"You can do this," pursued the man imperturbably,

"by thinking of your son Tom. He is your only son. You should love him. Once your mind is attuned to thoughts of love, you will be able to understand me more easily. Concentrate on love!"

The man leaned back in his chair as though he were certain the attuning process would consume an hour, this being, alas! a Wall Street man; but Merriwether said very promptly:

"I am ready for Chapter II."

"I doubt it. Love! The love of father for son, of son for mother, of son for wife, of son for father and so on!" "I understand. My mind works quickly. Go on!"

"Do you by any chance happen to know that your son is in love?"

"Yes. Where is the girl?" "It isn't the girl. It's just girl."

"Oh, quit vaudevilling!"

"There is no girl who is the girl. There never was. There doesn't have to be any!"

Quite obviously this man was a lunaticwith the eyes of a particularly sane person. If there was no girl Tom was in no danger of marriage. A million for not marrying an undesirable person-yes; but a million for a daughter-in-law, when Tom was not in love!

"Only," thought Mr. Merriwether, "in e I have the selecting of her! And if I pick her I don't have to pay."

"And yet," said the man musingly, "Tom loves her!"

Mr. Merriwether's perplexity was fast rising to the dignity of anger.

"If there had been a girl of Tom's own class," the man went on, as if talking to himself, "why shouldn't he have been seen in public with her?" Mr. Merriwether was listening now with his soul. "And if the girl were of the other class, that financial geniuses, alas! sometimes have to accept for daughters-in-law-a nice, vivacious choruslady, or a refined Reno graduate, or worseshe would have insisted on being seen in

public with Tom, to show her power and to raise the paternal bid-price for a trip to Europe-alone!"

The man ceased to speak and began to nod his head slowly, his gaze on the rug at his feet. Mr. Merriwether could stand it no longer.

"If there is no girl, what in blazes do I get for my million?

"Your pick of eight!"

"Eight what?"

"Eight perfect daughters-in-law!"

A thought shot through Mr. Merriwether's mind: Was any form of insanity

He looked at the lunatic. The eyes were sane-cold, shrewd, mindreading eyes, full of a sardonic humor.

"They are all," added the man as if he wished to dispel unworthy suspicion, "in love.'

"With Tom?"

"With love-like Tom!"
"With love-like Tom!" helplessly repeated Mr. E. H. Merriwether.

"Your mind"—the man spoke very slowly and distinctly, as if he wished to deprive Mr. Merriwether of every excuse for not understanding him-"does not seem to be working this morning with its usual efficiency!'

"No!" admitted Mr. Merriwether sadly. "If you'd only use words of one syllable I think I could follow you

"It isn't that. It is that your mind was not attuned in the beginning to the thought of love, and therefore could not follow my words. You compel me to spend time in explaining the obvious. Listen! If you wish Tom to become the heir to your name, to your railroad, to your work, and to all the dreams you have dreamed about your work and about your son; if you want him to be your successor, to continue your work, to perpetuate the name and influence of Merriwether in his country-I say, if you wish all this he must do one thing and you must see that he does it. And that one thing, Mr. Merriwether, is for him to marry wisely. Do you get that?"

"Yes," answered Mr. Merriwether very simply. "If he doesn't it will be death to your hopes-a tragic

break in the Merriwether succession. No; don't shake your head. Admit it. Face it frankly. I know it. I know that you also know it. Can you expect me to believe that you want Tom to be the fool husband of a fool girl, whose influence on him -

"Tom isn't that kind," interrupted E. H. Merriwether. "All men are that kind. Does history record the case of a man, greater even than E. H. Merriwether, who when it came to women was an utter ass? Yes, of a thousand; in fact, the stronger the man the weaker she makes himthe better his brain the worse his folly. And the cure? When an intelligent man realizes that he is a hopeless ass over one woman he realizes that his only escape is by

the suicide route. No! It's much cheaper for you to pay the million. Oblige me by thinking. Isn't it cheaper to pay a million?"

He held up a silencing hand, as though he wished Mr. Merriwether to think for a full hour of the bargain he was getting. Mr. Merriwether thoughtquickly and accurately as was his wont. And he admitted to himself that it was indeed cheap at a million. But there must be value received. Promises, however plausible, are no more to be capitalized blindly than threats. It depends on who promises and why; and also on what is promised. He thought of offering a smaller sum and of going through the usual preliminaries of a trade, but decided to be frank.

"If you can deliver the goods I'll pay the million." And after a pause he added: "Gladly!"

as for Tom's Jake"

"I banked on that when I decided you ought to contribute a million to our fund," said the man simply. "I studied you and your fortune and your vulnerability, and I decided to attack via Tom. This was easier and cheaper than a stock-market campaign."

The man somehow looked as though he had said all that was necessary; but Mr. Merriwether reminded him:

"You must prove your ability to deliver the goods."

"I thought"-the man seemed mildly surprised-"we had."

"No; the million hasn't stirred."

"You are a brave man, Mr. Merriwether."

Mr. Merriwether laughed and said:

"What should I fear? People don't murder a man like me and get away with it-not when the motive is money. Political assassination, perhaps; but not for a few dollars-especially when my heirs would spend millions to see that justice did not miscarry." He shook his head smilingly.

"My dear sir, when we decided to go into the gold-mining business -

"Gold-mining business!"

"Exactly! We thought to save time and effort by getting our gold already coined. Our general staff studied various methods-the ticker, for instance, and legislative attacks on your roads; but we went back to Tom. It is, of course, nearly as stupid to overestimate as to underestimate one's opponent; so, while we provided against every contingency arising from your undoubted possession of a resourceful and fearless mind, we also thought—please take note—that you might display stupidity; and we prepared for it. Such as, for instance, in case you pointblank said No! We have also provided ways of preventing you and your uncaptured millions from hurting us. Of course we could make the stock market pay us for the trouble of kidnaping you or of murdering you. Don't you see clearly what you would do if you were in my place?"

"Oh, yes-I see it clearly; but I don't believe you could

do what I could in your place!"

Nobody is free from vanity, for everybody seems to be a natural monopolist when it comes to brains. You are kidnaped at this very moment, aren't you?"

"People know I am here

"Oh, yes! We expect to have you telephone McWayne presently not to expect you to lunch and that we have extended every facility to his detectives for having this house under surveillance. We kidnaped the great Garrettson and kept him out of reach of the great world of finance long enough to enable us to cash in. Not only that, but he never told how we did it. You remember when Steel broke to -

"You didn't do that!" exclaimed E. H. Merriwether. "Oh, yes, we did; and I'll tell you how." And the man

briefly outlined the case for him.

E. H. Merriwether listened with much interest. When the man made an end of speaking the financier shook his head skeptically, which made the man ask:

"You don't believe it?"

"No!" answered Mr. Merriwether.

"Nevertheless it is so. We also might have engineered in your case some deal such as that by which we compelled Ashton Welles to disgorge some of the money he had no business to have." And he proceeded to enlighten the financier.

"Very clever!" said Mr. Merriwether.

"Rather neat!" modestly acquiesced the man. "Suppose we had decided to kidnap you? The first thing to do is to get you here. Well, you are here."

"How will you make money by that?" asked the

financier, smiling.

"We don't expect to. We have not planned to make money by kidnaping you. Nevertheless you must admit it can be made a very expensive matter for you. But please let me kidnap you without interruption!"

"I beg your pardon!" said Mr. Merriwether gravely. It struck him that the possession of a sense of humor makes a crook ten times more dangerous.

made the reporter Tully really formidable. "We assume that you foresaw the danger to yourself in coming alone to this house. You'd employ private detectives to watch it at ten dollars a day a man, exactly as you have had your son watched the moment we decided it was time for you to begin the watching. McWayne, your efficient private secretary, is ready to move to your rescue. I don't see what else you could have done to protect yourself that we have not provided for."

"The police!" mildly suggested Mr. Merriwether.

"And the reporters!" mocked the man. "Pshaw! We know what we are doing. Why, we have rehearsed your kidnaping and even your death. Our ablest members have in turn impersonated you-put themselves in your place

"I Now Ask You to Give Me One Million Dollars"

and fought us, on the principle of the German army maneuvers. I will not bore you with more details and I admit that the human mind cannot foresee accidents; but we have studied how your mind would work. Suppose you assume that you are kidnaped and beyond the possibility of help from your friends. Shall I tell you what we have done to make Tom marry one of our eight desirable candidates?"

"If you still wish that million."

"Having decided to attack through Tom we studied him and his ancestry on both sides. We easily learned that he had never had a serious love affair, and that he was imaginative and adventurous like yourself. There were many young women who would have liked to become your daughter-in-law-too many. That was Tom's trouble. But our problem was really made easier by that. We simply had to turn his thoughts to love and to one girl. We therefore did."

"How?"

"We got him here. I piqued his curiosity and made the affair an extraordinary one by saying all we wished him to do was to answer one question. As we had rather expected, he would not come; but, of course, we had foreseen that, and so we got him here in one of our own taxicabs."

"How?"

"We telephoned him the doctor said he should come instantly and that you were not really in danger. We don't believe in lies; but we took pains that no other cab was in front of the club when we telephoned him from the corner drug store. Attention to details, my dear sir, always brings home the bacon. Having roused the spirit of adventure in a remarkable way I then asked him the great question. What do you think it was?"

Tom's father shook his head.

"It was this: Where did you spend your summer at the end of your Freshman year? He told me. Then I gave him a box made to order for me by a French expert, which would deceive other experts so long as we did not try to sell it. Anybody can imitate the gold work of any period. In all the museums of the world you will find fakes. Attention to details! I was prepared to have him show that box to local experts. I assumed he would do so, being a Merriwether and, therefore, intelligently curious."

"Box with what?" asked Mr. Merriwether, also intelli-

gently curious.

"Wait! When your son told me where he spent his summer at the end of his Freshman year I knew he was then about nineteen-too young to think of marriage but old enough to think of love. He had for the first time in his life been free from home influences and direct parental supervision. He was bound to regard himself as a man of the world and think of innocent flirtations as a manly art. Being in that frame of mind, and at the same time being a nice, rich, good-looking chap, all the girls would naturally make a dead set for him. Their numbers would keep him from having one love affair.

"All love affairs at twenty are much the same. A boy always begins by being it love with love. Indeed I believe twestyyear love to be exclusively a literary pasion-that is, boys get it from reading about it. Of course I studied time, period locality and manifold probabilities; and therefore, I sent him on a mission that suggested love-love for the one girl that Fits intended him to love and to marry. in order to fix, accentuate and accelerate is love-thinking I used the perfume of succ peas."

"How does that work?"

"I picked out sweet peas because the are found everywhere. Their oder a strong and characteristic. He must have inhaled that odor thousands of times when he was flirting with pretty girls the sinner he spent at Oleander Point with Doctor Bonner."

"Yes; but about suggesting -

"I advise you to read up on the paychology of odor associations. You vil learn that there is a very close relation between the olfactory sense and the desirto love. Oliver Wendell Holmes decired that memory, imagination, old sentiness and associations are more readily reached through the sense of smell than by almost any other channel; and, also, that 'other tory impressions tend to be associated with a sum-total of feeling-tone.' This has been known for thousands of years.

"A very interesting paper was written by Mackenzie, of Johns Hopkins. If you read it you will know more than I can now take the time to tell you. The Orient understands the value of perfumes in levmaking, and I could tell you amazing things; but I will refer you to Cabaria. Dadisett, Hobbes, Jaworski, Iwanici.

Schiff, Wolff and Zwaardemaker. If you wish, my seretary will prepare an exhaustive bibliography of the subject for you."

"No, thanks," said Mr. Merriwether. "But I still doo't understand -

The man sighed. Then he said:

"I'll tell you, of course." He then told Tom's father about the message in the dark that Tom had carried.

"But he couldn't possibly believe it!" exclaimed Mr. Merriwether.

"No; he couldn't—but he did. Of course I have talest you behind the scenes—that is, I have opened your eje and turned your head in the proper direction and held a firmly there and shouted Look! And of course you set the machinery standing still and you can't imagine it il motion. You are not so imaginative as I thought you

"Huh!" said E. H. Merriwether thoughtfully. That after a brief pause he said: "I see the wheels revolving

Ingenious!"

"More than that-practical! My object in having Tom fall in love with love, suggesting that there was too girl born to be his bride, accentuated by my use of the sweet-peas odor as a leitmotif, was to have something to offer you which would be cheap at a million. The next see was to make Tom do foolish things-for effect on you First, to make you fear Tom was crazy. I had a girl wis knew young Waters talk to him about Tom's new sad alarming queerness and suggest that he telephone to Mr. E. H. Merriwether.

"Of course Waters wouldn't telephone-and of course did. And, of course, if you had disbelieved or suspected you would have sent for young Mr. Waters and he would have denied the telephone but admitted the queer actions of Tom and the fact that people were talking about thes. That would have allayed any suspicion you might have entertained. So I stage-managed the opera scene and the Boston trip to make you fear the worst. In that frame of mind you could be induced to come here voluntarily. 1 sent Tully to you. You had to come!"

"Very clever!" said Mr. Merriwether with a thoughtid

absence of enthusiasm.

"Therefore," continued the man as if he had not hear the other's interpolation, "your son, being full of the thought of love and, even worse, of marrying the mate that Fate selected for him five million years ago, is DOE ready to marry any girl that smells of sweet peas. We thought that, instead of vulgarly extracting the milist from you by torture or threats, we would place you in exdebt by perpetuating the Merriwether dynasty. Hence the preparation of eight very nice girls-three of them it your own set, three others children of people you know, and the remaining two equally desirable but less historical, = it were."

"Who are they?" If Mr. Merriwether was to pay a million he might as well see the label.

"Cynthia, Agnes and Isabel, daughters respectively of lordon Hammersly, William Murray and Vanderpoel Joodford. Any objections?"

"No; but you can't ----"

"Yes, I can. Also, Louise Emlen, daughter of Marbury mien, the lawyer ——"

"He's a crook!" interrupted Mr. Merriwether,

"He doubtless interfered with one of your deals; I see you respect him. He's a crank, but she is a brick. And a liss Lythgoe, daughter of Professor Lythgoe, of Columa—the most beautiful girl in New York. Ramona Ogden; if father is Doctor Ogden, the lung specialist; her mother as a Jewess. The remaining two are of humble birth, ut all of them are healthy and beautiful, of good ancesy, plenty of honesty, brains, and, above all, imaginative, my one of them will not only make Tom happy but will ake him a worthy successor of a great man. And such andchildren as they will give you! I envy you!"

The man spoke with such fervent sincerity that E. H.

erriwether merely said:

"It is a risky business, even though the chances appear

"That's why we ask one million dollars—because we we eliminated the risk. Very cheap. Are you ready?" "Yes," said Mr. Merriwether grimly.

"Then, will you kindly ----"

"Yes; I will kindly tell you that you are a damned fool! ou've wasted my time. I'm going to my office, and if I in't have you put in jail it will be because I don't want e publicity. But don't push me too far or I'll do it anyw!" And Mr. E. H. Merriwether rose.

"Sit down!" said the man, with a pleasant smile.

"Go to hell!" snarled the czar of the Pacific and Southstern, and looked at the man with the eyes that Sam arpe once said reminded him of a mink's when it kills the sheer love of killing.

For all reply the man clapped his hands sharply twice.

MIT men—the overintelligent-looking footmen—came

m behind the heavy plush portières. Also, the ascetic
pking man who had held the glass of acid in the taxicab

d had brought Tom into the house the first time. The

cetic-looking man held a cornet to his lips, and his lungs

re filled with still unblown blasts.

"Three weeks ago, Mr. Merriwether," explained the mysficus master of the house, "this worthy artist began to actice on his beautiful instrument at exactly this time every orning. This was in anticipation of the morning when you ould be here—the idea being to drown your cries. The ighbors have complained and I have promised to play piasimo; but a few loud blasts, which will do the trick, will be given. Attention to details, Mr. Merriwether! Ready!" The cornetist inflated his lungs and held the cornet to his

 The footmen seized Mr. erriwether by the arms and p, one man to each limb.

"Doctor!" called the master. A sixth man came from behind e portières. He had some tin is in his hand—plainly labeled her—and also a cylinder of impressed laughing gas and an ialer.

"Expert! Anesthetics!" said
man curtly to Mr. Merrither. "We propose to take
u out of this house if we kidpyou. If we decide to kill you
have arranged to do it right
re at home. I think we'll kidpyou. A week or two will
the you amenable to reason.
realize, of course, that every
y you spend under our hospible roof will make it a little bit
we difficult to get the million
to our clutches. Would you
to know how we can kidnap
u and get away with it?"

"Yes," replied Mr. E. H. erriwether with a pleasant

"Tell our Mr. E. H. Merrither to come in," said the man the cornetist, who thereupon appeared and presently remed, followed by a man made to resemble the great financier. The task was rendered easy by a famous flat-brimmed hat, the the crown like a truncated he, so familiar to newspaper aders through the cartoonists' orts. The resemblance was a striking enough to deceive at the range, but it probably and work at a distance.

"Walk like him!" commanded e master. The fake Mr. Merriwether walked up and down the room with the curious swaggering, jockeylike jauntiness of the little railroad man. From time to time he snapped his fingers impatiently in the same characteristic way Mr. E. H. Merriwether almost always used when giving an order to subordinates.

"That will do!" said the man, with a broad grin at the impersonator of the little financial giant. The double left

the room-still walking à la E. H. M.

"I have had that man—an actor of about your build with a gift of mimicry—coached for weeks to imitate you. We told him it was a joke and guaranteed him an appearance before the most select audience in New York at one of Mrs. Garrettson's world-famous functions. We pledged him to a secrecy so natural, under the circumstances, as to rouse no suspicions. A few minutes ago we sent a footman to tell your chauffeur to go away and return at one. He wouldn't do it. The footman said the boss said so. Your man retorted that he took orders from only the boss himself—especially when countermanding previous orders.

"So our Mr. Merriwether went out to the front door, yelled 'One!' in your voice and snapped his finger at the intelligent chauffeur, who thereupon beat it. But the sleuth remains. It makes us laugh! But, after all, since we have provided for him, it would be a pity not to go through the entire program. Does this bore you?"

through the entire program. Does this bore you?"
"Must I tell the truth?" asked Mr. Merriwether.

"Yes."

"I can stand more." In point of fact Mr. Merriwether was sure the situation was serious for him. That is why

he joked about it.

"Over six months ago we opened an antique shop on Fourth Avenue. We had the usual truck. Also we have had this antique dealer—who is your humble servant—go from house to house on the Avenue offering to buy or exchange those antiques of which people have grown tired. We even asked you. We have offered such good prices and such excellent swaps that we have taken antiques from some of the wealthiest houses on the Avenue. Also we have made a practice of importing antiques from Europe, which we auction off every two weeks. The money we get we deposit in various banks, and then we buy bills on Paris. The banks now know us. Remember that—it is important.

"Well, we also have an exact copy of your motor, even to the initials in the door panels. Pretty soon we send for our Merriwether motor and our E. H. Merriwether emerges from this house and gets into his car and off he goes—and the sleuth with him."

"But if there should be two, and one stay?"

"Then Number Two will see not long afterward an elaborately carved Gothic chest taken from here into the antique dealer's wagon—a wagon now known to the traffic squad. We carry you away and lock you in a small sound-proof room, to get to which people would have to move out of the way a lot of heavy pieces of furniture. There is no question of our ability to kidnap you and to keep you a prisoner. I tell you we have paid attention to details persistently and intelligently. Meantime what does Sam Sharpe do to the stock market? And Northrup Ashe? How much will a month's absence from your office cost you?"

"Not half as much as it will cost you when I get out."

"And if you don't get out?"

For reply Mr. E. H. Merriwether grinned broadly.

"My dear Mr. Merriwether," the man spoke very seriously now, "we had not really expected such unintelligent skepticism from you; but, as we prepared for everything, we, of course, prepared for even crass stupidity on your part. In demonstrating our power to do what I say some painful moments will be your portion. This I regret more than I can say. Just now our problem is to prove our complete physical control of you and also our utter indifference to your feelings.

"I am going to do what will make you hate me to the murder point. In deliberately making a violent enemy of a man like you we pay ourselves the compliment of thinking ourselves absolutely fearless. I propose to have you spanked—to whip you as if you were a bad little boy. We shall at first use a shingle on you—undraped. You may begin when ready, James."

"Sir," said one of the footmen very respectfully to Mr. E. H. Merriwether, "will you kindly take off your coat and waistcoat, preliminary to the removal of your trousers?"

Mr. E. H. Merriwether tried to smile, but desisted when he saw that the men's faces had taken on a grim look.

"We know," said the master solemnly, "that for every blister we raise you will gladly spend a million to clap us into jail. Do you really wish to be spanked and to hate us for it for the rest of your life?"

"No."

"The alternative is the million-or death."

"You can't kill me and get away with it."

"Oh, yes—even easier than kidnaping. Will you please assume the fact of your death?"

"I'll do that much to please you," said Mr. Merriwether. He still believed that murder would not be profitable to these men and hence did not believe they would go that far.

"Would you like to know how we propose to dispose of the body?"

"I might as well see everything," he answered in a resigned tone of voice. The man looked at him admiringly and said: "Come on!"

They led the great E. H. Merriwether to the cellar. There he saw that the furnace coal had been taken out of

> its bin and put in the adjoining compartment. The plank floor had been taken up, and what looked like a short trench had been dug. Outside stood a pile of crushed stone, some bags of cement, some bundles of steel rods, a section of five-inch iron soilpipe with a mushroom-head trap at one end, and concrete-workers' tools

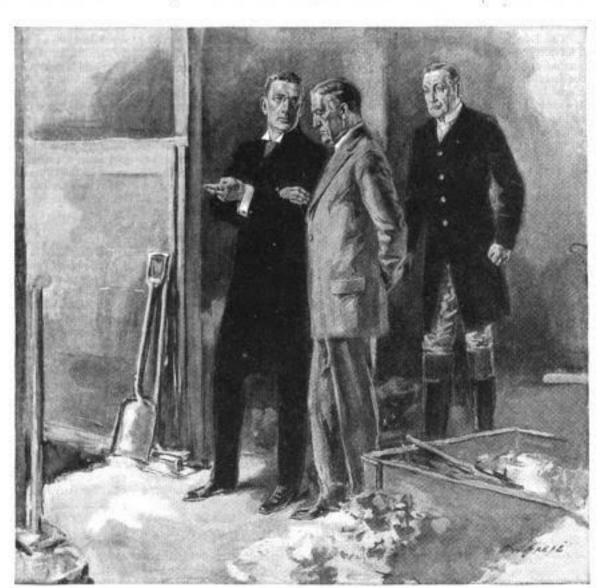

"After we make absolutely sure that you are dead we throw a lot of soft mortar into the grave, deposit the corpse, and then pour in more cement—so that you will be completely surrounded by it. It will make it very difficult indeed to recognize you when they try to chip away the hard cement—if they ever try! Then we fill the grave up to the top with concrete, using plenty of steel rods—not to reënforce the concrete at all, but to make it very hard digging with a pick.

"We also stick the soil pipe into the—er—cavity in order to account for the disturbed pavement. Intelligent searchers—your son and his detectives—will assume it is plumbing, and seek no further.

"We replace the plank flooring in the bin and fill it up with coal, thereby further obliterating all traces of your grave.

"We have provided for that part, you see. Why, my dear Mr. Merriwether, what we really do to you is confer immortality on you. We elevate you to the rank of one of the mysteries. Charlie Ross and E. H. Merriwether! Just assume that we'll

#### Feeling the Tariff

AMONG business men nowadays we often hear it remarked that from this time forth, for at least a twelvementh, the country will feel the effect of the new tariff law as it has not felt it hitherto. Probably this is true. Obviously a tariff change the effects of which were entirely imperceptible would have been entirely useless. There is no reasonable doubt that a majority of the people of this country had reached a firm conviction that the tariff was too high and should be radically revised. Certainly they did not expect the revision to go no further than to change some figures on the statute book. They expected it to have some effect on prices. Probably that effect is now beginning to be felt.

Oddly enough the loudest complaints we have encountered come from the South, where steel men declare that English, German and Belgian bars and billets are coming in at prices they cannot meet. The Democratic answer is that, possessing such natural advantages as we do, if we cannot compete with English, German and Belgian manufacturers, after they have paid the freight, we had better shut up shop and buy our steel abroad.

More is made of the importations of corn from Argentina into the Mississippi Valley, resulting in a considerable depression of the price of the cereal at Chicago. Our corn crop in 1913 was twenty per cent smaller than in the year before. As compared with the average of the three preceding years, it fell short about twelve per cent, and the average of the three preceding years was only about equal to consumption. With a deficit in home production the price of corn might have gone somewhat higher than it has, A greater number of immature food animals might have been rushed to market because the owners would not buy the higher-priced corn with which to feed them, which would have resulted in a greater shortage of beef and mutton in the future and still higher prices for meat; but certainly all that would have been no economic gain to the country. Importing some of Argentina's surplus corn is a more rational and profitable arrangement. And at this writing corn at Chicago is fifteen per cent higher than it was a year ago,

Probably in the next twelvementh we shall feel some effects of the new tariff; but that is no condemnation of the act. On the contrary it was for precisely that it was passed.

#### Opportunity

WE HAVE often wondered whether it would be humanly possible to devise equality of opportunity for children, and are quite inclined to believe that it would not be. Certainly matters might be arranged so that the overwhelming majority of poor children would not have to leave school about the time they get into the grammar grade. By free tuition, free maintenance and compensation to the parents for the youths' earning capacity it would even be possible to give bright children from the poorest homes as fair a chance at higher education as the millionaire's son has.

However, even that would not produce real equality of opportunity between the children of successful and unsuccessful men. On the whole, children derive as much from their parents and the environment their parents create as from school. A domestic environment flavored with alcohol, bickering and unpaid grocers' bills must be quite as great a handicap to a child as ignorance of syntax. Moreover, a successful parent is in the way of success. His acquaintanceship is among successful men—those who can say the right word and open the right door for a youth.

Opportunity, so to speak, belongs to his club. Whether in art, a profession or trade, the best education a young man can have comes through the personal, friendly interest of a master of the art, profession or trade—who, very likely, is his father's friend. This is something no school can give.

The parent who abuses his own opportunities squanders opportunity for his children. We do not believe it is humanly possible to get away from that; but it is certainly possible to give children greater equality of opportunity than they now have.

#### Scientific Exploitation

NOBODY will deny that capital lives by exploiting labor. That is its function. To exploit, says Webster, is "to utilize; to get the value or usefulness out of." Certainly, by and large, capital would not pay a dollar for labor unless it expected the produce of the labor to be worth a dollar plus. Capital calls the plus profit; Socialists call it surplus value and various other more or less hard names, which mean exactly what capital means by profit—that for a dollar outgo in wages there must be something more than a dollar income.

Scientific management is simply scientific exploitation of labor. It means making the labor more efficient; getting a greater value out of it. And, so far as it is really scientific, it means better living and working conditions, better pay, reasonable hours, protection from accidents, better schools; for there is no longer any question that all those things heighten the efficiency of labor.

It is true that a good deal of the progressiveness of our day involves a more scientific exploitation of labor. Sanitation, factory inspection, child-labor laws, wider educational opportunities, compensation for industrial accidents—all those things and many more involve conserving the labor resources of the country and making them more productive.

Capital will get part of the increased product; but we cannot understand why anybody who assumes to speak for labor should, on that account, wish these things undone. Yet quite a number of persons in that position speak as though they did.

Capital has not a tenth part of the stake in heightening the efficiency of labor that labor itself has. With labor of the lowest efficiency, capital has got along very comfortably. A man produces two dollars and a half, of which he gets the two while capital gets the half. If his product is raised to five dollars, of which he gets four—or only three dollars and fifty cents—our poor arithmetic cannot figure him worse off.

#### Squandering Public Money

THE National Monetary Commission, by authority of Congress and at public expense, visited Europe and investigated all phases of banking, including agricultural credits. The last of the thirty-odd volumes of its report had hardly been printed before Congress sent another commission to Europe to investigate agricultural credits.

Under the new banking law it was necessary to divide the country into reserve districts. All the information that any one needed to determine the number and boundaries of those districts was already available in print within fifteen minutes' walk of the Capitol; but a committee traveled all over the country, listening to oratory and discovering at first hand that the Mississippi River flows past St. Louis in a southerly direction.

Of course there was dissatisfaction with the committee's findings; so recently the House, as a matter of course, passed a resolution calling on the committee for all the material it had gathered. This would involve the editing, arranging and printing of huge tomes of utterly worthless stuff setting forth the roseate claims of rival cities.

This is typical of what goes on at Washington all the time. When it comes to investigating, Uncle Sam is a veritable Coal Oil Johnny. All the information needed may be obtained in the Congressional Library, just across the Capitol grounds; but Congress must send a committee through the whole country and have it gathered all over again.

What Congress really wishes to know might be contained in three pages of a report, but it must have the whole ten volumes printed again. For a quarter of the money Congress could have had a report of the physical value of railroads that would be exactly as good as the vast detailed inventory of railroad property it has ordered.

#### The Public Defender

ON ONE side of the American criminal court stands the public prosecutor. On the other side stand a horde of private practitioners, some of them most honorable men, some of them men who would disgrace any calling. And in the middle ground stand a large number of others, who are even as you and I—not surprisingly good or surprisingly but but regardful, first of all, of their personal interest is the case, which dictates that they shall win it if possible without doing too great violence to their consciences.

A defendant is free to employ any of these practitioners or as many of them as he can pay. Out of the confict between them and the public prosecutor come the delays quibbles, exceptions, appeals, hired experts and manifeld other scandals that were indelibly exemplified, for example, in the Thaw trials.

Long ago a public defender was suggested, and the like has found favor among many broad-minded lawyers. The public defender should be appointed and paid by the public, exactly as the public prosecutor is. The defense is every criminal action should be in his hands, just as the prosecution is now in the hands of a public officer. The desire of society is simply to know as surely and expetitiously as possible whether an accused man is guilty. The present system of private defense tends to prove, rather how smart his lawyers are.

We hope the legal profession will thresh out this quation of a public defender. That criminal procedure in the country urgently needs some radical reform is not detect by anybody worth considering.

#### A Suggestion for Censors

SHELLEY wrote: "The highest moral purpose sine is in the highest species of the drama is teaching to human heart, through its sympathies and antiputhes knowledge of itself; in proportion to the possession of which knowledge every human being is wise, just, shows tolerant and kind."

We wish all men and women whose mental limitation take the form of an itch to censor other adult persons plays and books would cut that out and ponder it until to meaning has, perhaps, illuminated their cloudy minds.

#### The Meat Bill

THERE is a popular idea, especially among people the pay butchers' bills, that meat is a vanishing article of diet in the United States. We hear a good deal of the commous decrease in our stock of meat animals in the face of a steadily rising population; and from the experience of the last fifteen years it would be easy to construct a curve by declining arc of which would touch the last Irish steaded the end of this century. In fourteen years, in fact, the production of meat has fallen off by three billion pouts, though population has risen by twenty-two millions.

However, even this cloud has a bright side. Some recent figures by the Department of Agriculture—for which only approximate accuracy is claimed—give the consumption of dressed meat as one hundred seventy-nine pounds in head in 1900 and only one hundred fifty-two pounds in 1913; but in the latter year seventeen pounds of hear. liver and tongue a head must be added. And, as more than one-tenth of the population is under five years of age, the average inhabitant above that age is eating something more than half a pound of meat a day.

Half a pound of meat a day is enough for a prize fighter in training if the rest of his diet is properly arranged; and we still have meat enough for all rational needs of a population twice the present size. Half the meat make eaten in the United States had better be exported—not so much because health does not require it as because at least half the meat eaten is of poor quality and hadly cooked.

#### An Amendment

SECTION SIX of the newest antitrust bill reads as follows: "That nothing contained in the antitrust laws shall be construed to forbid the existence and operation of fraternal, labor, consumers", agricultural and horticultural associations . . . or to forbid or restrain individual members of such orders and associations from carrying out the legitimate objects of such associations."

To avoid ambiguity, we move to amend this section as follows:

"We stand between the devil and the deep sea. We have declared there shall be no restraint of competition are have made that the corner stone of our popular trustbusting policy; but any logical application of that dictur. would ban every labor union in the country and even cooperative marketing association of farmers and fru growers. We dare not put these labor and agricultura associations squarely inside our trust policy, for that work cost too many votes. We dare not put them squarely ou side, for that would give commercial combinations to great a handle against us. The best we can do is to tip th labor and agricultural associations the wink and whisebehind our hands that they may slip out the back door which is not locked at all—at the same time preserving stony and forbidding face toward all cooperation amous manufacturers and merchants."

That is what the apparently meaningless section re-

### WHO'S WHO-AND WHY

#### Serious and Frivolous Facts About the Great and the Near Great

The Jenate's Only Claude

THE science of names is an exact and fascinating science, as we are informed by a lady who scientifically makes her living by expounding the same; and few parents, when labeling their offspring, take adequate heed of its requirements. As we understand this science one's success in life depends largely on whether one is named Mike or Montague. One must have a name that vibrates in harmony with one's vibrations in order to achieve the best that is within one.

It is plain enough, the lady who devotes her life to this subject says, that if Fate has scheduled a person to perform under the name of Percival it is a rude shock to his prospects to have a crass father tag him

or life as Patsy. The name Patsy, of course, has few if ny harmonious vibrations; whereas Percival may almost e played on a flute. Now then, if Percival is called Patrick e is out of harmony and not in tune with his innermost nd better self, and he is likely to get the inharmonious orst of it; but if Percival, as decreed by Fate and as set orth by this lady at five dollars a throw, is rightly percialed at the beginning there is no telling how far he may go. Practically none of us has the right handle. I knew a san whose first name was Hank. He gave up his five and

arned that he should call himhif Gwenn, which he did, with
he result that he lost his credit
the bank; but, of course, that
ts outside the realms of scienfic nomenclature and enters
he grosser regions of finance,
which the exponents of this
fience pay no heed further than
manding each five dollars in

ivance. I am moved to these reflecve statements by the contemation of the first name of the nior Senator from Virginia. aid first name is Claude. This, 7 the way, is the only Claude present on the roll of the eatest deliberative body in e world. We have Jims and shns and Williams in profuon, but no other Claude. In e House of Representatives e have three Claudes and one laudius. As will be seen, this a correct ratio, or nearly so. there is one Claude in the mate, with its ninety-six memers when it is running full force, tree Claudes and a Claudius is fair representation for the ouse, with its four hundred sirty-five members-not extly proportionate, but fairly ood, everything considered.

The question resolves itself to his: Is the particular Claude b whom I have reference—Sentor Claude Augustus Swanson, (Virginia—named in harmony ith his vibrations? It seems ot, after contemplating both lames and vibrations. Dissectng Claude, we learn that it means, in its original sense, lame. Also, we discover that Augustus means venerable. Wherefore the parents of this statesman started him out as Lame Venerable Swanson, and that makes us laugh, scientists though we may be.

I have not at hand a compendium that shows what the senator should have been named, but I have access to a rather complete record of his performances; and it can be said that any person who conceives the senator to be either lame or venerable is not much of a conceiver.

Lameness, I take it, predicates a slow and halting progress, and the quality of being venerable is usually coincidental with a full quantity of years. Casting a rapid glance backward over the career of Claude Augustus, it must be affirmed that the only time in the past twenty years when the senator, with any justice at all, could have been called lame was between February 1, 1910, and August first of the same year, a period of six months.

He was a bit lame then, for he was not on the payroll. He held no office. He was merely a private citizen. Still, he recovered his old, graceful, elegant and unimpeded manner of progress on the date last mentioned and has displayed no signs of hobbling since. Lame? Not so one might notice it! He has walked—not to say skipped—from one job to another with all the agility of a gazelle and all the dexterity of a diplomatist.

#### A Quick Cure for Lameness

WE FIND him first practicing law in Chatham, Virginia, after a varied school experience, and exhibiting no signs of impediment either in his walk or his speech, a gallant figure of a young Virginian, true to the historic principles of the statesmen of the Mother of Presidents—which, in short, are to get a job and cling to it. He had no job, but he daily oiled and otherwise kept in good running order his clinging apparatus, with such result as shall be shown. As a clinger Claude is a wonder. He has clung for twenty years and bids fair to cling for twenty more.

It is probably true that if Claude had been named scientifically and harmoniously he would have begun clinging at an earlier date; but he did fairly well. Handicapped as he was, it took him a few years after he left school to grab a congressional nomination, which, no doubt, would have been his instantly if the vibrations had been accurately vibratory. He did the best he could, however, and went to Congress in the fifty-third session of that body, which began operations in 1893, the election having occurred in 1892, which, also, as will be remembered, was Mr. Cleveland's year.

Once in, Claude, not realizing how handicapped he was by his name, found Washington life to his liking and determined to continue as a participant in it. A stalwart and handsome person, he presented himself for the suffrages of his constituents a second time and was reëlected. This continued with pleasurable regularity until the Fifty-ninth Congress, when he determined to add another star to his shoulder straps and entered the primary contest for Governor of Virginia. It is a great thing to be Governor of Virginia—greater perhaps in Virginia than elsewhere, but great. All governors of Virginia admit and have admitted that. Besides, it frequently leads to something.

Our hero entered the primary, prudently retaining his seat in Congress the while, pointed with pride to his record at Washington, and was nominated and elected. He served four years, retiring on February 1, 1910. Then came those eventful six months when he was lame. Apparently there was a period of repose at hand; but Senator Daniel died and the lameness disappeared.

Governor Mann appointed Claude Augustus to fill the vacancy and presently the legislature did its part; and thus we observe the senator wearing his toga in a dignified manner and assured of it until March 3, 1917, at any rate. However, there need be no fears as to the loss of it, for the probabilities are that Claude will be one of our niftiest togaists—not tangoists—for years to come. You see, he has the habit and so have his constituents, and this forms a practically unbeatable combination.

You will never find Swanson going up in an aëroplane when he can just as well take the elevator. You will never see him jumping off the roof when he can come decorously down a stairway. You will never discover him yelling fire until he sees what makes the smoke. He puts on few shows, and those he does put on are along the regular, legitimate lines. When he speaks a piece he speaks a regular piece, according to the rules and regulations for speaking pieces. When he does a thing he does it in the usual way. There is nothing sensational about him and nothing frivolous. His record shows that.

When a man can start in life in any state—much more Virginia—and go to Congress for fourteen years, then get

to be governor, and then take a senatorship, it argues that he knows his people and that his people know him. Also, it argues that he uses little new stuff. The old, accepted, regular lines of procedure—politics, progress and propaganda—have been his support and guide.

Swanson is a typical product of our politics. He is never far ahead of his constituents, but is ahead of them just far enough when it is time to be in that position. If it is his turn to be radical he is radical in a becoming manner. Likewise he is never behind them. His usual position is right along with the main body of the voting troops; so it is in the Senate, and so it was in the House of Representatives.

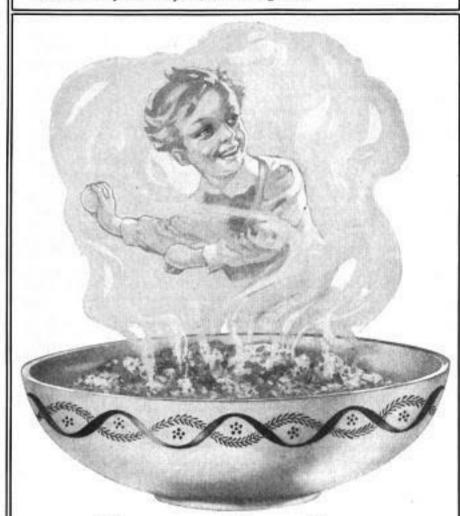

When conservatism is seemly, conservatism is his cue. He is, as I said, a politician and he has made a success of it. At that, he is a most useful legislator and has an uncanny skill for discovering the lines of least resistance. He will never be much of a senatorial soloist, but he always will bring a good, serviceable, well-trained voice to the chorus and will be effective in the close harmony needed now and then.

And, as the lady who makes her living at it might say, what a pity he does not vibrate with his name!—albeit he has done right well in present circumstances. Othomight be right, or Olaf. And we have just elected a Virginian President, too!

#### 10% More for Your Money

Quaker Oats is now put up also in a 25-cent size, nearly three times as large as the 10-cent size. By saving in packing it offers you 10 per cent more for your money. See how long it lasts.

### Serve Quaker In Big Dishes

#### If You Would Know Its Vim-Producing Power

Quaker Oats is the utmost in energy food. It should multiply vim, create bubbling vitality, make one "feel his oats."

But a little dish, once daily, doesn't go far enough. Active, growing children need three times what most children get.

Serve Quaker in big dishes. Make it the morning meal. Then you will know the fullness of its vim-producing power.

And millions of grown-ups need a month of such breakfasts to put them at their best. Nobody doubts the energy that's there, but few folks get enough.

## Quaker Oats

#### The Luscious Energy Food

Quaker Oats forms a luscious dish because it is made of just the rich, plump grains. It is made to tempt children to eat an abundance. And they will if you put it before them.

We pick out for Quaker just the cream of the oats. We get but ten pounds from a bushel. Yet Quaker Oats, with all this flavor and aroma, costs no extra price.

Bear this in mind-you who want children to get the full benefit. Get them the luscious flakes which have won the world

to Quaker.

A hundred nations send here now to get delicious Quaker Oats. All because of this flavor, which has taught millions of children to love this food of foods.

It is always there, and always will be, when you order Quaker.

Serve Quaker Oats in large dishes. Small servings are not sufficient to show in full its vim-producing power.

10c and 25c per Package Except in Far West and South

The large 25-cent package gives ten per cent more for the money

The Quaker Oals Company

### OUT-OF-DOORS

#### Hinte for the Amateur Vacation Camper

THERE is no purchaser on earth whose needs and notions are better studied or better supplied than are those of the American sportsman. Many firms annually put out catalogues of two or three hundred pages illustrating and describing hundreds and thousands of articles of interest or use to the sportsman. These big mail-order catalogues are best sellers in the best sense of the word. A man may send back a spring bonnet or a plano he has bought by mail, but he is pretty sure to keep any article of sporting gear he has purchased in the same way.

of sporting gear he has purchased in the same way.

Some of these myriad articles are usefuland some are not. You cannot possibly take along with you into the country all the things you see advertised; but perhaps, like others who go vagabonding, you are fond of talking about your outfit. This latter is a most elastic term. A sportsman's outfit is like the dictionary—the editors never get through with the compilation.

Take, for instance, the subject of packbags. Even if you are not going on a tramp-

Take, for instance, the subject of packbags. Even if you are not going on a tramping trip you will have some kind of warbag or packsack in which to carry your clothing and odds and ends. The more experienced you are, the less apt you are to take along a trunk—or even a valise. As the small boy said in his composition: "There are many kinds of packbags—too numerous to mention."

Guides in the Adirondacks and Maine still use the pack-basket, which is practically unknown in the West. The professional woodsman of the Western pine country uses a capacious bag nearly square in shape, with a flap that buckles over with three straps. This bag has shoulder straps and usually a tumpstrap as well. A professional cruiser will get eighty pounds of flour, bacon and odds and ends into one.

The sportsman who has a larger number of knicklenacks will find that such a hag

The sportsman who has a larger number of knickknacks will find that such a bag, though holding them all, will make a jumble of them all; and the thing you want is always at the bottom of the bag. Moreover, this is a shapeless, disreputable sort of package. If you wish something more formal you can buy a smaller and nattier packbag, better shaped to your eye if not to your back. It will not really be any better than the professional packbag of the woodsman. It is a good thing to watch the professional's outfit when you make up your own.

#### The Tumpline Man

If you travel much in Canada you are apt to get the idea that the tumpline is the only way to pack. The aborigine packs with a band passing over his forehead, and does not use shoulder straps. The heaviest loads of the wilderness are carried in this way, and this is how the heavy portaging is done on all the long Northern trails. The tumpstrap man does not use any packbag at all. He spreads his square of canvas on the ground, arranges his loose articles on it, folds in the ends and sides of the package cover, and either fastens his tumpline to the end-straps of the package, or else makes up his package with the tumpline passing through the middle of it. It is more trouble to make up such a pack than it is to throw everything into a packsack. The tumpline man is simply a beast of burden; and as he carries with his neck he cannot look up or look round very much, or pay any attention to the use of the rifle or camera.

After all, each country has its own customs. The tumpline is simply a means of getting heavy loads across the portage. It is useless in mountain country. You will find the hunters and prospectors of the Rockies making up their packages in some such fashion as above described, but they carry their loads by means of shoulder straps and not tumplines. Sometimes they have pads of sheepskin or felt, which are fitted on the shoulder straps to lessen the cutting. They carry heavy loads in the mountain country in that way—and could not carry them in any other way.

them in any other way.

The general lines of the packbag are adapted to the purpose and the country you have in mind. Anything will do to carry flour and bacon. If you have things you want to keep separate you need pockets.

If you are going on short journeys you can carry a large bag. If you are doing mountain climbing you need a small one—and one that sits tight. In general you will bear in mind that you should carry your load well up on your shoulders and not on your hips—any packer will tell you that.

The European rucksack is a light and heady has not yet in general use in this

The European rucksack is a light and handy bag, not yet in general use in this country, but worth studying. It is broad at the base and small at the top. Its mouth fastens with a puckering string, and sometimes it has a cover flap. It sits high and snug on the shoulders, and allows perfect freedom of the head and arms.

times it has a cover flap. It sits high and snug on the shoulders, and allows perfect freedom of the head and arms.

I presume that our old friend Nessmuk the original go-light artist in American camping matters, never saw a rucksack but he invented a sort of packbag on about the same lines. Sometimes also he would just make a turkey, as the lumberman call it—a grainsack, with a string tied from one corner to the top and thrown over the shoulder as soldiers sometimes carry their blanket rolls. You can buy a so-calles Nessmuk bag today if you like. Or you can make an excellent turkey of your own by means of a grainsack and a pair of over alls. That is the use for which overall really were designed. Tie the waist of the overalls to the top of your pack, and a let to each lower corner, and you have a easy-carrying a set of packstraps as you could ask. I have often seen this devicused by hunters in British Columbia.

#### The Norwegian Rucksack

We Americans are apt to think that we can make our own sporting equipment, an certainly we have been prolific and ingeniou enough in that regard. Ordinarily we sai at European sporting gear. Not long aghowever, I wanted a European rucksackalight packbag—and a Norwegian friensent me one. It was a good deal like the duck that was hatched out among the chickens. I never saw anything like it, an joined my friends in the general laughth that greeted its first appearance. Yet thought enough of this bag to try it, made good, and now I shall use it wheneved I want a packbag in the woods. It is work a description, for some thought has be put into its construction. It is, in fact, the knapsack of the Norwegian mountal army—men who often have to carry lon while they are traveling on skees. It wou be hard to devise a better mountain pac sack than this one.

In general description this is a large rue sack, broad at the base, narrow at the top but it is not built limp. Running from t bottom corners to the top there is a frain of brass rods roughly triangular in shall hollow and not very heavy—but rigid. The frame keeps the pack away from the bayet does not touch the back itself. The shoulder straps run from the lower corners the upper corners of the frame, where the are short adjusting straps. The lower part of the triangular frame is not straight, I semicircular, to fit above the hips. It do not, however, touch the hips at all, becaus broad leather band runs from end to end it. The weight of the pack is distributed between this broad band below, the cross shoulder straps between the frame and the body, and the straps as they pass over shoulders. Still another strap runs from the corners of the pack round the bebuckling in front.

When you get this pack on you ke something like a cross between a Jew peddler and a Constantinople hamal; it is there to stay. You could roll over it if you liked. There is an air space between the pack and the back, and the weigh beautifully distributed. It will pack fit twenty-five to fifty pounds, according the contents. So little does it distress wearer that I find I can walk along an hour or two carrying twenty-five thirty pounds, and hardly know the bathere.

The general theory of this bag, howe is not its only excellence. It is a per trunk, handbag and packbag combit Inside the body of the bag you can put y soft stuff or your heavy stuff. Betweet this and the back of the bag there is a d pocket all the way from top to both

enclient for clean shirts or handkerchiefs, a stat you like. Then you fasten the bag with a drawcord like a rucksack—I run a left chain through the grommets on top of size and fasten it with a padlock, so that tranship it as a trunk. Over the open top here is a protecting flap which buckles town. The inside of this flap has still enther pocket in it, excellent for toilet

On the front of this omnium gatherum there is a deep, wide pocket, about half the entire length of the bag. You can put a sweater in that, or any other soft stuff. Nerseventhat all. On each side of the bag from top to bottom runs a narrow pocket, iso with a protecting flap and buckles, as have all the others. You can put ammunitant camera films, or the like, in these side pockets. Lastly, underneath the bag are riged two little straps to hold your slicker of entra coat, or your rod case. Instead of hising one big bag into which to dump oneything, you thus have seven different septacles, all made out of a light waterprof material, and all hung to the easiest aming device I personally ever saw.

sectacles, all made out of a light waterroof material, and all hung to the easiest
arrying device I personally ever saw.

With this kind of rucksack you can find
ruc camera, your fishing tackle, your cleaning nd your camp ax, your combs, brushes,
uses, handkerchiefs, clean clothes, old
dethe and articles of food, and so on, withatary trouble. You could dispense with
dittybag if you wished; but the dittyint or "possible bag"—made of canvas
or tucksiin, or what you like, and holding
rur needles and thread, buttons, fishhole, matches, whetstone, medicine case,
and ill your little odds and ends—is someting no real woodsgoer would care to
standon.

I drop my possible bag inside my rucksek. This gives me eight pockets. With its arrangement you can keep house with sattless and dispatch.

My Norwegian military rucksack lies bein as now, packed for its next journey—
shirh will be, this summer, to the mouth of
the Markenzie River and over the Rat Portap to the Yukon. It has in it everything
im going to take on that trip outside
of my bedroll and my mosquito tent. It
comes three articles without which I should
led lost in the woods—my personal idea
of a good hand-ax; a blue graniteware
usipan, which has always seemed to me
dener than the canvas washpan; and a
strain quart cup, made of block tin, with
Il & branded on the handle. This tin cup
is tiackened now by many campfires. I
put of the sutler in the Yellowstone Park
it 1856, and it has been my mascot ever
inter.

One winter, ten years ago, I conceived it to be an excellent thing to walk across few Brunswick on snowshoes in the winter-time. In some way my mascot got lost but my pack in the middle of that forest statements. I mourned it for months, but he seat spring a trapper found it by sheer-standent; and so by devious processes to back to me the following summer. I have to think then that it belonged to be and ought to be a part of my outfit, her it came back in this miraculous which. Any woodsgoer will understand his attachment to some particular article of an outfit. The sportsman without a thin has not yet been discovered.

#### Internatic Packing of Camp Gear

Some men are neater by instinct than then—the others call them old maids in mp. I confess I like to know where I can ut my hand on a spoonhook without feel-tlosely for the barbs; where I can find heh roll of film, or another box of cartiles, or the spare matchbox, or the extra if of soap. Moreover, there are little imp you want to keep handy when you a stooting or fishing—a small pair of mens; a pair of cutting pliers; not to without fly-hooks, leader box, reels, and wike.

Once we used to carry all these things in a pockets of our coats when we went that. Lately it has become rather the that thing for the angler or camper to be a little bag, with two pockets and little bag, with two pockets and little bag, with the best of pockets and little bag two 
There are all sorts of ideas and uses in bags. For instance, you can carry food in small, round bags, which nest in a larger bag. These are waterproof, and excellent for salt, sugar, tea, coffee, dried fruit, or the like. Such a bag is better for back or boat. The chuck-wagon on the range carried these things in a box and left a trail of tin cans across the range.

One beauty of the packbag, or portable

One beauty of the packbag, or portable carryall bag, is its freedom from injury in shipment. You can arrange locks for any one of many kinds of handy canvas packages, containing your bedroll or sleepingbag, your tent, your clothing, or your nested cooking outfit; and you can ship it by rall as your personal baggage. Of late there has come into use the canvas cylinder, like the sailor bag, fitted, as are most rucksacks, with a row of grommets on the top, so that the bag can be shut by means of a gathering string—or, better, fastened with a chain and padlock. One of these big round bags will hold a world of stuff. It is waterproof and if tied tightly will even float for a while in case of a capsize if it has your bed inside. It goes nicely into a boat or canoe, or even into a wagon; and if you have in your outfit a pair of packstraps you can put your trunk on your back at the end of the wagontrail and march off very happily.

happily.

If you are camping light two or three of these sailor bags will hold all your outfit. In one you can carry your tent and ground-cloth; in another your personal outfit and bed; in yet another the cooking outfit and food. It is just as well to have a little system in your camp work. What are you going to need first when you pitch camp? Hand-ax, floorcloth and tent? Then put these things in last when you break camp, so that you can get at them first when you pitch camp.

Meantime your chum is perhaps making the fire while you are laying out the tent. He wants, first, his cooking outfit—the frying-pan and coffee-pot, and the little folding griddle with legs which serves as a stove. These should go in his bag last when you break camp. Your bedroll and personal duffel, being needed later in the game, can wait in the other bag until you are ready for them.

#### Camp Beds and Bedding

Continually you must qualify all these matters by the factor of transportation. In a very long and hard journey you may not wish to ship your personal outfit in so perishable a case as a canvas covering. I have a friend who swears by the fiber telescope cases, provided with heavy straps and locks. He has sent his sporting outfits almost all over the world in these cases, and they have come back practically as good as new. They are not so heavy as trunks, are provided with good metal corners, and will hold an indefinite amount of stuff and stand indefinite grief—camelback, horseback or manback.

You cannot, however, use one of these as a packbag yourself at the end of the wagontrail. If you have wagon transport or even a packtrain these cases are good to take for rough use. You can pack your sleeping-bag or blankets in one and the rest of your outfit in another. The two will make a good pair of sidepacks on a horse; and when you get back to the railroad you can check them just like trunks.

and when you get back to the railroad you can check them just like trunks.

A manly and workmanlike efficiency ought to characterize any sportsman's outfit; and, for the most part, he should beware of fads and fashions that come and go. It is the business of the professional outfitter to make you think you want a lot of things the most descriptive adjective regarding which would be "cute." You ought not, however, to despise too much the modern tendency toward lightness and compactness. The main thing is to be sincere and simple, and to beware of affectation, whether that shall mean overmodernity or a blind clinging to the old-fashioned past.

An old-time plainsman would not listen to any talk about a bed other than a blanket-and-quilt roll done up in a big tarpaulin. He would point out that a thin waterproof drilling cover might get a hole punched in it. Yet it might be pounds lighter and holeproof enough. Even yet sleepingbags are made with very heavy canvas covers, and a very practical bag will run about fifteen pounds.

about fifteen pounds.

Some like sleeping-bags. I certainly do not. Yet they have the virtue of cleanliness and compactness. It is hard to get a good camp bed down as low as ten pounds

Is there any floor covering you could use on your porch that could be cooler, more beautiful, more cleanly than these sanitary, finely woven, Deltox Grass Rugs? Colored so daintily, patterned so pleasingly—durable, too.

The fabric of Deltox Rugs, nature's own product, is impervious to dust and moisture, and because the dust sifts through to the floor these rugs are always fresh looking. They save labor, too; simply roll up the rug, sweep the floor, unroll the rug and the work is done. Once over with a vacuum cleaner makes a Deltox Rug look like new.

On the porch—in the kitchen—bed room—library nursery—on the office floor—anywhere, Deltox Rugs brighten and beautify every environment because their keynote is harmony. And they are inexpensive, a 9x12 Deltox Rug costs but a fraction of the price of a woolen or worsted rug of the same size.

If your dealer doesn't handle Deltox send us his name and your address and we will send you an unusually attractive booklet showing Deltox Rugs in their natural colors with reproduced photographs of many American home interiors where Deltox Rugs are used.

If you will include 10c to cover postage we will send you a sample Deltox Rug 18x18 inches, for which you'll surely find some good use.

Insist on Deltox

OSHKOSH GRASS MATTING CO. 84 Adel Street OSHKOSH, WISCONSIN

in weight—fifteen is much better. One blanket is not enough for a good camp bed. It should be remembered also that writers who talk about beds of pine boughs are describing only a very limited part of this continent, all of which is open to sporting

travel today.

I am a great believer in a good bed. The nearest approach to it I have made, taking in all the compromises, is the thin mattress of deerhair, with blankets above it, the whole in a light waterproof cover of canvas or balloon silk. I even indulge myself in n pillow—a very small one—of goosehair.
It is only large enough to be of service when used on top of a folded sweater or coat.
You can throw this bed down anywhere as soon as you break camp and it does not

need much softening.

When you come to the matter of beds in your outfit you open up another wide

field of practice and conjecture.

If you are in the hands of a Mombasa outfitter, who will always send out a safari based on the English ideas of camp life, you will very likely have broad camp cots, folding table. ing canvas chairs, a folding table—also made of canvas—and a lot of other things that will take an army of darkies to carry. This is all right for those who like it. I certainly see no use for it—at least in this country. Yet I recall very pleasantly a certain camp cot and a folding canvas chair with a high back that my father enjoyed for many years when we used to camp together. Maybe I shall enjoy them some time.

After your packbag and your tent and your bed comes your campfire or your camp stove. Elsewhere something has been said about the general idea of a camp stove in-side of a tent. Do not use it unless the weather is very cold. In that case some one will have to sit up to tend fire. Most of us, however, do not camp in extreme weather during our vacations, and usually we cook over an open fire out-of-doors. A very practical range, familiar to every one, is made of a pair of green logs, a few inches in diameter, laid side by side. It is not always convenient to get these logs and they have a way of burning out and spilling the coffee, If you can get hold of a couple of steel bars to put across your logs they will help a great deal. Any of the little griddles with folding legs will make a practical camp stove. Better have two, as they are not large enough to hold all your cooking utensils at once. They weigh very little.

#### Stoves for Camp Use

One of the best camp stoves I ever used was made of an old gunbarrel, plugged and sharpened like a spike so it could be driven into the ground. The breech was also plugged, and bored to admit the ends of two or three wire hoops which would swing round as though on pivots. These steel hoops were strong enough not to melt in hoops were strong enough not to melt in the fire, and they would hold a frying-pan very comfortably. Another bent bit of steel supported the coffee-pot. We would drive this spike down into the ground and build a fire round it. If a frying-pan got too hot, or if the coffee boiled over, it was easy to swing the vessel to one side on its hinge. This spike, however, was clumsy to pack, as it was a couple of feet long.

Elsewhere mention has been made of the importance of the camp stove in certain countries. Up in Alaska I have seen pros-pectors and hunters traveling with packs on their backs, and carrying a sheet-iron stove called a Yukon stove. In the coast country of the Alaskan peninsula the only firewood is crooked alder of no great size.
You can't do much with it without a
stove—and, besides, it slways rains up
there. The man who hunts bear on Kadiak
Island, for instance, must either have a Yukon stove under a canvas shelter or else he must live in a native barrabara, where

he can cook down on the ground and let the smoke go out at the top, tepee fashion. There are other kinds of stoves that you can invent for yourself. I have seen a very practical little stove in the tiny shanty of a fisherman on Lake Erie who was fishing through the ice. It was a baseburner, using coal, and was made out of a powder can not much more than a foot in height.

Camp clothing is, of course, something to be selected with reference to the place and season where you intend to use it. For walking or mountain climbing, nothing beats knickerbockers, but they are not good in mosquito country and not good on horse-back. The usual advice is just to wear your old clothes on a camping trip, but this is not

always good advice. When you are in woods or the mountains in cold way you are very likely wearing an inch or more of shirts and underwear than would at home, and very likely your troo

will not meet comfortably.

I recall a friend of mine who went I recall a friend of mine who went winter camp in the Rockies once with with the pleasant anticipation of we out an old pair of trousers, once n fitted by a good tailor. When it can putting on his flannel shirt he had to it outside his trousers. It was picture in a way, but hard to witness with gra The best clothes really are those mad camp life.

camp life.

For cold weather it is hard to mackinaw. Some of this is loose shoddy. Ask for the kind of pants th man wears—a close-woven dark mack man wears—a close-woven dark mack not quite so soft and spongy as the av-mackinaw coat. Get them at least inches bigger in the waist than your-clothes. Have the legs long enough comfortably into your shoetops. The can stoop or sit down comfortably, of over a log without any knee-strain. Ov-or khaki pants will do for warm weat corduroy not!

The only place for corduroy clothe a moving-picture show. In some climates and countries y not much need a coat if you have a shirt and sweater, but the average mado well to take his coat along. It is always cool in the evening—and some if you are riding, you will feel chilled. listen too attentively to the man whyou that if you get cold, either by day night, all you have to do is to put or other suit of underwear. Sometimes not convenient. I prefer to put on a The sort of coat, like the sort of tro depends on the country and climst which you are going. It may be mar or khaki.

#### Raincoats and Gloves

About the only place where you ca a buckskin shirt is in the heart of the ness, where you are entirely alon where it does not rain. There is n softer, lighter or warmer for its weigh a good Indian-made buckskin shirt but an Indian can make one worth but buckskin has strictly gone fashion. It is not good for trousers, is hard to find a place where a shirt v attract attention. Go simply. Dr way the professional woodsmen do, outdoor people of the country who are spending your vacation. I lead to bucksk ing breeches, and I long so much to place sometime where I may wear Perhaps that will never be—certain on the cow-range, in the Far North, South, in the Rockies or in any ever saw.

Everything goes well in camp and trail so long as it does not rain—rai worse than snow. What shall one rains? Some say you should slip rubber poncho which goes under yeat night. That is all very well if ye plenty of transportation. A rubber is about as heavy and cold a thing can get. The hole in the middle lett ness up from the ground at night. ness up from the ground at night. it is just big enough to get you go wet if you wear it as a raincoat. T who devised the poncho for the us-cavalryman must have had some against the cavalryman. If you ing horseback the best raincoat is to puncher's pommel slicker, but it bulky and heavy to consider for ot. The best thing I have ever found is pure-rubber garment gathered in w ber bands at the neck and wrist, and very full. This is perfect for u automobile or wagon, in a cance boat—or while you are working camp. It is very light and portal also puncturable.

Gloves make for comfort in outd Some men like to go bareh always wear gloves—even while The best glove I have found is the glove of buckskin, made for army u regulations now prescribe that it s have a gauntlet—it is the private w gauntlets on his gloves. skin or castor gloves, if large and lo nice to wear. You can also get sh gloves with deep cuffs and with t of the fingers cut out—very nice for in mosquito country. Up in Labra will find it necessary to have ske

# WHIRL POOL DISHWASHER

Thoroughly washes china, glassware, silver and kitchenware in a few minutes of easy operation.

Dries and sterilizes china. Hands never touch water.

Large numbers are being sold in the

#### JOHN WANAMAKER STORE Philadelphia

and the Wanamaker circular says of it:

"At last—a successful dishwashing machine for the home"

"It makes dishwashing a pleasant task."

"The well-known objections to previous types have all been overcome in this machine."

The Whirlpool is self-cleaning and shouldely sanitary. Washes finest chine and glassware with no danger of breaking, using a dishpan full of water for susing and another for russing. Dushly hult of stamped metal; no pump; small in size, and especially adaptable to limited space. Beautifully finished in laked enamel. Refined and ornamental.

Average family size \$15.00 Information furnished regarding larger sizes. All machines strictly

If not obtainable in your locality, The Whirlpool will be sent prepaid upon receipt of price.

Appeals strongly to high class dealers and agents. Will be shipped to responsible seems, prepaid, upon recept of rete. Remanable at our expense, after a days' examination. Regular discount aliased thereon when agency is established. Shipped in castoms 16x22 inches, wight 23 pounds.

HERSHEY-SEXTON COMPANY Manufacturers

1223 Filbert Street, Philadelphia, Pa.

drilling, or the like, fastened to your gloves, like a clerk's office sleeves, and fitted with a band of rubber to hold them on the arm. Nor should you despise the havelock or neck cape, which will be serviceable if the midges are bad. You can wear it also as a night-cap.

nightcap.
Some like khaki for outdoor wear. It is useful, but not so warm as it might be. The main trouble with most trousers is that they do not give enough room in the knee and hip. Really, a well-cut pair of English Bedford-cord riding breeches ought to be of general all-round utility for riding or footwork. They would, however, come in for the same restrictions that lie against the use of the buckskin shirt—one does not

use of the buckskin shirt—one does not want to look too "stunty."

The subject of footwear in camp is an old and an endless one. In general the fashion is now against the old high-top heavy hunting boots. If you are going on slippery rocks you will need nails, otherwise you will not often need them. You can get an easy shoepack, without any heel, and with a sole of what is called elk leather, probably horsehide, soft and pliable, which will do you very well for walking or boatwork. It is not really waterproof or snowproof—and it is not suitable for riding, of course; nor will you find it above reproach in mountain climbing. Cut the tops down so that your trousers will just go into the tops of the shoes. Usually it is the high-top boot that causes the agony of the chafed Achilles' tendon at the heel. If you are troubled with that take your tall boots off, take out your trusty hunting knife, cut them down to street-shoe height—and go on your way happy.

happy.

In the Far North moccasins are worn as regular footwear by red men, halfbreeds and white men; but for the average American sportsman they are an affectation except when used round the camp; then they are most comfortable. You cannot get without trouble real moccasins anywhere except in Northwestern Canada, in the fur country. When you get them you can't walk in them with much comfort if there is any gravel or other hard going. I have a pair to which I have sewed soles of soft elk leather. They now go very nicely, but are, of course, rather slippery on wet rocks. In certain kinds of straightaway walking, where the going is good, the moccasin is comfortable footwear for a white man, but it takes an education for most persons to enjoy it. However, nothing is better to have in your packbag when you come in tired at night. They are good in cold, dry snow—horrible and worthless in wet weather.

#### Watches and Handkerchiefs

Good socks are hard to get in this country. They should be thick, but soft and of good wool—not full of knobs and gobs. Ah, what a comfort there is in a pair of moccasins and a soft, dry pair of socks at night! Have your boots big enough for two pairs of socks, one of light soft wool and one of heavy soft wool. Your feet will look large, but they will feel good!

Always wear a waistcoat, whether you keep it buttoned or not. It is full of pockets for matches; your compass—or your two compasses—vour everlasses: matchesfe.

Always wear a waistcoat, whether you keep it buttoned or not. It is full of pockets for matches; your compass—or your two compasses—your eyeglasses; matchsafe, and such odds and ends. Some men wear wrist watches—Englishmen very generally in many parts of the world. Do so if you feel that you are obliged to, but please do not come round to my camp, especially if you have a handkerchief tucked up your sleeve at the same time, for I might not ask you to supper. I see no reason why you should not wear your watch in camp as you do at home. If you are afraid of losing it get a cheap one in a gunmetal case. Tie the watch to your person with a thong as you do your compass, your dog whistle—or perhaps your hunting knife.

Do not forget a good, big soft-silk handkerchief. It is good to keep off the sun or the cold or the mosquitoes. Wear it sensibly, and do not tie it as though you were posing for a picture. It was made for use, not for show; in fact, that is a very good test to apply to yourself as you turn out in your camp outfit—let it all be for use and not for show.

In one pocket of your waistcoat you will have your matchbox—waterproof of course—and in your possible bag, which goes inside of your main warbag, you will have your extra box or bottle of matches. As all sportsmen know, you can make a fairly good small matchbox out of two brass shotgun-shells, ten and twelve gauge, by telescoping them. I traded one such for

### 211 OUT OF A POSSIBLE 264

In Philadelphia are made 211 of the 264 products that are manufactured in the United States. Of these 211 she makes 15 in greater quantity and of greater value than any other city in the country.

This industrial activity naturally produces steady incomes. These incomes swell bank balances, fill savings banks, buy homes, feed, clothe and educate families, and make of Philadelphia one of the greatest buying centers in the world.

You can place advertising before the eyes of open-minded and financially able buyers in Philadelphia in the columns of the

### PUBLIC LEDGER

Copyrighted 1914

by Burley Tobacco Company, In

another similar with a forest ranger up on the Peace River once. The primers had started on his matchsafe and let in the water. As mine was still waterproof I gave it to him; and I have his today. Also I have a large-mouthed bottle full of matches which has been in my camp outfit, corked and unopened, for some twenty years, in many parts of the country and under many conditions of transportation. You can break a glass bottle, of course; but until you do it makes a very practical matchsafe. Your hunting knife—or perhaps you should rather call it your camp knife—is something by which you may be judged among professionals. The fashion in knife-blades, as in boot-tops, is for smaller longitudinal dimensions. A four-inch blade is long enough to cut up anything. Such a knife, with any kind of handle that has no guard will fit tight in a sheeth. You can guard, will fit tight in a sheath. You can bore the handle, if you like, and fasten the knife to your belt or scabbard with a thong, so that it will not be lost should it slip out of its scabbard. Another item of personal equipment is

the camp ax. Personal habit comes into play here also. When hunting alone in strange country I always like to have a light ax at my belt, as well as a knife and some matches. The best handle is not straight, but has a knob on the end so that it will not slip. About a pound's weight for the head is effective. The steel cannot be too good and it should be kept sharp. Such a tool will do for camp work, but is not heavy enough for a trapper or a regular woodsman, of course.

The half ax used by the New Brunswick trapper is a mighty efficient tool. If you are going on a long trip with a wagon or a packtrain it is best to have one man-size ax along. You cannot do much in getting fuel for the whole night with one of the little axes, though it is very handy in camp or bivouac work, or general tinkering. Per-haps it is partly habit that makes a man feel so uncomfortable unless he has some such little friend along with him. Let the weight of your ax go into the head and not into the handle. The camp ax ought not to be a toy but a tool. Somewhere in your outfit there should be a file and a whetstone— carborundum is keen cutting. The steel in your ax and your hunting knife ought not to be too brittle and not too soft. When you get hold of a really good piece of steel in either it is apt to be by accident. Cherish

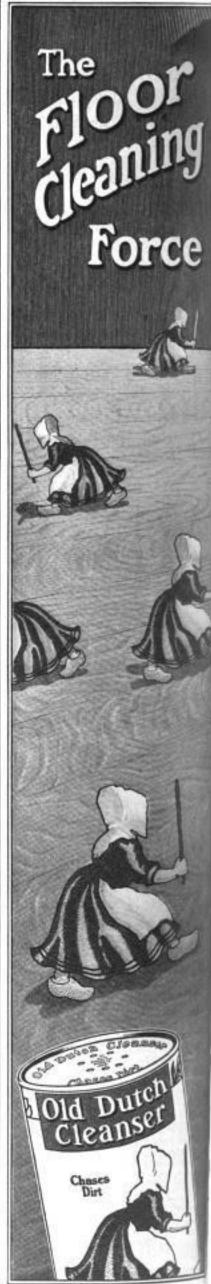

#### Things That Come in Handy

Your camp light is something of a problem. Usually it will be your campfire. The little electric lights that work with a pushbutton are convenient, but are apt to wear out on a long trip where you cannot renew the batteries. Candles get crushed and kerosene lanterns frequently are impos-sible. Perhaps you will have to do your best with the campfire. If you want to sit up all night you can build a fire, and if you want to go to sleep you do not need much light.

Keep your fishing rods and your guns dry at night by putting them under the edges of your blankets. If you have a smallbore, high-power rifle you cannot keep it clean with water and vaseline. You should have along a bottle or a screw-top tin of one of the thin modern cutting oils. Not even this will really clean the grooves of a high-power rifle. When you get home take some high-power ammonia and moisten your cleaning rags. They will come through dirty for a much longer time than you would expect. Ammonia is hard to take into expect. Ammonia is hard to take into camp, though it is very useful to soothe mosquito bites. Castor oil is something disliked by mosquitoes very much.

Many other items will occur to other men as useful or even indispensable, and some readers will perhaps mark off the list some of the suggestions above noted. The beauty of the sportsman's catalogue is that it provokes discussion. There is no better reading than can be found in its handsomely illustrated pages.

Following even in most rudimentary fashion its wide range of suggestions, you may thus transport your own hand-picked, wholly delectable outfit by train, by wagon, by horse, or by your own back, to your chosen spot-may unpack it there, from tent to bed and campfire equipment. You may walk all day with comfort or fish all day with delight; or you may come into camp wet and tired, and soon be dry and comfortable.

### The Letters of William Green

#### The Mutations of the Biehop's Butter

DEAR AUNT: Hennry Begg and me are in a little more trubble at home witch is ushual but not seryus.

Hennry said it would not do enny harm

to rite to you about it and see who is to blaim witch is genrelly us becaws we are the

smallust witch is verry offen the case.

Hennry said we otto tell you about it and if we otto be scoalded to go ahead and scoald us witch would be the last straw but we

could probily stand it.

Hennry said he had grate confydunce in you becaws you seam to understand a boy on account of not haven too menny of them yourself witch a grate menny do and are afrade thay will get spoilt frum too mutch

And Hennry said when he thinks of his bloo off thum and the serkus and the Forth of July and how kind you always would be he would not be afrade to go to you for ennything eaven a scoalden witch is quite a

big complymunt to you don't you think so?
If you are not afrade to go to sumbuddy
eaven for a scoalden it is a sine thay are your best frend and a boy needs more places ware he can go for a talken to and not feel had about it afterward and makes up his mind he will not do it agen whatever

But sum scoaldens are wurse than if you did not get enny at all and would never

make you a better man.

Sum of our fathers scoaldens are with
the best intenshuns but do not seem to do us mutch good probily becaws of him beein

us mutch good probily becaws of him beein too bizzey to lurn how to scoald the rite way witch makes you sorry you did it and you will not do it agen until the neckst time and maybe not then.

Hennry said it is a grate feelen to be scoalded the rite way and go out hangen your head and full of shaim back of the barn ware you will stay for sevrel hours wanten to do rite in the fewchure and not go fishen on Sunday witch broke your mother's hart and she will never hold up her hedd before the minnistur agen.

But a harebrush or a strap or a shingul

But a harebrush or a strap or a shingul will not help you to sit down and think it over but only make you wunder if thay are your reel parunts out in the shed ware one of them did it.

Sumtimes Hennrysaid his father tells him to go in the shed and wate till I come and Hennry is offle mad at furst but by the time his father comes Hennry is all out of the noshun of it but his father is not but he would be if he would wate a curple house.

would be if he would wate a cupple hours.

Hennry said a boy's father always otto
wate a cupple hours before he goes in the
shed and then it would be quite diffrunt
becaws a saingul is appto brake a boy's
host because he is too provid and hates to hart becaws he is too prowd and hates to turn over.

Hennry said to tell it all to you and not spare us at all and so Hennry's muther sent him to the grosserey store at fore o'clock and get sum butter for the bishup who was commen to dinner and it was not enuf in the ice box for him becaws a bishup is appto eat more butter than ushual when he is away frum home for dinner and Hennry's muther told him to hurry back becaws she mite want him to borro sum table things for the bishup's dinner when he came home with the butter.

So Hennry's muther gave him a tin pale with a tite lid on it soze the butter would be purfeckly safe becaws a boy is dangerus to carry butter with onley a paper on frum beein so soft in the hot wether.

So Hennry and me started for the grosserey store and got the too pounds of butter witch was all nice and cool and little drops of wotter on it and a big flour on top of the both of them frum the butter mold.

Furst Hennry would carry the pale and then I would carry it a wile and then Hennry would swing it round his head in the pale and then I would swing it round and it was lots of fun and not like wurk at all to carry it.

After wile we were passen the livvurey stable and Hennry swung the pale round and the handle came off frum heein bent by too mutch swingen and the pale went about twenty feet becaws of haven sutch a good start frum swingen.

### P. A. sure does set the clip

for men who want to know the joys of a jimmy pipe or a makin's cigarette—and "dasn't." There's no soft pedal action needed by you or any other man. You can go at Prince Albert hammer and tongs and it won't bite your tongue. The bite's cut out by a patented process! Thousands upon thousands of pipe and cigarette smokers never would have known the glories of real tobacco if it hadn't been for

### PRINCE ALBERT

You'll get that fact jolted into your system the first tin of P. A. you smoke. You paste it in your hat that if all we claim for this brand wasn't hard facts, Prince Albert sure never would be "the national joy smoke" today!

You know as well as we do that you can't fourflush and get away with it very long. You present yourself with a tidy red 10c tin of P. A. and you'll pretty quickly know where you get off on the pipe question.

Chicago: 1501-1513 E. 55th St. McKinley Music Co. 80 Fifth Avenue

Then it struck the rode in frunt of the from it struck the rone in trunt of the livvurey stable ware it was verry dusstey frum so menny horses trampen all the time and the lid floo off and both of the butters fell out and rolled quite a ways before Hennry and me could get them.

Hennry and me could hardly beleave our

eyes when the butter was rollen in the dusst becaws it was all so quick we hardly knew

what happened.

But Hennry and me hurried up and caught it almost before it got through rollen but a grate deel of dammidge was done already becaws you would never beleave how mutch dusst you can get on a cupple pounds of butter just by rollen a little wile in the rode.

It was a grate supprize to Hennry and me but we both got out our jaknives and scraped off as mutch as we could get and then we washed both of the butters off in the wotteren troff witch did sum good but it did not seem to look like the same butter but probily just as good to taste Hennry said verry hopeful witch is the kind of a boy

Hennry is.

So Hennry filled the pale with wotter and we put the butters in and put the lid on tite and Hennry and me started agen quite seryus sloshen the butter up and down in the pale to wash off a little more dusst but not sure how it would come out but hopen it would be nice and cleen and we would emty the wotter out before Hennry got home and probily nobuddy would know

After wile we took the lid off to see how it was commen out and it was mutch wurse and a verry dark brown culler all over. But it was onley dark brown for a little ways in becaws Hennry scraped sum off with his fingernale and it was all brite and yellow underneeth.

Hennry and me took it out of the pale and looked at it but it was verry mornfle and we could not see mutch hope for it.

So Hennry and me lade it on the grass under a tree ware it was shadey and we pored the wotter out of the pale and then we both lade down to think it over. We had to think quite fast for it was nearly time to be home.

Then Hennry turned round quick ware the butter was on the grass behind us and a purfeckly strange dog was licken it witch by this time was quite brite and cleen but a little ruff on the outside frum the dog licken them witch seemed verry hungry for butter when Hennry chased him away and we put then in the pale agen and started home walken offle slow.

On the way home there was sum boys batten up flies and Hennry and me stopped with the butter and batted up a few flies with the tin pale under Hennry's straw hat to kepe it frum getten too warm in the

After we batted up sum flies Hennry looked in the pale under his hat and it was quite soft and runnen a little on the outside

edge.

It was mutch cleener though frum the dog axsiduntly licken it witch was for-chunate for us Hennry said and it mite be we would still bring home sum fare butter

for the bishup after all.

By this time Hennry and me started home agen and in a little wile Hennry had a good skeem just as we went by the pump a little ways frum Hennry's house and we both washed our hands purfeckly cleen witch is better for a boy handlen raw butter.

Then Hennry pumped a lot of cold wotter on the butter one at a time in the pale and then we took turns squeezen it with our hands and wurken them into a purfeckly round shape witch was sumthing like a baseball but bigger round.

By dooen this way the dusst was wurkt all through and did not show hardly at all and you would hardly known but it was too big balls of butter rite out of the grossery ice bocks if thay made it that way witch Hennry told his muther thay offen did when thay are in a speshul hurrey.

Hennry and me tasted it after we got it fickst over and could not find ennything the matter with it Hennry said.

His muther was a little supprized at the shape of them but Hennry said maybe it was sumthing new as thay offen are. Hennry and me lissened at the dore for dinner becaus Hennry could not ete with the bishup on account of beein onlyy grone peeple and Hennry's muther said to ecks-cuse spex in the butter witch she never saw so menny before but it was a new kind

After dinner Hennry and me went in the parler to see the bishup witch was quite a

THE efficiency of a motor can be made or marred by the spark plugs used. Bosch Plugs are the right plugs for every motor. There are scientific reasons why they are right. Here are four of them:

1. The intense heat of ignition sparks will been away soft spark plug points. That is why the points or electrodes of chean plugs hall to list. Beach Plugs have especially heavy, nickel electrodes that persist is witheranding the intense heat. That is why the 1914 Grand Prize and Vanderleit Cup Race winners used Bosch Plugs.

2. Bosch electrodes are not pointed to because pointed types make a thin streaky spark and burn away quickly. Bosch electrodes are crescent single are have a knife edge that provides a read-path for the electric current and make starting casy. For a quick get-away is Bosch Plags.

3. The exclusive, crescent shaped rice of flame, lamiting a larger number of games, lamiting a larger number of ga-particles than any other form of ricetrate. That is why Stock Plung give new life to angloss not previously Bosch-Equipt.

4. Booth Plags give satisfaction without continual adjustment because they have three electrodes, which are not too many nor too few Gest Historianin. The stark himps the gap affering the least residure. When this gap grows wider the spatk automatically passes to the next, and so on That is why succrosful long engine tools are those made with Booch Plags.

Perhaps your car is not efficient, perhaps it needs new plugs. Try a set of Bosch Plugs; the same as those used by all high grade cars such as the Peerless, Pierce-Arrow, Mercer, Garford, Speedwell, Jeffery, Velie, Marmon, Case, Stutz, Moline-Knight, Lozier, etc.

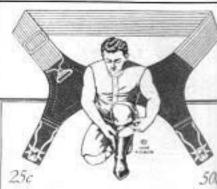

Bosch Plugs can be bought for \$1.00 each from your dealer, Bosch Service Stations, or direct.

Write for "Locating the Spark Plug," sent free to any motorist upon request.

### The Pioneer Broad Leaf Havana Cigar

No man who loves a really fine cigar should overlook the pleasing qualities of this famous brand.

The pure Havana filler and matured Broad Leaf wrapper harmonize perfectly in producing a deliciously mellow, sweet, full-flavored smoke of distinctive character.

#### The National Smoke

HAVANA AMERICAN CO., N. Y.

nice man and he yoosto be a boy once he said witch a grate menny minissturs never

were Hennry said afterwurd. He said
Hennry and me were fine boys witch made
us feel offle gilty about the butter.

Then he told us some storeys of how he
yoosto do when he was a boy and lots of mischuff and Hennry and me felt verry frendly
and so Hennry thought it was all rite to tell
him about the butter rollen in the dusst and
the wotteren troff and the doch linken it and the wotteren troff and the dog licken it and batten up flies and the pump and how we fickst it soze to be purfeckly good after all the trubble we had with it.

Hennry's muther hurd us laffen and the bishup too and my muther hurd us too becaws she was cumpuny and the bishup lafft a grate deel but Hennry's muther did not and my muther eather becaws it did not

seem to be so funney for them.

After wile the bishup went away and Hennry and me thought we would go outside a wile frum the way our muthers looked witch was not verry cumfortable for us and slepe in the barn.

The rest of the butter was not used eaven

for cooken but throne out in the garbidge barrel witch was the last of it after goen through a grate deel of expearence.

Hennry and me did not slepe our best and this mornen Hennry said we otto to rite to you and get the butter off of our mind. There is a boys' camp in the woods ateen miles frum here and Hennry wundered if it would be all rite to go up there for a few days till our muthers blows over about the butter.

It would be fiffty sense fare for us to go thare and a dollar apeace to stay a week and we mannidged to save up twenty-too sense this summer and we can probily get the rest of the munney sumway.

We could walk back the ateen miles to

save the fare cummen home.

We have been quite helthy this summer but not as strong as a boy mite be ruffen it and Hennry is sumtimes quite week caven after eaten haffa wottermellun and sum pares. He thinks it mite be stummick trubble commen on as thay offen do.

Our muthers would be glad to see us when we came back and they could get the butter off of their minds.

A promt ansur would probily help Hennry and me to make up our minds about goen to camp.

Mutch love to Uncle William and you mite ast him if he ever did sutch a thing and how mutch he was to blaim.

Your affeckshunate nephew, WILLIAM GREEN.

P. S.—The ateen miles would be quite a walk but probily we could stand it all rite.—W. G. —J. W. Foley. -J. W. Foley.

#### A Poor Family

AVETERAN surgeon of the Civil War, who still practices in the Piedmont sec-tion of Fauquier County, Virginia, where his patients include the wealthy horse fan-cier of the bluegrass and the shiftless, poverty-stricken mountaineer of the Blue Ridge hollows, was recently summoned to the bunkside of a lank, chin-whiskered hill-billy, stricken with a sluggish fever.

Some two months prior a barrel of whisky had been added to the meager possessions of the hill-billy's family—the ethics of the acquisition does not enter into this tale— and of this the good doctor had learned; not, however, through any member of the hill-billy's family.

Desiring to tone up the patient with a stimulant, the doctor concluded his

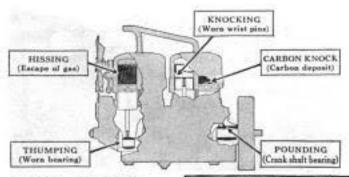

instructions thus:

"Now, madam, the best thing for you to do is before each meal to give Jim a good, strong whisky toddy."

"Laws sakes, doctor," replied the woman of the house, "we-all ain" got no whisky

an' ain' got no money fer to buy it neither!"
"What, no whisky!" exclaimed the
doctor severely. "I know you had a barrel
of it here two months ago."
"Yassir, I know," came the prompt explanation; "but a barrel o' whisky don' las'
long in a fambly what can't afford ter keen long in a fambly what can't afford ter keep

### NOISE

#### The motor's complaint against incorrect oil

If your motor makes some unusual sound, stop your car. Investigate.

Noise frequently means unnecessary friction — the direct result of incorrect lubrication.

#### Common noises are:

"Thumping." A dull thump at each revolution of the main shaft indicates worn main or connecting rod bearings. This trouble is hastened by oil of low quality or incorrect body—will finally result in badly worn bearings and knocking.

"Knocking." This may be due to loose wrist-pins. It may be due to badly worn bearings or bushings which should be refitted or replaced. Incorrect lubrication will cause both of these troubles.

"Carbon Knock." A sharp muffled ring, at ignition, indicating excessive carbon de-posit usually caused by oil of low quality or

"Pounding." Due to engine laboring under overload. Lubrication plays no part in this trouble.

"Hissing." This is frequently due to heavy scoring of cylinder walls. It is most often brought on by inefficient lubrication.

There is only one insurance against the re-sults of incorrect lubrication. That is the use of oil of the highest quality which is correct in body for your type of motor.

You can secure this oil by referring to the Lubricating Chart which is partially shown at the right. For a number of years this Chart has been a standard guide to correct lubrication.

It represents the professional advice of the Vacuum Oil Company—the recognized world leaders in scientific lubrication.

Our complete Chart will be mailed to any motorist on request.

We will also send on request a pamphlet on the Construction, Operation and Lubrica-tion of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

It is safest to buy Gargoyle Mobiloils, in original barrels, half-barrels and sealed five and one-gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

> Gargoyle Mobiloil "A" Gargoyle Mobiloil "B Gargoyle Mobiloil "E" Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

For information, kindly address any inquiry to our nearest office. The city address will be sufficient.

MODEL OF

Correct Lubrication

Explanation: In the schedule, the letter opposite the car
related the grade of Gargoote Mobiled that should be used.

For example: "A" means "Gargoote Mobiled A." "Arc."

rears "Gargoote Mobiled Actic." For all electric vehicles

to Gargoote Mobiled "A." The recommendations carer all
reducts of both pleasure and commercial vehicles unless

thereign noted.

# Punctures 90% Less

Investigations prove that with "Nobby Tread" Tires punctures are 90% less than with the average tire.

The big, thick "nobs" on "Nobby Tread" Tires stand out so far from the shoe that nails, glass, sharp stones, etc., hardly ever reach the shoe.

Study the "nobs," their size, their thickness, and the way they are placed, and you will understand why.

And remember this—you have got to wear out these big, thick, tough "nobs" before you even start to wear out the extra strong tire underneath—that is one reason why experts call "Nobby Treads"

# Two Tires in One

Thousands upon thousands of veteran motorists now use "Nobby Tread' through all seasons, because they are such phenomenal mileage tires and re

DO NOT BE TALKED INTO A SUBSTITUTE. Your own dealer or any relief them for you at once—or go to another dealer. Note This:—Dealers who sell I

### THE LAME DUCK

#### Views of an Innocent Bystander

Washington, D. C.

DEAR JIM: This is the second war—if this is a war, to say nothing of the Boxer uprising, the Cuban intervention, the Philippine insurrection, with a considerable slant at the Japanese-Russian fuss and some small angles on the Boer imbroglio—this is the second war that has found me at the theater of executive operations; but it is the first war that has left me tions; but it is the first war that has left me in a position where I could not express my burning thoughts on the same in the evening and discover them illuminating asbestinized first pages of newspapers on the

following morning.

Now, Jim, it is true that I am producing as many burning thoughts on this Mexican question as any thought producer you know and at as high caloric pressure; but, as you may realize, war in addition to being hell is also hurried, and there is grave danger that if I light up my cerebrating apparatus the product thereof would not keep hot during the period of time that must elapse between flame and public formulation. In short, what might be perfectly proper to-day might be in the discard long before it reached you.

Hence, I am confined to the fixed occurrences, the settled propositions, that have seethed their last seethe in our heaving midst and are historical, as mayhap they were originally hysterical. To this end it is my intention to comment on a grave matter of precedent maintained, an affair of state that was put over in the conven-tional and regular manner. These incidents, whatever you may think to the contrary, are not so common that, incidental as they are, they are not deserving of comment. Indeed, respect for precedents in our State Department and observance thereof have

not been so frequent or so marked that they may pass unnoticed. We make up our own precedents as we go along, or have been doing so; and that makes this matter I have in mind of greater import.

What I have to inform you about relates to Mr. Edward Savoy, of the State Depart-ment. Mr. Edward Savoy is a negro and he has been a messenger at the door of our various Secretaries of State for the past forty-four years. Thus it has happened in the past—not now, of course, but in the past—that Mr. Edward Savoy has been in completer possession of knowledge of diplomatic procedure than some of his superiors. He is a most intelligent as well as a most polished messenger, and he has watched the happenings within the door he guards for forty-four years. Small wonder that he is wise!

#### The Right of the House of Savoy

On the day when Señor Algara, the Mexican chargé, came to the State Depart-ment to get his passports or to request them, Mr. Edward Savoy bowed the Mexican chargé into the office of Secretary Bryan and then hastened to his good friend that of Mr. Bryan.

"Majah," said Mr. Savoy, "you are a good friend of mine?" Major J. J. Dickinson, who has a room near

"I trust so, Eddie," the Major re-sponded. "I have felt sure that you have

"I have with your friendship."

"I have, Majah—I have."

"That being the case, Eddie, what can I do for you at the present moment?"

"Majah," said Mr. Savoy, moving close to the Dickinsonian desk, "that Mexican

to the Dickinsonian desk, "that Merchargé is in there with the Secretary. So I understand. And what has that to

do with me?"

"Nothing, Majah; but it has a lot to do with me. Majah!" And Mr. Savoy's voice became low. "That Mexican charge is there for only one purpose."
"And that is?"

"He has come for his passports, suh. have been here for forty-four years, and know. He has come for his passports. I have knowledge of diplomatic procedure.

He is here for no other purpose."
"Well, what of that?"
"Majah"—and Mr. Savoy's voice as well as other portions of Mr. Savoy shook with earnestness—"he won't get them!"

"Won't get them! Of course he will get

"Begging your pardon, suh, I don't mean what you mean. What I mean is that he won't take them with him. I have been here forty-four years and I know the precedent, suh. His passports will be delivered to him at his embassy, suh—delivered to him."

"I fear I do not get the drift of your remarks, Eddie."

"Majah, I have been here forty-four years and I know the precedent, suh. The precedent is, suh, that I shall take them to him-that's the precedent, Majah. This is the third time this has happened since I have been here, and on the former two occasions I took the passports to the dip-lomat who demanded them. I took them,

Majah. That is the precedent."
"Well, you probably will take them this

time."
"Thank you, Majah; but that is the precedent. I remember when Lord Sackville-West was handed his passports. He came here and the preliminary negotiations en-

"Then, suh, he returned to his embassy. I was summoned by the Secretary and given his passports, incased in an official envelope. I took them to the embassy. I brushed by all the clerks and doorkeepers and entered the room where Lord Sackville-West was sitting. I put my heels together and stood up straight; and I said: "'A communication from the Honorable the Secretary of State, suh.'"

#### All According to Precedent

"'Let me have it, my good man,' Lord Sackville-West replied; and I handed him the envelope containing his passports. He tore it open and said: 'Very well! Very well! They are in regular form; and I thank you.

"'But, Lord Sackville-West,' I replied, will you be so kind as to give me some receipt so I may show it to the Honorable the Secretary of State on my return to my post of duty, thus satisfying him that I have discharged my trust?" "Lord Sackville-West looked round and

"'What sort of a receipt do you want?'
"'If I may be so bold, Lord SackvilleWest,' I replied, with a bow, 'kindly write
as follows on the back of the envelope: Received intact the contents of this envelope; and sign your name.' He did so. I returned to the State Department and showed the envelope to the Honorable the Secretary of State; and he glanced at it

and said:
"'Very well! Very well!'"

Mr. Savoy lowered his voice again.

"That envelope, Majah, is in the archives
of my family and is one of my priceles
heirlooms. And it is so with the envelope in
which I delivered his passports to the
Spanish Minister in the spring of 1898. I
have that also in the archives of my family."

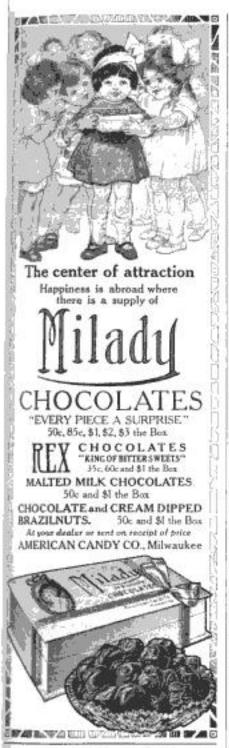

have that also in the archives of my family."
"But, Eddie," commented Major Dickinson, "I do not understand what is needed.

How can I assist you?"

"In this way, Majah—in this way: That white man who is the messenger Mrs. John Hay put in here, he knows what is going on too, and he's hanging round the Secretary's door. I thought that perhaps, as the Secretary hasn't been here very long, perhaps he wouldn't think of the precedent established and held sacred for forty-four years; and when it becomes necessary to send his passports to Señor Algara he might call in the white man and let him take them.

"It's very important, Majah. The prec-edent has continued in force for forty-four years. It wouldn't look well or sound well in the public prints to have it spread abroad that a precedent established for forty-four years had been broken. I am sure the Secretary wouldn't do it knowingly; but there are many things, many forms of pro-cedure, with which he may not be entirely familiar, and I feel that in such an important matter as this he would not care to be misled. It's precedent, Majah—precedent; and I shall be obliged if you will call his attention to the far-reaching consequences involved."

You want me to suggest to the Secretary that you are the proper person to take the passports to the Mexican chargé?"

"Yes,sah—that's it. Yes,sah—diplomat-ically, Majah, diplomatically; but in such a manner that the proprieties and amenities shall be observed. You are from the South, Majah?"

I was born in Kentucky."

"Well, Majah, you knows how it is; you-all don't want no white man doing a black man's work—especially in delicate matters like this. Now, if I may be so bold as to say it, Mr. Bryan, the Secretary, he's from Nebraska, and he might not understand that side of it; and he might think nothing at all about the precedent, either." So Major Dickinson went in to see

Secretary Bryan.
"Chief," he said, "Eddie Savoy, who has been a messenger outside this door for forty-four years, is desperately afraid you will let the white messenger take the pass-ports to the Mexican chargé. Eddie claims, if you do, that a diplomatic precedent of forty-four years will be broken. He asked

me to suggest to you diplomatically that he is the proper person to carry the passports." "Major," Mr. Bryan replied, "your presentations are received in the diplomatic spirit with which they are tendered. Mr. Savoy shall take the passports. The precedent shall be observed."

"I thank you, sir," said the Major, bowing and retiring.

And in consequence of this understanding Mr. Edward Savoy took the passports to the Mexican charge, officiating in this capacity for the third time in forty-four years, or on every occasion when such offices were required in our diplomacy. This, too,

is settled, fixed, immutable.

Meantime you should hear the Senate growl over the net results of its justification

The trouble grose in this way: After the President made his war speech and the House passed the justification resolution, that resolution went to the Senate and

that resolution went to the Senate and there they wrangled over it for some time. Then came the debate. There was criticism, both welled and open, for the President and his Mexican policy; and it was the duty of the organization members not only to defend the President but to urge the resolution as he wanted it. Also, it was their duty to make it clear to the world that this was a great patriotic movement, and that they—the organization leaders—were great patriotic people; and that the other great patriotic people; and that the other great patriotic people comprising the residue of the population were with them.

#### The Screaming Eagle Gagged

Now the only people who can be with the Senate in a public debate, so far as public and immediate manifestations of approval are concerned, are the people in the gal-leries; and naturally the galleries were full. Thus we have the stage set: The organiza-tion leaders ready to be patriotic until they burst the buttons off their vests; the galleries crowded with citizens who were anxious to be patriotic by applauding these senators; and the presiding officer—who was for a time the Vice-President— Thomas Riley Marshall by name. What happened? Why, Jim, every time

a person in the gallery clapped a patriotic hand in approval of some flag-waving, rally-boys-rally, this-is-our-country-and-our-President sentiment, the Vice-Presi-dent—himself a Democrat—sternly repressed such manifestations, and twice put this entire body of patriotic American citizens out—cleared the galleries, sup-pressed the applause, and otherwise injected himself into the proceedings.

Then he went away; and he called Senator

J. Ham. Lewis to the chair. This position in the chair kept J. Ham. off the floor and out of the debate. He could not fling any polysyllables about; could not wave the flag in unison with his whiskers; could do nothing but preside—that is, nothing but one thing. That one thing was to suppress applause.

Imagine a senator waving his arms about and, in the middle of a grand, golden and gorgeous peroration about the beauties of the flag, being stopped, just as he is prepar-ing to take his final soar into the empyrean, by the rat-tat-tat! of the gavel of the presiding official who says: "The senator will suspend for a moment. The chair desires to admonish the galleries"—and so on. Talk about funeral baked meats coldly furnishing forth a marriage table! What about suspense for the senator of the scale!

about such gags for the scream of the eagle! I tell you, Jim, these senators have their Yours, unvexed, BILL. troubles.

## "The Boss Told Me to Get the Book"

That's the way a few have asked for one of the three books advertised below. Out of thousands of requests, only a few "let George do it."

No doubt the boss read the bookbut he took a big chance. Don't follow

These books were written for executives - not for subordinates. They reveal an all too common lack of connection between advertising and sales, and suggest the remedy.

Have your copy addressed to you personally.

If there is sales and advertising waste and inefficiency in your business you ought to know it first.

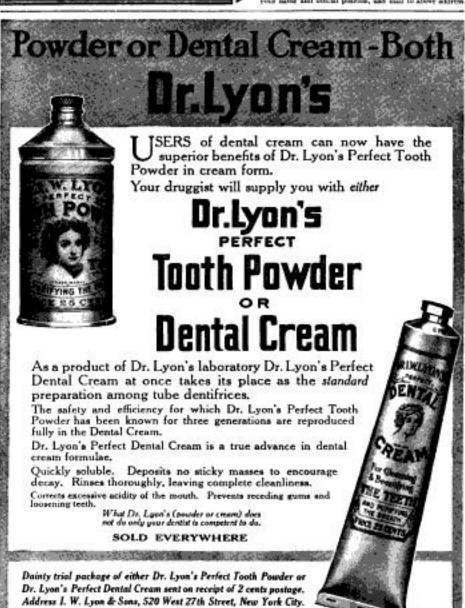

#### An Astonishing Revelation

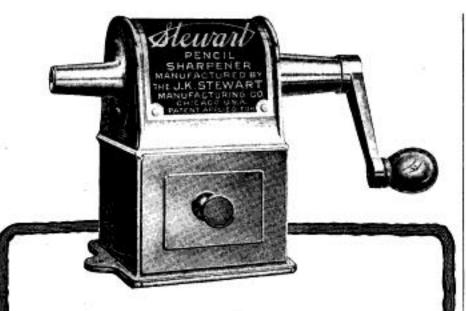

These books hold something impor-tant for every business man. They tear the mask off advertising and show the man who pays the bills how to get the most for his money.

If you check "A" on the coupon be-low, you'll receive "Blazing the Trail," a book for non-advertisers; "B" will bring you "Building the Rose way," a book for men who spend \$25,000 or less a year on advertising; "C" brings "Keeping the Road Open," a book for those who spend over \$25,000.

One book—whichever fits your needs —will be sent free. If you want more than one send 25 cents for each additional copy.

#### I'm the little pencil sharpener you've been waiting for. I'm the Stewart-I never break the point.

I'm a new thing in the world-and I fill a long felt want.

A clever little device—all my own-an automatic stopper-makes it impossible for me to break the pencil point.

I've been a long time coming-but at last I'm here.

And as a pencil sharp-ener I'm going to put the jack-knife out of business.

For I save time and trouble-I make no dirt-and I'm thoroughly efficient.

Also I'm fool-proof.

I'm built of only a few strong parts. I'm as simple as simple can be.

My twin cutters are made of a special cobalt alloy steel which will outwear ordinary cutters eight to one.

I'm really a very important individual.

And I'm sure I'm quite as much needed in the office, factory, school and home as any other needed modern

I'm a necessary tool-

and you need me—now.
I am built by the J. K. Stewart Manufacturing Company of Chicago—the world's largest makers of diecastings and I'm constructed with all the care of the world-famed Stewart speedometer.

You will find me on sale in practically every store where stationery or cutlery is sold.

Price, \$3.50

#### Money-Earning in Small Towns

THE man or woman in a small town who wants to learn some money "on the side" usually lacks the opportunities possessed by those living in larger places. We have a plan by which this can be accomplishedwhich is open to anyone with a little spare time on his or her hands, day or evening.

If you live in a town of less than 5000 inhabitants and expect to have some spare time on your hands this summer, we'll pay you liberally for it. We have a new proposition to make to those living in towns of that size. If you will drop us a line of inquiry we will explain the offer fully to you.

It is an unusual opportunity and if you want to make some extra money - to turn leisure hours into cash - it will interest you.

#### *THE SPRING SONG*

(Continued from Page 9)

in the sun and magnetizing a she-cub with

The tyranny of home has carpet-slippered the world. It has preserved its hearth tra-ditions in the denatured atmosphere of the city apartment and the fireless fireside. city apartment and the fireless fireside. The roaring peat logs, with their flame-lit circle of cold-backed squires and dames, are the gas grates and the gilded steam radiators of today; but the tyranny of home is still godfather to the easy chair, and has sponsored the lounging robe, the hartshorn smoking set, and the hand-embroidered cushion-top to the Christmas shopping list of useful gifts for men.

Gentle-tingered, it bound Mr. Heyman to the plush depths of his golden-oak reclining chair, and held him until the seventhong of the seven-day wedding present on the mantelpiece lost its echo and his wife's voice drifted to him through the fragrant

voice drifted to him through the fragrant haze of a dream and his morning coffee. "Hey-man!"

"Yes—yes, petsie."
"Come! Each morning you read your
paper longer and get later."
He yawned and stretched his arms back-

ward to their limit.

ward to their limit.

"I should worry! With a flat completely furnished, from a dumbwaiter to a wife, I ain't in such a hurry to get out in the heat and talk pickled tripe and liverwurst to the trade."

Mrs. Heyman leaned through the frame of the doorway, a blue-aproned Vesta, with the sacred fumes of breakfast bacon hovering in an aura about her and a smear of

pancake flour across the flush of her check.
"I got a surprise for you, Heyman. You
ought to see! Honest, mamma herself could

learn from me how to make griddles!"
"Griddles! I could die for joy! But
what we got a new parlor for if we can't sit
in it a minute? Mamma and papa can save
their parlor; but I sit in mine! Come! You ain't give me but two this morning, little canary! Married only two months and she forgets I take three kisses before breakfast— three kisses and a glass of water." She slipped into the big breadth of his embrace and transferred the flour streak to

his coat.

his coat.

"Ack, Heyman, quit! That's four already you've had. Come on out in the kitchen, everything's getting cold. Don't put your cuffs on the table, Heyman, they scratch."

"Already it's too hot to wear cuffs."

"Ain't it so! Look out, will you? The backs of the houses look like summer, don't they? Look over at all them flowers in

they? Look over at all them flowers in Feraldini's windows. The paper says the opera closes tonight and she sails next Saturday. Won't I miss her, though, limbering up every morning on the Spring Song and them little arpeggios I copy after her! Won't I miss her?"

"It's like mamma and papa say, we got the cheapest flat in New York, twenty dollars, steam heat and grand opera thrown

"And me getting free singing lessons from listening to her!"

"Honest, petsie, last night when I came home you was singing the same things as she sings, and I didn't know which one it was, it sounded so fine. So help me, it did, Ray. She ain't got nothing on you."

"Aw, Heyman!"

"Come, little canary, I'll run you a race to the kitchen."

"Aw, Heyman, quit such nonsense!"

Aw, Heyman, quit such nonsense!"

"Ach, how pretty she sets the table with the fringe on the napkins turned up!" "Here, sit on this side, Heyman, so I can reach the griddles hot off the stove

They drew up before a tiny table spread in the tiny kitchen. May sunlight wandered in and lay on the fresh red-and-white tablein and lay on the fresh red-and-white table-cloth, and glanced off the new tin utensils hung like armor round the walls. Mr. Heyman plunged a fork into the topmost four of a stack of steaming griddlecakes, transferred them to his plate and tilted a sluggish stream of golden syrup over them, cup of happiness only to find it bubbling

anew.
"These cakes, with this syrup, Ray! Before we was married, believe me, I sat more than once in the Subway and looked at the advertisement pictures of 'em with a emptiness inside me that made me dizzy."

"When you are downstairs. Herman

"When you go downstairs, Heyman, stop in the store with a batch of 'em for papa—ten he can eat and not know it! You should eat your eggs first, Heyman."

"Petsie! Such a care she takes of me I don't deserve it, Rachel; such a happi ness I don't deserve. I wonder sometime what right I got to it."

His tones were suddenly low and treme-

in his throat.

Ach, Heyman, you should talk so! Only last night I says to mamma and papait was lucky day for me when you came in th store and tried to sell us that first order a pickled goods. I only wish all girls shoul-be so lucky."
"Ach!"

"Ach!"
I says to Becky Kopf yesterday when was downstairs in her flat: 'I got it bette even than you, Becky. Look at Moe, tw weeks a year on the road!' How mad sh got!—just like I said something to get maat! Can I help it that Moe's house send him on the road?"

"Aw that reminds me. I forget to give

"Aw, that reminds me, I forgot to giv Moe and Becky last night what I brough home for the baby—a little monkey in a bo I seen 'em selling down on Fourteent Street for six cents. What's the different I thought: I get the little shaver one, i can't break me. Always when I come i

that kid goes right in my pocket, like I wa
a five-and-ten-cent store."

"Tonight when we come home from
mamma's we'll stop in with it. Always a
ten o'clock he wakes up and cries a little.

"Just like a buzz-saw he cries, so cute!

"Backly called upstairs, last picht the

and ielly order today don't you and mamm.

sell Sol Herzog & Company that chowchos and jelly order today don't you and mamm let me in when I come home tonight Whew! How warm it is already, not?"

"It's grand weather for mamma and pap to be going to the country, not? Yesterday Heyman, you ought to seen—papa on the sly bought hisself a fishing pole as long a you are. How mad he was when I seen is standing behind the refrigerator—like is was something to be ashamed of that he was going to enjoy himself."

"The old man'll have the time of hilife—bait he's got already too."

"Today when I'm done in the flat I'll gover and help 'em pack. For her and papa two weeks in the country mamma packs his for Europe! A basket yesterday shought special for their luncheon on the train—like a shoebox wouldn't do! Chi

brought special for their luncheon on the train—like a shockox wouldn't do? Chi dren they are? I'm glad they spend the money on page fifty-six for pleasure: a poor grandma's money one vacation in the lifes they can afford."

"It's grand! With Aunt Hanns and you the store can run just as good. We can pickle mamma's tongues for her while she gone and surprise her—not, Ray?"

"Ach, Heyman!" She slid round the table and placed the warmth of her thee

"Ach, Heyman!" She slid round the table and placed the warmth of her chee close to his shaved one. "How good you are, Heyman! How I love you!"
"My little canary bird! I—sh-h-h-Listen how early in the morning she sing When I get a thousand dollars each operasearly in the morning I wouldn't get up!"
"Listen, Heyman—sh-h-h-h!"
"Why does she always sing the sam songs—always.—"

"Why does see always sing the same songs—always—"
"Miss Anson says she probably im limbers up on those—light little things lik the Spring Song; she don't sing grand oper in the morning. Listen, Heyman! Ain'that swell? Listen to her take that C!"
"What's she singing, petsie—the Sprin Song?"

Song?"
"No, silly! Ain't I been trying to lear
"No, silly! Ain't I been trying to know i you ever since we moved in how to know i when you hear it? The one where she take

when you hear it? The one where she take
the little grace-notes on high C is the Sprin
Song—like this—Tra-la-la-la! Them'
arpeggios she's singing now."
"I should stand and listen to the differ
ence between the Spring Song and granopera, yet; with Isaacs tryin' to beat me! that chowchow order! Put a napkin eve them cakes if you want me to take 'em. Ray

Sixth Avenue don't need to know what w had for breakfast."
"Tell mamma she should fix him som country sausage out of stock with then and that I'll be over later. Good by, Hey man. Don't come home so late—we exover at mamma's tonight and she gets mad Take care, Heyman, the papers are full a street-car accidents!" "Good by, petsie. Go out for a little en-joyment today. Walk out with Becky and the baby. I come home early. Good by!" "Heyman?"

"Heyman?"

"You only kissed one ear and I feel lepsided."
"Baby! There now, you got more as you

He closed the door lightly after him and his heavy-shod feet clattered down the flights in a rapid avalanche.

Except for the tenuous twitting of sparrows from zigzag wires and the shouts of children playing in a rear courtyard be-neath a network of clotheslines, the apart-ment was suddenly quiet. With a little sigh that died in a smile, Mrs. Heyman turned to her kitchen, plunged the waiting dishes into a shining pan, pushed her sleeves further off her round elbows, and let the hot terrent from a high-pressure faucet plunge into the sink.

Presently she broke into a little warble gently, like a bird singing in its throat, and with her blue-and-white cup towel polished the face of a plate with a rapid rotary mo-tion. The warble grew to a trill and the trill to a full, joyous crescendo that brought her down the scale again in little silvery staccatos, like a tiny mountain rill trickling through the roof of a cave and suddenly terminating in delicate suspended stal-artites. Then upward again, higher, freer, swifter, pat against the back doors of Fifth Avenue, up over the roof of the fifteenstery De-Luxe, down into a cat-infested courtyard—a lark warbling out its joy; a mother cooling her most sacred lullaby; Progening over her flowers. Proserpine crooning over her flowers.

Beneath the kitchen window a voice hallooed twice. Ray paused on the crest of her flight, placed a dry teacup beside its mate and leaned half out of the window.

"Yes, Becky!"

"What you doing up there, Ray? I heard Heyman go long after Moe." A head protruded from the window beneath and a round, olive-skinned face turned upward like a pansy in the sun. "Was that you singing, Ray? Honest, half the time I can't "It was me, Becky, trying to copy some of her high notes. I—I could take 'em, too, if I had the training."

"Come on down a while, Ray."
"You come up."
"Can't leave the baby—he's asleep."
"I ain't done my dishes yet."

"What you fixing for supper, Ray?" "We're going over to mamma's for sup-per. Next week they go to the country."
"On your way home stop in—I got some-thing for Heyman. We'll be sittin' out in

front tonight till you come back.'

"I keep my eyes on my hubby; you don't give him no surprises behind my back. How you two carry on together!" Laughter.

"I'm fixing sweet-sour tongue for supper; Moe is so crazy for it. I got a grand big one off your mother."

Heyman likes it too."

"Come on down a while, Ray, your housework ain't so heavy."

"When I've done my dishes, all right; that kid I ain't seen for a day. Honest, he's all Heyman talks about. Wait, I must go, Becky; there's my bell." Mrs. Heyman drew inward and opened

her door cautiously, her checked apron

fung backward over one hip.
"What is it, please?"
"Ees thees the place where madame——"
"This is Soi Heyman's flat, Number 2." "Ess thees the place where madame seeing thees morning—and all the morn-

"Yes." Mrs. Heyman narrowed the open doorway and placed her foot half aggressively in the opening.
"Madame who seeng early thees morn-

After seven o'clock the lease says that tenants are allowed to use all musical instruments—ain't the voice a musical

The small black-clad figure without, the silk-stockinged variety, which has opened the first act of every society drama whose gold furniture ever required flecking, whose vaist is the size of a small-sized embroidery hoop and whose apron is as sheer and small as a cambric handkerchief, ventured one tall-heeled slipper across the threshold.

"Zee note for madame."

Rachel broke the seal of the ciel-blue envelope with fingers that fumbled, and read rapidly and with darting eyes. Then the note fluttered as though it had turned to an aspen leaf in her hand and drifted to the

floor.

"Feraldini! She—she wants to see me, girl? My voice—she—she—she wants—me! Feraldini! My apron—I—oh—now?"

"Yes; madame come weeth me now, be-fore madame go to the opera house. Now, please!"
"Yes! Come! We go now—now—
"Madame's hat?"

"Here on the hatrack-this-my hus-

band's cap will do. Let's hurry, girl!"
With her eyes like phosphorus on black water and senses swimming, Rachel dragged the small black figure along with her out

into the gaslit hallway.

In its sulky stream of light she paused for a moment and glanced down the shabby front of her house-crinkled skirt in sudden hesitation—then went down the stairs with her heart beating in her ears, throbbing in her throat, leaping high in her bosom; and clutched in her hand, like a damp ensign, was the blue-edged cup towel.

In the red-velvet-and-walnut parlor, in a circle of light flung by a painted china lamp and in a silence that was as singingly electric as a wire transmitting its message, a tribunal sat on the least uncomfortable chairs of the six-piece velvet-and-walnut set, and two women wept frankly; and an old man rubbed a gnarled hand across his

"For heaven's sake, mamma, Heyman, papa, say something, one of you! I can't stand no more of this awful stillness!"

Mrs. Hoffheimer rocked herself to and

fro.
"Always this room was bad luck to us! In this room poor Grandma Hoffheimer laid on that red sofs when she was dead; in this room, when papa broke his foot with the keg falling on it, we laid him till the doctor came. Always when we don't sit like always in the kitchen and talk it's bad luck"

"Bad luck! Listen to her, Heyman and papa, bad luck she calls it yet! Bad luck!" "Bad luck I said; and I say it again— bad luck!" "Bad luck!" repeated Mrs. Heyman, her

"Bad luck!" repeated Mrs. Heyman, her voice rising in a semi-hysterical crescendo. "Bad luck, Heyman, when Feraldini—think once!—wants me to go to Vienna with her, in two days, on the same boat! When for nothing, with no expenses, she will make out of me a great singer! Bad luck yet!" "Sh-h-h, petsie!" Mr. Heyman stroked his wife's hand an analyse.

his wife's hand up and down with a razor-strop movement. "The trouble is we all get excited at once. We got to get calm. Re-member, when I left home this morning, Ray, you was like always; and when I came home tonight a singer like Feedelici came home tonight a singer like Feraldini wants to take you to Vienna with her. It

don't get in your head all at once."

"Heyman, such rooms as hers you never seen! Honest, for gold I couldn't see a minute—gold halls; gold elevators; gold furniture! And for flowers! You can believe mer many there were your in her. lieve me, mamma, there were more in her rooms than that time we had tickets for the flower show at Madison Square Garden."

"In springtime flowers ain't so expensive and all what glitters ain't always gold neither. With a bottle of gold I gilded three headcheeses for our window last Christmas, didn't I, papa? We got 'em yet. For fif-teen cents we got all the gold we wanted. A married woman, Ray, has got her first duty to her husband -

But, mamma -

"In twenty-five years not one hour have I left papa. A woman's place is with her husband; and not even being a biggest singer, like her over there, can go before making him a home. Don't get no new-fangled ideas like that in your head."

She ain't American, mamma, she's Eyesne and t American, maining, sne s Eye-talian. Oh, Heyman, would you believe it how plain she is? She gave me some grapes as big as walnuts, and asked that I should sing the Spring Song and some scales up and down, like I did this morning over the dishes, and then the Flower Song from

"If I say it myself I bet you sang grand!" "I did, mamma, only I was so scared; and afterward she took me in her arms and cried, and me such a sight, with the dishtowel in my hands! And she asked me such questions about you and papa, and who else in the family was a singer."

Mr. Hoffheimer rubbed his dry fingers

together.
"Back in the old country, Rachel, I remember in our family once was a great singer, who went to Nürnberg and ——"

## You Can Change the FORD

from Pleasure to Business

Full Panel Delivery Body Load Space 44x54

NTERCHANGEABLE with the regulation Ford Pleasure Bodies, a Highland Commercial Body gives you practically two Ford Cars for a little more than the price of one.

Six Models, (four shown here), all built with the same rugged honesty that characterizes the Ford Car, light, roomy and strong. They will carry any load that the Ford Chassis can carry.

No matter what may be the character of your merchandise or how long your hauls, the Ford Car with the appropriate Highland Commercial Body will modernize your delivery system, increase its efficiency and reduce its cost below the cost of horsedrawn vehicles.

We carry a complete stock and can make immediate delivery either direct or through your local Ford Dealer. Prices from \$18.00 upward, F. O. B. Cincinnati, Ohio.

Write today, telling us what business you are in and we will send you full details as to the Highland Commercial Body that will exactly meet your requirements.

#### STEEL'S

Famous Pound Cake, Sponge Cake and Macarooms

A horse and wagon, or delivery auto, and small capital are necessary.

The Steel-Drake Baking Co., Wallabout Market, Brooklyn, N.Y.

"Always on your side Hoffheimer! In my family I guess we didn't have no voices! I ain't sayin' peddlin' needs a singing voice like yours, Rachel, I know better as that; but when poor grandpa selig his tinware used to mend, even when I was a little girl I remember how loud and fine his voice was—two blocks away we could hear him coming home to lunch!"
"Ach!" Suddenly Mr. Heyman rose and pushed back his chair until it whined

on its casters; his face had lost some of its light, as though dusk had fallen sadly, and his eyes were dark, like windows with the shades drawn. "It ain't what she's got or shades drawn. "It ain't what she's got or where she got it, mamma and papa, it's what she's going to do! That's what we got to decide here now—tonight. Rachel, we leave it to you to decide what is best for you to do!"

"Oh, Heyman, what to say I don't know! I—I want to go! I can't sit home and see the greatest singer want to take me to Europe and —"

Mrs. Hoffheimer trembled to interrupt.
"In my day wifes didn't leave their husbands, voices or no voices!"

"Keep calm, mamma! It's a grand thing, just the same, that you got a daughter and I got a wife with such a voice."

I got a wife with such a voice."
Rachel turned toward her father, with her hand on her bosom as though she would

still its heaving.
"A thousand dollars, papa, she told me

"A thousand dollars, papa, she told me this morning, she gets every time she sings a rôle. Think of it! Such rooms you never seen! Two maids like the one that came for me, and ——"

"A thousand dollars! Go'way! It don't sound good to me!"

"Ask anybody, papa, what money grand opera singers get! Heyman, you tell him."

Mr. Heyman placed his cold hands on his wife's shoulders and his lips grazed her hair.

"Ray's right, papa. There's big money in the business. I used to sell greengoods to Lispinsky's, down on Green Street, and his daughter gets four hundred a week with a music show called The Queen of Hearts; and in grand opera it's more." and in grand opera it's more.

"In two years, papa, Feraldini says of me she'll make a singer like herself—two years in Vienna, with the best!" Heyman interposed in a voice that verged

on acerbity:

"Wait, Ray, three times you've told us all that! Now let's get down to business."

"A wife's place is ——"

"No; let me do the talking, mamma.
Three hours we been talking! Where she
gets her voice ain't the question. The fact
is she's got it! What kind of gold furniture

gets her voice ain't the question. The fact is she's got it! What kind of gold furniture Feraldini's got don't get us nowheres. Two days Ray's got to get ready. Tonight we must decide does she go or stay!"

"Ach, Heyman, my husband, I——"

"That don't get us nowhere, Rachel. You can't go and stay here with me and mamma and papa too."

"You decide for me, Heyman; you ——"

"That none of us can do! For yourself you must decide. We don't stand in your way. If we must give you up, then we—we say, if it's for your good, you should go!"

"It is, Heyman! I want to sing! Every night I wake up with something soprano in my throat that wants to sing. A voice like pure gold, she says, I've got."

"Ach, listen to her, Hoffheimer, our only baby! Married two months—and listen! Her husband shouldn't be so easy with her; his foot he should put down! For a married woman two years away from her husband—it ain't decent! Heyman, ain't you no man? it ain't decent! Heyman, ain't you no man? Papa, ain't you got no foot to put down?
Her grand new flat, her grand new furniture,
her grand new husband! And now, just
because a Eyetalian singer ——
"Sh-h, mamma, sh-h-h! Heyman's right.

Rachel should decide for herself. A woman that ain't happy is a bird in a cage. For her flat she don't need to stay home, they can sublet and make money on it. Heyman can come with us. For herself Rachel must

Mrs. Heyman swayed backward into her

husband's arms.
"I-I'll come back and make you all three proud! I'll sing in opera, with all of you in the middle box. I want to go, Hey-

man, even when it breaks my heart to leave you and mamma and papa, I want to go!" "You go, then, Rachel. That settles it!

Now we're getting somewheres."
"Ach, my child—ach, that I should live to see the day when she leaves me and her papa to go across the water! Parents like

we been; a husband like hers; a ——"
"Mamma!" Heyman's voice was like

"Heyman's right to be mad at you, mamma!" Mr. Hoffheimer waggled an angry finger before his wife's eyes. "She wants to go and we can't hold her. You want a cooped-up woman in the family? Not me! We ain't got nothin' soprano in our throats, Gott sei Dank! Me and Heyman say, Ra-chel, that you should go, and mamma says

With a mean that was torn out of her breast, Mrs. Hoffheimer folded her daughter within her arms and sobbed through lips that blubbered outward in frank emotion.

"My baby! They don't understand. Nobody can care like a mother for her flesh and blood! Ack, my baby, like papa says, I say you should go; but my heart goes too. I ——"

too, I — "
"Mamma! Mamma! I can't stand it! It's
"Mamma two years "Mamma! Mamma! I can't stand it! It's
only for a little while, mamma—two years
and I make you all famous! Think, once,
how you hate the store in winter when the
bulk olives freeze, mamma! And when I
come back we can give up the store, and—
think once, mamma!"

"When your heart is being torn out you
can't think!"

Ray turned to her husband, with each breath catching on the crest of a sob.
"Heyman, you—you ain't mad at me.

"For what should I be mad, Rachel! You should do what makes you happy. There ain't many girls got a chance like—like—you."

"Lyric she said I was, Heyman; lyric soprano. It won't be for long. With mamma and papa you won't get lonesome."

"So soon you sail, Rachel! Ach, Hoffheimer, day after tomorrow our child goes

heimer, day after tomorrow our child goes to Europe, and not even warm clothes for the ship she's got!"

"I don't need nothing, mamma—all expenses she says she pays. Tomorrow—"
Mr. Hoffheimer batted a remonstrating

hand.

"You ain't no beggar that you go without pocket-money. How glad I am to stay home from the country, you should know All day I fight with mamma—country I got to go yet! How glad I am to get this mone, here on the table in page fifty-six out of the house you should know! Here, take it book and all, so I get it out of my sight!"

"No-no-no, papa; no-no-no!"

"Take it or, so help me, I throw it out the window!"

"Papa, for my own wife I can pay he expenses."

expenses."
"Takeit, I say; no monkey business! To the country I almost had to go! Schnapps next door, went; and like the measles he came home with mosquito bites. Me and mamma say: 'Gott sei Dank! We don't go to the country,' not, mamma?'

Mr. Hoffheimer cackled in a heady, this roice, and showed the book for the country.

Mr. Hoffheimer cackled in a heady, this voice, and shoved the book further into hi daughter's resisting hands.

"Papa's right, Rachel. What'll old folk like us do in the country? Climb trees' With Aunt Hanna tending store, we lose the clothes off our backs, such overweight shi gives. Me and papa can sit in the parl sometimes this summer, if papa don't make me ashamed and take off his shoes to purhis feet in the grass! We like it just as well and better, not, Hoffheimer?"

"I should say so!"

"Mamma, papa, I can't!"

"Tomorrow, Rachel, I take you out and buy you what you need. For a husband, got something to say too."

"Ach, mamma, papa, I—honest, I fee sick-like inside with happiness! I could crymy eyes out at leaving, but I could holle for happiness because I'm going. She criew when I sang, mamma, and wiped her eyes of the dishtowel and kissed me. Ach, it was wonderful!"

"Such dishtowels like those she don'need to be afraid of."

Mr. Heyman reached for his hat.

"We go home now. Rachel: tomorrow.

Mr. Heyman reached for his hat.

"We go home now, Rachel; tomorrow
we got enough excitement before us."

"I be over at six tomorrow, Rachel, with
papa's valise he brought from the old coun
try and them flannels you left here from
your trousseau." Tears rose in Mrs. Hoff Tears rose in Mrs. Hoff trousseau.

heimer's voice and she swallowed then gulpingly. "You take my sweater for the gulpingly. "You take my sweater for the hoat, too, it's heavier as yours ——"
"Don't worry her with such nonsense tonight, mamma. Ach, don't you put the book out of your hands, Rachel—page fifty-six!"
"Papa, I can't take it!"

Papa, I can't take it!"

"Papa, I can't take it:
"Papa, my wife don't need ——"
"Sh-h-h! Good night, children. Good night!"
"Ach, mamma, good night!"

"Take her home, Heyman. These wimmin with their cryin'! Where they get so much of it from I don't know. Look at 'em on each other's shoulders, like wilted celery heads! I—I—ach!"

"Good night, papa!"
"Sh-h-h! All wet she makes my face
with her nonsense! Look at Heyman. Like a ghost he looks so tired! Go home, go, go!
You scalawags, you!"
"Come, Ray!"

"C-comin'! G-good night, mamma, papa. Good night!"

The door closed on her sobs; and on the dark stairway without she swayed toward her husband, with the tears streaming from

her open eyes.
"Heyman, promise me you ain't mad

at me!

"I ain't mad, baby—for why?"
"It won't be so hard after I get started,
Heyman; and when I come back I——" Sh-h-h! All tired out you are, Ray."

They stepped out into a momentary whiff of cool May evening. Children danced in shrill groups under arc lamps; and, beneath the giant network of the Elevated, surface cars clanged at the traffic; and in chairs ranged along the sidewalks, backs to chairs ranged along the sidewalks, backs to buildings, shopkeepers and their families could glimpse a navy-blue sky between the trellises of the Elevated, except that the arc lamps were so bright they could not see

the stars.
"Sh-b-h, Rachel; there's Becky and Moe sittin' out in front! Put that book in your pocket; don't tell them all our business. Till tomorrow, when it's all settled, they

don't need to know."
"You're right, Heyman, not a word!
Jealous like a cat Becky'll be when she knows it.

The Kopfs tilted their chairs back against the plate-glass window of the plumber's shop and greeted them in reproachful pantomime:

"Hello, night owls! We been waitin' for you. Moe wanted to go up to bed half an hour ago when you didn't come; but I wanted to wait to give Heyman his surprise."
Heyman mopped at his damp brow and rubbed the inside band of his derby.
"All day I been greening Books, what

"All day I been guessing, Becky, what you got for me. One of two things it is, I bet you—a new trick the little shaver's got,

or some of that apple kuchen it makes my mouth water to think about."

Mr. Kopf rose to his corpulent five feet

and closed his campstool.

"You ain't right neither time, Heyman.

A surprise she's got for you and Ray that's a real surprise!"

Mrs. Heyman showed her teeth in a re-mote and aërial-like smile, and closed her hand over her husband's arm.

"How jealous I am of Heyman, Becky, you should know-you and him with your surprises!"

Mrs. Kopf's small, beady eyes danced

inquiringly in her head.
"What's the matter, Ray? You ain't sick, are you? You and Heyman look like you've seen ghosts! Nothin' ain't wrong, is it? Huh?"

"Such a headache I've got, Becky. And Heyman, like a rag he gets the minute it gets a little hot."

Mr. Kopf whacked his thigh with the short, fat hand of inspiration.

"I got it, Becky! We'll take 'em upstairs and fix 'em both up with some of our root beer! How's that?"

"For once, Moe, you got a good idea in your head. Come, we go up to our kitchen; it's cool like ice. Here, take my campchair up for me, Heyman. I keep tellin' my old man if he don't stop eating all the good things I make for him we'll soon have to take

a ground-floor flat, 'cause be can't climb."
"You hear, Rachel," cried Heyman,
stretching the rims of his eyes in mock formidability, "how good some husbands get treated?

They trooped up the stairs, their gauzy

laughter drifting backward and downward.
"Moe, go light up the kitchen, so Ray
and Heyman can see, but don't wake the
baby! It ain't his time for half an hour yet. Come right in, folks. Feel how cool my kitchen is? Sit down."
"Ray ain't feelin' so well, Becky, and we

can't stay. We take a drink of your grand

root beer and then go right upstairs."

"Moe, hurry up and bring in from under
the sideboard some of that apple kuchen for

Heyman, but don't wake up the baby!"

Mr. Kopf returned with a well-piled cake plate, which he balanced on his upright fingers with the exaggerated genuficctions of a waiter.

"Don't go so soon, folks! In a few minutes the baby wakes up—always he wakes up to be fed at ten o'clock. Me and Becky nearly die laffin'; just like a buzz-saw he yells. You can hear him upstairs, ain't it? You stay and watch him.

"Not tonight, Moe; Ray ain't feelin' so well."

"Look, Heyman! Here's the surprise for you and Ray. Me and Moe had a extra one made. Look!"

"Now what do you think of that? A picture of the little shaver! Say, honest now, look at them little bare feet and all! Honest, Moe, if you like it or not, I'll kiss your wife right here for that! Look, Rachel; see the picture of the little shaver!"
"Aw, ain't he sweet! How grand he got posed! How grand that embroidery took,

Becky—look, you can see the pattern! Ain't he sweet?"

Mrs. Heyman bored a kiss into the paste-

board and rose to her feet. "It was a grand surprise, Becky. We'll have it framed and hang it in the parlor along by mamma and papa. Thanks!"

"Thanks, Becky! It's a grand picture of the little shaver."

the little shaver.

"Don't mention it." "Good night, folks!"
"Good night!"

In their little flat above it was as quiet as the inside of a shell. Heyman raised the bedroom window and tweaked on the electric light. Heyman's face sprang out yellow and at strange variance from its habitual terracotta pink.

"Heyman, you—you look like the dead!"
"Don't begin that, Rachel; I'm all right."
She sat down on the uncrinkled bedcover and regarded him with tear-swelling

eyes.

"Promise me you ain't mad at me,
Heyman!"

"For what should I he med Rachel?

"For what should I be mad, Rachel? Don't begin that again." "I-sometimes when I think of mammamamma and papa, Heyman, and—see how—Becky and Moe are so happy—I—

-feel like I—can't-I -Ach now, Rachel, such talk! Won't we

all be here when you get home? The old folks and me won't run away, we—"
"So easy he gives me up! He don't—
don't care; and me—I—I could die for homesickness already—before I'm gone!"
She burrowed into the fluffy pillow-shams.
"I—such a terrible feeling I have——"

"I—such a terrible feeling I have——"
"It—it ain't a question of me, little canary; you got a bigger chance than anything I can ever do for you. It's you I gotta think about! Ach, Rachel, quit crying so, baby! When you go on like this I feel myself losing—losing my nerve!"
"Heyman, I—such a husband you are! A girl to have all at once such a husband

girl to have all at once such a husband and such a mother and father!"
"Sh-h-h!"

"What can being the greatest singer give me that I ain't already got? I-promise me, Heyman, I don't have to go. I can't,

Heyman! I ——"

"Sh-h-h! Tomorrow, Ray, you feel different."

She flung her arms round his limp collar and clung to him like a rockbound Andromeda.

"No-no-no! Promise me, Heymanpromise me I don't have to—promise me!"

He moved his lips to speak; and because the words would not come he leaned over

and took her in his arms silently.
"You stay home, then, baby—home!"
"Ach, my—my Heyman!"
From below, the Kopf infant raised its voice to the night in a lusty scream that

speed-hot buzz-saw biting into hard wood.
"Listen, Hey-Heyman, listen to the little s-shaver! He's singing the song for sure!"

"What song, darlin'?"
"Silly boy! You never know it when you hear it."
"Darlin', you're like me, so upset and happylike that you don't know what you're sayin'. Lie still there, darlin'. That ain't singin', it's only the little shaver yellin'-

the "The Spring Song, silly boy! It's the Spring Song for sure that the little shaver's singin'!"

He took her cheeks between his thumbs

eyes.
"Rachel, I—don't——"
She jerked her head away for the refuge on his shoulder, the timid hope under her heart beating against the high hope in his.

## "White at Last"

"I certainly am glad to get this house white. What makes this so much whiter than the paint we had before?"

"Well, I asked Henderson who painted his house last spring and what paint he used. He told me that Davis & Son did the work with Carter White Lead and linseed oil, so I told Davis to send his men up."

"Hasn't our house always been painted with white lead?"

"Yes, but Carter seems to be whiter than other white leads. Davis showed me a couple of samples of white lead that he said were pure and they both looked

gray alongside of Carter. He says it's Carter that made Henderson's house so white, and this looks as if he were right."

#### CARTER Strictly White Lead

is a perfectly clear, pure white because it is manufactured by a modern process that eliminates even slight impurities and employs no discoloring agents. It is unusually fine because it is being constantly and thoroughly pulverized during the fifteen days it is being chemically changed from pure metallic lead to white lead.

Carter White Lead is unexcelled in its affinity for linseed oil, its spreading and covering qualities, in durability or in any of the other qualities that have made white lead the most widely used white pigment.

Carter White Lead is preferred by experienced painters as the base for making colored paints because it contains nothing to dim the brilliancy of the tinting colors used.

If you are thinking of having your house painted in colors ask your painter or paint dealer to show you a copy of "The Paint Beautiful" portfolio, which shows twelve modern houses painted in up-to-date color combinations.

Whether your house is to be painted in colors or white you should send today for a free copy of "Pure Paint, a Test-book on House-pointing," illustrated with four color plates from "The Paint Beautiful" and containing in small space information of great salue to property owners.

If you have had any trouble with paint or paint-ing, write to our Paint Information Bureau about it.

## End time-waste in your billing

This complete correspondence typewriter automatically foots and proves your bills while it types them

## 11 questions answered

No business man can shut his eyes to this new time-saver. It will soon be as standard as the typewriter itself.

Below are some natural questions:

"Will it really save time and money?"

This is effectively answered in many letters we receive from users large and small. The following is a sample:

".... Beg to say that we consider that we are saving 20% of our time in handling orders, entering, billing, etc., and for making out statements at least 25%."

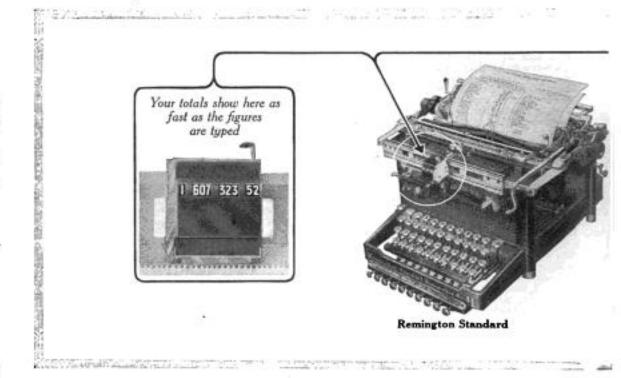

This is one of the more conservative statements.

"Why should I bother about bookkeeper's work?"

It is not a question of bookkeeping. It is a question of time-saving.

This machine, by totalling and proving bills while it types them, saves valuable clerical time. The saved time can be used for collections or other productive purposes.

3

"Will it fit my present billing system?"

Yes. It requires absolutely no changes in system. It does your work your way. It applies to small billing departments as effectively as it applies to large ones.

"Is it absolutely accurate?"

The best evidence is this: It is used constantly by the United States Sub-Treasury and by prominent banks throughout the country.

"What is the cost?"

That varies with the carriage-width. It is higher than the cost of a plain typewriter. Compared with the cost of a standard, first-class adding machine it is low. And remember: It is an adding machine combined with a complete typewriter.

The initial cost is soon wiped out by the time-saving, to say nothing of the accuracy insurance.

"Is it complicated?"

No. While it totals with coldsteel precision, its actual operation is simplicity itself.

"Can my present operator use it?"

Most assuredly. Within an hour your typist can learn to operate it readily.

"Can it be used readily on my regular correspondence?"

Yes. It is an absolutely complete Remington Typewriter for correspondence purposes. The simple switch of a lever prepares it for letter writing.

"Who are using it?"

Thousands of manufacturers and retailers-large and small-insurance companies, banks, city departments, railroads, express companies, steamship lines, telegraph companies, brokers and many in other lines.

machines were the first on the market. How much longer they will keep in first class condition, we do not yet

The Remington Adding & Subtracting Typewriter can be had in any of the Remington Models shown on this page. Each is a member of the famous Remington family—each is a complete, easy-running typewriter, plus the adding and subtracting feature—each is designed to insure maximum durability—each has distinctive features designed to meet individual requirements.

Two ways to investigate

Sooner or later the adding and subtracting typewriter will be considered as fundamental in practically every up-to-date business equipment as desks and chairs.

Its use is spreading rapidly.

The chief reason why most offices or stores-where bills and statements are part of the day's work—are not using it now is because the office heads have not yet investigated its time-andmoney-saving possibilities.

A new illustrated folder, "The Story of a Day's Work", makes it possible for business men, who are alive to the advantages of relieving human effort with improved mechanical helps, to learn specifically how the Remington Adding & Subtracting Typewriter will save clerk-time-and how it will do away with unnecessary error-risk and expensive calculations on their bills and statements.

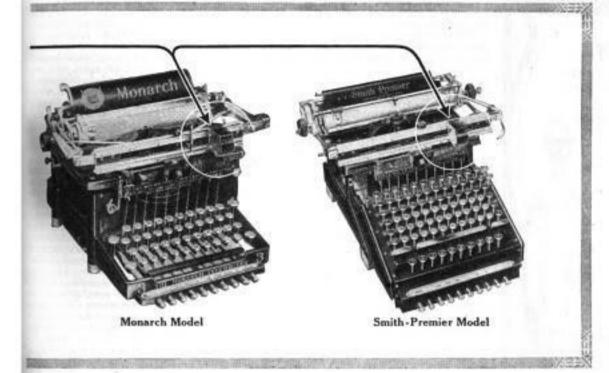

We will send a copy of "The Story of a Day's Work" to any employer of clerical or stenographic help-on request. The information in this helpful little folder will probably mean to you the important difference between efficiency and inefficiency in certain departments of your business-the difference between an extra profit and a needless reduction of your "net" for the ensuing

twelve months.

A note now dictated to your stenographer will bring you this folder by return mail. Later, if you wish, we will install a machine in your office, where you can demonstrate its use-fulness on your bills — without expense to you.

We recommend that you send now for "The Story of a Day's

"Is the touch light or heavy?"

Light. The keys are not punched as with the usual adding machine. They operate with a light typewriter touch.

When the adding and subtracting mechanism is connected the touch of

the numeral keys is slightly different. This prevents adding on correspondence work. On correspondence work, the adding mechanism is detached by touching a lever. The numeral keys then operite as lightly as the letter keys.

If you wish to have the name of a user in your neighborhood we shall be glad to supply it.

"Is it durable?"

Decidedly. We have testimonial letters from offices which have been using this machine for 5 years. Their

#### AN AMERICAN VANDAL

Continued from Page 12)

vividly of that which inevitably happens when a millionaire's daughter is being mar-ried to a duke in a fashionable Fifth Avenue church—it reminded me of that because it was so different.

Fortunately for us we were so placed that we saw quite distinctly the entrance of the wedding party into the chapel inclosure. Personally I was most concerned with the

members of the royal house. As I recollect, they passed in the following order: His Majesty, King George the Fifth. Her Majesty, Queen Mary, the remaining Four-Fifths.

Small fractional royalties to the number

of a dozen or more.

I got a clear view of the side face of the queen. As one looked on her profile, which was what you might call firm, and saw the mild-looking little king, who seemed quite eclipsed by her presence, one understood—or, anyway, one thought one understood—why an English assemblage, when standing to chant the national anthem these times, always puts such fervor and meaning into the first line of it.

Only one untoward incident occurredthe inevitable militant lady broke through the lines as the imperial carriage passed and threw a Votes for Women handbill into His Majesty's lap. She was removed thence by the police with the skill and dexterity of long practice. The police were competently on the job. They always are— which brings me round to the subject of the London bobby and leads me to venture the assertion that individually and collectively, personally and officially, he is a splendid piece of work. the inevitable militant lady broke through piece of work.

The finest thing in London is the London policeman and the worst thing is the shame-fully small and shabby pay he gets. He is majestic because he represents the maj-esty of the English law; he is humble and

esty of the English law; he is humble and obliging because, as a servant, he serves the people who make the law. And always he knows his business.

In Charing Cross, where all roads meet and snarl up in the bewildering semblance of many fishing worms in a can, I ventured out into the roadway to ask a policeman the best route for reaching a place in a somewhat obscure quarter. He threw up his arm, semaphore fashion, first to this his arm, semaphore fashion, first to this his arm, semaphore fashion, first to this point of the compass and then to that, and traffic halted instantly. As far as the eye might reach it halted; and it stayed halted, too, while he searched his mind and gave me carefully and painstakingly the direc-tions for which I sought. In that packed mass of cabs and taxis and busses and carriages there were probably dukes and arch-bishops—dukes and archbishops are always fussing about in London—but they waited until he was through directing me. It flattered me so that I went back to the hotel and put on a larger hat.

#### The Holders of the Balances

Another time we went to Paddington to take a train for somewhere. Following the custom of the country we took along our trunks and traps on top of the taxicab. At the moment of our arrival there were no porters handy, so a policeman on post out-side the station jumped forward on the instant and helped our chauffeur to wrestle the luggage down on the bricks. When I, rallying somewhat from the shock of this, thanked him and slipped a coin into his palm, he said in effect that, though he was obliged for the shilling. I must not feel that obliged for the shilling, I must not feel that I had to give him anything—that it was part of his duty to aid the public in these small matters.
I shut my eyes and tried to imagine a

New York policeman doing as much for an unknown alien; but the effort gave me a severe headache. It gave me darting pains across the top of the skull—at about the spot where he would probably have belted me with his club had I even dared to ask him to bear a hand with my baggage.

I had a peep into the workings of the system of which the London bobby is a spoke when I went to what is the very hub of the wheel of the common law—a police court. I understood then what gave the policeman in the street his authority and his dignity—and his humility—when I saw how carefully the magistrate on the bench weighed each trifling cause and each petty case; how surely he winnowed out the small grain of truth from the gross and tare of surmise and fiction; how particular he was

to give of the abundant store of his patience to any whining ragpicker or street beggar who faced him, whether as defendant at the bar, or accuser, or witness

It was the very body of the law, though, we saw a few days after this when by invitation we witnessed the procession at the opening of the high courts. Considered from the standpoints of picturesqueness and impressiveness it made one's pulses tingle when those thirty or forty men of the wig and ermine marched in single and double file down the lofty vaulted hall, with the Lord Chancellor in wig and robes of state leading, and Sir Rufus Isaacs, kneebreeched and sword-belted, a pace or two behind him; and then, in turn, the justices; and, going on ahead of them and following on behind them, knight escorts and ushers and clerks and all the other human cogs of the great machine. It was the very body of the law, though, of the great machine.

of the great machine.

What struck into me deepest, however,
was the look of nearly every one of the
judges. Had they been dressed as longshoremen, one would still have known them
for possessors of the judicial temperament—men born to hold the balances and fitted and trained to winnow out the wheat from the chaff. So many eagle-beaked noses, so many hawk-keen eyes, so many smooth-chopped, long-jowled faces, seen here together, made me think of what we are prone to regard as the highwater period of American statesmanship—the Clay-Calhoun-Benton-Webster period.

#### London's Safety Value

Just watching these men pass helped me to know better than any reading I had ever done why the English have faith and conf-dence in their courts. I said to myself that if I wanted justice—exact justice, heaping high in the scales—I should come to this shop, I should bring the trade to this oldestablished firm; but if I were looking for a little mercy I should take my custom else-

I cannot tell why I associate it in my mind with this grouped spectacle of the lords of the law, but somehow the scene to lords of the law, but somehow the scene to be witnessed in Hyde Park just inside the Marble Arch of a Sunday evening seems bound up somehow with the other institu-tion. They call this place London's safety valve. It's all of that. Long ago the ruling powers discovered that if the rabidly dis-contented were permitted to preach dyna-mite and destruction unlimited they would not be so and to practice their cheerful does not be so apt to practice their cheerful doctrines. So, without let or hindrance, any apostle of any creed, cult or propagands, however lurid and revolutionary, may come here of a Sunday to meet with his disciples and spout forth the faith that is in him until he has geysered himself into peace—or, what comes to the same thing, into speech-

When I went to Hyde Park on a certain Sunday rain was falling and the crowds were not so large as usual, a bored police-man on duty in this outdoor forum told me; still, at that, there must have been two or three thousand listeners in sight and not less than twelve speakers. These latter balanced themselves on small portable platforms placed in rows, with such short spaces between them that their voices internetween them that their voices intermingled confusingly. In front of each orator stood his audience; sometimes they applauded what he said in a sluggish British way, and sometimes they asked him questions designed to baffle or perplex himheckling, I believe this is called—but there was never any suggestion of disorder and never any violent demonstration for or against a statement made by him. against a statement made by him.

At the end of the line nearest the Arch under a flary light, stood an old bearded man having the look on his face of a kindly but somewhat irritated moo-cow. At the moment I drew near he was having a long and involved argument with another controversialist touching on the sense of the word tabernacle as employed Scripturally one holding it to mean the fleshly tenement of the soul and the other an actual place of worship. The old man had two favorite words—behoove and emit—but behoove was evidently his choice. As an emitter he was only fair, but he was the best behoove

I ever saw anywhere.

The orator next to him was speaking in a soft, sentimental tone, with gestures gently appropriate. I moved along to him, being

(Continued on Page 49)

(Continued from Page 46)

minded to learn what particular brand of hrotherly love he might be expounding. In the same tone a good friend might employ in telling you what to do for chapped lips or a fever blister he was saying that clergy-men and armaments were useless and expensive burdens on the commonwealth; and, as a remedy, he was advocating that all the priests and all the preachers in the kingdom should be loaded on all the dreadnoughts, and then the dreadnoughts should be steamed to the deepest part of the Atlantic Ocean and there cozily scuttled, with all on board.

There was scattering applause and a toice: "Ow, don't do that! Listen, 'ere! Hi've got a better plan." But the next speaker was blaring away at the top of his voice, making threatening faces and waving his denched fists aloft and pounding with

them on the top of his rostrum.
"Now this," I said to myself, "is going to be worth something worth while. Surely this person would not be content merely with drowning all the parsons and sinking all the warships in the hole at the bottom of the seas. Undoubtedly he will advocate something really radical. I will invest five minutes with him."

I did; but I was sold. He was favoring the immediate adoption of a universal tengue for all the peoples of the earth-that was all. I did not catch the name of his universal language, but I judged the one at which he would excel would be a language with few if any h's in it. After this disap-pointment I lost heart and came away.

Another phase, though a very different one, of the British spirit of fair play and tolerance, was shown to me at the National Sporting Club, which is the British shrine of boxing, where I saw a fight for one of the championship belts that Lord Lonsdale is scever bestowing on this or that worthy and worshipful fisticuffer. Instead of being isside the ring prying the fighters apart by main force as he would have been doing in America, the referee, dressed in evening dothes, was outside the ropes. At a quick word from him the fighters broke apart from clinches on the instant.

The audience—a very mixed one, rang-ing in garb from broadcloths to shoddles was as quick to approve a telling blow by the less popular fighter as to hiss any suggestion of trickiness or fouling on the part of the favorite. When a contestant in one of the preliminary goes, having been ad-judged a loser on points, objected to the decision and insisted on being heard in his own behalf, the crowd, though plainly not in sympathy with his contention, listened to what he had to say. Nobody jeered him down.

Had he been a foreigner, and especially had he been an American, I am inclined to think the situation might have been differ-ent; but, as this man was a Briton himself, these other British hearkened to his sputterings: for England, you know, grants the right of free speech to all Englishmen—and denies it to all Englishwomen.

#### Much Ado About a Lion

The settled Englishman declines always to be jostled out of his hereditary state of intense calm. They tell of a man who dashed into the reading room of the Savage Club with the announcement that a lion was loose on the Strand-a lion which had broken away from a traveling caravan and was rushing madly to and fro, scaring horses and frightening pedestrians. "Great excitement! Most terrific, old

dears—on my word!" he added, addressing the company.

Over the top of the Pink Un an elderly gentleman of a full habit of life regarded

"Is that any resson," he inquired, "why a person should come rushing into a gentleman's club and kick up such a deuced hullabaloo?

The first man—he must have been a Colo--gazed at the other man in amazement. "Well," he asked, "what would you do if you met a savage lion loose on the

Strand?"
"Sir, I should take a cab!"

And after meeting an Englishman or so of this type I am quite prepared to say the story might have been a true one. If he met a lion on the Strand today he would take a cab; but if tomorrow, walking in the same place, he met two lions, he would write a etter to the Times complaining of the growing prevalence of lions in the public thoroughfares and placing the blame on the

Suffragettes or Lloyd George or the Nonconformists or the increasing discontent of the working classes—that is what he would do.

On the other hand, if he met a squirrel on a street in America it would be a most ex-traordinary thing! Extraordinary would undoubtedly be the word he would use to describe it. Lions on the Strand would be merely annoying, but chipmunks on Broadway would constitute a striking manifestation of the unsettled conditions existing in a wild and misgoverned land; for, you see, to every right-minded Englishman of the insular variety—and that is the commonest variety in England—whatever happens at home is but a part of an orderly and an or-dered scheme of things, whereas whatever happens beyond the British domains must necessarily be highly unusual and exceed-

ingly disorganizing. An Englishman's newspapers help him to attain this frame of mind; for an English newspaper does not print sensational stories about Englishmen residing in England—it prints them about people resident in other lands. There is a good reason for this—a reason based on prudence. In the first place the private life of a private individual is a most holy thing, with which the papers dare not meddle; besides, the paper that printed a faked-up tale about a private citizen in England would speedily be exposed and also extensively sued.

#### Sensations to Order

As for public men, they are protected by exceedingly stringent libel laws. As nearly as I might judge, anything true you printed about an English politician would be libelous, and anything libelous you printed about him would be true.

It befalls, therefore, as I was told on most excellent authority, that when the editor of a live London daily finds the local grist to be dull and uninteresting reading he straightway cables to his American corre-spondent or his Paris correspondent—these two being his main standbys for sensationsasking, if his choice falls on the man in America, for a snappy dispatch, say, about an American train smash-up, or a Nature freak, or a scandal in high society with a rich man mixed up in it. He wires for it, and in reply be gets it. I have been in my time a country correspondent for city papers, and I know that what Mr. Editor wants Mr. Editor gets.

As a result America, to the average provincial Englishman's understanding, land where a hunter is always being nibbled to death by sheep; or a prospective mother is being so badly frightened by a chameleon that her child is born with a complexion changeable at will and an ungovernable appetite for flies; or a billionaire is giving a monkey dinner or poisoning his wife—or something. Also, he gets the idea that a through train in this country is so called because it invariably runs through the train ahead of it; and that when a man in Connecticut is expecting a friend on the fast express from Boston, and wants something to remember him by, he goes down to the station at traintime with a bucket.

Under the headlining system of the English newspapers the derailment of a worktrain in Arizona, wherein several Mexican tracklayers get mussed up, becomes Another Frightful American Railway Disaster! But a head-on collision, attended by fatalities, in the suburbs of Liverpool or Manchester is a Distressing Suburban Incident! Yet the official Blue Book, issued by the British Board of Trade, showed that in the three months ending March 31, 1913, 284 persons were killed and 2457 were injured on railway lines in the United Kingdom.

Just as an English gentleman is the most modest person imaginable, and the most backward about offering lip-service in praise of his own achievements or his country's achievements, so, in the same superlative degree, some of his newspapers are the most blatant of boasters. About the time we were leaving England the job of re-modeling and beautifying the front elevation of Buckingham Palace reached its conclusion, and a dinner was given to the workingmen who for some months had been engaged on the contract.

It had been expected that the occasion would be graced by the presence of Their Majesties; but the king, as I recall, was pasting stamps in the new album the Czar of Russia sent him on his birthday, and the queen was looking through the files of Godey's Lady's Book for the year 1874, picking out suitable costumes for the ladies

of her court to wear. At any rate they could not attend. Otherwise, though, the dinner must have been a success.

Reading the account of it as published next morning in a London paper, I learned that some of the guests, "with rare British pluck," wore their caps and corduroys; that others, "with true British independence," smoked their pipes after dinner; that there was "real British beef "and "genuine British plum readding" on the means and that plum pudding" on the menu; and that repeatedly those present uttered "hearty British cheers." From top to bottom the column was studded thick with British thises and British thats.

The editorial writers of that very paper are given to frequent and sneering attacks on the alleged yellowness and the boasting proclivities of the jingo Yankee sheets; proclivities of the jingo Yankee sheets; also, they are prone to spasmodic attacks on the laxity of our marriage laws. Perhaps what they say of us is true; but for unadulterated nastiness I never saw anything in print to equal the front page of a so-called sporting weekly that circulates freely in London.

In the campaign to give the stay-at-home Englishman a strange conception of his American kinsman the press is ably assisted by the stage. In London I went to see a comedy written by a deservedly successful dramatist, and staged, I think, under his personal direction. The English characters in the play were whimsical and, as nearly as I might judge, true to the classes they as I might judge, true to the classes they purported to represent. There was an American character in this piece too—a

American character in this piece too—a multi-millionaire, of course, and a collector of pictures—presumably a dramatically fair and realistic drawing of the wealthy, successful, art-loving American.

I have forgotten now whether he was supposed to be one of our meaty Chicago millionaires, or one of our oily Cleveland millionaires, or one of our steely Pittsburgh millionaires—or just a plain millionaire from the country at large: and I doubt from the country at large; and I doubt whether the man who wrote the lines had any conception when he did write them of any conception when he did write them of the fashion in which they were afterward read. Be that as it may, the actor who essayed to play the American used an in-flection, or an accent, or a dialect, or a jar-gon—or whatever you might choose to call it—which was partly of the oldtime drawly wild Westerner school of expression and partly of the oldtime nasal Down East school.

#### A Continent at a Glance

I had thought-and had hoped-that both these actor-created lingoes were hap-pily obsolete; but in their full flower of perfection I now heard them here in Lon-don. Also, the actor who played the part interpreted the physical angles of the character in a manner to suggest a pleasing combination of Uncle Joshua Whitcomb, Mike the Bite, Jefferson Brick and Coal-Oil Johnny, with a suggestion of Jesse James interspersed here and there.

True, he spat not on the carpet loudly, and he refrained from saying I vum! and Great Snakes!—quaint conceits that, I am Great Snakes!—quaint concests that, I am told, every English actor who respected his art formerly employed when wishful to type a stage American for an English audience; but he bragged loudly and emphatically of his money and of how he got it. I do not perceive why it is the English, who themselves so dearly love the dollar after it is translated into terms of pounds, shillings and respect should insist on regarding us as and pence, should insist on regarding us as a nation of dollar-grabbers, when they only see us in the act of freely dispensing the aforesaid dollar.

They do so regard us, though; and, with true British setness, I suppose they with true British setness, I suppose they always will. Even so I think that, though they may dislike us as a nation, they like us as individuals; and it is certainly true that they seem to value us more highly than they value Colonials, as they call them—particularly Canadian Colonials. It would appear that your true British can never expense another. British subject for the headcuse another British subject for the shockingly poor taste he displayed in being born from home. he may forgive us for refusing to be licked in an early number.

by him, he can never forgive the Colonials for saving him from being licked in South

When I started in to write this article I meant to conclude it with an apology for my audacity in undertaking—in any wise-to sum up the local characteristics of a country where I had tarried for so short a time; but I have changed my mind about that. I have merely stolen a page from the book of rules of the British essayists and novelists who come over here to write us up.
Bless your soul! I gave nearly eight weeks
of time to the task of seeing Europe thoroughly; and of those eight weeks I spent
upward of three weeks in and about London—indeed, a most unreasonably long time
when measured by the standards of the
Englishman of letters who does a book
about us

He has his itinerary all mapped out in advance. He will squander a whole week on us. We are scarcely worth it; but, such as we are, we shall have a whole week of his company! Landing on Monday, he will spend Monday in New York, Tuesday in San Francisco, and Wednesday in New Orleans. Thursday he will divide between Boston and Chicago devoting the forence. leans. Thursday he will divide between Boston and Chicago, devoting the forencon to one and the afternoon to the other. Friday morning hewill range through the Rocky Mountains; and after luncheon, if he is not too fatigued, he will take a carriage and pop in on Yosemite Valley for an hour or so.

But Saturday—all of it—will be given over to the Far Southland. He is going 'way down South—to sunny South Dakota to see the genuine native American darkies, the

the genuine native American darkies, the real Yankee blackamoors. Most interesting beings, the blackamoors! They live exclu-sively on poultry—fowls, you know—and all their womenfolk are named Honey Gal.

#### The Northcliffe Playwrights

He will observe them in their hours of leisure, when, attired in their national cos-tume, consisting of white duck breeches, banjos, and striped shirts with high collars, they gather beneath the rays of the silvery Southern moon to sing their tribal melodies on the melon-lined shores of the old Oswego; and by day he will study them at their cus-tomary employment as they climb from limb to limb of the cottonwood trees, picking cotton. On Sunday he will arrange and revise his notes, and on Monday morning he will sail for home.

he will sail for home.

Such is the program of Solomon Grundy, Esquire, the distinguished writing Englishman; but on his arrival he finds the country to be somewhat larger than he expected—larger actually than the Midlands; so he compromises by spending five days at a private hotel in New York, run by a very worthy and deserving Englishwoman of the middle classes, where one may get Yorkshire puddings every day; and two days more at a wealthy tufthunter's million-dollar cottage in Newport, studying the habits and idiosyncrasies of the common people.

And then he rushes back to England and hurriedly embalms his impressions of us in a large volume, stating it to be his deliberate opinion that, though we mean well enough, we won't do—really!

He necessarily has to hurry, because, you see, he has a contract to write a novel or a play—with

He necessarily has to hurry, because, you see, he has a contract to write a novel or a play—or both a novel and a play—with Lord Northcliffe as the central figure. In these days practically all English novels and most English comedies play up Lord Northcliffe as the central figure. Almost invariably the young English writer chooses him for the axis about which his plot shall revolve.

English journalists who have been dis-charged from one of Northcliffe's publica-tions make him their villain, and English journalists who hope to secure jobs on one of his publications make him their hero. The literature of a land is in perilous case when it depends on the personnality of one when it depends on the personality of one man. One shudders to think what the future of English fiction would be should anything happen to His Lordship!

Business of shuddering!

Editor's Note-This is the eighth in a series of articles by Irvin S. Cobb. The ninth will appear

#### CHEAP AT A MILLION

(Continued from Page 23)

do what I say. Very well! Now, visualize the search made for you. Endow your people with superhuman ingenuity. Useless!"

The man waved a hand toward Mr. Merriwether; but Mr. Merriwether said:

"You assume that the search will be exclusively for me—but they will also search for you!"

"My dear sir, that is unkind of you!"

The man spoke reproachfully. "We know that when we go into crime as a business we must guard against the chief contributory must guard against the chief contributory cause of the vast majority of all business failures, according to the statistics of Dun and Bradstreet—to wit, insufficient cap-ital. Murderers are caught when their faces and habits and families are known. Usually their lack of means forces them to betray themselves. But nobody knows how the men who will kill E. H. Merriwether look. And we have enough money to go anywhere. We will become tourists—like thousands of others. Some of us will stay in New York; others will go on round-the-world tours. See this?"

The man rolled from his pocket some

round-the-world tours. See this?"

The man pulled from his pocket some packages of well-worn bills, with the bank-wrappers round them, though a finger hid the bank name. Also the man showed to Mr. Merriwether several books of travelers' checks of the fifty-dollar denomination—the specimen signature also being covered by the man's finger.

"Enough for all," said the man. "Kindly oblige me by thinking of what you would do in my place; and in all frankness acknowledge that nothing would be easier than to get away. Ordinary crime is so largely accidental that the average criminal is at the mercy of even the unintelligent police. Professionals do the same thing over and over and acquire telltale mannerisms. Also, they lack culture and find the class attraction too strong to resist—besides always being hard up and therefore defenseless.

"We had come about this case systematics." therefore defenseless.

We had gone about this case systematically. We wanted your million—but, more, we wanted the sport of taking it from a man who had no moral right to the particular million we desired. If you had been a really conscienceless financier we'd have made it five millions; in fact it is because we are not sure that even this million is tainted that

we ask you to pay it to us for giving you a fine daughter-in-law. Shall we go upstairs?"

The master of the house led the way upstairs and Mr. E. H. Merriwether, escorted by the stalwart footmen with the intelligent force followed his own intelliintelligent faces, followed, his own intelli-gent face impassive. That he was thinking meant only that he was doing what he always did.

The man sat down in his chair, with his back to the stained-glass window. He asked pleasantly:

"What do you say now, Mr. Merriwether?"

"I say" the little crar answered with a

"I say," the little exar answered, with a frown of impatience or anger, or both, "that when you are tired of playing the damned fool I'd like to return to my business."

The man rose to his feet quickly, his face pale with anger. He took a step toward the financier, his fists clenched—and then

the mancaer, his lists cienched—and then suddenly controlled himself.

"You jackass!" he said. "You idiot! Have you no brains whatever? Must I lash common sense into you? Take 'em off!" It was a command to the footmen. "Will you disrobe, sir?" very politely saked the cliest of them.

"Will you disrobe, sir: very pointery asked the oldest of them.

Mr. Merriwether, six inches shorter than the speaker and a hundred pounds lighter, drew back his fist, but the four men seized him and began to take his clothes off. "Tie him!" commanded the master.

They tied him to the library table, face down

down.

"Music!" cried the man; whereupon the cornetist began to play the Meditation from Thais softly, but obviously ready to play fortissimo at a signal from the chief.

"I am going to lick you with this whip!"

"I am going to lick you with this whip!"

"Management it viciously and walked round

He snapped it viciously and walked round the table until he stood behind Mr. Merriwether. He lifted his arm and then the great Merriwether, autocrat of fifteen thousand miles of railroad, iron nerved, fearless, imaginative and intelligent, yelled: "Wait!"

"The million?"
"Yes!"

"Help him!" said the man; and the intelligent-looking footmen respectfully

"I don't believe you would kill me-tut I never liked spankings." Mr. Merriwether Mr. Merriwether

spoke jocularly—almost!

The man confronted Mr. Merriwether

and said, very seriously:

"Mr. Merriwether, we should certainly have killed you if you had persisted in your stubbornness to the end. We knew we had

The man looked inquiringly at the financier to see whether any doubt remained; but Mr. Merriwether asked quixzically;

"Honest, now, would you —"
"We would!" interrupted the man, looking straight into Mr. Merriwether's eyes. And what Mr. Merriwether say there made him ask:
"How will you have the milliont"

"How will you have the million?"
"In cash. I'm glad you will make the payment. But really, sir, I wish to impress on you that Tom is ripe to be taken for better—or for worse."

on you that from is ripe to be taken for better—or for worse."

Mr. E. H. Merriwether looked long and earnestly into the eyes of the mysterious man who was despoiling him of a million dollars. It began to seep into his under-standing that if Tom could be married to a nice girl the resulting peace of mind would indeed be chosen at a million.

indeed be cheap at a million.

"Now, if you please," pursued the man pleasantly, "telephone to McWayne that you wish him to come here with certified checks on your different banks, aggregat-ing one million dollars, made payable to Michael P. Mahaffy."

Mr. Merriwether started. The name was

New York City. Explanations as to the million might be embarrassing to any political boss; but for a million dollars any political boss; but for a million dollars any political boss would be glad to explain—or even not to explain.

political boss would be glad to explain—or even not to explain.

"From this house Mr. McWayne will go to the banks, accompanied by the studious gentleman who had the honor of holding your left leg. You will indorse each check by writing 'Indorsement Correct' and signing your name. McWayne will go with our Mr. Michael P. Mahaffy and get the monay in fluor tane and twenties in hands. money in fives, tens and twenties, in handy wads-old bills preferred and so requested from the paying tellers, who will intelli-gently understand that Mr. Mahaffy is not signing his name in person; so he can swear signing his name in person; so he can swear in any court of justice that he never saw the checks. Asking for old bills is to make them impossible to trace. This will also allay the banks' suspicions. The worst that can happen will be that a few tellers will wonder what Mr. Merriwether has to do with city realities that he needs Mahafiy's

with city politics that he needs Mahaffy's aid."

"I see!" said Mr. Merriwether thoughtfully. Then, after a pause: "Where is the telephone?"

"There!"

In plain sight and hearing of the master of the house the master of the Pacific and Southwestern called up his own office. He spoke to McWayne;

"Make out checks on all banks according "Make out checks on all banks according
to my balances in them, so that the checks
will aggregate one million dollars; payable
to Michael P. Mahaffy.—What? Yes?—
Have the checks certified.—Of course if
there isn't enough!—We shall want bills
that have been used—fives, tens and twenties.—Yes, all cash. Come up to 777 Blank
Avenue. You will go to the bank with a
man——"

"With Mr. Mahaffy," prompted the man "With Mr. Mahaffy," repeated Mr

Merriwether.

"And tell Tom to have luncheon and was for me," again prompted the man.

"And tell Tom I can't go to luncheon with him, but to wait for me."

Mr. Merriwether hung up the receive and turned to the man saying:

"The idea of using Mahaffy's name—"

"Rather good, isn't it?" smiled the man "Of course you wondered how we were "Of course you wondered how we wer going to cash the checks, didn't you? Well that's the way. The bank officials will be surprised to see the checks and they will watch McWayne and my man to the last

waten alcowayne and my man to the asset They will thus be able to hear my man so loudly to the chauffeur: 'Tammany Hall Charlie!' Attention to details, my dear sir! compelled to bet your entire fortune, your very life, on averages. The average man is both stupid and honest; so you and your like are fairly safe for fairly long periods of time. Of course if we had been obliged to kill you we should have done so and buried you, and we should have been wise enough to utilize your death in as many ways as

possible in the stock market—and out of it.

"For instance, I should have instantly telephoned to all the men in your class and told them we had eliminated you—as an example-and to remember that in case we ever had occasion to ask anything from them. We should also give them a countersign, so that they would be able to rec-ognize us when the proper time came. I can kidnap or permanently suppress any millionaire in New York, with neatness,

dispatch and safety.

"If Big Tim Sullivan could be killed and lie in the Morgue for days unrecognized, what chance do relatively unknown people like you great millionaires stand to be like you great millionaires stand to be found, once dead? A dead capitalist, remember, is no more impressive than a dead street-car conductor. If I got you into this house on the strength of Tom, as I got Tom to come in on the strength of you, what millionaire would refuse, for example, to go—in answer to a telephone message that his child had been run over and was now—let us say—at 128 East Seventy-ninth Street? Or that his wife, acting more or less as if she were intoxicated, was scatterless as if she were intoxicated, was scattering money at the corner of Seventh Avenue and Twenty-ninth Street?" Mr. Merriwether looked at the man a long time. He could not deny that to really

desperate men such deeds offered no particular difficulty. The average crook is not dangerous to a millionaire; but a man like this is more than dangerous. He thought quickly and formed his conclusions accu-

rately.
"How are you going to make Tom marry one of the girls whose names you men-tioned?" he asked in the tone of voice one

uses toward physicians.

The man smiled slightly and said:
"Oh, I am not going to do it. I don't care whether he marries or not. You must do that. But I'll tell you how—if you wish—after McWayne gets here. Just think over the affair. It will put you in a more intelligently receptive frame of mind."

And with a pleasant smile the man took And with a pleasant smile the man took a little book bound in green leather and

began to read.

Mr. E. H. Merriwether, as was his wont when thinking, began at the beginning and reviewed the entire affair quickly but carefully. He did this again—it did not take him long—and then he began to coordinate his ideas and study the case. Within ten minutes he had forgotten his animosity. In fifteen he felt respect for this man. In twenty he was thinking how helpless any one man is against his ten billion trillion natural foes—microbes, seismic disturbances, floods, and the chemical reaction of hostile brains. This man whose very name hostile brains. This man, whose very name was unknown to him, had vanquished the victor—had looted the tent of the general! This was incredible when spoken in a conversational tone of voice. Perhaps this

same remarkable man might tell how to make Tom choose a desirable wife. It was worth while making the experiment. It was in the nature of a gamble in which E. H. Merriwether stood to win a happiness worth all the money in the world and stood to lose nothing! to lose nothing!

A knock at the door roused him from his reverie. One of the footmen arrived from the threshold.
"Mr. McWayne!"

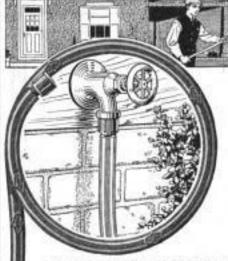

Mr. Merriwether's private secretary en-tered. E. H. Merriwether held out his right hand.

Mr. McWayne took four slips of paper and gave them to his chief, who quickly looked at them and passed them over to the master of the house. The man looked at them, indorsed them and handed a pen to Mr. Merriwether. The czar of the Pacific and Southwestern wrote on each of the checks:

"Indorsement Correct.

"E. H. MERRIWETHER."

He returned the checks to the man, who thereupon pushed a button a number of times. One of the footmen with the nonmenial faces appeared dressed for the street. He looked Irish. He wore a big solitaire scarfpin. His hat inclined to one side noticeably. He carried a square value in each hand. They looked as if they had seen service. On each was printed: Treasurer Tammany Hall.

"On Tap" Easter to Thanksgiving

Many a garden hose has died from "too much weather." The average hose is "on tap" continuously all spring and summer. Sun and rain, dew and "tug-of-war" soon do their work. Then-a new hose.

But you can leave Goodyear Lawn Hose "on tap" month in and month out with every confidence. Store it away in the late fall - take it out next spring, and it's good as new. Repeat the next year, and the next, and the next.

That's hose value!

A New Feature Goodyear Lawn gated hose with six additional heavy ribs that withstand all bending, tugging, twisting, yanking and friction of corners, trees, posts, lawn and gravel.

You can't kink it. You never have to "unravel" it. In addition, Goodyear Lawn Hose contains 19 per cent more rabber—live, active rubber that won't crack, chip or quickly deteriorate.

Goodyear Lawn Hose is the result of 13

Goodyear Lawn Hose is the result of 13 years' experience in all hose making. Its inventor is America's master hose maker.

Five Seamless Thicknesses

There are five other advantages—the inner rubber tube, a jacket of tested braided cotton, another rubber covering, another braided jacket, then the ribbed outer cover, all "cured" to one solid, wearproof unit.

How to Buy Buy lawn hose wisely, and be sure the hose has the famous Good-year trademark on every foot. That insures years of service—and beffer service.

If your dealer happens to be out of Good-year Lawn Hose, just send us his name. We will see that you are supplied immedi-ately, by express, prepaid. Price in 50 foot lengths: %-inch, 10c a foot; %-inch, 19c a foot; %-inch, 18c a foot.

We recommend the %-inch. You will find its size and weight best for average use.

"Go with Mr. McWayne to the banks

"Go with Mr. McWayne to the banks and cash the checks. Mr. McWayne will identify you," said the master of the house. "Yis, sor!" said the footman. The brogue was unnecessary; but E. H. Merriwether smiled slightly. McWayne and the footman in mufti left together. "Think some more!" said the man to E. H. Merriwether and resumed his reading of the little green-leather book.

Mr. Merriwether leaned back and

Mr. Merriwether leaned back and thought some more. To him the milliondollar loss was already ancient history. The only virtue that the Wall Street life gives to a professional is the ability to take a loss of money with more or less philosophy. That philosophy is also met on the racetrack, among experts in faro—also among real Christians.

McWayne and the man were gone an hour and eighteen minutes. Mr. Merri-wether had time to think of Tom and of himself and of the relation that had existed between himself and his son, and of the relations that would exist between them in the future—God willing. "Mr. McWayne!" announced the serv-

The private secretary entered; also the Irishman with the two valises.
"Tell the others! At five o'clock!" said the master of the house, and the footman

left the room—with the valises!
"Mr. McWayne, will you kindly wait in
the other room?" The man rose and parted the portières for the secretary to pass

through. "Certainly," said McWayne, frowning

politely.
"Now, Mr. Merriwether," said the man, "as I told you, Tom's mind and soul are prepared for love. The romantic vein in him has been worked to the limit. He can be laughed out of it very easily, for he is not entirely convinced; but it is too valuable a frame of mind for a really intelligent father. frame of mind for a really intelligent father

to destroy.
"The young ladies, also, are ripe for the coming of the one man in all the world. They will respond readily—and, I may add, respond with relief if they see he is a man like your son, against whom nothing can be said. It will clinch the affair. My advice is for you to call on the young ladies I have mentioned and judge for yourself, and then you be your own stage manager!"
"Have you any choice yourself?"
"You know Woodford?"
"Very well."
"And his daughter Isabel?"
"No."

"Well, she has the complementary qualities. She will, as it were, complete Tom. She is bright, healthy, very handsome, utterly unspoiled by the knowledge of her good looks—that is, she is highly intelligent. Her mind functionates quickly and is regulated and made to work safely by her keen sense of humor. You will love her for herself, as well as for Tom's sake and

for herself, as well as for Tom's sake and for Tom's children's sake.

"Arrange two things and you can do it. One is, prepare her to meet Tom. Tell her you don't know why you want her to know him, but you do. Tell her you wanted this before you ever saw her. And tell her you know she must think you must be going crazy—but will she meet Tom in her father's home?—in some room with the lights turned out? She will ask you why you ask such things. And you will rub your hand across your eyes and say, dazedlike: 'I don't know! Will—will you do it?'

"And when you take Tom to her, take advantage of the dark, and open this little bottle and touch Tom's lapel with this. It is essence of sweet peas. He will associate Isabel with the mysterious girl to whom he

Isabel with the mysterious girl to whom he took a message in the dark, and by the same token she will know he is the man who destiny decrees shall be her husband.

"Then leave the rest to Nature." Then

"Then leave the rest to Nature. They won't struggle. They couldn't if they wished; but they won't wish to fight. My parting words to you are: The man who was smart enough to get a million dollars out of you finds it even easier to make a young man who wants to love fall in love in the spring-time with a handsome, healthy girl who wants to be loved. You and McWayne will now use one of my prisoner-carrying motors. This way, sir!"

He led the way into the next room, picked up McWayne, and escorted the

financier and his private secretary to the curb. A neat little motor stood there, Mr. Merriwether climbed in. McWayne

Mr. Merriwether climbed in. McWayne followed. And then the man said:

"You will find that the doors cannot be opened from the inside. The chauffeur was told this queer feature was due to the fact that his master expects to use this car for his two very active and very mischievous children. He will drive you anywhere. You can arrest him if you wish; but it will be useless. We have spent a good many thousands in accessories that will be thrown away." And the man sighed.

"Who do you mean by we?" asked E. H. Merriwether politely.

Merriwether politely.
"The Tainted Wealth Reducing Syndi-

cate, which, having completed its opera-tions, will now dissolve. Good day, sir."

In the issue of the World of June ninth two advertisements appeared. One, under Marriages, read:

"MERRIWETHER-WOODFORD .- On June eighth, at the Church of St. Lawrence, by the Reverend Stephen Vincent Rood, Isabel Woodford to Thomas Thorne Merriwether.

The other, under Personals, read:

"T. W. R. SYNDICATE. — It was cheap at a million! E. H. M."

(THE END)

#### Recovering Radium

RADIUM is enormously more valuable than diamonds, and one of its advantages is that it cannot be lost easily, as a diamond may be. Wherever a bit of radium is it will vigorously declare its presence. An odd way by which it can be found was recently demonstrated in a Liverpool hostial when a quantity of radium was lost. pital when a quantity of radium was lost. The hospital had been given five thousand dollars' worth of radium, amounting to about one-five-hundredth part of an ounce, about one-five-hundredth part of an ounce, somewhere near the head of a pin in size. This, in a little case, was bound one night on the face of a patient to treat a cancerous growth and in the morning the radium was missing. The staff authorities were immediately notified, and it was agreed that in all likelihood the patient had accidentally swallowed the radium during the night. It was easy to decide that question. The patient was carefully examined by X rays, which would surely disclose the location of the treasure in its case if it was in the patient's body. Not a sign of the missing fortune body. Not a sign of the missing fortune was discovered, however; so it was agreed that the next most likely explanation was that the radium had fallen out of the band-

ages and been swept up.

The sweepings were then traced and it was discovered that those for that morning were just then being carried out of the hos-pital yard in a cart. The cart was stopped: but the problem then was to find out whether the tiny case of radium was somewhere in that cartload of dirt and trash. On the face of it the task seemed like hunting for a needle in a haystack, but actually it was

simple enough.

A hurry call was sent to Professor Lione
R. Wilberforce, of Liverpool University, a
noted authority on radium. He came a
quickly as possible, with an instrument
called an electroscope. As soon as he placed
the electroscope against the wooden side of
the cart he announced that the radium was
in the cart.

in the cart. By this time it was night; so all the doctors and scientists decided to postpone for there search until morning. The cart was backed into the yard and guards place over it for the night. In the morning Professor Wilberforce came again with the electroscope. The dirt was then taken out of the cart, a bucketful at a time. As each bucketful was passed down Professor Wilberforce tested it with the electroscope an announced, "It is not there," until elever loads had been rejected. The twelfth bucketful caused a jump in the instrument; an By this time it was night; so all the doc etful caused a jump in the instrument; an when this dirt was spread on a table th case of radium was found.

In another hospital a patient actually swallowed about the sa radium, and its location was quickly discovered in the intestines by X rays. The doctors were afraid that the powerful action of the weird metal would destroy the inte tines; so the patient was promptly cut ope and the radium recovered.

#### THE INSIDE OF THE Pork barrel

(Continued from Page 17)

We are all gratified at the commerce on the Great Lakes. It amounted last year to seventy-eight million tons. We have spent something less than fifty million dollars in their improvement and maintenance to date. Four-fifths of the commerce of the Lakes is ore and coal. Expressed in tons of ore this billion dollars of commerce floated on our creeks during the past four years would load fifty-five thousand ore ships of six thousand tons' burden each. If these should set out on the ocean in line, three ships to the mile—and the law will not permit them to travel that close together-we should have a line of loaded ships from Boston through the Panama Canal and across the Pacific Ocean to Hongkong!

If this ore were loaded on cars carrying thirty tons each it would fill eleven million cars and require three hundred and seventy thousand locomotives to pull them. Putting the trains one mile apart-less distance would be dangerous-they would cover every mile of track in the United States and have enough trains left over to encircle the world four times, a double track round the world at the Equator and another double track round the world passing through the North and South Poles

on the way.

If one is at all interested in the development of our transportation facilities the next time he meets one of these much-maligned creeks he should take his hat off

This is what the inside of the Pork Barrel looks like.

Senator Burton's criticism was not con-fined to the items of the bill. No man understands all the phases of waterway improvement better than he. That Con-gress has invested many dollars in waterway projects which have not returned the way projects which have not returned the service hoped for and expected is most cer-tainly true. That the future will demon-strate we are today no better prophets in such matters than our predecessors may well be granted. No project was ever more ardently advocated both in and out of Congress than the old Hennepin Canal.

#### How the Money is Spent

Representatives, and maybe some senators as well, came in on the flow as their predecessors went out on the ebb of the tide of popular clamor for the construction of this once far-famed canal. It was the most paramount of all the paramount issues in a number of districts of the Middle West. It serves today as the horrible example.

But yesterday the word of Cæsar might Have stood against the world; now lies he there, And none so poor to do him reverence.

Mr. Burton's criticism went to the method of appropriating rather than to the items for which the appropriations were made. I should say, perhaps, his shafts were better aimed at the method than at

In the days of his chairmanship, Rivers and Harbors bills were passed only every two or three years. A cash appropriation would be made and then authority given the secretary of war to enter into contracts for continuing the improvement for several years ahead, to be paid for by the Commit-tee on Appropriations from time to time as

the work progressed. Great pressure was brought on Congress to have an annual Rivers and Harbors Bill just as we have annual bills for the army. the navy, and so on. This plan became so popular, in fact, and for obvious reasons, that the committee could not resist either the clamor or the arguments in its favor. Mr. Alexander, therefore, determined to try it. Until it could be tested by actual practice and experience no man could foretell with certainty its success or failure as an economic policy. There were no prophets to read the future—none, at any rate, who could show any divine commission; so the policy was looked on as an experiment.

If it was to be attempted, every consideration of wisdom and expediency required that the test be fair and complete. Inter-preted in the light of this purpose, the con-clusion was irresistible that the annual bill should carry no authorization for continuing contracts. Cash sufficient to carry on

#### Governor Mann's Testimony

"I am heartily in sympathy with any work that gives boys an uplift, for they are our future citizens," said Governor Mann to our representative.

Virginia's distinguished executive sees in our service for boys an influence that contributes to better citizenship. Are you familiar with the reasons for Governor Mann's indorsement of our solution for your boy problem?

The Sales Division, Han 511 THE CURTIS PUBLISHING COMPANY the work for one year only made it certain that the next year's bill would pass. In this way alone could a fair trial be had.

Four annual bills have since been passed and the fifth is on the House calendar today ready for action. The policy is now as completely fixed as a part of the legislative program as the policy of any other annual appropriation bill. Several lessons have been learned.

Under the plan universally followed by Congress no river or harbor improvement is ever undertaken until it has first been investigated by the engineers of the army and recommended by them as desirable, cost and commerce both considered. Before the annual-bill policy was adopted it therefore frequently happened that a bill providing for a survey would remain on the committee's calendar for three years; and after the survey was ordered another three years would intervene before the report of the engineers could be acted on.

This country is growing at a very rapid

pace. Six years is a long time to wait; so it can be asserted with assurance that the annual bill, in obviating this needless and costly delay, has justified itself.

This, however, is not the whole story.

Mr. Burton thought the continuing-con-tract system was the economical way to do the work, and time and experience have abundantly justified his theory. When a project has been adopted that will require five or even ten years to complete—the nine-foot project for the Ohio River, for illustration—the businesslike course is to ascertain just how rapidly the work can most economically progress, and then authorize the engineers to proceed. One Congress cannot bind its successor,

One Congress cannot bind its successor, and there can be no guaranty that funds will be provided next year if the matter be left entirely to the determination of a future Congress. Contractors hesitate to invest in the necessary plant if work for only one year is absolutely assured, and but one method of assurance is possible, and that is to give authority by statute to the Secretary of War to enter into binding contracts.

#### The Shibboleth of Economy

Experience is the best of all schools, and Experience is the best of all schools, and Congress now has taken the course prescribed. We have learned the lesson and must either return to that system or be convicted of wasteful negligence. The policy of annual bills has been thoroughly justified for the reasons above referred to, though not amplified, and should and will continue; but, if just criticism and even censure are to be avoided, those projects which can be most economically prosecuted which can be most economically prosecuted under authority to make contracts for work or materials for several years ahead must be so undertaken.

Congress is always sensitive—supersen-sitive, in fact. Members must return to their constituents every two years for judgment. The cry of economy and the charge of extravagance are always the shibboleths of the opposition.

The temptation, then, is indeed great to

adhere to the policy of making allowance only for one year's work, though conscious all the while that by so doing the cost of the completed project will be increased. This is the real measure of the service rendered to the taxpayers of the country by those whose zeal for economy focuses their mental vision on the total, let the items be what they may.

If constituencies can be satisfied by assurance that the year's budget is no larger than its predecessor the election re-turns will give no cause for complaint, and the professional economist can continue his wasteful practices while the happy taxpayer foots the bills.

Every thoughtful citizen understands and confidently expects that the growing needs of this developing country will be reflected in increasing demands on the public treasury. What it is their right to demand and duty to require is that no project for the improvement of any water be undertaken by Congress that cannot reasonably be expected to promote the general welfare. When such a project is adopted it is the part of statesmanship, as it is the duty of patriotism, to provide for its completion in such manner and in such reasonable time as will effect the result at the minimum cost.

If this rule be faithfully followed the criticism of those who speak without knowledge and the censure of those who scold without reason may well be disregarded.

#### THE BUSHER COMES BACK

(Continued from Page 20)

funny Al? sometime in the week of Octo-ber twelfth. Old man Cutting's house or that yellow house across from you would be O. K. I would rather have the yellow one so as to be near you. Find out how much rent they want Al and if it is not no more than twelve dollars a month get it for me. We will buy our furniture here in Chi when Hazel comes.

We have a couple of days off now Al and then we play St. Louis two games here. Then Detroit comes to finish the season the third and fourth of October.

Your pal,

CHICAGO, ILLINOIS, OCTOBER 3. DEAR OLD AL: Thanks Al for getting the house. The one-year lease is O. K. You and Bertha and me and Hazel can have all sorts of good times together. I guess the walk needs repairs but I can fix that up when I come. We can stay at the

that up when I come. We can stay at the hotel when we first get there.

I wish you could of came up for the city serious Al but anyway I want you and Bertha to be sure and come up for our wedding. I will let you know the date as soon as Hazel gets here.

The serious starts Tuesday and this town is wild over it. The Cubs finished second in their league and we was fifth in ours but that don't scare me none. We would of finished right on top if I had of would of finished right on top if I had of been here all season.

Callahan pitched one of the bushers against Detroit this afternoon and they beat him bad. Callahan is saveing up Scott and Allen and Russell and Cicotte and I for the big show. Walsh isn't in no shape and neither is Benz. It looks like I would have a good deal to do because most of them others can't work more than once in four days and Allen ain't no good at all.

We have a day to rest after tomorrow's game with the Tigers and then we go at them Cubs. Your pal, Jack.

P. S. I have got it figured that Hazel is fixing to surprise me by dropping in on me because I haven't heard nothing yet.

CHICAGO, ILLINOIS, OCTOBER 7. FRIEND AL: Well Al you know by this time that they beat me today and tied up the serious. But I have still got plenty of time Al and I will get them before it is over. My arm wasn't feeling good Al and my fast ball didn't hop like it had ought to. But it was the rotten support I got that beat me. That lucky stiff Zimmerman was the only guy that got a real hit off of me and he must of shut his eyes and throwed his bat because the ball he hit was a foot over his head. And if they hadn't been makeing all them errors behind me they wouldn't of been nobody on bases when Zimmerman got that lucky scratch. The serious now stands one and one Al and it is a cinch we will beat them even if they are a bunch of lucky stiffs. They has been great big crowds at both games and it looks like as if we should ought to get over eight hundred dollars a peace if we win and we will win sure because I will beat them three straight if nessary.

But Al I have got bigger news than that for you and I am the happyest man in the world. I told you I had not heard from Hazel for a long time. Tonight when I got back to my room they was a letter waiting

for me from her.

Al she is married. Maybe you don't know why that makes me happy but I will tell you. She is married to Kid Levy the middle weight. I guess my thirty dollars is gone because in her letter she called me a cheap skate and she inclosed one one-cent stamp and two twos and said she was paying me for the glass of beer I once bought her. I bought her more than that Al but I make no holler. She all so said not for me to never come near her or her husband would bust my jaw. I sin't afraid of him or no one else Al but they sin't no danger of me ever bothering them. She was no good and I was sorry the minute I agreed to

But I was going to tell you why I am happy or maybe you can guess. Now I can make Violet my wife and she's got Hazel beat forty ways. She ain't nowheres near as big as Hazel but she's classier Al and she will make me a good wife. She ain't never asked me for no money.

I wrote her a letter the minute I got the good news and told her to come on over here at once at my expence. We will be married right after the serious is over and I want you and Bertha to be sure and stand up with us. I will wire you at my own

expence the exact date.
It all seems like a dream now about Violet and I haveing our misunderstanding Al and I don't see how I ever could of accused her of sending me that postcard. You and Bertha will be just as crazy about her as I am when you see her Al. Just think Al I will be married inside of a week and to the only girl I ever could of been happy with instead of the woman I never really cared for except as a passing fancy. My happy-ness would be complete Al if I had not of let that woman steal thirty dollars off of Your happy pal,

P. S. Hazel probibly would of insisted on us takeing a trip to Niagara falls or some-wheres but I know Violet will be perfectly satisfied if I take her right down to Bedford.

Oh you little yellow house.

CHICAGO, ILLINOIS, OCTOBER 9.

FIRIEND AL: Well Al we have got them beat three games to over the control of the beat three games to one now and will wind up the serious tomorrow sure. Callahan sent me in to save poor Allen yesterday and I stopped them dead. But I don't care now Al. I have lost all interest in the game and I don't care if Callahan pitches me tomorrow or not. My heart is just about broke Al and I wouldn't be able to do myself justice feeling the way I do. I have lost Violet Al and just when I was

figureing on being the happyest man in the world. We will get the big money but it won't do me no good. They can keep my share because I won't have no little girl to

spend it on.

Her answer to my letter was waiting for me at home tonight. She is engaged to be married to Joe Hill the big lefthander Jennings got from Providence. Honest Al I don't see how he gets by. He ain't got no more curve ball than a rabbit and his fast one floats up there like a big balloon. He beat us the last game of the regular season here but it was because Callahan had a lot of bushers in the game.

I wish I had knew then that he was stealing my girl and I would of made Callahan pitch me against him. And when he come up to bat I would of beaned him. But I don't suppose you could hurt him by hitting him in the head. The big stiff. Their wedding ain't going to come off till next sum-mer and by that time he will be pitching in the Southwestern Texas League for about fifty dollars a month.

Violet wrote that she wished me all the luck and happyness in the world but it is

too late for me to be happy Al and I don't care what kind of luck I have now.

Al you will have to get rid of that lease for me. Fix it up the best way you can. Tell the old man I have changed my plans. I don't know just yet what I will do but maybe I will go to Australia with Mike Donlin's team. If I do I won't care if the Donlin's team. If I do I won't care if the boat goes down or not. I don't believe I will even come back to Bedford this winter. It would drive me wild to go past that little house every day and think how happy I

Maybe I will pitch tomorrow Al and if I do the serious will be over tomorrow night. I can beat them Cubs if I get any kind of decent support. But I don't care now Al. Yours truly, Jack.

CHICAGO, ILLINOIS, OCTOBER 12.  $A^{L}$ : Your letter received. If the old man won't call it off I guess I will have to try and rent the house to some one else. Do you know of any couple that wants one Al? It looks like I would have to come down there myself and fix things up someway. He is just mean enough to stick me with ouse on my hands when I won't have no use for it.

They beat us the day before yesterday as you probibly know and it rained yesterday and today. The papers says it will be all O. K. tomorrow and Callahan tells me I am going to work. The Cub pitchers was all shot to peaces and the bad weather is just nuts for them because it will give Cheney a good rest. But I will beat him Al if they don't kick it away behind me.

I must close because I promised Allen the little lefthander that I would come over to his flat and play cards a while tonight and I must wash up and change my collar. Allen's wife's sister is visiting them again and I would give anything not to have to

## One Motorcycle Tire

#### Holds Every World's Record—Dominates in Sales And Equips 3/4 of All the New Machines

It is built by Goodyear-built just the same as Goodyear automobile tires, which have won top place in Motordom. Consider that-one maker holds the leading place both in motor car and motorcycle tires, despite tremendous rivalry. In three years Goodyears have gained topmost place in Tiredom. And the only reason lies in super-service proved by millions of these tires.

#### Why Take a Chance?

Rival makers, of course, must say, "Our tires are as good as Goodyears." But look at the evidence.

How is it that Goodyears won all the world's records in speed and durability tests?

How is it that Goodyears, in the test of time, came to outsell others?

Why is it that threefourths of all the 1914 motorcycles come out with Goodyear equip-

And look at automo-biles. Those tires must also stand fearful strain and grind. And most users meter their mile-age. Goodyears in that field have outrivaled all others. Now they

have won in both

fields by giving most of what you desire in a motorcycle tire.

Then why take chances? No tire, in any way, offers more than Goodyears. You pay no more for Goodyears than for other standard makes. No good tire costs you less. And the verdict of users — the final verdict as shown by

sales - is that Goodyears

go over there. I am through with girls and don't want nothing to do with them.

I guess it is maybe a good thing it rained today because I dreamt about Violet last night and went out and got a couple of high balls before breakfast this morning. I hadn't never drank nothing before break-fast before and it made me kind of sick. But I am all O. K. now. Your pal, Jack.

CHICAGO, ILLINOIS, OCTOBER 13.

PAR OLD AL: The serious is all over Al. We are the champions and I done it. I may be home the day after tomorrow or I may not come for a couple of days. I want to see Comiskey before I leave and fix up about my contract for next year. I won't sign for no less than five thousand and if he hands me a contract for less than that I will leave the White Sox flat on their back. I have got over fourteen hundred dollars now Al with the city serious money which was \$814.30 and I don't have to

Them reporters will have to give me a square deal this time Al. I had everything and the Cubs done well to score a run. I whiffed Zimmerman three times. Some of the boys say he ain't no hitter but he is a hitter and a good one Al only he could not touch the stuff I got. The umps give them their run because in the fourth inning I had their run because in the fourth inning I had Leach flatfooted off of second base and Weaver tagged him O. K. but the umps wouldn't call it. Then Schulte the lucky stiff happened to get a hold of one and pulled it past first base. I guess Chase must of been asleep. Anyway they scored but I don't care because we piled up six runs on Cheney and I drove in one of them myself with one of the prettiest singles you ever see. It was a spitter and I hit it like a ever see. It was a spitter and I hit it like a shot. If I had hit it square it would of went

shot. If I had hit it square it would of went out of the park.

Comiskey ought to feel pretty good about me winning and I guess he will give me a contract for anything I want. He will have to or I will go to the Federal League.

We are all invited to a show tonight and I am going with Allen and his wife and her sister Florence. She is O. K. Al and I guess she thinks the same about me. She must because she was out to the game today and seen me hand it to them. She maybe ain't as pretty as Violet and Hazel but as they say beauty isn't only so deep.

Well Al tell the boys I will be with them soon. I have gave up the idea of going to Australia because I would have to buy a

Australia because I would have to buy a evening full-dress suit and they tell me they cost pretty near fifty dollars. Yours truly, JACK.

CHICAGO, ILLINOIS, OCTOBER 14.

PRIEND AL: Never mind about that lease. I want the house after all Al and I have got the supprise of your life for you.

When I come bome to Bedford I will bring my wife with me, I and Florence fixed things all up after the show last night and we are going to be married tomorrow morning. I am a busy man today Al because I have got to get the license and look round for furniture. And I have also got to buy some new cloths but they are haveing a sale on Cottage Grove Avenue at Clark's store and I know one of the clerks there. I am the happyest man in the world Al. You and Bertha and I and Florence will have

all kinds of good times together this winter because I know Bertha and Florence will like each other. Florence looks something like Bertha at that. I am glad I didn't get tied up with Violet or Hazel even if they

was a little bit prettier than Florence.
Florence knows a lot about baseball for a girl and you would be supprised to hear her talk. She says I am the best pitcher in the league and she has saw them all. She all so says I am the best-looking ballplayer she ever seen but you know how girls will kid a guy Al. You will like her O. K. I fell for her the first time I seen her.

Your old pal,

JACK.

P. S. I signed up for next year. Com-iskey slapped me on the back when I went in to see him and told me I would be a star next year if I took good care of myself. I guess I am a star without waiting for next year Al. My contract calls for twenty-eight hundred a year which is a thousand more than I was getting. And it is pretty near a cinch that I will be in on the World Serious money next sense.

P. S. I certainly at that

that

get-

- all

## Railroad Men and Others

YOU will be interested in the case of Hawkins. For ten years he had been a conductor in the employ of the Arizona and Eastern Railroad. His weathereye was open, however, and finally he saw his opportunity. He secured a position with the railroad as City Freight Solicitor at Phoenix.

Then he found that to talk freight rates to customers he must study traffic operation. He enrolled as a student in a college making a specialty of that business. Within a month he had the training he needed, and was appointed Travelling Freight and Passenger Agent of the Southern Pacific and the Arizona and Eastern Railroads.

Hawkins has "made good" with a rush. He has had the ability all along, but it won him promotion and an increased salary only when refined by special training.

In whatever business you are engaged, you can secure the training you need free of charge. You can take a course in any university, college, technical school or musical conservatory and we will pay the bills. You are invited to ask for a copy of our Scholarship booklet, in which this offer is fully explained.

#### NOT ENOUGH MUSTARD

A warrant! Already he saw himself in the police court, hunted there by this vin-dictive, libelous female. Of course he could prove his innocence; but, then, think of the scandal! What would the world say to hear that he, Homer Drum, had been charged with stealing a ballet singer's clothes! Yes, that was what she must be—a ballet singer! Then there swam into Mr. Drum's mind

a sudden remembrance of to what and to whom he owed this outrageous affront-

Mrs. Drum!

Pale with righteous wrath Mr. Drum no longer gave heed to that noisy convocation outside. He turned and, stalking down the hall, entered the dining room, where he closed the door behind him. Again that ballet woman had resumed her tattoo on the panels; the uproar grew, but now he had closed his ears to it. Mr. Drum seated himself. Above the fireplace was a faded rectangle of wall paper, and on this he fixed his eyes. He waited. His mind, meantime, was busy.

was busy.

How long that night Mr. Drum sat there in the dining room he was not at the time aware. Some hours passed. Vaguely he recalled hearing eight o'clock strike; then nine; then ten. Hours before this, however, with a final resounding assault on the door panels Miss La Ray and her allies, the Schnabels, had departed. In the quiet that ensued Mr. Drum was again enabled to think of Mrs. Drum. Where was she? His reflections on the matter were complex. His reflections on the matter were complex. They ranged from moments of icy, austere calm to instants of righteous, superheated

wrath.

These last, though, burned quickly, their flames subsiding as swiftly as they arose, only ashy members remaining. At the end an air of grim, freezing gravity fixed itself on his face and brow.

Firm, not harsh! Severe, yet not unjust!
That was it. And, a clock at that instant striking eleven, Mr. Drum was counting the strokes, when all at once a thought leaped into his mind. It was one that had not occurred to him before. What if some-

thing had befallen her!
"Huh!" said Mr. Drum; and he had
half risen from his chair when a sound

suddenly arrested him.

Miss La Ray evidently had returned home. Down the airshaft again came float-ing the strains of Too Much Mustard, and with a rumble of rage he strode toward the window. Just as he was leaning out, though, to roar "Stop that noise!" Mr. Drumthought betterofit. What if she again descended on him? The thought made him moist. Just then the music stopped suddenly. There was a pause; and afterward Mr. Drum heard a murmur of voices. In the midst of this Miss La Ray's all at once arose. Its tone was one of profound aston-

"Well, whattier know about that!" ejaculated Miss La Ray.

Again there was a murmur of voices. Listening, Mr. Drum pricked up his ears. Presently some one said something, on

which there was a sudden burst of laughter.
"Huh!" said Mr. Drum to himself. His
face was thoughtful. Then, as though the thought were too preposterous, he idly shrugged his shoulders. Gingerly closing the window he returned to his seat before

the fireplace. The thought, though, whatever it was, would not down. "Absurd!" he told himself, and in the next breath "Huh!" he said self, and in the next breath. Hun? he said again. Overhead the music all at once had started up again; in turn with which there followed a steady thumping, which made the gas fixtures rattle and sway. Mr. Drum, however, gave no heed to this. The question of Mrs. Drum's disappearance now was paramount. She must be somewhere, but where? What if, indeed, she had been hurt! She might have fainted in the streets! She might have been run over! Even now she might be lying in some hospital, uncon-scious, unidentified. There might have been railroad wreck, and

Mr. Drum gave a sudden snort. A rail-road wreck! What would she be doing there? She had no business on a train! Abruptly Mr. Drum pushed back his chair.

What if she had run away!

Then reason returned to his aid. Run away? Ridiculous! She would not dare! The idea of any woman running off and leaving him! There was nothing in it. Pshaw! Then, besides, when they ran off they always took their trunks. Then, too, they pinned a note to the pincushion. It was absurd, though, to think of such a thing. Just think of the good home he had given her. Leave a home like that? Leave a life of ease and comfort? Nonsense! It was hardly worth while looking at that pincushion. No; it would be just a waste

Still, if by any charce she had — Huh! Oh, well, he would look; but he knew without doing so that there was nothing there. She would not have the impudence! He knew she had just been delayed somewhere. Before long now she would be home. Then she would explain. She would apologize, too, for worrying him. Yes; he would see to that. Meantime the pincushion was on her bureau and the bureau right beside the door. It was outrageous— the way she had worried him! Yes; .but

what if she had run off?

Mr. Drum had darted halfway down the hall when, with a jerk, he stopped, halted by a sudden sound. It was the click of a

key in the lock!
"You outrageous crea— -" Mr. Drum

began; then he got no further.

Mrs. Drum had just entered. His eyes rounding, he stared at her agape. Or was it she? Either he had lost his senses or she

Clad in a dress such as he had never seen on her before, she came slowly down the hall. That she limped he did not notice; neither did he observe her air. It was negligent, idle, easy. All Mr. Drum could see was her dress. There was a slit in the skirt and it was cut V-shape at the throat. To his scandalized sight V and split seemed to meet.

To his scandalized sight V and split seemed to meet.

Then she spoke.

"Oh, hello!" murmured Mrs. Drum.

"What are you looking so red about?"

The wellsprings of Mr. Drum's righteous wrath suddenly bubbled over. If he recalled his former resolution, "Firm, not harsh!" and so on, he must have felt that now was no time for etiquette. Where had she been? That was the question he wished answered. What is more, Mr. Drum wished it answered forthwith.

"Don't shout, Homer," begged Mrs. Drum as she began to remove her hat. "You know your throat isn't strong." Then, just as he was about to risk his throat again, she interrupted him. "Where have I been? Why, at a tea," Mrs. Drum responded calmly.

"A tea!" she repeated. "You heard me."

No hint of what was coming had as yet dawned on Mr. Drum. All he could grapple with at the moment was the effrontery of the reply.

Dawdling at a tea all these hours? Idling

the reply.

Dawdling at a tea all these hours? Idling her life away while his dinner burned! As she removed her last hatpin Mrs. Drum

turned to gaze at him.
"What's that you're mumbling?" she inquired idly.

There was a pause. Mr. Drum seemed to struggle to express himself. Perhaps he felt speech to be inadequate; for, pointing his forefinger to the neighborhood of Mrs.

Drum's knees, he began violently to wag it.
"Do you mean the dress?" asked Mrs.
Drum. And with bland satisfaction she
smoothed out a wrinkle in its folds. "Swell, ain't it?" she remarked.

Mr. Drum suddenly exploded.
"Where did you get it? That?" he
demanded. "Answer me!"
"I stole it!" said Mrs. Drum.

The reply, in its inconceivable frankness and simplicity, swept Mr. Drum from his feet. Then it was true! Right, after all, had been on the side of that unspeakable female overhead. Mrs. Drum had purloined the ballet-woman's clothes! However, ere Mr. Drum could voice the turbulence of his mind, Mrs. Drum delivered him a second

crushing blow.
"Yes; I stole it," she said; "only you needn't worry about that. I won't have to go to jail and you won't have to pay for the dress, because I went upstairs and squared myself! Yes, I did! I took the dress to wear; then when I'd worn it I got scared. So I thought I'd tell her everything. Well, she hardly said a word. She just laughed and laughed and laughed. Then she asked me whether I wouldn't come into the parlor and dance. She had a lot of friends there, you know—only my feet hurt and I couldn't. So she kissed me," said Mrs. Drum, "and I came away. Yes, that was how it was."

TT'S the wet or grease of the slippery pavement that seals the strong, elastic Vacuum Cups and forms the never-slipping suction grip.

On the slippery slant to the curb-in a hundred close situations where a skid means collision—there's positive safety in

Mr. Drum waited until she had finished. Even he himself wondered at his dignity, his self-control.

"How dare you!" he said then; and again Mrs. Drum stared at him. "Dare what?" Mrs. Drum inquired. "Steal her dress or tell her about it? I wish you'd stop puffing up your cheeks like that," she added.

With difficulty Mr. Drum repressed himself.

"Silence! What do you mean by such

behavior?"
"What behavior?" she asked.
"Answer me!" said Mr. Drum. "Where
have you been all day?"

Mrs. Drum for a moment gazed thoughtfully at him.

"All day, Homer? Let me see. Well from half past eight till half past eleven this morning I washed dishes, made beds, swept floors, scrubbed the kitchen, dusted the parlor and dining room, made a pie and oiled the hardwood floor. Then from half past eleven until half past three I mended your socks, sewed your underflannels, took your shoes to the cobbler, your hat to get ironed, and then went to the cleaner's for

your coat. At three, then, I ——"
"No impertinence!" said Mr. Drum.
"Answer me, I say!"

Mrs. Drum smiled curiously.
"I went to a tea, Homer, as I've said.
It was a tango tea."

It was a tango tea."

She did not even alter her tone as she told it. The speech flowed from her as unconcernedly as though she announced that chalk is chalk. A pause followed; and during it Mr. Drum's face gradually assumed the hue and proportions of a toy balloon. Then he found his tongue.

"A tango tea!" he echoed.

"Yes, Homer; only you mustn't shout so," Mrs. Drum again begged.

"You danced! There—in a public place!" asked or rather accused Mr. Drum.

Mrs. Drum nodded.

Mrs. Drum nodded. "It was a charity dance, Homer. I forget the name of the charity; but they gave it at the New York Roof. It was one of a series of mid-Lenten dances and it cost me a dollar to get in. At first I just meant to look on; but after a while one of the man-agement asked me whether I'd like to dance with any one. I said no; but he looked so disappointed I had to change my mind. I said I'd dance just once—just for charity, you know; so he introduced me to a partner.

"And you danced—you danced with him!" said Mr. Drum, his tone incredulous.

"His name was Benny," replied Mrs. Drum. "First we did the Castle Walk and then the Grapevine Dip. That was easy; so we tried the Horse Walk next, following which we gave the Kitchen Sink, the Lame Duck, and I dunno what. . . . Oh, well, what's the use?" murmured Mrs. Drum. "We just danced and danced, and I had the time of my life!"

Mr. Drum cared to hear no more details. "You abandoned fe——" he began.

"You abandoned fe-" he began, when Mrs. Drum swiftly turned on him.

"There now, don't you get excited! I know exactly what I've been doing and I know exactly what you're going to say—only you needn't," added Mrs. Drum. "I don't want to hear about Satan and idle hands, or that a stitch in time is a penny earned, or that a bird in the hand is the noblest work of God."

There was in her voice a note that Mr. Drum had never heard before. He gasped

slightly.

"Yes," said Mrs. Drum; "and I'm sick of hearing woman's place is the home and that idleness is woman's curse, and a whole lot of stuff like that you've been telling me for the last eleven years. . . . Keep still!" said Mrs. Drum as her husband rose suddenly, his face purple. "Ever since we walked to the altar you've been doing all the talking; and now I mean to do a little too.

You're always saying marriage is a partner-ship, and—well, I guess you're right—only up to now you're the only one that's been drawing any dividends. Hereafter I'm going to have mine too."
"You—you——" began Mr. Drum;

"You-you—" began Mr. Drum; but Mrs. Drum gave him no chance to

"What are you going to call me now—an ungrateful female? Well, maybe I'm a female and maybe I'm ungrateful—only that don't alter anything. Woman's place may be the home, but just the same that depends on what sort of a home it is. I didn't marry you to be put in jail. Yes; only the last few years you'd have thought I was in for life at hard labor. That's why I took that girl's dress and that's why I went to that tango tea!"

"I—why—now——" Mr. Drum said;

"I—why—now——" Mr. Drum said; and one noted now there had crept into his face a new, somewhat astonishing note. He seemed less sure of himself than usual.

He seemed less sure of himself than usual. He would have been thought a little startled. "I—why, well—"
"Oh, stop mumbling, for heaven's sake!"
Mrs. Drum exclaimed. "I was just saying I am sick of working on a stonepile and getting nothing for the job! I'm sick, too, of living in solitary confinement.
And that reminds me," added Mrs. Drum,"I took that fool worsted thing this afternoon and sent it downstairs with the garbage. There may be no place like home. I know. and sent it downstairs with the garbage. There may be no place like home, I know. Yes; but, thank heaven, there are other places that ain't!" Then she sniffed. "If I can't have a little fun in my own house I know where I can find it now! Put that in your pipe and smoke it!"

Mr. Drum, pale to the eyes, did not reply. In the imagery of his mind a spectacle had been upraised before him. It was the picture of Mrs. Drum whirling amid the mazes of the turkey trot in the arms of the

mazes of the turkey trot in the arms of the anonymous Benny! Just then some one overhead again put a needle in the machine and down the airshaft came the melody of

Too Much Mustard! Mr. Drum considered. Woman's place,

after all, was the home!
"Say," he said, his voice breaking, "what's
the cost of a machine like hers upstairs?"

#### **Vocational Training**

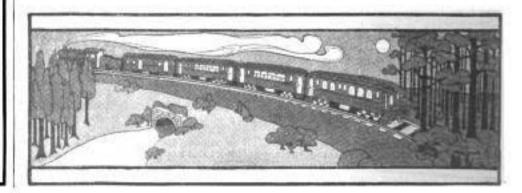

THE barber is the only workman for whom there is a really fixed demand in American cities. Analyzing the Twelfth Census reports for cities having fifty thousand or more inhabitants, the Russell Sage Foundation finds that in every city there are substantially three barbers to each thousand inhabitants. Every other occupations shows greater variability.

Those occupations that have as many as the representatives for each ten thousand.

ten representatives for each ten thousand inhabitants in all cities, number only twenty for men and seven for women. Without knowing the facts one would probably say that every city would show at least one butcher, physician, lawyer, clergyman and dentist for each thousand inhabitants; but he would be mistaken. Those occupations are not among the twenty constant ones. The printer, plumber and baker have steadier jobs in the sense that for each thousand eitre follow there will be at least one. sand city folks there will be at least one.

The only constant occupations for women—one worker for each thousand inhabitants in all cities—are those of servants, dressmakers, teachers, saleswomen. laundresses, nurses and housekeepers. All but one of these, it will be noted, have to do with the household or with children—from which those who take the Kaiser's view of woman's proper place in the universe may derive much comfort.

Even our vocational schools mostly train youngsters for the jobs they want rather than for the jobs they can get. No doubt that is the right method; but an analysis of the actual supply of jobs is helpful.

#### SUSANNA AND HER ELDERS

"Pet, you'd better go to mademoiselle.
... Ask her, with my love, to fix you up some French history to translate,"

Laty Beaumaris suggested.
"I should prefer a Gallic verb," Lord
Beaumaris amended. "I marry in accordance with my parents' wishes. Thou marance with my parents' wishes. Thou mar-nest in accordance with thy parents' wishes. He marries—and so on. And make a sold schoolroom tea while you are about it, my child," he continued, as Susanna hestowed a parting strangle on Alaric, kicked over a footstool, and rose to leave the room; "for I fear we are to be deprived of your charming society at dinner this of your charming society at dinner this evening.

Susanna's lovely red underlip pouted; her blue eyes clouded with tears. She fashed a resentful look at her sire and went

"She is not manageable by any ordinary methods," said Lord Beaumaris, running his forefinger round the inside of his collar and shaking his head. "In such a case contamacy must be combated with craft, and defiance met with diplomacy. Alaric, regrettable as is the course you have counseled us to pursue, I feel inclined to adopt it. . . I shall write tonight to make an appointment at the Carlton on Wednesday with the Duke of Halcyon, and I shall to obliged if you will—at your early conbe obliged if you will—at your early con-venience—favor me with the address of the young man Wopse."

THE garden chalet was damp. It had been raining and the glittering appearance of the walls betrayed the fact. "As though a bally lot of snails had been dancing a cotillion on 'em!" said the Duke of Halryon. He yawned dismally as he opened the casement and leaned out, looking in his width based allow picks with the state. gaudily hued silken night suit like a tulip

drooping from the window sill.

Then the keeper's wife came splashing up the muddy path carrying a tray covered with a mackintosh; and the knowledge that his breakfast would presently be set before him, and set before him in a luke-warm, flabby and tepid condition, caused Halcyon to groan; but presently, when tathed, shaved, and attired in a neat inickerbocker suit of tawny orange velvet-ee, with green silk stockings and tan shees, salmon-colored silk shirt, rainbow necktie and panama, he issued, cigarette in mouth, from the chalet and strolled in the direction of the newly restored west wing, his grace's equanimity seemed restored.

He even hummed a tune, which might have been The Honeysuckle and the Bee, or God save the King! as he mounted the short, wide, double flight of marble steps that led from the terrace, and, pushing open the glazed swing doors, entered the ballroom, the entire space of which was filed by a bewildering maze of ropes and scaffolding, as though a giant spider had span a cobweb in hemp and pine.

A smell of turpentine and size was in the ar, and a paint table occupied a platform immediately under the skylight dome, the sides of which were already filled in with outlines transferred from cartoons designed by the artist engaged to ornament the apartment. That gentleman, arrayed in this carrying a deerstalker cap on the back of a well-shaped bead, was actively engaged in washing in the values of a colossal nude-figure group with a bucket of sepia and a six-foot brush. He whistled rather queerly as his bright eye

fel on the intruder.

"You're there, are you?" said the duke unnecessarily. "Shall I come up?"

"If you can!" said Halcyon Wopse with a decided smile that revealed a very complete set of very white teeth. "But, to save time, perhaps I had better come down to you." And the painter swung himself lightly down from stage to stage until he ightly down from stage to stage until he reached the ground level of his august relative.

"Put what you've got to tell me as clearly
as you can," said the duke. "I never was a up at Eton, and the classic names of these Johnnies you're thingumbobbing on the

"The design outlined on the plaster in the central space on the left-hand side of the stright dome," said Wopse, A. R. A., "is the Judgment of Paris. The three figures of the real medical space out." of the rival goddesses are completely outlined: but, as you see, Paris is only roughly blocked in."

"I don't see a city," said the duke, with some annoyance. "I see only a bit of a man. And as for being block tin -

"Paris was a man—or, rather, a youth," said Halcyon Wopse, quoting:

Fair and disdainfully lidded, the Shepherd Holding the golden apple, desired of -

"Hold on! When people get to spouting it knocks me galley-west," said the duke. "Just tell me plainly what the beggar was to judge. Goddesses? I savvy! And which of 'em took the biscuit—I mean the apple? Venus? Right you are! That's as much as I can hold at one time, thanky!"

"Sorry if I've overestimated the extent of the accommodation," said Halcyon Wopse, smiling and lighting a cigar.

smiling and lighting a cigar.
"One of the Pailagas. Now, hang it,"
said the duke, "that is infernally stupid of

my man."
"Of my man, you mean," corrected the

"I begin to think," said the duke, "that I have, in falling in with the absurd plot cooked up by that old footler, Beaumaris, and swopping characters with a beg—with an artist fellow like you in order to take the fancy of a long height less than the said of a long height of a fancy of a long-haired, long-legged colt of a

girl —"
"I presume you allude to Lady Lymston?" put in the painter coldly.
"Of course! I say, in tumblin' to the idea and embarkin' in the game I've made an ass of myself," said the duke. "As for you, you're in clover."
"Say nettles!" sighed the painter.
"Passin' under my name —"

"Passin' under my name ——"
"Passin' under my name ——"
"Pardon!" said the painter. "The name is my own. And let us say simply that in changing identities with your grace, in order to enable your grace to cast a glamour of artistic romance over a very ordinary

"Eh!" interjected the duke.

"—situation," continued the painter—
"in doing this I have laid up for myself a considerable store of regret."

"Regret! Why—hang you!—you're chalkin' up scores the whole bally time!" shrieked the duke, stamping his tan shoes on the canvas-protected parquet. "Beaumaris' guests—only a few purposely selected fogies and duffers who don't count, it's true—believe you to be me. They flatter you and gies and duffers who don't count, it's true— believe you to be me. They flatter you and defer to you. You take the dowager in to dinner and I'm left to toddle after with Susanna's French governess. I'm out of everything and obliged to talk art—bally art!—from mornin' until night! While you—you've ridden to cub hunts on my mounts driven my motor curs and bust my mounts, driven my motor cars and bust my

"And very good ones they are," said the

"You ride infernally well, and show off before the field at Henworthy Three Gates, where the hardest riders in the county hang back. You ain't afraid of a trappy take-off—you weren't built for a broken neck!" screeched the incensed peer. "You play golf, too, and win the Coronation Challenge Cup for the Lymston Club, takin' seven holes out of the eighteen, and holin' the round in the score of sixty-eight."

"It was my duty to maintain the honor of your grace's name, once I had consented to assume it," said the painter with a bow. "And you're a dead shot, confound you! knockin" the birds over right and left, and

getting a par. in every sportin' newspaper for a record bag of four hundred! You're a pole player too—hit a hall up and down the field and through the goals at each end, and look as though you didn't care whether the ladies applauded you or not, da—hang you. And you must own to bein' a bit of a cricketer and consent to play in the County Cricket Match on Thursday; and I wouldn't like to bet against your chances of makin' a big score—an all-round admirable what's-its-name of a fellow like you!"

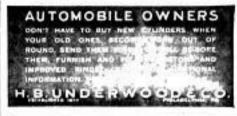

"Perhaps you'd better not," the painter remarked calmly, knocking off the ash of his

"But I should be glad to know the reason for this display of temper on your grace's part, all the same," he added. "If I rode like a tailor and shot like a duffer, hit your ponies' legs instead of the ball, and played cricket like a German governess at a girls' boarding school, I could under-

"Don't you understand, when I get back into my own skin again I'll have to live up to the reputation you've made me?" yelled Halcyon. "I could pass muster before

because nobody looked for anything; but

"And what of my reputation? I think I

heard you telling Susanna ——"
"Susanna!" echoed the duke.

"She is Susanna to your grace. Did I not hear you telling her that Chiaroscuro was an Italian painter of the Cinquecento—who, you said, was a pope who patronized art! You went on to say that Chiaroscuro lived on hard eggs and designed carnival cars, and

on hard eggs and designed carnival cars, and that Benvenuto Cellini won the Gold Cup at the Ascot Race Meeting in '91."

"Look here; we won't indulge in mutual recriminations. It's beastly bad form!" said the duke. "And, though you can ride and all that, I never said I thought you could paint for nuts: in fact, between ourselves, I don't half like havin' these spooks on the ceilin' set down to me." He twisted his little sandy mustache and fixed his eyeglass in his eye, and started. "Here's Lady Lymston comin' over the lawn, with a whole pack of dogs, to ask me how I've got on pack of dogs, to ask me how I've got on

pack of dogs, to ask me how I ve got on since yesterday."

"Take my blouse!" The painter de-nuded himself of the turpentiny garment, appearing in a well-cut tweed shooting suit.

"Get into that rag? Not me—thanks! Hand over your brush and give me a leg-up on that scaffoldin', like a good chap. I'd better be discovered at work, I suppose," and His Grace of Halevon as he slowly said His Grace of Halcyon as he slowly mounted to the platform under the dome.

He had just reached it when Susanna's fresh young voice was heard outside calling to her dogs, and a moment later she appeared. Her fair cheeks were flushed, her blue eyes were bright with exercise. She wore a rough gray skirt which, though less attenuated than of yore, still showed a slim, arched foot and suggested a charming ankle; a white silk blouse, confined by a Norwegian belt; and a loose beret cap of black velvet crowned her yellow head, its silken riches being now disposed in a great coil through which a silver arrow was care-lessly thrust. She started and reddened from her temples to the edge of lace at her round throat when the tweed-clad figure of the painter caught her eye, and gave him her hand with an indifference that was too ostentatious.

"I didn't know you were interested in art," she said. "Oh, yes," responded the painter; "at least, if this can be called art," he added modestly.
"'Sh!" warned Susanna. "He is up there

and will hear you.

"He?" echoed the painter, reveling in the blush.

"Did I bear my name?" called the duke sweetly from above. "Hello, Lady Lym-ston—that you? Come to record progress? As you see, we're going strong." His six-foot brush menuced a Hera's drapprise; a callingt of size upset tripbled its contents. gallipot of size, upset, trickled its contents through the planking; his velveteen conttails placed Paris in peril as he turned his back to the cartoon and, resting his hands on his knees, assumed a stooping attitude and peered waggishly down over the edge of the scaffolding at Susanna. "Take care—you!" shouted the painter,

forgetting his aristocratic rôle.

"My foot is on my native thingumbob— ain't it, Lady Lymston?" said the owner of nin tit, Lady Lymston?" said the owner of the small, cockneyfied, grinning counte-nance above. "How do you like the wax-works? This is the"—he flourished the six-foot brush perilously—"this is the Judgment of Berlin!"

"Paris!" prompted the false duke

hoarsely.

"He is trying to joke," said Susanna in an undertone. "Don't discourage him." "I should think that would be difficult,"

remarked Wopse grimly.

remarked Wopee gramy.

"Papa tries to be crushing and Uncle
Alaric's rudeness is simply appalling," said
Spearen in a confidential undertone. "And Susanna in a confidential undertone. grandmother walks over him as though he were a beetle-no; she would run away from a thing like that I should say an earwig or a snail; so one feels bound to be a

"If only out of opposition!" said the painter, with a keen look of intelligence, at

which Susanna blushed again. "He is idiotic when he tries to be funny about art and mixes up names and dates— and tells you that Titian sang in opera and and tells you that Titian sang in opera and Rubens is a popular composer; but he can paint, and Uncle Alaric thinks he will be president of the Academy one day. These cartoons are splendidly bold and effective."

"You think so? Wait till I've colored being up a bit," said the duke, catching the sentence, "Then you'll—"

He lowered his brush and advanced it, dripping with cobalt, toward the group of

"Don't touch them!" shouted Wopse in

agony.
"Why not?" asked Susanna.
Prouse me,

"I don't know. Excuse me, Lady Lymston; I believe the smell of this size isn't wholesome," Wopse stammered. "I'll get out into the air." He bolted.

"Good heavens!" he moaned as he

strode unseeing down a broad path of the dazzling west-front pasture. "I can't stand this! I'll tell that idiot, Osmond-Orme, that the deception must come to an end." "Why do you walk so fast?" said the voice of Susanna behind him. "I have had to race to catch you."

to race to catch you."
"I am sorry," said Wopse, stopping and turning his troubled eyes on the fair face of

his young relative.
"Let us walk on"—Susanna cast an apprehensive glance behind her-"or some-

'Somebody will see us walking together!"

said Wopse acutely.
"It is so much nicer," Susanna said de-murely, "when one can keep pleasant things to oneself. And we have had a good many walks and talks since you came down here, haven't we? And cliff scrambles—and bi-cycle rides—and rows on the river. And the fun of it is that, though we are such pals really, father and grandmother and Uncle Alaric believe that I positively detest you."

Her young laugh rang out gayly; she thrust a sprig of lavender, perfumed and spicy, under the painter's nose. He cap-tured the tantalizing hand.

"Do you not?"

"Detest you? You know I don't."
"May I have it?" It was the sprig of lavender; but the painter looked at and squeezed the hand.

"If you promise to make a big score on Thursday." Susanna, it must be admitted, was

learning coquetry.
"I will—if you are looking at me!"
"Done!"

"Done!"

"Done! Come into the beech avenue,"
the painter pleaded, "just for a few moments, before that little beast follows us.
You know he will!"

"He can't!" Susanna's golden eyelashes drooped on her crimson cheeks. "He can't get down! I—I took away the ladder before I came away!" she owned.

Both hands were imprisoned; her blue

Both hands were imprisoned; her blue eyes lifted and lost themselves in the brown

ones that looked down at her.

"Was that because you wanted—to be alone with me? Was it?" demanded Wopse, "Oh, Mountstuart!" "I'll let you go when you have owned up—not before," Wopse said sternly.

Susanna's reply came in a whisper:
"You—know—it—was!"
The whisper was so faint that Wopse had to bend quite low to catch it. Of course he need not have kissed Susanna; but he did, as Alaric Osmond-Orme and Lord Beaumaris appeared walking confidentially. maris appeared, walking confidentially together arm in arm.

"I think my little stratagem succeeds!" Lord Beaumaris had just said, in reference to the preference exhibited by his daughter for the society of the pretended painter; and Alaric had responded: "Yes, as you say, my plan has proved quite a brilliant success!" when Lord Beaumaris clutched his cousin's arm.

"Merciful powers! Susanna and that-that young impostor!"

Alaric's eyeglass fell with a click, and the diabolical left eye twirled and twisted fiend-ishly in its socket as its retina embraced the picture indicated.

"Feign not to have observed.
Well, Susanna! How are you, Halcyon?
We are strolling toward the ballroom for a
glimpse of Wopse's work."
"We are stro—" Lord Beaumaris

"We are stro—" Lord Beaumaris choked and purpled. Alaric dragged him on.
"Do you think "—Susanna's cheeks were white roses now—"do you think they—"
"Saw me kiss you? Not a doubt of it!"
"Oh!" Susanna confronted him with blazing eyes. "You—you did it on purpose! It was a plot——" She clenched her strong young hands hattling with the desire. strong young hands, battling with the desire

to buffet the handsome bronzed face before her. "I'll never—never speak to you
again!" she cried.
"You will not be allowed to," grouned
the poor painter. "Our walks and rides
and all the rest are over. . . . Yes,
there has been a plot, but not of the kind
wood suspect. I am a traitor, but not the you suspect. I am a traitor, but not the kind of traitor you think me. Lady Lym-ston, I am not the Duke of Haleyon. I am a poor devil—I beg your pardon!—I am a painter; my name is Wopse, and I have disgraced my profession by the part I have played." He sat down miserably on a rustic bench.

"Oh! It has been a put-up thing between you all!" Susanna gasped. "Oh!" She towered over Wopse like an incensed young

"If I could only paint you like that! Yes, I deserve that you should hate me. Never mind who planned the thing; I should have known better than to soil my hands with a deception," said Wopse. "As for the

"The duke! Do I understand that that earwig in velveteen is my Cousin Halcyon?"

Susanna's voice was very cold. "Yes. I am a kind of cousin too," said

Wopse.

But not that kind. Those—those de-

"But not that kind. Those—those designs—the work on the ceiling! They are really yours?" Susanna asked.

"Mine of course! Do you think that fellow could have done them?" cried Wopse, firing up. "I've risen at four every morning to work at them, and ——"

"And you ride splendidly, and you're a crack shot and polo player, and you're going to win for the county eleven on Thursday!"

to win for the county eleven on Thursday!

came breathlessly from Susanna.

"Ah, you won't care to look at me now!"
said the depressed Wopse.

"Won't I?" Susanna's eyes were dancing;
her cheeks were glowing; she pirouetted on
the moss-grown ground of the avenue and the moss-grown ground of the avenue and dropped a little curtsy to the painter. 
"When doing it will drive father and grand-mother and Alaric and the earwig wild with rage! . . . When—when I like doing it too! When ——" She stooped, and her lips were very near Wopse's cheek. "When I love doing it!"

"Oh, Susanna!" cried the painter.

"My dear Halcyon!" said Lord Beau-maris, peering shortsightedly upward through a maze of scaffolding. "I think you may as well come down."

"In other words, the game is up!" said Alaric Osmond-Orme mildly. "Come down, my dear fellow, and resume your own rolls of hereditary legislator. Allow me to

down, my dear fellow, and resume your own rôle of hereditary legislator. Allow me to replace the ladder." He did so.

"So that fellow's done me! I guessed as much when that little—when Susanna took away the ladder," said the duke, preparing to descend. "And then when I saw him kiss her—there's a remarkably good view of the gardens through the end window—I—"he pointed to some remarkable effects of color solashed on the ground so carefully color splashed on the ground so carefully prepared by the painter—"I took it out of the beggar in the only way I could, don't you know!"

"Take it out of him still more," suggested Alaric, his tinted eyeglass concealing a fiend-ish twinkle, "by playing in the County Cricket Match. He's entered in your name, you know."

"You're very obligin'," said the duke:
"but I don't think I'm takin' any," He
gracefully slithered to the floor as Susanna
and Halcyon Wopse entered the ballroom,

and Haicyon Wopse entered the ballroom, radiant and hand in hand.

"Papa," said Susanna, taking the bull by the horns, "Mr. Wopse and I are engaged. We mean to be married as soon as possible after the County Cricket Match." She kissed the perturbed countenance of Lord Beaumaris noded to the dule and added t Beaumaris, nodded to the duke, and walked over to Alaric. "Your plan has succeeded beautifully!" she said. "Aren't you pleased? And won't you congratulate us?" I am delighted!" said the imperturbable Alaric. He dropped his eyeglass, and before the preternatural intelligence of his left eye even Susanna quailed. "And I congratulate you both most heartily."

He smiled and pressed the hands of Su-

He smiled and pressed the hands of Su-sanna and her lover; then, moving away, he stepped into the garden. There, unseen, he rubbed his hands, twinkling with mourning

"I loved that boy's mother very dearly, boy as I was then!" said Alaric. "As for Susanna, if she knew that I knew she was listening at the library door -

He replaced his eyeglass, and his expression became, as usual, a blank.

#### MEXICO: The Record of a Conversation With President Wilson

(Concluded from Page 4)

and what it might bring forth, but has no information beyond the general knowledge that Huerta had accepted the friendly offices of the self-proposed mediators. I sked him whether, in the event of successful mediation, his plans for the betterment of Mexico would be carried out.

"I hope so," he replied; "for it is not my intention, having begun this enterprise, to turn back—unless I am forced to do so—still have assurances that the great and

ustil I have assurances that the great and rying wrongs the people have endured are in process of satisfactory adjustment. Of course it would not do for us to insist on an exact procedure for the partition of the land, for example, for that would set us up in the position of dictators, which we are not and never shall be; but it is not our intention to cease in our friendly offices un-til we are assured that all these matters are on their way to successful settlement. It is a great and a complicated question, but I have every hope that a suitable solution will be found, and that the day will come when the Mexican people will be put in full posses-sion of the land, the liberty and the peace-ful prosperity that are rightfully theirs." President Wilson banged the desk again. His smile vanished and his face became

stern and set.

stern and set.

"And eventually," he said slowly, "I hall fight every one of these men who are now seeking and who will then be seeking to exploit Mexico for their own selfish ends. I shall do what I can to keep Mexico from their plundering. There shall be no individual exploitation of Mexico if I can stop it."

He walked over to the big blue globe.

"It is a wonderful country," he said as he put his finger on Mexico, "a wonderful country! There is every advantage there for the peaceful and prosperous pursuit of happiness. Have you ever noticed that if you draw a line straight south from New York it will touch the western coast of South America instead of the eastern, and that it runs along by Chile and Peru, and the other countries on the western side of

the Southern Continent?

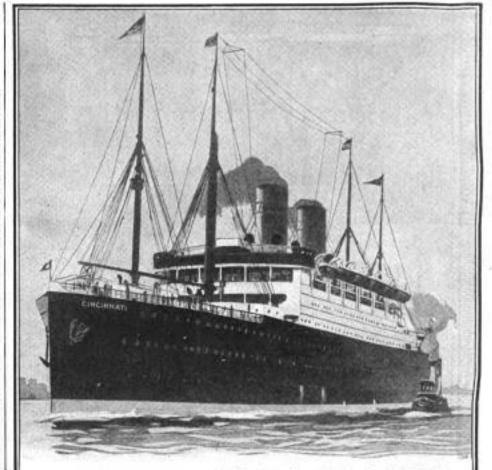

"Thus, with the Panama Canal running practically north and south, this brings these countries, which have been so remote, into close touch with us, and the commerce of this Western Hemisphere will brood over

Central America.
"What we desire to do and what we shall do is to show our neighbors to the south of us that their interests are identical with our interests; that we have no plans or any

thoughts of our own exaltation, but have in view only the peace and the prosperity of the people in our hemisphere."

The little clock on the bookcase struck nine. The President rose. He walked down the stairs with me and took his hat to be across to his office where there was to go across to his office, where there was to be a conference on the vexing situation in Colorado. As we parted at the end of the corridor he held out his hand and said:

"It will be a great thing not only to have helped humanity by restoring order but to have gone further than that by laying the secure foundations for that liberty without which there can be no happiness."

## Sense and Nonsense

The Tactful Cop

CHARLES COMISKEY, who runs the White Sox ball club in Chicago, is widely acquainted in that big town and in his day has been lavish with passes to his ball park.

Last year he gave a season pass to a young man he had helped to an appointment on the Chicago police force. Soon after this Comiskey was pushing his automobile a bit beyond the speed limit up Michigan Boulevard and was stopped by a policeman.

The policeman opened the door of the car
and saw Comiskey sitting inside.

"Hello, Bill!" said Comiskey. "How
are you getting along since I got you your
job on the force?"

The reliesement coupled and stattered

The policeman coughed and stuttered.

Finally he said:

"Look here, Charlie; you'll have to go slower with this car of yours or I'll have to give back my pass."

#### Nothing on the President

APROPOS of the human side of President Wilson, the President was out for a ride in his automobile one afternoon. The machine passed a small boy standing beside the road.

"Did you notice what that boy did when we passed?" the President asked. "No, Mr. President; I did not."

"He made a face at me."

"Is it possible?" exclaimed the shocked companion. "I didn't observe him."

"He did," said the President; "but did you notice what I did?"

"No. sir."

No, sir."
Well," answered the President happily, "I made a face right back at him!"

#### Two-Minute Lights

TWO-MINUTE lights for stairways and a spartment-nouse entrances are just coming into use in the United States, though they have been in common use abroad. When one reaches home late at night and finds the halls and stairways dark, a pressure on a push button at the door lights up the various lamps; and two minutes later the lights go out, thus giving enough light for the latecomer's conven-ience, but thriftily obviating the necessity for constantly burning lights.

An added attachment is a switch that will keep all the hallway lamps burning until a fixed hour, such as eleven-thirty,

and at that time turn them all out, but connect them with the two-minute control for the remainder of the night.

#### Caves of the Winds

CAVERNS filled with stored air are a O comparatively recent trick in mining. Abandoned drifts or tunnels through rock are sealed up and air is pumped in until they contain it at the pressure necessary for run-ning air drills and other mining machinery. The caverns thus have stored-up power for emergency use or to help keep up an even pressure in the regular supply.

At the great Anaconda Mines this same idea has been ingeniously used to give a prefectly regular pressure. An under-

perfectly regular pressure. An under-ground rock receiver for the air was blasted out at the foot of a hill and compressed air is pumped into this receiver. Far up on the hill is a reservoir of water, with a pipe running down below the air receiver and coming up into it through the bottom.

The water from the reservoir would nat-urally flow down into the air receiver, but the air pressure there keeps it out. When the stock of stored-up compressed air is reduced water comes up into the air receiver, and when an excessive amount of air is pumped in, the water in the hill reservoir rises; but the air pressure in the rock cavern always remains steady.

#### No Place for Ladies

A FAMOUS foreign newspaper corre-spondent, a German, was stopping at a seaside hotel where the dining-room helpers, following the New England custom, were nearly all college girls, working during vaca-tion in order to keep themselves at school

the rest of the year.

The spectacled young person who pre-sided over the table where the German wananer man ate was undoubtedly o excellent breeding, but she never seemed able to remember whether the eggs were to be fried on one side or scrambled on both.

Finally, one evening after he had been served with a meal entirely different from the one he had ordered, the foreigner lost his temper and spoke rather sharply to the

young woman.

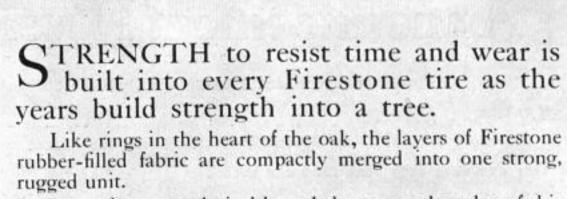

"Easy there!" admonished his table mate, an American writer. "She's a lady, you know, old man."

"But I do not vant a lady," said the German plaintively. "I vant a vaiter!"

It requires no technical knowledge to see the value of this time-proved, natural method—the layer-built, double-cured process, which admits of minute and multiplied inspection.

The peculiar quality of Firestone Rubber is its strength and resiliency. There is no more stubborn hold than the gripping endurance of the Firestone Non-Skid tread. Its added volume indicates, too, the powerful body behind it. It requires Firestone inbuilt strength to support the massive bulk of the Firestone Non-Skid tread.

Let these sturdy, long-life Firestones teach you how far tire service has advanced. Use them on Firestone Rims, with Firestone Red Inner Tubes, to enjoy a new and higher degree of motoring comfort, confidence and convenience, with the economy of—Most Miles per Dollar.

## The Most Important Announcement I Ever Made:

There has always been a material difference between Tosated Corn Flakes as we make them and as you buy them.

It has constantly been my ambition to deliver the flakes to you as fresh and crisp as they are when they come from our ovens.

By the use of new machinery, we are able to offer you, at no increase in price KELLOGG'S TOASTED CORN FLAKES so perfectly sealed that, wherever and whenever you buy them, they will be as fresh, tender and crisp as the moment they left the ovens. We call this "Waxtite," the seal of quality.

This is the most important announcement I ever made.

## THE FAKERS

By SAMUEL G. BLYTHE

ENATOR William H. Paxton, universally known as the Old Fox of the Senate, had been to the White House that morning, had wheedled the president into promsing an important appointment to a nan from the Paxton organization, and was well pleased with himself as ie walked down Pennsylvania Avenue loward the Capitol. His hat was tocked a bit to one side, he swung his ane jauntily, and he blew little clouds a smoke into the sunshine from the igar that tilted upward from one orner of his mouth. He smiled geniilly at the passers-by, and added a low to his smile whenever any person ie met displayed the slightest sign of ecognition, which was frequently, for Paxton was serving his twentieth year n Congress and was a familiar figure in the streets of Washington.

The senator was not only pleased with himself, but pleased with the olitics he had played, with the presilent who had helped him play it, with is party, his prospects and his power. leveral of his colleagues had candilates for the place Paxton had secured or his own man, and the fight had een lively and at times acrimonious. By a judicious scheme of elimination and some cleverly disposed charges gainst the others he had brought his wn candidate into a front position, and, choosing this particular morning s the psychological time, had decended on the president, persuaded im that the matter should be settled, hat the only safe way to settle it was o appoint the Paxton applicant, and ad won. He contemplated with seene satisfaction the meetings he would ave with the senators who had lost, and framed the speeches of joking ondolence he would make to them.

As he passed the corner of Sixth Street he heard the clatter and clang of an ambulance whind him. He turned. The wagons and carriages on the broad avenue slowed down, ad in common with all those on the sidewalk the senator stepped out to the edge of the sphalt to watch the ambulance go by and to wonder what unfortunate was in it or miting for it and the young doctor who sat behind. Apparently the case was an urgent ee, for the driver was leaning forward and the clamor of the warning gong was incessant. he ambulance was halfway down the block between Seventh and Sixth streets when be senator reached the curb and joined the people who fringed it, staring at the pproaching conveyance with that mixture of curiosity and terror the progress of an mbulance always excites.

Paxton, a masterful man, had taken a sort of a supervisory mental control of the ituation. He saw a little boy, whose mother had forgotten him in her interest in the rogress of the ambulance, start across the street, dodging between two wagons. The man lriving the ambulance did not see the child, for he made no attempt to stop his horses or

"Look out, kid!" shouted a man on the curb. "Look out or you'll be run over!" The mother screamed. The boy ran ahead, laughing at his escape from restraint.

The ambulance came swiftly, the gong beating a strident tattoo.

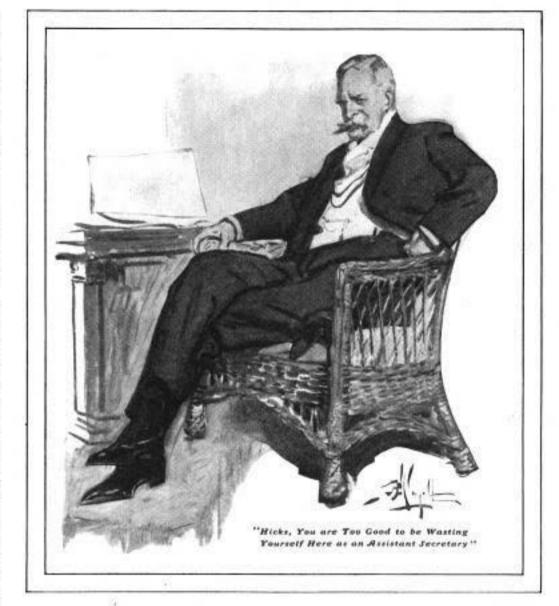

The mother screamed again. Then Paxton, pushing ahead of half a dozen men who tarted forward, stepped quickly out on the pavement, scooped up the boy and, holding im in his arms, carried him back to the curb and gave him to his mother. He received or profuse and tearful thanks graciously, bowed, expressed his polite pleasure over what \* called a slight service and resumed his walk to the Capitol.

"That's Senator Paxton," said one man in the crowd. "The Old Fox."

Everybody was interested. "Senator Paxton," the onlookers said one to another;

Old Fox Paxton." And as Paxton passed out of view the bystanders spoke of him in atimate terms, as if they all knew him well, after the manner of Washington people.

It was halfpast ten o'clock when Paxton reached his committee room. T. Marmaduke licks, his assistant secretary, was in the outer office opening letters and sorting the ommunications into piles.

"Morning, Tommie," greeted the senator. "Much grief in the mail this morning?"

"About the usual amount," Hicks answered, "with one particularly pitiful wail from Primston because you don't land that job for him."

"Fixed it today. Wire Primston to come on. Bring in the letters I need to see in about fifteen minutes. I want to look at the paper first."

Paxton walked into the private office and closed the door. Hicks slit another envelope with his opener, opened it dexterously, took out the letter that was within, glanced at it and tossed it on one of his piles. Then the telephone on his desk rang.

"Hello," he said, as he put the receiver to his ear. "Yes, this is Senator Paxton's committee room. . . Who's talking, please? . . . the Evening Dispatch. . . . What's that? . . . Somebody telephoned in the senator rescued a child from death this morning? . . . Hadn't heard of it. . . . No, the senator isn't here yet—expect him any min-ute. . . . Sure, tell him to come down, we'll be glad to see him."

Hicks hung up the receiver and whistled. "What do you know about that?" he asked himself, and knocked on the door of the private office.
"What is it?" asked Paxton as

Hicks entered.

"The Evening Dispatch just called up and said they hear you rescued a child from death on the Avenue this morning."

Paxton laughed.

"Bosh!" he said. "Where did they get that yarn?"

"But didn't you?" asked Hicks, his disappointment showing in his voice.

"No, I didn't rescue a child from death, or anything like it. I'm no hero dashing into the street at the peril of my own life to snatch a babbling, prattling, golden-haired infant from beneath the pounding hoofs of wildly galloping horses. What I did do was to proceed in a decorous and elderly manner across the asphalt at Sixth Street, pick up a little boy who had strayed out there in the way of an ambulance and restore him to his mother. It was no heroic or thrilling rescue. It was simply a precautionary measure, for the ambulance would have stopped anyhow, and that's all there is to it.

"But a Dispatch reporter is coming to see about it. What'll I say?"

"Tell him just what I have told you, and ask him to forget it," and the senator resumed the reading of his paper.

Hicks returned to his desk much grieved. He sensed a story. Hicks liked stories. He realized the advantages of publicity. He had planned to depict the rescue to the reporter with many exciting details and great declamatory effect. He felt the senator was overlooking an opportunity.

The reporter came. Hicks knew him well—Garson, the man who covered the Senate end of the Capitol for the Dispatch.

"Senator in?" asked Garson.

"No," Hicks replied. "He was here, but had to go to a committee meeting."

"Our people telephoned up to me they have a story that the senator rescued a kid from death down on the Avenue this morning. Heard anything of it?"
"Yes," said Hicks; "he told me about it. Good story too."
"Well, they've got the yarn and they want me to verify it. Can't get a statement

from the old man, can I?"
"He isn't here," repeated Hicks; "but it's true. What have you got on it?"

"Oh." said Garson casually, "I don't know the details. All they told me was that the old man was coming along the Avenue simultaneously with an ambulance that some fool of a driver was pushing past the speed limit to pick up a souse or something that one of the intelligent first-aid corps had diagnosed as a fractured skull. A kid ran in front of the horses, and Paxton chased out and grabbed the kid just in time to save it from being run down, and restored it to its distracted mother, as our story will undoubtedly say.

As Garson talked, Hicks fashioned the incident into narrative form, aided by an active and useful imagination.

"That's right," he said, "those are about the main points. The ambulance was coming to beat the band, and the driver didn't see the kid. It was only a little bit of a boy, just able to toddle along, and there wasn't a chance. Everybody was paralyzed with fear—that is, everybody except the senator. He dashed out, plucked the goldenhaired child from beneath the pounding hoofs of the wildly galloping horses"—Hicks had seized on the senator's irony—"and jumped aside just in time to escape death or severe injury himself and to save the child from being awfully mangled on the pavement. The senator carried the child back to the curb and gave him—I guess it was a him—to the hysterical mother and resumed his walk to the Capitol, amid the enthusiastic cheers of the witnesses of the heroic deed."

"Say," commented Garson, "you talk like a man in a best-seller. Back up! What's the kid's name?"

"He didn't stop to inquire."

"But it's straight goods, is it?"

"Sure, and it's a good story. It isn't every day a senator as well known as Senator Paxton pulls a thing like that."

"All right," said Garson. "Let me use your phone, will you? They want it in a hurry for a flash in the noon edition."

Whereupon Garson called his office and verified the thrilling rescue, unconsciously repeating some of the phrases used by Hicks.

"Tell them to put some feathers on it," whispered Hicks.

"Oh," said Garson as he hung up the receiver, "they'll
do that all right. There isn't anything else in sight for
a flash."

Hicks waited impatiently for the noon edition of the Dispatch, which went on the streets at a quarter to twelve. He was highly gratified to find a large black heading across the entire top of the front page, reading: "Senator Paxton Rescues Child From Horrible Death," and a much-paragraphed story beneath reciting, in the most vivid language at the command of one of the desk men on the Dispatch, the circumstantial story of the rescue, wherein the principal figures were the famous senator, who was "heroic" in every other line, the weeping mother, who was "distracted" as frequently, and the child, who was a "prattling, sunny-haired babe" proceeding laughingly to his inevitable and frightful doom had not the heroic senator been on the spot and quick to act. There was a four-column picture of the senator, hurriedly taken from the cut rack, and the smaller headlines screamed of heroism and courage and bravery and modest deprecation on the senator's part.

"If that ain't a peach I don't want a cent," commented Hicks. When the second edition came up Hicks was sorry to observe the seven-column head had been dropped, the leads taken out of the article and the picture of the senator reduced to two columns in width; but an artist had drawn a decoration to go with the picture of the senator—a bold freehand sketch of that agile statesman reaching beneath the upraised hoofs of two infuriated horses and taking therefrom a child that looked up with joyful trustfulness into his steel-blue eyes.

He was a little uneasy, however, for Paxton, though not averse to publicity, was particular as to its character, and he awaited the senator's coming with some apprehension. Soon after three o'clock Paxton stormed in with a copy of the Dispatch in his hand.

"Hicks," he shouted, "what sort of rot is this?"

"What do you mean, senator?" asked Hicks innocently.

"This—this hysterical balderdash about me being a hero."

"Oh, you mean that story in the Dispatch?"

"Yes, I mean that story in the Dispatch! I thought I told you to stop it."

"How could I stop it?" protested Hicks. "They had it. I didn't give it to them. What's the matter with it? Isn't it a good story?"

Paxton laughed. "Good story," he repeated. "I should say it is a good story. It's so good that forty senators have already advised me to apply for a hero medal and have offered to testify to my general heroism, and I won't hear the last of it for weeks."

"But," insisted Hicks, "I don't see how it will do you any harm, and it may help you a lot out home."

Paxton looked curiously at Hicks. He crumpled the paper and threw it on the floor. Then he laughed again. "Hicks," he said, "you didn't try to stop it, now did you?"

"No, sir; it was true and I couldn't see any harm in it. It's fine publicity."

"In fact," continued Paxton, "you rather pushed it along."
"Well," confessed Hicks, "I may have added a thrilling detail here and there."

"Thinking, no doubt, that you are working for an actor instead of a senator, or that I do a high dive in a circus and need attention from the press?"

"Oh, no," protested Hicks, "not at all. It occurred to me that it would be a shame to waste the incident, especially as there can be no political comeback, and I let it go. I would be glad to have a story like that printed about me."

Hicks Found the Study of Coke and Littleton and Kent a Tedious Business

"I am sure you would; I am sure you would," said Paxton, and he sat down, lighted a cigar and looked at Hicks for a long time, watching that young man as he worked busily at his typewriter.

"Hicks," said Paxton finally, "you are too good to be wasting yourself here as an assistant secretary."

"That's what I think," assented Hicks, turning quickly from his desk and facing Paxton expectantly. Paxton smiled. "I am glad my views on the subject

Paxton smiled. "I am glad my views on the subject coincide with yours," he said. "Well?" prompted Hicks after a moment's silence.

"Oh, nothing," Paxton replied as he rose to go into his private office. He stopped at the door. "I'll study it over," he said. "I have an experiment in mind I think I can work out with you."

11

TOMMIE HICKS changed his name and style of appellation from Tommie to T. Marmaduke in his senior year at high school in Salestown, a county seat in Senator Paxton's state, where Tommie was born and lived until he came to Washington. To be sure, nobody in Salestown took the change seriously and all his boyhood friends continued to call him Tom and Tommie, but in Washington he used T. Marmaduke for himself and found it was accepted without question. They are familiar with such things in Washington.

He was a delight to Senator Paxton, who saw in him undeveloped traits of demagogism that he was sure, with proper cultivation and conservation, would enable Hicks to gain a success in politics. Paxton hated demagogism but he enjoyed demagogues. He made friends with the fakers who came to Congress-and there were many of them-and took a huge pleasure in urging them to greater efforts for the relief of the common people and all the quackery that goes with the professional propaganda of that sort. It was a pastime with him, not dangerous, for at the time the Republican organization was so firmly in power in the Congress and in the nation that even the astute Paxton could see nothing ahead but years of uninterrupted rule for the conservative organization of which he was one of the leaders. Paxton had great private contempt for the people as a mass, holding that they allowed themselves to be fooled so easily that they deserved nothing more than they allowed themselves to get, and using as examples and proofs for his arguments various political charlatans who attained and held political place entirely by their charlatanism.

Hicks was a type. Even as a small boy he liked to be conspicuous and aspired to lead, and was indifferent as to the methods he used to gain his ends so long as he succeeded. He invariably proclaimed himself the leader in every hoyish enterprise, and often had force enough to hold himself at the front. He never went to a party without reserting to little expedients to make himself stand out from the other children at the gathering. At a picnic he was the boy who did the loudest shouting. He insisted on being the captain and pitcher at the ball games, and always had an excuse ready for his failure to pitch winning ball. If another boy swam farther than he did, Tommie, observing his defeat, immediately organized a cramp within himself and gasped with pain when he reached the shore. H another boy ran faster than he did, Tommie said his foot hurt. When he told his tales, with his companions not present, Tommie always caught the most fish, gathered the greatest number of hickory nuts, knew where most birds' nests were, and he never by any possibility acknowledged he was not entirely familiar with any topic of current boyish discussion.

A great egotist, he was not particularly offensive, even with all his proclaimed smartness, for he was good natured and affable. Moreover, he was smart. His mind was brighter than the minds of most of the other boys, and though he never did get the highest marks in his classes he always made the showlest recitals and never failed to take advantage of a situation that would lead to his own elevation in the classrooms of the school. He skimmed through everything he could skim through, claiming all there was in sight, but, if put to it, he often could and would make good his boasts. And he had a talent for publicity Thomas Wentworth Hicks, his father, a judge of a lone court, often looked at Tommie speculatively and wondered where he would come out. The father hesitated to guess. Tommie's sisters were awed by his showiness, as were most of the other girls of his age, and Tommie's mother shock her head over him and complained: "He's too smart."

Tommie continually thrust himself before his elders in the hope that he would get a few commendatory words. He listened to the conversations between his parents and the people who came to his father's house, storing in his retentive memory what they said, in order that he might show off later by repeating the wisdom of the comment to his boy companions and claim it for his own. He cultivated the big men of the village as much as he could, and hung about law offices and his father's court, trying to impress himself on the men who were there, and was supremely happy when some lawyer or merchant patted him on the shoulder and told him he was a "bright kid."

Tommie edged his way through high school along the lines of least resistance. He studied Latin and Greek because his father wanted him to, but he hated both languages. He was one of the first in his class to find out about the use of translations, and when they reached Circu and The Anabasis, after he had somehow mastered the intricacies of the readers and prose composition and conjugations and declensions, and had a dim realization of verts and their roots, he procured interlinear translations and often read from these books instead of from the text when called upon to translate in the class. His nerve carried him through. He found a book that contained the English equivalents for his composition work in these languages and used that instead of studying; also, at examination times, he resorted to these translations and boldly copied the answers to his questions, regardless of the fact that the students were supposed to be on honor. He was prominent in the literary societies, having taken great pains to be elected to the oldest and strongest one, and he developed himself into a rather fastidious dresser, wearing bette: clothes than his companions, and being the first boy of those of his particular set who donned a cutaway cost.

He was rather fond of feminine society, largely because he could make more of a personal impression on the young ladies than he could on the boys, who probed into his superficiality farther than the girls did; and he never lost at opportunity to associate with men older than he was, not did he fail to try to impress himself on them as their intellectual equal. There was a lecture course at the high school, and six or seven platform orators came each year to talk to the students. T. Marmaduke invariably sought out these lecturing stars and introduced himself to them. In his senior year he contrived to have himself elected manager of the course for that year, and he took great pains to meet the orators and always referred to them as his friends No man of prominence came to the village who was not besieged by young Mr. Hicks, usually with a request for his autograph, and led into a conversation that would enable T. Marmaduke to say later, in some company where he could make an impression: "I was talking to my friend, Mr. White. He's a member of Congress, you know, and he said to me

He showed an ability for florid oratory and, though be did not shine particularly in the debates of the literary society, he was much superior to most of his classmates in declamation. He could string words together so they sounded well, and his perorations always were flowery and usually cribbed from his father's set of Notable Speeches and Debates. His graduation oration was highly commended. It discussed The Trend of the Times eloquently and learnedly, and Tommie stole most of it from a bound copy of the Congressional Record he found in the office of a young man friend of his who was studying here.

He wanted to go to college and had selected Harvard as the institution of learning on which he would confer his talents; but his father died soon after the younger Hicks graduated from high school, and college was out of the question. Some years before he had decided to become a lawyer. He felt he had a talent for the law. Also he was interested in politics, and he knew that most of the politics of the country—the showy part of it, at least—is in the hands of the lawyers. So he entered the office of Judge William Percival Smith, the lawyer of Salestown, to study law, and after the proper period of apprenticeship to take his examinations and be admitted to the bar.

T. Marmaduke Hicks, aged nineteen at the time he began the study of law, was a tall, good-looking youth who had taken earnest and frequent stock of his personal attributes. He wore his hair long, brushed it back straight from his forehead and affected gay ties and clothes of extreme cut. When trousers were baggy T. Marmaduke's were baggier than any of the baggy ones worn by his associates; and when trousers were tight T. Marmaduke's were the tightest in the village. He went to the city as often as he could, and was the first to appear in a straw hat with a brilliant ribbon on it. He denied himself some necessities to buy a pair of patent-leather shoes with pearl-colored

tops, and he was the first young man in those parts to wear spats.

Hicks found the study of Coke and Littleton and Kent a tedious business. He much preferred the appearances he could make in the minor courts, and never failed to be at the courthouse when the various terms of court were in progress. He took his prerogative of sitting in the indosure devoted to members of the bar with a grand air, and became acquainted with all the lawyers of the county and with those from other sections who came to try their cases there. He had a smattering of legal phrases which he used on every occasion. He spent little time at his desk. His father left some money, and T. Marmaduke lived at home with his mother, who thought him the most wonderful person in the world and supplied his financial needs as well as she could, fondly looking forward to the tay when he should take his ather's place at the local bar.

The presidential campaign of 1896 gave Hicks a further excuse for neglecting his law studies and an opportunity or mingling in politics. He oudly supported the gold tandard, was vociferously for McKinley as against Bryan, erganized the young men of is village into a first-voters' :lub although he was not yet first voter himself, and wrote nany letters to state and sational headquarters telling if the good work he was doing for the cause." He proudly xhibited the replies he rexived, and by dint of peristent effort and many letters nanaged to secure a brief rommunication from Mark Janna himself, thanking him or the interest he was showng in the loyal endeavor to edeem the country from the Democracy, and, as Mr. Janna's note had it, "saving is from the ruin and disaster hat will inevitably arise if we dopt the heresy of free silver is preached by the enemies of he republic."

When there was a big speaker in the neighboring city he borrowed enough money from his mother to enable him to go to hear him, and he never came away without shaking hands with the orator and saying a few kind words for himself. He would loaf for hours about a hotel corridor awaiting a chance to edge up to a spellbinder and grasp him by the hand.

by the hand.

"Aw, come on, Tom," a companion said one day;

"what's the use of sticking round here just to shake hands
with that hot-air artist? He don't care anything about
you."

"I know that," Hicks replied, "but I care something about him." And he waited.

The speaker, who was Senator Paxton, came down into the lobby. Hicks rushed over and extended his hand.

"I am Mr. Hicks, senator," he said — "Mr. T. Marmaduke Hicks, of Salestown; and I want to shake you by the hand and tell you how much inspiration I get from your magnificent speeches."

The tired campaigner looked at this ardent young man curiously.

"Well, son," he said, "I'm glad you like 'em. What did you say your name is?"

"T. Marmaduke Hicks, of Salestown."

"Glad you like 'em," repeated the senator. "Come and see me if you ever happen to be in Washington." And he moved away.

"There," exulted Hicks to his companion, "you see what that means. He asked me to come and see him in Washington. Like as not he'll get McKinley to give me a big place after election."

"Huh," scoffed the other, "I can see him giving you a place! What a nerve you'd have to ask him for one."

Hicks looked at his friend compassionately. "Charley," he said, "maybe he won't give me a place, but you can bet your life it won't be because he won't have an opportunity."

"Do you mean you're going to ask Billy Paxton for a job?"

"Sure!" Hicks replied. "I'm doing a lot for McKinley and I know darn well that I won't get anything for it unless I do ask. Besides, he told me to come and see him." "Told you to come and see him," mimicked his friend.

"Why, I heard him tell that to forty other people."

"That may all be," assented Hicks genially; "but perhaps the other thirty-nine won't accept the invitation."

III

AFTER the election Hicks wrote another letter to Mark Hanna, recalling his own efforts in the campaign, but generously giving Mr. Hanna due credit. He received a short reply thanking him for his congratulations, a short letter signed with a facsimile signature done by a rubber stamp. Hicks carefully traced the rubber-stamp signature with a pen, giving it the appearance of an autograph signature, and showed the letter round Salestown as an evidence of his political acquaintance with Hanna. Also he wrote to Senator Paxton, congratulating him on his "noble efforts which had borne such glorious fruit" and saying therein that he contemplated an early visit to Washington, when he intended to call on the senator and congratulate him in person. The senator wrote that he always was glad to see his constituents, and Hicks carefully preserved that letter.

He had decided to go into politics, to get an office, to become a statesman. Judge William Percival Smith advised him to take up stenography and seek a secretarial position

first, and Hicks thought that might be a good idea. He stopped loafing, abandoned his law books and applied himself to shorthand. He could work when he wanted to, and he spent hours over his stenography and practicing on a typewriter. By inauguration time he was fairly proficient at taking dictation and had a good speed on the machine.

"Mother," he said at the dinner table one day late in February, "I think I'll go down to see McKinley inaugurated and call on Senator Paxton."

"That will be nice," assented his adoring mother.

"Probably," continued Hicks, "I shall not come back."

"Won't come back? Why, Tommie, what do you mean?"

"Oh, I guess I'll take some place under this new administration. Mark Hanna and Billy Paxton will get me a good job. I have letters from both of them, you know."

"Mark Hanna!" gasped his mother. "Do you mean Mr. Mark Hanna?"

"Sure, Mark Hanna; old friend of mine; fine old chap too. He knows I did a lot of work for McKinley."

"What place will you take?" asked Mrs. Hicks, gazing at her son in frank admiration.

"Oh, it's too early to say about that. Something good."

"Don't you let them appoint you ambassador," warned Mrs. Hicks. "I couldn't allow you to go away

off to a foreign country."

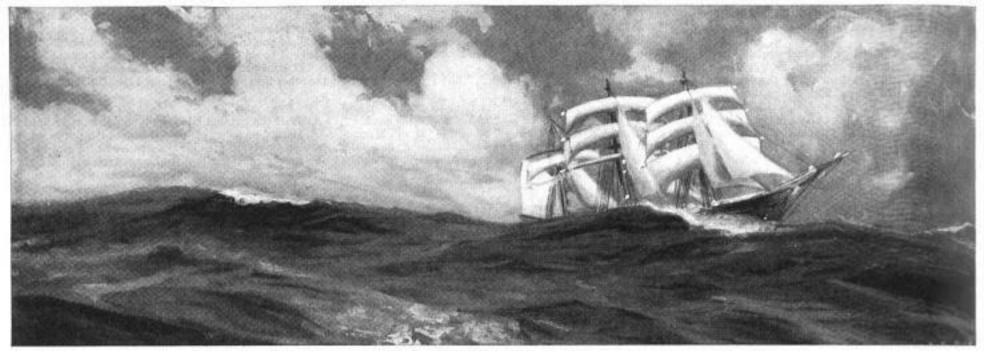

"Of course," responded Hicks, holding out his plate for another piece of pie, "if they insist on my taking an ambassadorship I suppose I would have to oblige. But," and he smiled across at his mother, "you needn't worry much about that, I guess. I'll pick out something, and put up such a fight they'll have to take care of me."

(Continued on Page 40)

Ne Came to Dinner Ten Minutes Late, and Made an Impressive Entrance

## THE SQUAREHEAD

For a Month the Palgrave Bucked the Westerlies

KRAGERÖ gasped in wonder when, as winter was setting in, Eric Sigurdsen returned to take away his widowed sister, Besla Svensen, and her little daughter, Hildigunn of the Sea Eyes.

Life in the Norse fishing village paused in amazement just to behold him. Many a son of Kragerö had fared out of its flord and gone down the Skager-Rack, but never had one come back like this.

It was hard to believe that this man of the world, with a diamond as large as a hazelnut on one of his ropelike fingers and another, its mate in size and refulgence, in his magenta satin scarf, was the tow-headed fisher boy who ten years before had gone away to sail on deep water. Kragerö saw nothing at which to smile in the ornateness of these gems—no incongruities; no bad taste in Eric Sigurdsen's apparel. It had no esthetic conscience to be upheaved by magenta satin ties and green plaid tweeds and yellow-topped shoes.

To the unsophisticated villagers these things were but the habiliments of the miracle that had happened; but what drew and held their imaginations above all his other belongings were a thick golden watch chain across his wide chest and, hanging midway on it, a nugget charm the size of a pigeon's egg. This chain and this nugget were symbols of the miracle. They were literally a part of the golden hoard he had wrested from the mountain breasts of California. That nugget was the first of his riches the earth had given him.

"As you see this nugget so I found it!" he loudly boasted to the oldtimers on the one night he spent with them in the inn of the Northern Light.

And for the most part they were old men, who awesomely passed the nugget and chain from seaworn hand to
seaworn hand. The past three seasons had taken heavy
toll of Kragerö. The youngest there was Olaf Greig; and,
being the youngest, it was to him that the nugget and chain
came last to beft and to admire; but without so much as a
word he returned them to Sigurdsen and his silence went
unnoticed, for the parting drink had been tapped and stood
ready. Otherwise the fact that Greig had nothing to say
would have occasioned no comment. This sea orphan was
not one to talk. Since the great fleet disaster two years
previously of which the lad was one of a handful of survivors, who owed their lives to him, he had come to be
known as Olaf the Silent. It was this disaster that had
widowed Besla Svensen.

"It's like one of the Edda tales—eh?" said Old Jon Thorsen a few minutes later, turning from closing the inn door on Sigurdsen and as he spoke slipping into his trousers pocket three goldpieces, which the miner had left in his knotted palm. A murmur of assent was answering him through the pipe-smoked atmosphere when his gaze picked up Olaf Greig in front of the hearth. "There!" he exclaimed, pointing at the lad. "Just as you see my smack partner now so I saw Eric Sigurdsen ten year ago! Standing that way at that very fireplace he was!"

All eyes centered on the boy at this. Olaf, his back toward the company, was staring down at the flames, lost in a study of their play. Against the yellow, leaping light his tall, sea-booted form stood out like the trunk of a young oak. Thorsen had to call him twice to bring round his curl-matted blond head.

"But Eric was never the makings of such a man when he was eighteen- never!" said the host of the Northern

Light, beginning the distribution of a freshly filled set of mugs, an installment of Sigurdsen's largess. A chorus of indorsement answered this comment, for it was known of all there that no man or boy in Kragerö, or for miles up and down the coast, was Olaf Greig's equal in strength.

In this moment the lad became aware that he was the subject of discussion. He shifted uneasily, self-consciously returned, with something of defiance, the drink-fuddled gaze of those who stared at him, and then, jamming on a storm cap, made for the street.

"Going home," was the answer he gave to Thorsen's query as to whither he went. He did not drink and nobody sought to detain him, but he paused a second in the closing of the Northern Light's door. Jon Thorsen was speaking.

"It's like it is in the Scriptures," was what he said:
"'Many are called, but few are chosen.' Eric Sigurdsen is
one in a hundred thousand. Aye, one in a million!"

Sigurdsen had left behind him at the Northern Light the price of much drink, and so it was not until an early morning hour that Thorsen tacked homeward. A blur of light from the window of a shack by the waterside, which Olaf shared with him, was his leading beacon; but this morning his partner was not sitting up with a book. By a candle's spluttering gleam he was putting the finishing touches to the rigging of a model brig, a dainty thing to be held in the palm of one hand. And an hour later, while old Jon lay snoring, Olaf stood on the quayhead waving goodby to Hildigunn Svensen—Hildigunn of the Sea Eyes—where she stood between her uncle Eric and Besla, her mother, at the rail of the steamer that was carrying them away from Kragerö.

The model was in the girl's hands, but Olaf could not see that her tears were falling on it like rain; the distance was too great. Besides, there was a mist in his own eyes, which had come there when he had put the little brig in her clasp and she had reached up and kissed him full on his broad mouth. With the exception of his Tromsö mother, whom he could not remember, this girl of twelve was the first woman to touch her lips to his.

Eric Sigurdsen had spent but two days and three nights in Kragerö. There were some who said they would not believe he had been among them if it were not that Besla Svensen and Hildigunn were gone and that so many had strange American goldpieces to show for it. His coming and going were like the passing of a comet, and like the passing of a comet he left old men and women nodding and whispering of the past; but also he left a boy stargazing.

Winter's hard clinch was loosening on Kragerö, its tattered white cloak drifting down the Skager-Rack, when a letter—the first he had ever received—came to Olaf Greig from Hildigunn of the Sea Eyes in far-away California. His blue eyes glittered as he spelled from the childish scrawl the message that she would never cease to think of him, and finally this tremendous sentence:

"Uncle Eric says that if you should come to California there would be work for a man like you. Come!"

In the hour that brought that letter Olaf found Jon Thorsen in the Northern Light and told him he was going away. And Thorsen said, as he had before:
"'Many are called, but few are chosen."
Eric Sigurdsen is one in a hundred thousand—in a million! Better stay here fishing, Olaf." And there he paused at what

he saw in the youth's eyes—that light of long, far-flung dreams that freezes the tongue of age. His last weak attempt at argument was: "How can you go? You have no money to pay for your travel."

"I'll go to the Golden Gate as a sailor goes—round the Horn!" the boy answered; and when May was yet young he had found him a California-bound ship, an Englishman, and was sailing out of Newcastle-upon-Tyne.

On the last day of July at midnight he was stamping his feet in the forecastle of the Falls of Dee and beating his arms round his body, like the rest of his watch, in an endeavor to make the blood flow again in frozen toes and fingers. For six weeks the Falls of Dee had been trying to weather Cape Horn; for six weeks she had been bucking the dreaded westerly gales of those latitudes; for six weeks the voices in her had been lifted in blasphemy—but never once had Olaf Greig complained. He was smilling now what all his mates were cursing their lot with gall-steeped tongues.

tongues.

"What makes you smile—eh?—always as at a joke!"
demanded an old cockeyed Swede who, during these hard
times, had more than once marked the unvarying happiness of the boy's expression. And, foolishly and youthlike,
boasting, Olaf answered, using his own Norse tongue, for he
knew little English:

"I go to sea no more after this. In California I go to work in the gold mines."

With a scoffing laugh the Swede translated this to the forecastle and the forecastle remembered it.

Suddenly one September midday Olaf Greig saw the land of his dreams ahead. He saw it from the highest point in the ship—from where he had been sent to reeve the halyards for the Falls' house flag. Standing on the main-skysail yard, with an arm round the bare pole, and swaying with it as though part of it, his eyes snatched it to him. And of a truth it was a golden land. The Marin Hills and the Coast Range, which loomed up at the end of the vista formed by the gleaming Gate, had already put on their autumn garb. With the sun shining through a shimmering haze on this brown dress, they seemed, in fact, burgeoning of the yellow riches of which the watcher had come to ravish them. Nor as the ship sped landward did the

likeness grow less.

"Won't Hildigunn be surprised, and Besla and Eric
too?" he was repeating for the twentieth time in his excess
of joy, when a hail from the deck started him descending.

As he reached the crosstrees, his eyes cast down, he sailor and waterwise though he was, paused in fascination of such small boatmanship as he had never believed possible. Little open craft, some carrying two and other three passengers, were reaching up to the lee side of the Falls of Dee and fastening to it with long iron hooks. For a second one of the narrow cockleshells would ding to the huge surging hull, risking destruction, courting death, and in that second deliver an occupant or two over the ship rail. The next instant the cockleshell, apparently fit only for a summer lake, but now ten miles from land in the deep sea, was safely trailing astern at the end of a long line attached to its iron hook. It made Olaf's sailor blood hat

with admiration. This was a great country to which he was coming-a marvelous land, indeed, whose watermen could do things like that!

Some of the strangers ran aft to where the captain stood beside the pilot, and the boy saw them force cards into his hands. One knocked another down. He guessed they must be traders, the Yankees who, Jon Thorsen had told him, could outwit a Stockholm ship chandler; but he had no more than a moment of his wonder to give them. Another cockleshell was riding almost flush with the Falls' rail amidships. In the instant that he caught his breath, expecting to see the boat crushed, a man in such a garb as government folk wore in Norway—a long black coat and a tall, shiny hat-leaped aboard. And he had just time to mark that this man landed on the deck with an ease and lightness that none of the others had shown, when a hail from the mate stopped his descent and sent him climbing aloft again to furl the slatting skysail.

Once again in the hour that followed the boy glimpsed the man in the tall, shiny hat talking to the captain on the peop. And he could not know that this person, whom he took for somebody of importance, was Bull Wilson, king crimp of the port; but, even had he known it, he had no time or interest to give to what went on below him. There was the welcoming land for an eye feast and the furling of

many sails for his hands.

Not until the ship lay anchored in the stream off San Francisco did Olaf's feet touch deck again. As he swung out of the rigging, drunk with the drink of his dreaming. the man in the tall hat and frock coat met him and, more wonderful than all, hailed him by his own name.

"Yuh bound fer th' mines-eh, Greig?" he asked in English, only to repeat the question immediately in a

bastard sort of Norwegian.

"Oh, jes-jes, sir," stammered the boy, removing his cap and not daring to look above the diamond sparkling in the middle of Bull Wilson's blue necktie. "Ay go bay Eric Sigurdsen's—bay Coffee Creek in day County Trinity."

"Right enough!" And Bull Wilson pretended to read from a card: "Got yuh on m'list. I'm Sigurdsen's agenthis labor agent. Yous is de kind dey need in de mines!"

The kindly pat on the shoulder that accompanied the last brought Olaf's abashed gaze up to Bull Wilson's face, but he did not mark then its thin, cruel lips, or the small, crumpled ears—cauliflower ears, prizefighters call them. This important person was simply a part of the whole wonderful golden scheme of things that was enmeshing him.

"'Ere, me square'ead pal, 'ave a wipe!" cut in a Cockney sailor, reeling between them and pressing a whisky

fask to Olaf's lips.

The boy gave the sailor a push that sent him twenty feet. It was an exhibition of strength that brought a low whistle from the crimp; but there was no time to be lost.

"Come! Over de side wid yuh, me lad!" he urged. "It's all right! Yuh dunnage's in de boat. Quick-'fore de skipper comes for ard an' stops yuh!"

There was no danger of interference from that quarter, hough, for it was money in the ship's pocket to let the

rimps take her sailrs; by their deserion all they had arned on the passage out would be forfeit to her. And, enger to put foot on the hore of his dreamand, congratulating imself that he was so soon and so easily to scape the vessel on which he had signed intil she should each England again, Maf Greig dropped wer the side into one of the Whitehalls he ad admired so much itsea. The Cockney was already there, and with him was he cockeyed Swede.

"Ay got a yob bay lay mines!" cried he Swede at sight of laf. "Ay goan to nake fave tollar a lay too!"

And thereat the oy's imagination eaped. Five dollars day! That was wenty kroner! For me day's work in his land of gold ie was to receive as nuch as a month in he home fisheries grought!

As these figures raced through his brain the boat passed under the stern of a big merchantman at anchor and so near that he spelled her name and port—the Seafarer, of London. By the few men he saw aloft bending sail and by her deep lading he knew her for an outwardbound, and his heart was stirred of pity for her and her sailors. They were going away from the golden shore! Why could not they know enough to stay?

That night, as the city clocks struck ten and the bells in the harbor echoed the hour, Olaf Greig stood against the bar of Bull Wilson's boarding house, the Bowhead, gazing into the blue eyes of Olga, the crimp's wife. They were

alone. The few whom drink had not put to bed on the floors above had gone seeking adventure along the adventurous Barbary Coast. For nearly an hour this woman had held the boy in conversation, held him by an attraction with which he had never yet reckoned. He thought he liked her and that his heart had opened to her because her hair was yellow and her eyes blue, and because she was the daughter of a woman of Tromsö, which was his mother's birthplace.

Often, as he talked or listened, his eyes went to the street door expectantly; for when Bull Wilson had gone out he had told him that it was to purchase the railroad tickets to carry him and the other sailors to the mines in Trinity County. And always the woman's eyes followed the boy's, but not with expectation of her spouse's return. Suddenly she leaned far across the bar, the light of a strange desire in her face.

"You are a pretty boy, sailor—do you know that?" she laughed tremulously, and one of her hands closed on his. Olaf reddened; his breath caught at the insinuation.

With a feeling akin to fright he drew his hand away. The woman frowned; and then, laughing tremulously again, she whispered:

"I believe you now-that you've never touched a woman's hand before."

There was hardly anything Olaf had not told this slattern Circe about himself, even including that. And as he was struggling to save his senses from the spell that was closing on them—he felt like one who had been under water too long—the street door banged open and Bull Wilson entered.

"Come, sailor!" he called, ignoring the woman and signaling the boy to follow him into a dimly lighted hallway

that led toward the rear of the Bowhead.

"Don't go with him!" Olaf thought he heard the woman whisper; but, without fear and glad to escape her, he obeyed the crimp.

With the utterance of that warning whisper, Olga Wilson hesitated a second and then stole from behind the bar and into the hall after them. She overtook her husband as he bade Olaf enter the silencing room, a dim, gaslit, sound-proof hole the ice-chest door of which stood open on his right.

"Please, Bull!" she pleaded. "Don't do him up!"

"Gwan! Beat it! You're soused!"

"He'll shanghai you! Run! Run!" she shrieked at the boy in his own and her mother's native tongue; and her arms encircled her husband's.

"I'll Go to the Golden Gate as a Sailor Goes -- Round the Horn!"

At this warning Olaf Greig instinctively leaped toward the door, only to pause as he saw one of Bull's fists strike the woman and fell her. In that instant all the chivalry of youth lighted the fire of a consuming, berserk rage. And above the roar of this blaze he heard the primitive racial call. He was Norse. This woman was Norse. Her mother, like his own, had been a Tromsö woman. With the cry of a wild beast he flung himself at Bull Wilson who, sneering as had been his wont in his prize-ring days, certain of the outcome, calmly waited to receive the attack.

There could have been only one result of that clash. The skill of fist, the brain cunning, the cold blood, that had made Bull a champion of champions, were still his despite his forty-odd years of age and long retirement. He ground the Norse boy as a mill grinds grist. Thus it happened an hour afterward that

Olaf Greig, triced hand and foot, and unconscious, was sold, with the Cockney and the cockeyed Swede, across the main hatch of the Seafarer, of London, the ship to whose people his heart had opened in pity only that afternoon. And thus it happened that as this Liverpool-bound merchantman cleared the Gate in the morning light it took the strength of her three mates to prevent this squarehead from jumping overboard and to tie again the hands and feet they had loosened to put to work.

Toward the end of the day the captain and chief mate, with pistols in hand, freed him again and lifted him upright where he had been lying prone beside the hatch on which he had been sold. He was dazed; his strength was spent. His limbs trembled under him. A handshove would have toppled him over; and, realizing this with something of shame, his masters put their weapons away. As they pocketed the pistols a lurch of the ship dropped him on his buttocks. He did not attempt to rise. The shock sent his bruised and swollen hands to his chest, which gaped black-and-blue with heelprints through his rent shirt. From the chest they went uncertainly to his raw face and finally

clasped his rocking head; but he uttered no sound, not even when the captain leaned over him anxiously and, with no tender hands, felt of his ribs and his limbs for breaks.

"Seems all right," he announced, finishing the examination.

"But we'd better not turn him to till morning, sir," suggested the mate doubtfully; and with that, their voices sunk to a murmur, they went aft together.

Where they left him there he continued to sit until, of a sudden, the breeze freshened and bore down the vessel's lee rail to an angle that revealed a low, indefinite shadow along the ocean's rim to the eastward. That shadow was land. It stirred Olaf's bewildered, groping brain-gave it something to fasten on.

Slowly, painfully, he rose to his feet, and as he reached

A Week They Had Been Fighting Their Way Toward the Land

his full height his face came on a level with a glistening, brass-bound glass port in the house at his side. In its mirroring surface he saw himself, and the memory of what had happened returned like a floodtide—engulfed him. That receding coast in the distance was the land of his dreams!

His blackened eyes leaped toward it. A low moan escaped him, and as his puffed lips shut again the setting sun's blood-red disk dyed sea and sky and coast a crimson hue. A reddish glow shot through the sails of the ship. All the world was incarnadine, even as was the soul and brain of Olaf Greig. In that moment he was ten thousand of his Viking ancestors aflame with blood lust—an unquenchable desire of vengeance.

"I will come again! I will come again!" he swore, his right hand uplifted in witness. By the gods of his heathen forebears he swore it—by Frey, by Njord, by Odin! By Odin's ravens of thought and memory, Hugin and Munin, he dedicated himself! The Christian God of his own childhood had departed from him.

Barnacled, foul of bottom, undermanned, the Seafarer made a long passage home. It was the end of September when she cleared the Golden Gate. March was a week old when she went up the Mersey. As her last mooring line was made fast a blond-headed young giant known fore and aft as the Silent Squarehead went over her side, alone and penniless. Under one arm he carried a thin bag of clothes purchased from the ship's slop chest. It represented his part of the earnings for the half-year's toil. The rest had gone to make up the blood money the ship had paid Bull Wilson for him.

Twenty-four hours later Olaf Greig was outwardbound for San Francisco. Three months' wages he had signed away to a Norwegian boarding-house keeper for the chance. What manner of ship the Palgrave was mattered not to him. She was bound toward the Golden Gate. That was sufficient. He had not paused to write so much as a line to Jon Thorsen. Eric Sigurdsen, Besla Svensen, Hildigunn of the Sea Eyes—all in Kragerö might never have existed; in fact, there were only two persons in the silent red world in which he was living now—himself and Bull Wilson.

The one link that connected past and present was little Hildigunn's letter, now a year old; but no tender thought, springing from the days when she had called him Olaf the Happy, prompted his keeping the blood-stained scrap of paper. It was the symbol of his oath, the silent acolyte of his terrible passion. It was the one thing Bull Wilson had not taken from his pockets the night he had beaten him and sold him as they sold cattle at the

Summer, the season of his own Northern summer, but the wintertime of the South, found him again off Cape Horn in an ice-sheathed ship. For a month and until her foremast went by the board the Palgrave bucked the westerlies. Then she put back to the Falkland Islands. August saw her at last enter the Pacific. A September hurricane took her three topmasts from her to the west-ward of Valparaiso. A wall went up from her forecastle.

Kragerő fairs.

"This iron bucket'll never fetch Frisco!" proclaimed an Irishman the morning the ship's head was turned toward the Chilean port to seek repairs.

"Jes, we goan come bay Frisco in good time," said Olaf solemnly in the broken English that was now his. And for the rest of that day the forecastle had something else besides ill luck to talk about. It was the first time that anybody there had ever heard the Squarehead—thus was he called as he had been on the Scafarer and on the Falls of Dee before her—say more than Jes or No.

More than half the crew deserted in Valparaiso, but Olaf Greig was not one of those. The Palgrave was bound toward the Golden Gate. She would have been sinking before he could have thought of leaving her. The Palgrave finally would carry him to where his enemy lived and trafficked; sooner or later she would set him down there, and then—

With his bare, unweaponed hands he planned to wreak his vengeance, and the broad day was to look on. And after he had benten and trampled Bull Wilson as the crimp had benten and trampled him, and broken across his knee, as one would break a stick, the arm with which he had struck the woman who had sought to befriend him—that was to be the last

The plan went no further than that. There was no afterward-we reckening

of consequences. The death of his enemy would be the end—that was all. The course of his passion was like the irresistible motion of one of his native glaciers. Of the law, of what might happen to himself, of the possibility of his own death or life, he held no comprehension. That accident or death, or any other agency, might remove the boarding-house master from his vengeance never suggested itself.

After two months' delay in Valparaiso the Palgrave sailed a third time for her destination. Baffling winds stayed her passage through December; contrary gales beset her in January. It was on November second, nearly eight months out from the Mersey, that Olaf Greig, on the lookout at daybreak, sighted the Heads of San Francisco. And though they loomed up gray-browed and white-toothed under the onslaught of a westerly storm, he nevertheless strained his eyes to discover a small boat carrying a man with a tall, shiny hat; but no boat came off from the land to board the Palgrave. No small boat could have lived in the sea that was running.

Not until the ship lay anchored in front of the hillsprawled city did the crimps and their runners appear; and as he realized that Wilson was not among them something akin to doubt assailed his passion. It began to pass in a moment, however, for the second man to solicit him and offer a flask was a Wilson runner. Olaf wanted to ask him where Wilson was, but he dared not. He was fearful his purpose might be guessed. He remembered nearly all the runners, but the fact that they did not recognize him made him suspicious. Perhaps this was but a pretense on their part; so he got another sailor to make the inquiry, and when this man brought him word that Bull Wilson was not only alive but more prosperous than ever the Squarehead scuttled into the ship's dark sailroom and sat there alone for nearly ten minutes. As suddenly as he had disappeared from the deck he reappeared and, going up to Wilson's runner, said:

"Ay go ayore veet you."

Without a belonging he went over the rail into the Wilson Whitehall; and, seeing him do this, the Palgrave's skipper and her young chief mate could not believe their eyes. They had a warm feeling for this Norse blond head, who had stuck by them and the ship with an incredible loyalty. They hailed him from the poop, beckoned him back, shouted warnings against the crimps; but his only answer was a dogged shake of the head.

And the runner, fearful that this sailor might change his mind and demand to return to the ship, signaled the boat puller to lay to his oars the while he patted the giant familiarly on the back and whispered him ruby promises. The runner knew that he had accomplished a feat worthy of Bull Wilson himself—the pulling of this seaman out of a ship that owed him eight months' wages. He had done something to brag about in this season when the whaling fleet was paying a bonus of two hundred dollars a man but in the glow of his artistic pride—and let it not be fergotten there is art in all things—he did not mark that this squarehead listened with no eagerness to his panderer's tongue. Silent, grim, his jaws clenched, his hands locking and unlocking where he held them between his cramper knees, his eyes half shut, his head nodding now and then Olaf sat until they reached the shore.

"Take it from me, sailor, yuh'll git a real welcome at de Bowhead," said the crimp, exhausted by Olaf's silence. As he spoke he was hustling his game into the covered wagon that awaited them at the boat landing. "Bull Wilson' de man tuh treat yuh right."

"Jes," assented Olaf, taking a seat on the bottom of the wagon and letting his legs hang over the tailboard. He ame Crocky, the runner, were the only passengers, but with decisive shake of the head he refused to ride beside him of the driver's seat. It was thus he had ridden the first time through San Francisco's crowded downtown streets to the Bowhead. He remembered how easily he had alighted a the wagon had backed up to the curb in front of the boarding house. He wanted to be in readiness to spring. This was one of the things he had thought about in the darkner of the Palgraye's sailroom.

The wagon had made half the distance from the water front toward the Bowhead when a messenger boy, with bundle, attempted to crawl up beside the man on the tail board, missed his footing and fell sprawling. Hurt in spiteful, he picked up a stone and hurled it straight: Olaf. It clipped the Squarehead cruelly on the chin and drew blood.

"That rat hit yuh, sailor?" called the driver, pullir up and looking back to where Olaf sat as motionless as cigarstore Indian.

"Naw," he answered, his gaze balefully fixed on the be running round a corner. Nothing must delay him not and, as he wished it, the driver whipped up his hor again.

And five minutes afterward the wagon stopped sudden and began backing. It was in front of the Bowhead, as standing in the open door, with his silk hat acock is shortly cropped gray head and a larger diamond than evin his blue-striped shirtbosom, was Bull Wilson. He wsmiling the stage smile with which he was wont to me that covered wagon when it returned from a ship. As t

vehicle's end squared with the curb advanced on it. In the second that put out his stage hand of welcome human avalanche, uttering a wild, articulate cry, launched itself at him.

A quarter of an hour later—not more Bull Wilson was kneeling beside the a conscious form of Olaf Greig where it! on the floor of the room with the ice-ch door. At his side, watching what he d stood Olga, his wife, and Crocky, a runner.

"If he'd ever landed on me once! dat," said Bull, shaking his head," der have been a wake in de Bowhead t night!"

He was holding up the limp arm i which he had just driven a hypodermi morphine. It was bare to the should Below the elbow it was of the his bronze; above as white as Parian mar Michelangelo must have had sud model for his Moses. But it was its pacity of terrific strength, not its be tiful formation, that made Bull Wilrun a hand lovingly along its length

"Gee, what a pile driver!" he claimed in admiration, patting the round biceps. "Wid half a head an's like dese dis squarehead cud clean u Nigger an' Jeff an'a couple o' John-N in a night—make'm all look like t' cents! Take a pipe at dat chest!" pulled back the torn front of Olaf's sl "It's a hunderd-gallon bar'l!" T with a sigh, he dropped the arm a standing up, added: "An' tuh the's jest a plain nut!"

"What's gettin' me, though," cu Crocky, "is, what set him nuts on y Bull? Sure yuh never seen him—n handled him?"

"Maybe I've handled him. I du

With the Cry of a Wild Beast He Flung Himself at Bull Wilson

# The National Pastime—Indoors and Out By CHARLES E. VAN LOAN

A BASEBALL fan would be all right if he could forget it once in a while. Whenever I meet one I'm reminded of that line in Huck Finn—"Harmless when not out of his head."

A fan is usually a good fellow; but he can't understand that the man who plays baseball for a living doesn't want to eat it, drink it, sleep it and talk it. I suppose I've met thousands and thousands of fans, ranging all the way from true sports to the rednecks who want to lynch you for kicking away a close game, and not one of 'em would ever let me talk anything but baseball. I try to be polite to 'em, because it's better to have boosters than mockers sitting over beund third base; but the ther day I handed a fan i jolt that he'll remember or months.

He was a nervous little arty with noseglasses and whiskers which he weeded all the time with one hand.

The whiskers prejudiced me against him at first, because I've ever been able to figure out why a man should go to a lot if trouble to raise a crop of hair on his face when it grows wild on the top of his head. I met him on a street car.

"Excuse me," says he, edging up alongside, "but you're dike Purcell, aren't you? I've watched you play ball for o long that I feel as if I know you. The very first week ou joined the club I said to the boys: "There's a shortstop or you!" It's hard to fool me on a ballplayer. I can tell a tar as far as I can see him."

Well, that was fair enough. I'm always willing to listen o any man who starts in by telling me how good I am. ome of the boys pretend they don't like that sort of stuff; ut, take it from me, they do. Whiskers handed me his ard and it turned out that he was a statistician or somehing with an insurance company. Figures were his long nd heavy suit; and, say, he certainly had 'em trained le could make 'em lie down, roll over, double up, and arch in a column a mile long; but the best thing he did as to string 'em out five points beyond the decimal.

He passed me a line of talk so full of figures that it bunded like a census report. Part of the time I was treadig water and the rest of the time I was coming up for air. "he best I could do was to look wise and nod my head noe in a while. He had a new system of figuring fielding verages that would be a wonder if anybody besides imself could understand it. By and by he started in to emonstrate to me just when and where we won the World's eries from the Panthers. He was so darned sure about it int I had to break in on his argument.

"No," says I; "your dope is all out of line. We licked to Panthers the second week in September."

"Eh?" says the human multiplication table, digging into is whiskers as if he wanted to pull 'em out by the roots. But the World's Series was not played until October!"

"Right you are," I says; "but, even so, we licked the anthers in September. If you're ever in St. Louis go to the Transcontinental Hotel and you can see the table that the World's Series was won on. It's in Room Three-meteen."

"Table!" says he, rooting into his whiskers harder than

"Mahogany table," says I, "with bum legs and a

Then I got off the car and left him standing there, teasing s whiskers with both hands and trying to make up his ind which one of us was crazy. Unless he reads this he'll ever know that he was being tipped off to some inside

That World's Series was decided a month before it was ayed, and it was won on a marble-topped table in Room hree-nineteen at the Transcontinental Hotel, in St. ouis. Here is the story:

We needed another winning pitcher. I've never yet seen the ball club that wasn't in the same fix. Winning pitchers can't be bought—they must be developed. They can't be bought because the mints don't work nights. There isn't enough money in circulation to pay for one. If you think this is a joke ask to see the price tag on Matty or Walter Johnson.

We not only needed a winning pitcher but we had to have one or drop out of the first division. We had three good men in Jim Ainslee, Tod Sholter and Myles McNabb; but McNabb—the best one of the trio—was getting old and he could work but once a week. That left a gap in between, and to fill it we had only Ainslee, Sholter and a flock of has-beens and never-was-ers.

We needed another good man the worst way; and it was up to Silvertip Jamieson, our manager, to rustle up one if he expected us to have a fighting chance for the pennant. He turned the ivory-hunters loose, with instructions to go the limit.

It is remarkable what a number of pitchers a few scouts can scare out of the tall timber between the Twilight League and Southwest Texas. A scout is a good deal like a detective—he thinks he's got to find something or the boss will accuse him of laying down on his job. If he can't find the real thing he digs up a counterfeit and gets credit for being busy.

Pitchers came rolling into the training camp by the carload, and some of 'em couldn't be trusted to pitch hay into a barn. There were tall ones and short ones, fat ones and thin ones, righthanders and lefthanders; and there was one foolish boy from Oklahoma who pitched with either hand and called himself The Amphibious Wonder.

Fatty Fitzgerald, our retired catcher, who does nothing now but coach young pitchers, gave the bunch the onceover and roared like a lion.

"I want a commission in lunacy to sit on these scouts of ours," says Fitz. "The pitchers they have shipped us so far are worth about seven dollars a ton on the hoof."

One recruit pitcher reported late—a long-legged, lopsided Shanghai rooster of a kid named Doty—Maxwell Doty. I think one of the scouts caught him in a beartrap somewhere in Wyoming. He had all the earmarks of a farmer and he walked as though he was used to following a plow; but, suffering centipedes! How that kid could pitch!

He had an audience the first time he began to warm up and get the kinks out of his arm, and before he started for the shower room the jury was for him sixty ways. It seems that he had been working some all winter and his arm was in first-class shape.

His fast one was better than Jim Ainslee's best and had more of a hop to it; and he knew where his slow one was going when he cut it loose.

Give a man a good fast ball, a good slow one, and absolute control of 'em both, and there isn't much more to it - except, of course, the heart and the head. It's necessary for a pitcher to be game and he ought to be able to think every so often. We didn't know much about Doty's heart, and his head was shaped too much like a turkey egg to suit me; but he seemed to have everything else that he needed. After the third day with Doty old Fitz was going round with a broad grin on his face.

"If this fellow's nerve is all right," says Fitz, "we've got a winner sure. It don't make any difference whether he's a pinhead or not—the catchers can do the thinking for him. All they've got to do with that boy is to show him where they want him to put the ball. I can give him a sign, shove the mitt down and shut my eyes—bang! right into the cup every time. If

he can keep that control—even when he's scared—he'll be all right. A whole lot depends on the start he gets. Let him lick a few second-division ball clubs and get confidence, and after that you can shoot him at the tough ones. Yes, sir—he looks like a million dollars to me!"

It's queer about pitchers—you never know when a star is going to turn up or where he'll come from, though it's a safe bet that it will be some little whistling station that nobody ever heard of. The best pitchers in the world come from the small towns—very few of 'em are big-town boys. Every so often a kid is born with the ability to throw a stone where he wants it to go—the rest of it is training and practice, though all the training and practice in the world won't make a pitcher unless he's born to be one.

It took Doty some time to get acquainted with the gang. He was the most bashful chap I ever saw in the beginning; but the boys didn't josh him much. We all wanted him to have the best start possible. A pitcher is bound to go a lot stronger when he knows that the men behind him are his friends. If Doty had been an infielder, say, trying for somebody's job, it wouldn't have been made so easy for him; but he was a pitcher and we all knew we were going to need him. It makes a difference, you bet!

At the training camp Doty used to come up to my room and look on when we played poker. He would sit on the bed for hours and never say a word. Once we asked him whether he wanted to play, but he blushed and shook his head.

"I don't know enough about the game," says he; "but I'm learning. By and by I'll be able to give you boys a whirl."

That tipped us off that he was broke and wouldn't have any money until the season opened. It was a cinch he wouldn't have any too much then, because it's only the pitcher with a strong minor-league reputation who gets a chunk of coin out of his first season in the big league. Doty had no more reputation than a rabbit and nobody had ever heard of him. As a matter of fact he signed for two hundred dollars a month—and I'll bet he thought it was a lot of money.

H

WE OPENED the season away from home and Silvertip kept Doty on the bench for quite a while, waiting for something soft. In addition to that he wanted him to get used to the crowds and the noise. We all took turns shooting confidence into him, because we wanted him to win his first game. A licking right off the reel might have set him back a whole season. You have to figure all these angles with a green pitcher. There's nothing in the world like a good start.

When we got up against the Canaries—the weakesthitting team in the league—Silvertip turned Doty loose on 'em.

"If he can't beat these lizards," says the boss, "he can't beat anybody! If he does beat 'em he'll feel just as good over it as if he'd trimmed a sure-enough ball club."

Doty won his opening game all right enough; but, at that, there was some credit coming to us. We stepped up there in the first half of the first inning, before Doty even took the ball in his hand, and we whaled in four nice juicy runs-and that's the stuff that puts heart into a pitcher.

Pitching winning ball for us isn't like doing it for a weakhitting outfit, where a pitcher knows before he starts that he's got to be fifty per cent better than the man he's up against in order to get an even break. We wallop the ball behind our pitchers, and when we start hitting we generally go right down the line. Our twirlers walk into the box with a certain amount of confidence. They know they're going to have help in winning the game, and a run or two by the other folks won't lick us.

We staked Doty to four aces, and the kid pitched like a veteran. The Canaries got him in the hole twice, but Monk Mundon, our first-string catcher, steadied him down with a little talk; and Doty braced up and pitched himself out of trouble in a way that was beautiful to see. The Canaries got only five hits off him, but they didn't even get foul tips when men were on the bases. Monk called for the fast one,

up round the neck, and Doty put it therea white streak under the chin. They didn't score on him and nine of 'em fanned. It was a happy bunch that went to the clubhouse after the game. It was a toss-up as to who was the most tickled-Silvertip, Fatty Fitzgerald or Doty himself.

The kid said the big league wasn't as tough as he had expected, and that was taking quite a lot of credit for licking a lot of cripples; but we let him get away with it. We told him that so long as his fast ball was working, shoulderhigh and inside, all clubs would look alike to him. It annoys a batter quite considerable to have to pick a ball off his ear and hit it

somewhere. That was the beginning of Doty's winning streak—fifteen games in a row and nine of 'em shut-outs-and there's no telling how far he would have gone if we hadn't booted the sixteenth away behind him. He let the Game-

cocks down with three hits in eleven innings, and we lost by a two-to-one score.

All the sporting writers in the country had hysterics trying to dope out how a raw kid, with about as much intelligence as a rabbit, could go on licking the best-hitting clubs and the wisest heads in the league game after game. They haven't explained it yet; and the only point where they all agreed was that Doty didn't have any license to do it. Any fool could have told 'em that.

Some of 'em took to analyzing his pitching motion and printing photographs of the way he gripped the ball. If they could have found out where he was different from other pitchers they would have laid his winning streak to that peculiarity. I think they were all bark-

ing up the wrong tree. I've studied Maxwell Doty just like a kid studies a new monkey in the zoo, and I believe the secret of his success as a pitcher isn't in his right arm at all, but in his number sixand-five-eighths head. He wins baseball games because he thinks he can. There's a whole lot in that. Take it from me, mental suggestion works on ballplayers just the same

as on other folks. I'll grant you that Doty can put a lot of stuff on a baseball; but so can Billy O'Dayand Billy hasn't won a game this season. He's afraid he's

going to be licked-and he is.

Take another instance of what mental suggestion will do for a ballplayer: Jack McShane, our pinch hitter, used to play regularly until his legs went bad. He never hit over .270 in his life. Silvertip asked for waivers on him, and while Jack was waiting on the bench the boss sent him up three times to hit in the pinches. Jack peeled off a double, a triple and a home run. He's getting four thousand dollars a season now just for going to the bat two or three times a week—and he's worth it. He can't field a ball to save his neck; he can't outrun an applewoman; and he's not even a good coacher, because he is mostly bone upstairs—but how he can belt 'em in the pinches!

There isn't a pitcher in the league who doesn't hate to see McShane come up out of the pit, dragging his big black bat behind him. Why? Because deep down in his gizzard Jack really believes that he's got something on the best pitcher that ever lived. He thinks that Matty himself isn't able to throw him a ball that " it on the nose. He's so sure of it that he isn d the way o the fence

a do all the

enods.

he can look at two and to is a caution! His syste worrying. Three time Explain it? I can'

Doty is another Jack McShane. After he had licked three teams in a row he got the notion jammed crossways in his little teacup of a head that there wasn't a club in the league that could beat him. He had it settled in his own mind that the batters were more afraid of him than he was of them, and that's a mighty useful idea for a pitcher to have. It keeps him from choking up when the bases are loaded, the count is three and two, and the next one has to be over.

Call it confidence if you like; it's really a deeper and stronger feeling than that-more like what the nut specialists call a fixed delusion. And what difference does it make whether it's a delusion or not, so long as it produces effects and wins ball games?

The thing that you're afraid of is the thing that will get you in the long run every time; and they say that where there's no fear there's no danger. I can't go so far as to indorse that last statement in full, but this much I do know: Doty isn't afraid of the most dangerous batter in the league. I've seen him stand up there, three and two on the Dutchman, and the bases loaded for bear, and laugh at Honus as he let the big one fly.

It's a queer proposition all round and I don't pretend to understand or explain it. I've looked at it from several

"It's Hard to Fool Me on a Ballplayer. I Can Tell a Star as Far as I Can See Him"

angles, and I've come to the conclusion that mental suggestion works better on a fellow with just room enough in his head for one idea at a time. I've tried it on myself, but it didn't get me anything.

I can't hold a thought in the face of a lot of other notions when they come crowding in. I can go up there to the bat with my mind all framed up for a hit, but I get to thinking about the amount of stuff the pitcher has got on the ball and double plays and infield flies and blind umpires—and the original thought gets lost in the shuffle. In the end I have to dlg my spikes into the ground, grit my teeth and pray for luck.

WHILE Doty was winning ball games he was losing out at the indoor national pastime. We got our first paychecks in Boston, and as soon as he could get his cashed Doty was right on the job, hunting up poker games.

Silvertip isn't so cranky as some managers. He knows that, rules or no rules, a certain amount of poker is sure to be played. He bars a table-stakes game, but with a decent limit and eleven o'clock as the deadline, he never says anything. I've heard that before he was married he paid better salaries than he does now-and got most of the money back in the poker games.

Doty went hunting for trouble and he found it. It wasn't exactly the sort of a game that an amateur would have picked out. There are some fairly tight poker play with our clubs-sure-thing boys who can wait all night the cards to come, and bet 'em good and hard when t do arrive.

I've heard that I play 'em pretty close to the cl myself-but I've got to do it, with Walker, Owly Elliott Jib Smith in the game. Those birds won't spend a w chip to help out a short pair; a raise before the drawme aces-up or better, and when they begin tossing in the and blues afterward you can put three kings back in deck without regretting it in the least.

This was the sort of a contest that Doty picked out himself. A lamb in a slaughter-house would have sto better chance. We sold him a ten-dollar stack and it la him almost as long as his cigarette. The poor boob alv wanted to see the next three off the top of the deck; : to make it worse, he had a notion that everybody was tr to bluff him. Then, when he got off loser, he went cr

There are a few baserunners in the league who will: down from first on anything. We say they run hogo Doty was a hogwild poker player. When he was losing which was pretty much all the time-he would draw cards to an ace, back-raise on a pair and call with any thing whatever. That system will break a Rockest

for, though you may catch a man blu once in an evening, the rest of the time

likely to have 'em.

Just to make it more binding Doty cou get rid of the notion that poker is me luck anyway, and that it's the cards you for in the draw that do the work. U certain conditions there may be an eleme luck in the game, but in the long run. playing with a bunch of hardshells, 1 comes nearer being an airtight cinch.

Doty's first check lasted him two night then he had to borrow a ten-spot to tide over the next two weeks. When the se check came it was the same thing over a but he lasted a little longer. One nig had a lucky streak and lost only about dollars. When the cleaning process wa ished he went to bed with his lowe hanging, and we held a council of w wanted him barred from the game.

"Playing poker with Doty," grand larceny from the person. If I n the money I wouldn't mind shaking pennies out of a kid's bank, or I might bag a blind man and empty his tin cup separating this poor loon from his pay is my notion of rotten sport. He out be playing five-cent limit with the wo

"Listen to him, boys!" says Elliott. sore because Doty paid five dollars to di a pair of treys and took in another trey pair of queens against his pat flush!"

Well, I don't pretend that I had for the circumstance. It makes a good player sore to have a sucker take a blin and hook up the winning hand when an with sense would have stayed out. The worst of a hogwild player. Sometimes! a thousand-to-one shot over on you-ar himself on the back for using judgmen

We had quite an argument about w ought to do. Most of the boys though if Doty had the gambling fever the on was to let it run its course.

"He'd only carry his dough to an c game or lose it shooting craps. M you're so stuck on getting rid of hir don't you tip it off to Doty on the q. t. that he's a outclasted in this company?"

That was Walker's suggestion and I acted on it. the thanks a fellow usually gets for a disinterested Doty didn't say it in so many words, but it was plain that he thought we didn't want to give him a chance his two hundred back again.

He had fixed delusions about poker, too, one being that luck is bound to turn sometime. He exthat much to me.

That made me sore and I washed my hands of hin can't save a fool from his folly or build a moral fen will keep habit within bounds. The born gamb gamble, whether you provide tools for him of I had all the money I've seen won and lost with two of sugar, spotted as crap dice!

Doty became a regular contributor. Every pay walked right in, laid down his check, and walked ri again. For all the chance he had he might just have indersed it and mailed it to us to be split five When he went broke he played on tick and ran ta us, paying up every two weeks.

The poor kid didn't even hold out enough money a new summer suit. All the rest of us blossomed pin-striped flannels and Panama hats; but Doty w same old heavy thing he brought to the training c

March—a double-breasted blue serge suit made by some hick tailor who probably hadn't seen a fashion card in ten

Because he always looked shabby and never spent a nickel, Doty got credit for being close-fisted. One of the boys caught him going into a cheap-lunch joint for dinner, and after that he was called the miser on the sly. You see, when a ball club is on the road each man is allowed three dollars a day to eat on—and he's supposed to spend the three dollars for food. A penny-pincher will eat waffles and coffee for breakfast, a bowl of soup at noon, an Irish stew at night—and sink about two and a quarter to the day. That's what they figured Doty was doing; but I know now he was holding out that money to gamble on. Tod Sholter, who roomed with Doty on the road, had a hunch how things were going and made a few sarcastic cracks from time to time—but not when Silvertip was about. We've never had an informer on the payroll.

You'll recall there wasn't much of a battle in our league that year. It was more like a pursuit race. Doty was stacking up victories every time out, Ainslee, Sholter and McNabb were all going great guns, and the team was hitting hard and consistently. There are seasons when all the breaks in the luck are with one club, and this was our turn. In July we had such a long lead that it seemed as though nothing but a trainwreck could beat us; and naturally we began to count on the World's Series money as already in our pockets—twenty-five hundred dollars apiece at the lowest estimate, and from that up to four thousand dollars.

It's funny how the spirit of extravagance hit every one of us about the same time. Sholter began talking about the piece of property he was going to buy out near Walla Walla, where his folks lived. Fatty Fitzgerald paid nine iollars for a hat—marked down from fifteen because the season was half over on straws. Silvertip gave his wife a pair of diamond earrings on her birthday. My wife ordered a mahogany sideboard for the flat, and I loaded up with clothes and things.

Thinking about that soft money coming to us in October and unsettled our notions of economy—we were spending t in advance.

The poker game got a little steeper and once in a while we played table-stakes. Doty's I O U's got bigger. The time came when his check wasn't enough to cover 'em.

"Oh, well," says some fool at the table, "that's all right, id. Charge up the difference against your split of the World's Series."

"Is—is there any objection to that?" asks Doty, looking from one to the other of us.

I wanted to object; but I remembered how he'd acted before and I kept my mouth shut. It didn't seem right to me to let the boy run up a tab against money that he only hoped to get and which a switch in the luck could beat us out of. "No objections?" says Doty. "All right, boys! Put me on the slate for a couple of stacks and I'm playing fifty behind 'em. I feel lucky this evening."

#### IV

WE WERE at home the last week in July and the first half of August. When the team isn't on the road I'm as quiet a married man as anybody and I don't play much poker. In the first place, my wife won't stand for it. In the second place, if I do play she finds it out and asks for the winnings. That sort of thing makes a losing session come high.

While we were at home I lost track of the poker bunch, but I understood the game had been running three or four nights a week, with the roof for the limit and Doty slipping his paper to everybody. I had a couple of his I O U's myself—one for fifty and one for seventy-five; and, as it turned out, I didn't have a chance to get any more.

My wife, still thinking about that soft October money, invited herself to go West on the last trip of the season. I'm not what you'd call a seasoned and hardened married man, but I've learned some things in two years—and one of 'em is that when Bess wants to do anything I save time and trouble by saying Yes right off the reel. I knew her being with me meant no poker and, to tell the truth, I wasn't sorry. I was a winner on the season and satisfied to keep that way.

Our first stop was with the Canaries—still at the tailend of the league—and we figured to wallop 'em four straight and pass on without drawing a long breath. Doty had had their number all the season, so the boss sent him in to pitch the opener.

Before the game I overheard snatches of a talk between Doty and Owly in the clubhouse. Owly was arguing and Doty seemed to be begging.

"I'm only telling you what the boys think," says Owly.
"But—it ain't fair!" says Doty. "It ain't fair! Can't
you see it don't leave me a chance? And look how deep——"

After Doty had left the dressing room I asked Owly what was doing.

"We've barred him from the game," says Owly. "Confound it, we had to do it to keep him from owing us a million dollars!"

"Is he hooked in deep?"

"Deep enough! I wish this I-O-U thing had never been started."

I knew then that if those hardshells were getting conscience stricken they must have the kid gaffed for further orders.

Well, sir, there wasn't but just room enough for his troubles in Doty's little peanut of a head that afternoon. Whatever the thought was that he was holding crossways in his belfry, it certainly didn't have anything to do with

pitching winning baseball. The kid didn't have a thing in the world and he couldn't locate the plate with what he did have. He pitched like a sandlotter, which means that he was even worse than a busher. Silvertip yanked him in the sixth; but by that time the game was gone.

All good pitchers have bad days now and then. I didn't really begin to worry about Doty until the fourth day, when the boss sent him back to close the series and fight for an even break. The Canaries had licked us two out of three and were twittering about it. Between his games the kid had been mooning round the hotel, smoking cigarettes and looking as though he'd lost his last friend. He tried to persuade the poker players to let him have a final whirl, but they stood firm.

His second game against the Canaries was even worse than his first. His control was gone and so was his nerve. He showed that by walking out of the box to talk with Monk Mundon every time he got in the hole. The real Doty would have laughed at those weak batters and fed 'em

A Long-Legged, Lopsided Shanghai Rooster of a Kid Named Doty

the fast one between the ear and the shoulder. Once more Silvertip pulled him out; and the Canary coachers told Doty that he was about through and that they knew when he broke in that he was too lucky to

"I dunno what's the matter with me," says the kid as he started for the clubhouse. "I guess I'm all in."

"Forget that!" growls Silvertip. "You'll be all right when we get to Chicago. There's a team you can beat by just walking into the diamond."

But in Chicago they knocked Doty out of the boxin the second inning—and you can bet that gave us something to think about. I don't know of anything that can worry a ball club like having the winning pitcher go wrong; and we had something special to worry about.

With Doty in shape for the World's Series, we figured on a cinch with the Panthers. Those fellows have always been suckers for a righthander with a good fast ball. With Doty out of it the

battle would be a desperate one, with the odds the other way. It meant a matter of twelve hundred or fifteen hundred dollars to every man on the team—the difference between winning and losing the big series.

The newspapers were full of Doty's collapse, as they called it. Three games in a row he'd been taken out or knocked out. Some of the critics explained just how it happened and what made him go to pieces. It's queer how a newspaper man who can't catch a foul tip in a clothes basket can pick a real player apart joint by joint and find out exactly what ails him!

Silvertip was as much worried as anybody and as puzzled. I suppose the real answer never occurred to him certainly he wouldn't have believed that five or six men who should have known better had made the kid a nervous wreck by winning a big chunk of his World's Series money in advance.

This was the situation when we reached St. Louis and rolled over to the old Transcontinental Hotel. We won the opening game with McNabb in the box, and as I was leaving the clubhouse Tod Sholter touched me on the arm.

"Mike," says he, "Max Doty owes you some money. Come up to my room as soon as you get to the hotel. I want to see you."

"What business is it of yours?" says I. "Where do you come in on this?"

"It ain't where I come in—it's where the kid is going to come out that counts. If you don't want to see me you can see Silvertip about it."

Well, I didn't want to see Silvertip. I knew what he'd say; and, besides, I'd been feeling rotten enough about my part in the Doty business. When I opened the door of Tod's room, Walker, Jib Smith and Owly Elliott were sitting on the bed, and Hetherington and Dowling were over in one corner.

"Hello!" I says. "Is this a mass meeting of Doty's creditors?"

"Just that, exactly," says Tod. "Sit down."

Sholter is one of those serious-minded, slow-talking country fellows. Without raising his voice once or giving anybody a chance to interrupt him, he told his story.

"Boys," says he, "I've known right along that there was something doing with Doty, but I never knew how serious it was until the other night in Chicago. I went upstairs late and found Doty crying over a lot of torn paper on the writing desk. He didn't want to tell me what was the matter, but I made him. It took me two hours to get at the truth.

"That kid has got a girl out in Nebraska somewhere it doesn't seem possible, but he has—and she expects to marry him after the World's Series is over. He'd been trying to write her a letter to say that there wouldn't be any wedding—first, because he wouldn't have enough money; and second, because he was all in as a pitcher.

"He talked a lot of nonsense about his ruined life and how he'd be better off dead and all that sort of thing. You know what notions a kid gets sometimes. . . . I'm not going

## PULLING OFF A BIG DINNER

#### How Organization Feeds You Occasionally at Ten Dollars a Plate

Oyster Openers Preparing Oysters to be Jerced at a Big Banquet

Where One Thousand Guests Dined With Prince Henry of Prussia

THE steward of the Van-Waldorbilt took down a bulging letter file. It held several hundred sheets of thin paper, each bearing the type-

written menu of a dinner given at that hotel during the past of professional men, college graduates and fraternities, winter. "There's the story for the season," he said; "but natives of the different states and foreign countries, and it isn't finished, because the season isn't over yet. Some of these were small private dinners of a dozen plates, but most of them represent public banquets of a hundred plates and upward. Half a dozen hotels in New York now do as large a business as ourselves.

"Not so long ago," the steward added, "a dinner for seven or eight hundred guests was an event with us-a great big banquet. We had maybe two or three of that magnitude in the winter and looked forward to them with anxiety. The chef's department and my own had busy days ahead, and when the night finally came the boss stayed down until everything was safely over. Our mechanical equipment for handling the food still needed improvements, and the human organization to handle the equipment had to be built up. Everything was excitement and tension. Nobody knew what might happen. Smoke made in taking the flashlight picture might mysteriously disappear in the hotel's ventilating system, to emerge later in a guest's room and cause trouble. The kitchen force might slip up or the waiters fall down.

"Nowadays, however, we serve a dinner of from one thousand to fifteen hundred plates almost as a matter of routine; and, though we now call fifteen hundred people a big banquet, everything goes off on a smooth schedule."

New York's dinner industry is a big one. No accurate statistics have ever been compiled to show its magnitude, but there are some interesting estimates.

Just after the guests sit down to a banquet, and while the tables are still in nice order, a flashlight photograph is taken. One concern in New York makes these pictures at all the large hotels, and the manager estimated that seven hundred and eighty thousand diners had been photographed by his concern during the season of 1913-14.

#### Banquets for Fifteen Hundred

THE New York public-dinner season lasts from October to April, about six months; though, of course, banquets are being given throughout the year. One of the largest hotels serves an average of three banquets each week night during the season, or a total of about five hundred. There will be an average of one hundred and fifty guests at each dinner, or seventy-five thousand for the season. About six of the largest hotels do a business of equal magnitude, making a total of nearly half a million diners, and the business in the smaller hotels and restaurants will probably bring the grand total up to a million. At an outlay of ten dollars a plate, therefore, there is an expenditure of ten million dollars-if exact figures could be gathered probably it would be much more.

The dinner industry is constantly growing, for dinners play a vital part in the business, social and political life of the town. All the industries have organizations to promote their interests.

New York is a favorite city for conventions, conferences and movements of one sort or another, and these gather-ings invariably wind up with a dinner. There are societies

## By John Mappelbeck

many other kinds of organizations that make a practice of assembling at least once a year for a dinner. Local organizations dine as often as once a month in the winter; business houses bring their executives and salesmen together for conferences and dinners; traffic men and others whose work keeps them on the move find periodical dinners a means for keeping in touch with each other.

If a personage comes to town a public dinner is the best way of according him recognition, and also enables plain John Smith to see and hear the animals for from five to ten dollars a plate. Affairs are started and finished with public dinners, and important announcements are made; and when there is no other excuse for dining, New York will get together on an anniversary or a birthday-and so the industry thrives and expands.

A dinner for fifteen hundred guests is considered a big one, and about New York's limit in size; for if it is given at one of the hotels prominent in the industry the great ballroom must be used and some of the diners must be placed in the gallery. Fifteen hundred persons is about as large a number as can hear the speakers comfortably, because the audience is scattered round small tables; so the size of a public dinner tends to be limited by that condition. Moreover, it takes a strong organization, like one of the great college alumni associations, to bring out such a gathering, or the attraction of a very notable guest of

The big dinner starts when the hotel receives an order for approximately so many guests on a given date. First, the price of a plate is settled. At the prominent hotels this will not be less than four dollars, without wine. From that it may range upward to any figure. Theoretically the only limit is the sky, but practically the charge for a large affair is seldom more than ten dollars; for guests pay for their own dinners, or small parties are made up, with one man acting as host at a table—and so the expense must be kept within reason.

Higher prices prevail where one man gives a small dinner for some purpose. The motive for spending is then entirely different, and the souvenirs may cost more than plain John Smith's dinner at a large public affair. The host often plans months ahead, and the souvenir may be a privately printed book containing portraits and information bearing on the occasion, or specially designed articles of plate or jewelry.

Probably the most luxurious public dinners given in New York are those of the sheriff's jury panels, which are made up of men prominent in the city's life, who are fined whenever they fail to serve when drawn for duty on the sheriff's juries. These fines are spent in dinners, at which guests receive souvenirs of silver plate engraved with their

After the price has been settled the chef and dinner committee discuss the menu. Very often the occasion calls for special dishes. For a Southern gathering there will be delicacies from Dixie, and if the affair has a Scotch or Bussian character typical food products may be ordered

from abroad. For every dinner the chef likes serve something scarce or fine. Boats have been to catch a particular kind of fish, and hunte to get strange game for big dinners. These specialties nat rally take some time. New York's cold-storage reserv afford many unusual food products, such as Egyptian qui and kangaroo tails, and the canning industry now provid novelties like palm hearts; but when the chef is asked serve reindeer steaks or elephant's foot he appreciates it he is told a few days in advance.

It is a common belief that all the food for a big ding must be cooked many hours before it is eaten. That m have been necessary in the early days of the dinr industry, but it is not today.

Supplies are bought by the steward's department a turned over to the chef's men the day before the dinn so that all the raw materials may be in hand; but t actual cooking is done mainly while guests are at t tables, and most of the dishes are handled just as thou fifteen hundred patrons had suddenly walked in from street, sat down, looked over the menu, and given th order to the waiter, with directions to hurry it up.

#### Making the Final Count

THE soup requires longer cooking than anything else that is started on the morning of the day set for dinner. Grapefruit can be cut and oysters opened a hours ahead; so that is done and they are placed in the hot cold-storage rooms, to be ready when wanted. The f roasts and broiled meats, however, are cooked on a sch ule governed by the time the dinner starts, and the etables are cooked with them. As the waiters serve schedule, the flashlight picture is taken on schedule: even the tables are set, the decorations arranged and music played on schedule. There is really but one elen of uncertainty about a big dinner—the guests. How m shall there be, and at what time shall they sit down? Half past six in the evening is the time and all reso

tables set, first course prepared for serving, orchestra hand, flashlight apparatus in place, the waiters in hotel, who have had their own supper. It is highly im tant to feed waiters well before they go to work; other they would eat half the dinner themselves.

Men in evening clothes stroll in through different d ways of the hotel, check hats and overcoats, and awkwardly in the anteroom. Lights and mirrors da clawhammer coats offer no refuge for hands, and they cautiously round in the crowd until friends are acquaintances made or an attendant puts them at with a cocktail. The number grows, and count is being kept and word sent down to the kitcl

"Now they're coming in fast-eight hundred; a t sand; fourteen hundred. There will be fourteen hun and ninety in the final count. Now they are going inthey are sitting down."

First comes the flashlight picture, taken just as guests are seated, an admirable product in itself, mad a highly developed separate industry. The cameras have been designed especially for this purpose. The made with self-focusing features that give almost flexibility of a snapshot camera, and in compact for

aluminum, so that they may be carried about easily. The flashlight powder has been perfected for this work and is set off in fireproof cloth bags, which retain all the

At seven-fifteen the photographer says, "All ready!" and fires his shot. In an emergency he could quickly make another exposure. Three minutes later he is in a taxicab with the camera, and on his way to the darkroom maintained in the heart of the Dinner Belt for convenience. Ten minutes after exposure the plate is developed, in twelve minutes fixed; and after five minutes' washing it is put into wood alcohol and quickly dried before a hotair blast. Twenty minutes after exposure it is ready to print, and three minutes after that a proof is taken and in the hypo.

Two minutes' immersion serves to fix it so it will last for a few days, though from ten to fifteen minutes are needed for a durable print; and not much more than half an hour ater this proof is being circulated round the dinner tables and orders taken for copies. Sales of pictures must be made while the interest of the dinner is fresh, and so the photographer delivers all pictures the next day. If the finner happens to be one of great news interest an enlargement of the speakers' table will be made for the newspapers and perhaps be started running on the presses before the finner ends.

While the flashlight is being made, waiters are lined up sutside with the grapefruit and enter on signal. About that time the fish goes on the fire, and then come oysters; the soup is sent up from the kitchens piping hot, and other courses are cooked on a schedule governed by the progress of the dinner. Even roast fowl will not go into the ovens until the meal is well under way, and everything s done to a nice turn, dispatched from kitchen to table in the shortest possible time, and kept warm on big trucks, with covers that protect the food. These trucks are wheeled bodily into the ovens and heated, and then go firect to service elevators which land them on the banquet foor in a few seconds.

The serving room is as busy as a factory. Usually this is he anteroom where, twenty minutes before, guests were setting acquainted. The moment they enter the banquet nom there is a quick shift of scenery. Rugs come up, palms and furniture disappear, trestles are laid and converted into long serving tables, and a force of kitchen men in white pops up from below to deliver the food to the waiters. A great deal of space is needed, for while waiters are serving one course it is necessary to spread long lines of trays for the next, so that they can get everything simultaneously and take the food to the tables hot from the fire.

When the waiter battalion marches into this factory annex for the next course it is a good deal like the charge of the Light Brigade at Balaklava, for everything is done on signal, by number, together. The black-coated waiters pour out of the dining room in a long column of twos, bringing armfuls of dishes, which are set down, seized and whisked off, while they pour back with fresh plates of hot

Each waiter serves eight guests, but can usually carry food for only four; so the brigade makes two complete assaults on the trestles for each course, and there is a tremendous rattle of china and silver, prodigious bustle and joking, very apt to get into the blood of anybody who likes to be where things are going on fast in a large way. Probably that is why banquet waiters are regular war horses at the game, working night after night through the season, going from one hotel to another, and piecing out earnings by serving at downtown restaurants during the noon rush.

To serve a dinner of fifteen hundred places requires a force of more than six hundred workers. There will be two hundred table waiters; a hundred wine waiters; a service force of ninety men to portion out food as it comes up from the kitchens; a staff of one hundred twenty-five cooks in the chef's department; and seventy-five helpers under the steward, who cut butter, prepare vegetables, fruit, nuts and other sundries, wash dishes and carry on odd jobs. This makes a total of five hundred ninety workers directly engaged and does not include coatroom helpers, messengers, supervision, bookkeeping and overhead generally.

The upstairs work on a big dinner starts about two o'clock in the afternoon. At that hour one waiter in every ten reports for duty, sets up the tables, lays them and makes preparations. The others arrive in the evening, have their suppers, make a few final touches to the tables and are assigned to places.

It was once difficult to get the large number of trained waiters needed for a dinner of more than a thousand places, and extra men were recruited; but nowadays the

seasoned banquet waiter is available in greater numbers and understands his trade so well that a dinner of the largest size goes off smoothly. His service is skillful. He takes his place almost automatically, according to the scheme laid out for the occasion, and performs on signal many little tasks not perceived by guests.

When the flashlight man was ready, for instance, there used to be a hitch while word was passed round to remove the number cards on the tables, which hide faces and spoil the picture; but now a signal is given and each waiter lifts his numbers, retires out of focus and replaces the cards when the flash is over.

The table waiter works about four or five hours in serving a big dinner and is paid pretty good wages-two dollars and a half a night in the leading New York hotels, or three dollars if he comes to work in the afternoon. As soon as cigars are lighted and the speaking begins he is free to go home, for the regular hotel force clears the tables after the guests leave. As he goes out the timekeeper pays him for the night's work, because in six nights he may serve dinners at six different places.

A big dinner calls for an interesting investment in tools and equipment. For a ten-course affair, served to fifteen hundred guests, there will be needed about six thousand knives, six thousand spoons, eight thousand forks, fifteen thousand plates, twelve thousand glasses, two hundred tablecloths, fifteen hundred napkins, and a miscellany of other tableware. The investment in tableware alone amounts to several times the whole charge for the dinner.

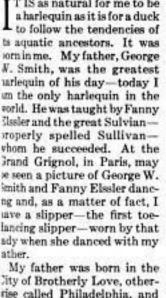

As an illustration, take the silver-plated trays used by waiters. Two hundred waiters serving a large dinner will need more than seven hundred trays, for while they are carrying in one course another is being spread on extra trays to facilitate service, and odd trays are necessary for incidentals. These trays cost ten dollars apiece. So plain John Smith, who pays five dollars for his banquet, must be served from ten dollars' worth of tray.

Another costly item is chairs. Hotel chairs cost anywhere from ten dollars to forty dollars apiece, and in a big establishment a thousand chairs are as nothing. So the seating for a big dinner represents an investment of from fifteen to twenty-five thousand dollars; and the money

(Concluded on Page 27)

# THE STORY OF A HARLEQUIN

# By JOSEPH C. SMITH

T IS as natural for me to be

rise called Philadelphia, and hat dancing agreed with him s pretty well established by he fact that he lived to be inety-seven; and he was eaching and producing as a usiness and attending balls md parties for the sheer fun of t until a few days before he lied. Naturally he was in great lemand. He danced with all he premier dancers who visited America in his time, even as I ave danced with all the great lancers who have come to this ountry in my time.

My father and myself were the only two Americans who ver went through a thorough school of dancing-that is, arlequin dancing, which is the most artistic, the most lifficult, and withal the most dangerous of the terpsichovan arts. You will wonder at the word dangerous used in onnection with dancing. But more of that later on. My ather firmly believed in the European system—a system

Chinese Maxixe—Improvised by Joseph C. Smith and Rita Jolivet, Leading Woman With 1000 Years Ago

now gradually being abandoned-that of handing an art down from father to son, and so gave me the real French schooling, with the benefit of such inventions and eliminations as he had made.

He was better than any school-teacher I have ever known. both in dancing and in speaking, and a self-educated man at that. To illustrate: When he was the harlequin with the great Revelles, and I was only a little boy, he wanted to teach me to be a harlequin; but I did not want to be one-doing all those quick movements of head and body and having everybody laughing at me, I urged.

My father would listen to my protestations and then, just to throw me off my guard, would say: "Oh, well; I must rest a while now."

Then he would sit down and yawn and stretch his body, and do all the funny little movements of the harlequin. That was his way of amusing me, of engaging my interest, of making me like a thing I did not like-in brief, of teaching me to be a harlequin without my knowing it.

When my father was dead and gone, and they wanted some one to play the harlequin, they came to me. I was twenty-two years old; and, though I had never done any harlequinading since I was a little boy, yet I had never forgotten a single detail of what he had taught me, and was able to go on and do the work.

Once he tried to teach me to do a double turn in the air. I do not mean a double somersault, which is comparatively

easy, but springing erect into the air and whirling like a top. I kept falling all the time and at last rebelled.

"It can't be done!" I cried.

"Can't, eh?" said he. "Come to the show with me tonight!"

When we got there he pointed out an Italian who was doing a one-and-three-quarters turn.

"What one man can do another man can do," he said, which was his way of exciting the spirit of rivalry in me.

I was only a boy at the time, but I went to the theater next morning, practiced a bit, and actually, did a triple turn before my father got there. And I can do a triple turn today, though I am forty years old.

My father was not only a great dancer but a great producer of pantomime. Among other famous productions he put on The Black Crook and during the run of the piece danced with seven premier dancers at each performance, which was some work, believe me! Among these dancers were De Rosa, Diana and Bon Fonti. Bon Fonti is now

fact also tends to refute the idea that dancers die young because of excessive heart tax and the like.

That my father was a strict disciplinarian was shown by his treatment of the great dancer, Countess Lola Montez, whom he taught and brought out. That lady had a very uncertain temper and used to indulge her penchant for horsewhipping everybody she did not like; but my father would not stand any of her nonsense. One day at rehearsal she had just begun one of her violent outbursts when he

teaching dancing in New York at eighty years of age, which

spanked her in the presence of the whole company.

My father never intended me for the stage, but when I was a little boy I was very delicate and he started to train me for my health. He first put me on a horse; in fact I learned to ride before I learned to walk. He used to hold me in position in order that I might learn the horse's motions. So I got to be quite a rider; and when

grabbed her, bent her over his knee, and soundly

I was ten years old I was the first one to leap from the ground to a horse's back and stay on a horse fifteen hands high. It was a running jump—a dash across the ring and then into the air; and when I struck the horse's back I stayed there. I never touched him with my hand. As a matter of fact, it was due to this training that I

was at one time the greatest high jumper in the world.

Circus riding is very difficult and one should begin early to learn. There are few child circus riders today. The training is too severe; it is considered cruelty. Today they put a strap round the youngster's waist and he is supported by a pole that goes round like the arm of a derrick as the horse gallops. In my day the child had to stand on the horse's back without any support, and every time he fell off he got cut with a long whip, which sometimes drew blood. Many a time I have fallen off a horse's back and hung on to his tail, his hind legs kicking me, and then struggled up on to his back again rather than touch the ground and get a cut from the awful whip.

#### Years of Fencing and Dancing

EVEN when I was a little chap of five, before I had become a full-fledged circus rider, my life was exceedingly strenuous. I used to get up at seven o'clock and at eight was riding a horse. Then I went to school from nine until two. In the afternoon when I came home I put on the gloves and sparred. Then I would take the swords, the combat, the quarterstaff, the single-

stick, until I was able to handle every kind of sword known. I kept up this sort of thing for ten years before my father would admit that I amounted to anything at all.

When I was fourteen years of age, and was just about finishing school, an Italian dancer came to this country and wanted a dancer to go to Europe in a hurry. He took me to Italy with him and I was made premier male dancer over ten Italian dancers at La Scala, in Milan. There was a young woman there who got so jealous of what this young foreigner could do—I had grown to be a very husky chap that when I used to hold her up in the air as we danced she would shake herself and wriggle and try to fall, so that I should be blamed for it. And, as Kipling would say, "I learned about women from her."

While I was still very young I was engaged at a theater in New Orleans where there was a skating ballet—all Frenchmen—who performed on roller skates. One day one of these performers was injured and I was asked whether I would help out the following night. I promised to do so, though I had never had a skate on my foot. The next morning I went to the rink and practiced for an hour or so, during which time I got a few pretty savage bumps; but got on to the way of the skates all right. The rehearsal was at ten o'clock.

"Have you ever had skates on before?" said the principal Frenchman.

"No," said I. "Give me a pair and let's see what I can do."
I put them on and fastened them while the Frenchmen stood round and laughed.

"Watch the Yank break his neck!" they said.

The Yank did not break his neck, however. Instead, he took a whirl round, and that night he went on and made a

big hit. It would have been quite impossible for a man who had not had my early gymnastic training to have done that.

The harlequin originated in Italy. His art is unique. It is the finesse of pantomime. The eight characters that are in all plays start from the harlequin. He is, for instance, the leading man and the juvenile. Then comes Pantaloon, the grouchy old father; then the clown, who is the comedian. Columbine is the soubrette, the prima donna, or whatever else she may be; and the fairy queen is the peacemaker in the family. The fop is the dude of today, the English fool. He is always the butt-in, the one father likes best for the daughter because he is an aristocrat; but he has no money. He is always coming in and getting beaten and batted about; they all go up and hit him with a stick, or something like that. The old witch is the mischiefmaker, who comes in and upsets things; and the devil is the villain.

The work of the harlequin is dancing, facial expression, pantomime. He never speaks. His every pose or movement of the head, hand or foot has a meaning of its own. These various movements are called animations. When his

Finale of the Maxixe as Danced on the Stage. When Danced in a Drawing Room the Man Raises His Partner Only a Few Inches From the Floor

mask is down over his eyes he is invisible; when it is up he is visible. The old nursery rhyme expresses it best:

Take this mask; when over your eyes No one can see you if he tries.

The harlequin is the sleight-of-hand man, the arch magician. He taps a coalscuttle and lo! it changes into a wagon or whatnot; he taps the wall and a bed comes out; he taps the bed and it disappears. He pulls the nose of Pantaloon and coins tinkle out, much to that gentleman's amazement and the delight of the children out in front. He is the marvel of wonder-workers. He picks up a quarter and it becomes half a dollar right before your eyes.

His dress is no less brilliant than his accomplishments. The colors on it represent the seven different passions. Black is death; if any one must die the harlequin points to this particular spot. White is purity; blue is truth; green is envy; yellow is jealousy; and red is love or passion. These colors in themselves give the harlequin quite a dumb vocabulary, and taken in combination they afford him an unlimited means of expression.

To make this wonderful dress was no mean job in the old days. They used to put tights on the artist and then sew each patch on separately. My father used to stand for hours while my mother thus built him up, patch by patch; but nowadays they weave the colors in, which makes the dress very expensive indeed. Also, the woven suits are very heavy and difficult to jump about in.

The most difficult thing in a harlequin dance is whirling in the air with the feet off the ground. Compared to this a double somersault is easy. The acrobat who does the latter makes a run and leaps many feet into the air and lands several yards distant. Again, he turns in the same direction in which he is going, thus availing himself of the momentum acquired as he leaps. But the harlequin jumps straight  $\psi$  into the air and then turns quickly at right angles. To be sure, he is able to gain direction and some momentum below he leaves the ground; but he must maintain the momentum by contortive work in the air, which is about the neares to lifting oneself by one's bootstraps of anything I know.

A double turn in the air is very difficult; but, as I said. I can do a triple turn, and I am forty years old. I do not do this often. It is done so fast the audience does not resize it and does not applaud me when I do it; but if I do 1 double turn they can follow it and they always roundy applaud. So what is the use? Another thing, I can pass my feet eight times in the air; but when I do, the action a so fast the audience cannot follow me and does not applaud. A six-pass, however, they will applaud every time: so I rarely do the eight-pass except when Harry Dixey, who appreciates it, is my audience. I never notice the other audience.

In a pirouette you always look at a light or some other object, and it is your head that does the pirouetting-thm

is, you hold the light with your eyes as long as possible while your body is whirling, then bring your head round quickly and eatch the less again. This turning of the head gives momentum to the body and, if done quickly enough, has the appearance of wringing one's own neck. Yes start in the second position—that is, with the leg out straight-and hop round until you per perfect balance; then you bring in your fort and start with your head. You have get to be absolutely rigid. You dare not move from that position after you have started. If you doe your chest an inch you will fall backward. When I am in good condition I can pirouette to sixtyfour bars of music, probably one hundred and twenty times.

#### The Art of Pirouetting

THE Frenchman and the Italian begin slowly and work up to top speed in pirouetting, stoping instantaneously at the very height of the velocity they have attained; but the Russin does not know how to turn a pirouette. He starts with a fast spin and turns until he dies down.

The dangers a harlequin encounters are sufas the general public would never dream of. We have heard of men falling and breaking their lepor ribs on highly polished ballroom floors. The harlequin must guard not only against slipping but against many other dangers. For instance in pirouetting, though he stops with electric suddenness, he must stand motionless. It would never do for him to go reeling about the stage after he ceased to pirouette, seeking to regain in balance. The effect and beauty of the morement would be lost. It would be grotesque. To get this absolute control and balance is the work of years. I have known only two men besides myself who could do a triple turn in the air, and one of them broke his neck at it at last.

The harlequin wearing soft-soled shoes always has the terrible dread of getting a tack in his foot. Once I had just taken my first step in the dance

when I landed on the point of one of those little devil's daggers and did fourteen jumps into the air before I could stop driving the deadly thing farther and farther into the ball of my foot with each jump. My friends had to take piners and pull the tack out of the bone.

In a dance like this, which requires the finest balance and adjustment in every way, it is necessary to have an absolutely secure and reliable floor from which to start. The public does not realize the difficulty and danger I am under from lack of this prime requisite. Where I am dancing now they put on three floor cloths, one on top of theother, inside of five minutes, and when I jump from the staircase and land on these I slide. I cannot get any purchase on these with which to leap into the air as I should from a bare floor but even when dancing on a bare floor you are apt to encounter a bad board, one that is not absolutely secure. The dancer, however, can detect that sort of thing the instant he touches it and is careful to avoid it therealist.

Changing from theater to theater has its disadvantages. I may dance one week on a perfectly flat stage and psi somewhat used to it. The next theater I go to may have a terrible rake to it—say, one inch in eighteen. I get used to dancing on the slanting stage and when I change backagain to the flat stage I am apt to fall backward unless I am carful. I would rather dance on a slanting stage, because I was practically born on one—that of Niblo's Garden.

The least thing will take your mind off your work, just as the shifting of a featherweight will throw you off your halance when you are in the air. For instance, the lights go out and the scene is changed; then the lights come on and you have to begin your movement before your sight is adjusted to the new glare. Or some slight change in the location of things will throw you off. One night, as I made that leap off the stairs, one of the fellows happened to have the flag a little too far front, which, trifling though it seems, would have thrown me out had not my brain, trained to neet just such emergencies, automatically adjusted itself to the unexpected conditions and saved me.

There is also danger of the rope or wire, by which the urlequin is sometimes suspended or swung in doing his urious stunts, giving way. A wire when straight may fand a great strain, but if it be bent or kinked it is greatly

veakened and becomes very treacherous.

Once I was playing in Denver, in The Statue Blanche, was the harlequin and was supposed to steal Columbine and run away with her. The crowd pursued; a balloon ame by with a trapeze attached, which I grabbed as the affated bag swung into the air and was carried away, with he girl under my arm. As a matter of fact, the girl was ally a dummy. I knew that I must rise forty-five feet to the air before I was swung into the wing. I had got limost that high when I heard the wire going Pin-n-n-g! in-n-n-g! You always have warning of a breaking wire. s it stretches it makes that little pin-n-n-g—such a sound s you would make by touching one of the wires of a piano ith the point of a feather very, very lightly, but instantly aught by the ever-listening, apprehensive ear of the an who has to do that kind of stunt.

I knew that I must act at once. It would never do a drop feet first and drive my legs up into my body. I dropped the dummy figure, doubled up round the ar, bent my head forward and clasped my hands round by knees—in short, made myself into a ball; and as se wire broke I dropped to the stage forty feet below, riking on my thigh. I cannot tell you how hard I ruck, but instantly my whole body began to turn black. They put me into an alcohol bath in the star dressing som and I was back on the stage within two days.

#### The Dangers of the Star Trap

) FALL dangers that threaten the harlequin, however, that of the star trap is the most terrifying. The star ap is an octagon-shaped contrivance let into the stage. has eight points of half-inch oak and is designed to eate the illusion that the harlequin is bursting through it very surface of the earth, so to speak—an illusion at was impaired by the old square trap, which everyody in the balcony and boxes could see.

When the harlequin says Go! the men underneath all the bolts, the weights are released, and he is shot to the air. His head hits the points of the octagon, liftg them; and, once he has passed, these immediately 
ll back into place. This is the most dangerous trap 
the world. If anything should go wrong and it should 
see slowly you might in your descent strike this hole 
if the descending oak points would run you through 
the spears of a horde of savages. There is one way 
avoiding this danger. If you see that you are comg down straight on the trap spread your feet and they 
and on each side of it. Or something may happen so

Mr. and Mrs. Smith Turkey Tretting

that you are shot only halfway through the trap, in which case you can quickly put your hands on the stage and rest your weight on them, thus saving yourself from being pinioned.

There is always the possibility of something going wrong in the working of the trap under the stage. The contrivance from which you are catapulted up through the octagon-shaped opening is something like an elevator weighted down. If this is released ahead of time the performer is apt to be banged against the stage. On one occasion I had just stepped on to the trap and was not quite in its center when the word was given to let go, and I was thrown up against the stage so hard that I forced three boards loose and my back was nearly broken.

Pantomimists are more jealous, I believe, than any other professional people, and this quality sometimes forces them to the most deadly extremes in dealing with rivals. This is another very definite danger that must be reckoned with.

I started the present dancing craze in America. A hall in Thirty-ninth Street was the cradle of the mania. I used to go down there and dance the Turkey Trot, which I had just invented or, rather, adapted. I did this dance in Chicago when we were putting on Madame Sherry at

Another Step of the Chinese Maxixe

the Colonial Theater. Then I put it on at Wallack's in A Certain Party, and later on used it in The Country Girl.

The Turkey Trot does not come from the Barbary Coast, the orgy zone of San Francisco. As a matter of fact the original of this dance is a hundred years old, and goodness only knows how much older! I got it by watching the negroes on the banks of the Mississippi. Down there the darkies go along the levees carrying their bags or sacks, moving with a slouching, swinging, half-gliding, half-loping gait, and singing or, rather, intoning: "Tote 'lon-n-g! Tote 'lon-n-g! There you have it—the Turkey Trot. That is where I got it. Variations of this dance are called the Bunny Hug, the Gobbler Glide and other names; but they all come from that "Tote 'lon-n-g!"

I was the first to do the Tango in this country. I brought it over from Spain, where the natives have danced it for generations. It is nothing more or less than the Spanish Fandango modified and adapted for ballroom purposes. The claim that the Tango was brought from the Argentine Republic is absurd. Even the Cubans have been dancing it for a long time. Really nobody invented the Tango; it just grew and came to this country in the natural course of events.

Mr. Smith Wearing His Father's Harlequin Dress

It is curious that a dance like this can have such a tremendously popular hold in one country and not be taken up by another; but when we consider that golf was the great game in Scotland for centuries before it was developed in England, right next door, we cease to wonder. It is curious how these wonderful things are confined to a small territory for centuries, and then quite accidentally burst into a world-wide craze.

When I first brought the Tango here I put it on at the Winter Garden and everybody laughed at it—the funniest and the most absurd thing they had ever seen, they declared. Now it is the rage of the world. Maurice saw how it went here and started it in Europe, and now it is all the rage there, where it has practically forced every other form of amusement to the wall.

#### The Apaches of Paris

THE Apache Dance is another modernized, debarbarized and transplanted form of the terpsichorean art.
There are probably more claimants to the foster parentship of this dance in America than in any other case.
Though many foreigners in Paris witnessed this dance,
I claim to be the first to have discovered from its crude
and villainous form in the dives there the possibilities
of beauty and grace; in fact some of the persons I taught
to perform this dance have most vehemently protested
their authorship of it.

There are twenty thousand low, murderous, cowardly, skulking characters in Paris called Apaches. These men are, in a way, like the gangsters of New York, though neither so cowardly nor so treacherous—that is, they do not betray their pals to save their own miserable

skins. Many of them work during the day. You may have one in your employ and not know it. Perhaps he is a salesman in your shop, with well-manicured nails and suave manners—a dandy.

All day he stands behind your counter and waits on your customers—suavely, manicuredly—and at night puts on the red bandanna and black sash, the signs of his avocation, and goes forth to join the boys.

The Apache used to hold up his victim in a dark street; but, since he has got the police of Paris demoralized, his audacity or bravado leads him to attempt coups in the most frequented thoroughfares. However, where murder is to be his means, he tackles his victim in a lonely street, throws his red bandanna over his eyes, makes him hold his hands over his head and ties them with his black sash; then he moves round behind his victim and thrusts a knife into his back, letting go of the instrument instantaneously and stepping back as the blow falls. Thus he avoids getting blood on his hands; and his precaution of blindfolding the man and turning his face away helps to prevent the identification of the murderer.

This, in brief, is a description of the Apache and one of his methods of procedure. There are many others that no

(Continued on Page 28)

# Corporal Billy's Come-Back

HIS thing of bravery under fire should be better understood. We may not all be cowards at heart; but we are gifted with a mighty discretion that would

stamp us such if we were not too cowardly to give it play. Fearing our own cowardice we sham a valor we have not. It works out like one of those scrambled-looking algebraic affairs with plus and minus signs that finally equal something you were looking for. The more cowardly, the more reckless-in proportion to our conceit. This has averaged high enough thus far to insure plenty of reckless behavior on battlefields. The men who run away are merely honest

men who very modestly crave no undeserved applause.

Private Hicks hates to be shot at; but he would rather be shot at than have Private Henderson beside him know how he hates it. And he believes, of course, that Henderson really loves being shot at. It never dawns upon him that Henderson's bravery is like his own, assumed to impress Hicks and the other privates and the officers and the war correspondents and the folks back home. If they understood each other there would be fewer fool charges and less of that pretty but uneconomic flagwaving outside the trenches. And fewer wars, to be sure. If the current brand of Scotch philanthropy—with a side-line of armor plate—had run to a Palace of Truth instead of a Peace Palace, which is a nice enough place for squabbles, soldiers might by this time be coldly refusing to let the powers make fools of them for the sake of proving to each other that they are not something which each man knows he is. Any ordinary union psychologist should be able to show them in twenty minutes that they all equally hate to be shot at, and if ever they come to see through each other's little game

No, it isn't a war story; no spies with cipher messages; nor two brothers fighting on opposite sides at Shiloh; nor the sergeant in the Philippines who has an affair with a beautiful native girl and gets cut to small bits-all but what the head-hunter wanted-with a sampan or a jabot or one of those things. None of that, although the tale does sound a martial strain here and there and the dominant theme was heard in the opening bars. Let us be on, through a diminished seventh, to the real trouble.

The ancient Corporal Billy Safford, G. A. R., lightly

hummed Marching Through Georgia, as he turned the sizzling pork chops under the hostile glare of another and much younger military character. The atmosphere of the small living room back of Corporal Billy's cobbler shop, redolent though it was of the kindly aroma of browning chops, was tense with a smoldering animosity. For the other military character had heatedly averred that the only way to cook the chops was to broil them out in the open over a fragrant campfire, about which, when the meal was done, stories of adventure would be told. Indeed, preparations had been made for this fire in the backyard—and then Corporal Billy had put his foot down. He was too busy that evening to fool round. They would have supper right there in the house and let that end it! Didn't he have to shave right after supper and then get into his uniform to attend the meeting of the Decoration Day committee? Certain

people seemed to forget that he was the sole surviving member of his G. A. R. Post in Ophirville, and that much

was expected of him on the morrow.

The other military character, slumping far down in his chair until he seemed to sit on his shoulder blades, scowled moodily down the sides of a stubby and freckled nose and into the gleaming teeth of the range. He was no other than Cyril Naughton Webster, captain of Boy Scouts, who had been put off upon his defenseless Uncle Billy Safford for a whole summer because it was feared by his mother that one more vacation in Oakland would secure him the unwelcome and perhaps enduring notice of a harried constabulary. We have scant knowledge of the lawless activities that incurred this sequestration; yet all too much may be safely inferred from the bare admission of his mother in her letter to Uncle Billy: "He is undeniably a boy of high spirits." When a mother will say this of her first born, how much it eloquently leaves unsaid!

But Corporal Billy was old enough to have forgotten about boys. He had fatuously agreed that the placid upland town of Ophirville was just the place for a boy of

undeniably high spirits.

And in the main he had found the association not without charm. Their military careers formed a bond between them. Captain Webster, as he preferred to be addressed indeed he promptly fought any one of his own weight who addressed him as Cyril-had quickly learned what might and what might not be attempted within the municipal confines, having become a keen appraiser of the police spirit in any place where he abided. And, moreover, the wooded hills beyond the town and the foaming river that threaded them had lured him from the streets. There he

By HARRY LEON WILSON

boy-scouted tirelessly, and in his lighter moments hunted and fished. And he ardently preached this open-air life to

He believed, and said, that his Uncle Billy was getting out of condition by reason of his close application to workwhence the disagreement of the moment, because Uncle Billy would not cook supper out where it ought to be cooked. And yet the trouble was less simple than this, for the matter of the Indians preceded it.

A mile below the town on a grassy flat sojourned for the fishing the family of one Joe Twohead-consisting of that reverend ward of the government himself, Sarah Twohead, his wife, his son, Ezra Elk, and the latter's consort, Annabelle Elk, née Swampy. These peaceful four, being observed by Captain Webster the day of his arrival, had fired him to high endeavor. He had behaved in their presence as a leashed terrier in a rat-pit. It had subsequently pleased him to believe that they were hostile Indians, that they came to buy supplies from the Boston Cash Store merely to ascertain the town's most vulnerable point, and that they traitorously meant to attack it on the first moonless night. Captain Webster meant to foil them if scouting would do it. He had trailed them furtively through the forest; he had haunted the brushy outskirts of their camp; and he had more than once unexpectedly confronted them, steely-eyed and threatening. He had left them no peace. They could make no move except under his surveillance. And then the distressing affair of the twenty-two-automatic-of which more at once.

Corporal Billy removed the supper from the range to the table, neatly spread with its red-and-white checkered cloth-the sizzling pork chops, the fried potatoes, the stewed tomatoes and the pot of steaming coffee. He took his seat and Captain Webster drew his own chair to the table stimulated by the food, yet still morose

"And Sheriff Kritzler swears," resumed Corporal Billy sternly, as the meal began, "that if you make one more break at them Indians he'll put you in the lock-up and keep you there. What in time did you mean by it anyway Wha'd you want to go and shoot one for? Answer me that, No, I won't call you 'cap'n' again less'n you act like you had some judgment."

"I never tried to shoot him," denied the captain such "I was just tracking him through the forest, and he never saw me because I moved stealthy from tree to tree. The he stopped a minute to pick up a package of tea or some thing that had fell out of his bundle, and I thought what bully shot that would be if he was only on the warpath: so I covered him with my rifle, just to see how fine I could draw a bead on him. But I never meant to pull the trigge, honest I never did; I just barely touched it. And it dent hit him anyway—just snipped off a twig beside his head But he let out an awful yell and jumped round and say me before I could vanish into the underbrush and make god my escape. Then by the time I got back to town, here the all four come and was after the sheriff to have me arrested or something. What kind of a way is that for an Indiana act? They swore I'd tried to kill that old one, and that sheriff he says

"I know well enough what he said," interrupted in listener. "He paroled you in my custody and I'm respo-sible for your peaceful behavior, mind that now. It is hadn't 'a' been a well-known and prominently respected citizen you'd been tried and sent over there to Folson at hard labor for attempted violent murder, that's what you'd 'a' been! Undeniable high spirits! My land, I should think so!"

"Huh!" sniffed the unabashed captain. "Nice way in Indians to act, wasn't it. Every one knows they're a cowardly race. They can act brave enough in the movies but look at how they do when it comes to a showdown on in the open as man to man-they run right off and tattle to a Dutch sheriff, that's what the cowards do!"

"You got no right to pester them Indians," warms Corporal Billy, spearing his second pork chop. "They'n peaceable, quiet folks, jest like you and me.

"Yes, and we'll all be scalped in our beds some night that's what," continued the captain. "I seen the ugi sheriff arrest me

"You let 'em alone!"

"Oh, very well! I'll let 'em alone for the present is mark my words, a time will come and I'll show 'em nomety If one of 'em ever crosses my path again he'd better have care. I'll put a dose of cold lead through his craven heat that's what I'll -

"S-sh! That'll do -

"Why, say," went on the captain, brightening. "you and I alone could go down there and make 'em all bite th dust. Just before dawn is the best time to attackt —"
"Look ahere, my lad," said Corporal Billy desperately

"you do any more of that and the sheriff 'll have you inside lookin' out, that's what he'll have you. And is for the way you talk, you leave that gun of yours right here to home for three days. Now I guess you'll talk son

"Want me to go out unarmed, do you?" inquired to captain bitterly.

"That's just what! You'll go unarmed until you leaf some discipline. How'd I ever gone through the war if I been like you, shootin' up people right and left?"

"Oh, all right," growled the captain, gloomily engage his food.

Corporal Billy pushed his chair back from the table emitted a long sigh of repletion and gnawed relishingy his plug of tobacco. The captain observed this with his disapproval.

"Tobacco is a filthy habit," he began oracularly. \*1 nts your growth

"My growth is had," retorted the corporal.

"And poisons your systems. See what it's done to you already. Look at the way you carry yourself! You see some setting-up exercises. Bend over and touch your too a hundred times, morning and night, and get some light dumbbells - Oh, well, if you don't want to listen -

For the corporal, with elaborate disregard, was again humming Marching Through Georgia, while he massed shaving apparatus before the small mirror above the small Undoubtedly he needed setting-up exercises as much a any man of seventy-five ever needed them. He was under sized, with a wisp of a white beard, dim and sorrowful has eyes and bent shoulders, and his limp was pronounced Tobacco may have been the cause. Then again forty year of cobbling might be accused.

Yet the corporal now went about the almost tragic susiness of shaving with real elation. Relentlessly he lought the blade over his lined old face to a sinister depth. He did not shave so much as scarify, but his ensuing groans were cheerful. For this was the one time in the ear when Corporal Billy was the central and resplendent gure of the town. This was the eve of his great day. Tonight was the meeting of the Decoration Day committee, he program of which never varied, from the introductory gution of the mayor to the declamation of the Gettysburg uddress by a girl pupil of the high school and the perunctory election of Corporal William Safford, late of the I'wenty-third Indiana Infantry, to the post of grand marshal of the parade-Corporal Billy on a safely prancing horse, miformed, embellished with a gorgeous sash! Year after ear it had been thus. He sometimes pretended to be ored by the regularity of the thing, but he was Ophirville's me surviving veteran of the Civil War, and could he nnfess to a decay of his public spirit? Not Corporal Billy! Captain Webster from his seat had watched that fearome ordeal of shaving with mingled hope and alarm. It ad seemed inevitable from the first gash that the old man rould do something fatal to himself with that razor; but he operation was amazingly completed with only some ninor casualties. Thereupon Corporal Billy, in the tiny djacent bedroom, proceeded to bedeck himself in his mart blue uniform. It was this uniform that won back he momentarily difficult respect of Captain Webster and estored his waning enthusiasm for life. He noted with pproval that the old man became more erect, lifting his ead pridefully, and the limp was hardly to be noticed. 'he captain himself brushed the fatigue cap and experineed a thrill in doing it. Corporal Billy set it firmly upon is lifted head and coyly approved himself in the mirror. he captain was undoubtedly respectful as he also surveyed he result.

"It's a bully uniform," he declared; "and I'll bet you ere a corking good soldier. I'll bet you were the bravest an in all your regiment."

"Shucks!" muttered the preening corporal. "Not at Il-lots braver than me."

"Oh, I know you've got to be modest," the other coneded; "but how about those times you told me of!"

But for the recent shave, a blush might have been bserved to mantle the jowls of Corporal Billy. It was rue that in certain expansive moments since the captain's rrival he had recounted two or three little adventures in hich he had played anything but a coward's part. But he boy was insistent for stories, and they might inspire im to brave deeds of his own; and if you were going to # a story at all you ought to tell it right, oughtn't youad little ornamenting details here and there. Still, with he old uniform actually on, the corporal somehow regretted ne or two of the more daring flights.

"Shucks!" be muttered again in self-disparagement. "Say," urged the now glowing captain, "tell us again tout that big six-foot rebel that you shoved your bayonet ean through the chest of, when he was just going to shoot

ou down in cold blood -

"No time for yarns," said the corporal shortly. "We ot to hurry to the c'mittee meeting."

Here the captain had to search at length for his own cap, hich always became mysteriously lost the moment he stered the house. Corporal Billy waited impatiently ntil this was found-in the wood-box back of the rangead then they were out in the main street of Ophirville

making a notable progress to the town hall. Corporal Billy strode with a military alertness, stiffly saluting such of his fellow townsmen as engaged his notice. Captain Webster stalked stiffly at his side, with frequent upward glances of pride, a pleased unit of the spectacle. A block up the street they encountered Mrs. Honora Kelly, a lady of billowy amplitudes, also garbed ceremoniously and wearing her best lilac bonnet above a high-colored and cordial face. Mrs. Kelly was the relict of one Michael Kelly, also a veteran of the Civil War. When Ophirville had boasted enough civil war veterans to maintain a fraction of a Grand Army Post, Mrs. Kelly had been the president of the local ladies of the G. A. R. But now of the post there remained only Corporal Billy, and of the local ladies only Mrs. Honora.

"Evenin', Mis' Kelly!" The corporal lifted his fatigue cap with a flourish. "To the c'mittee meetin', I take it?" 'Tis not so many more Dec'ration Days we'll be seeing, Corporal Safford," observed Mrs. Kelly with an effort at sadness.

"The Grand Army is passin' on," he retorted gallantly, "but the ladies of the Grand Army are ever young and fair, as the poet said."

"Be still with your jests," returned Mrs. Kelly, and the best bonnet was tossed coquettishly. Each year she angled for this compliment, and the winning of it never failed to brighten her.

As they walked on Mrs. Kelly waved an eloquently insulting hand toward the opposite side of the street.

"'Tis the Spanish war vets, would you look now!" she

Corporal Billy glowered at three youngish men in blue shirts and khaki trousers who conversed earnestly in front of the Boston Cash Store. True enough, they were veterans, but Corporal Billy's glance seemed to say that this term was too elastic.

"Vet'runs of the so-called war with Spain, I believe," he remarked grandly. It is unquestionably the way of Corporal Billy and his like to sniff at the opéra-bouffe campaigns in Cuba and the Philippines. By them the propriety of allowing the younger veterans to participate at all in the observances of Memorial Day is still mooted in many sections.

"An' wearin' gur-rand medals on the chests of them!" pursued Mrs. Kelly.

"Medals!" Corporal Billy sneered wickedly, "What them boys went through wouldn't 'a' been camp sports to what me and your husband and our cumruds went through, Mis' Kelly. And they got two medals apiece for their skylarking. Me? I got two medals myself, only I can't exhibit 'em to ladies. One in my shoulder-that's a saber cut. One in my leg-that's a minnie ball. They ain't a mite showy, but nobody can pull 'em off'n me.'

"Would you think they was talkin' of us now?" demanded Mrs. Kelly. "Seems like, the way they're lookin' over here."

"Like 'em!" growled the corporal. "Wha'd the mayor have to go put 'em on our c'mittee for? 'Tain't right for such as them to be messin' round the graves of our cumruds. Let 'em wait till they got some graves of their own to mess round.'

"They'd wait long," observed Mrs. Kelly crisply, "Their health was never threatened, though I believe one of them did catch a hard cold in Porty Reeky.'

They were still companionably muttering this grievance when Corporal Billy handed Mrs. Kelly into the hall, followed by the now subdued Captain Webster,

> The Mayor of Ophirville, as chairman of the committee on arrangements, sat at the desk

who was tasting his fill of reflected glory.

"I Walked Out With You and Out I'll Stay"

and looked formal. The superintendent of schools sat at a small table beside the desk to record the formidable minutes of the meeting. The town clerk, the sheriff and prominent citizens to the number of a dozen were also present. The Spanish-American war delegation filed in after the G. A. R. representation and found seats near the town clerk, with whom they held earnest speech in whispers.

"Meeting of the committee on arrangements for Memorial Day will now come to order," announced the mayor. He coughed gracefully and sipped from a glass of water solicitously tendered him by the alert superintendent of schools. "We are met together on this occasion to arrange for a fitting observance of the day set apart for honoring the nation's heroic dead. Needless to say that while our thriving little city is not so large as some other cities in this broad and united land, nevertheless its public-spirited citizens are not found wanting in respect in the matter of honoring the nation's heroic dead. On the morrow we shall pay a just tribute to those who so nobly laid down their young lives ----

At this point Mrs. Kelly wept audibly in tribute to Michael Kelly, who at the age of sixty-eight had been killed in a mine shaft.

"True for you, may'r!" she sobbed approvingly.

"Nominations," concluded the slightly annoyed mayor, "are now in order for the honorable post of grand marshal of the Ophirville Memorial Day parade."

Corporal Billy Safford tried not to look self-conscious at this. He had made the effort for years. He was running over in his mind the set little speech by which he should accept the honor to be foisted upon him.

The town clerk arose, but he did not look in the direction of Corporal Safford. He looked straight at the mayor. Something appeared to be wrong with the meeting. He was the brother-in-law of a Cuban veteran.

'Mr. Chairman, ladies and gentlemen," began the town clerk urbanely. "Ophirville has always seen her duty on this day of days, and need I say she has always met it -

"You need not," hissed Mrs. Kelly, already clairvoyant to his design.

"Every Memorial Day," continued the orator, after an icy stare at the insurgent widow, "has done our thriving little city and its public-spirited cohorts abundant credit, and far be it from me to intimate an intention of-er-intimating that we could have done it better otherwise than in the manner we did do it. But this year, though far be it from me to cast undue reflections

"It'd better be!" threatened the watchful widow,

it is my pleasure and my duty to propose an innovation. The grand marshal of our parade has heretofore been a member of the Grand Army of the Republic, that glorious organization without which, as the peerless Webster said -

"And who should it be but a G. A. R.? Come now!" demanded Mrs. Kelly in full-toned wrath. Corporal Billy choked strangely and there was a curious buzzing in his ears.

"Order!" demanded the mayor sharply,

"The innovation which I have to propose," continued the orator, indignant because he had wished to quote Daniel Webster on liberty and union and now realized that he had forgotten the lines, "is the election of a member of the Spanish-American War veterans to the honorable post of grand marshal of the Ophirville Decoration Day parade. I nominate Sergeant Sam Gates, of the First California Regiment, for that post."
"Second the nomination," mumbled one of the

younger veterans in khaki.

Corporal Safford, G. A. R., cowered as from a blow. Mrs. Kelly was on her feet with truculent fists aloft.

"I nom'nate Corp'ral William Safford," she shouted deflantly.

There was a painful silence. Corporal Billy, listening intently, looked about him with dumb appeal.

"Any second to the nomination of Corporal Safford?" demanded the mayor briskly. There was no response.

"Then Sergeant Sam Gates stands elected to the post of grand marshal," concluded the mayor, brutally flouting the manual of Cushing.

Corporal Safford rose unsteadily to his feet, holding to the back of his chair. Then abruptly he straightened as if he had heard a command.

He clicked his heels together, put on his fatigue cap and marched stiffly from the room.

For a block he continued to march stiffly, head erect, with the rhythmic tread of a soldier. But then he wilted to the cobbler's stoop and again he limped. He did not realize that he had been followed until he felt Mrs. Kelly's hand on his arm.

"The snakes!" she said simply. "But don't you take it to heart, my boy."

"I'm not, Mrs. Kelly." The old man straightened once more. "Maybe they're right and I'm too old for a grand marshal. To tell you the truth, I ain't felt so very fancy on horseback this last two-three years. But, anyhow, you'll be representin' the ladies of the G. A. R.'

"I'll not that!" she flashed. "I walked out with you and out I'll stay. What would our cumruds be thinkin', especially Mike, rest his soul."

"Our cumruds," murmured the corporal, as they walked on in silence.

Captain Webster, of the Boy Scouts, marched excitedly beside them. He was mentally dramatizing an Indian foray, in which the red devils should descend upon the settlement at once and scalp every one of those smarties back there who had rejected his Uncle Billy for grand marshal-"given him the hook," was the captain's phrasing of this process.

Back in the little kitchen Corporal Billy went mechanically about the washing of the supper dishes. He did not hum Marching Through Georgia, though at moments he affected a lively interest in the scraping of plates and the heating of dishwater. Nor was he unaided in his task. Captain Webster, despite a career of hardening adventure, was not without his human side. Indeed, as he deftly helped with the work there was something almost softly human in the glances he stole at the outworn veteran. He spoke but little, however, until the kitchen was once more neat. Then, as the corporal drew off his long kitchen apron and hung it on its nail, the captain, for purposes of light conversation, brought up a matter which had nothing to do with the affair of the evening.

"Now if I could take my rifle out just for an hour tomorrow morning-that Mrs. Kelly said she'd like me to shoot two of her young roosters and I think we should always try to perform little services for those about us and make their lives brighter."

"All right, but you bring that rifle right back when you've done it, mind that!" And Corporal Billy sank wearily into a chair to regard on the wall opposite him a steel engraving in a walnut frame of Abraham Lincoln striking

the shackles from a kneeling slave.
"I wonder if it was worth while," muttered the old man grimly. The reference was lost upon the captain, who was nevertheless sympathetic.

"You could come back all right," he announced cheerfully. "Come back? Back from where?"

"Oh, you know-come back. They think you're down and out, but you could come back, Uncle Billy."

"Oh, I'm a has-been all right." He continued to glare at the engraving, but Captain Webster was persistent. He planted himself before the old man, feet apart, head tilted, eyes half-shut in calculation.

"No, sir; you can come back, I tell you. If you'd just put yourself in my hands and give up chewing tobacco and take those bending exercises and breathe deep in the open air and drink pure spring water between meals, I'd make a new man of you. I got a book tells all about how to get hearty and rugged. Of course you're older than I am, but you can come back enough to make this jay town set up all right, all right. I'll bet you're the bravest man in this whole county today, bar none. I'll bet you

wouldn't be afraid of anything you could think of. Now you bend over and touch your toes a hundred times and -

"Bedtime," interrupted the corporal, who had been a poor listener. "And you can stay out all day tomorrowafter you bring that gun back."
"Not unarmed?" queried the captain. "You don't

mean totally unarmed?"

The corporal deigned no response to this.

"Well, can I take this old pistol? That'll be something." He took from the table the ancient army revolver that had long reposed in the trunk containing the blue uniform. It was a weapon large and long, of a battered grimness. The lock was broken, but its aspect was impressively sinister. It was at least three sizes too large for a boy scout, but, as the captain had observed, it would be something.

"I'll keep the shop shut tomorrow," said the corporal, "but I won't go out myself-I'll be busy round here. Yes, take the pistol." With a heroic effort at pleasantry he added: "And you can shoot all the Indians you want to with that." "Very good, sir!" said the captain, and formally saluted.

Decoration Day naturally saw the shops of Ophirville closed; but the shop of William Safford, its wooden boot swinging above the door, seemed more tightly closed than any other. Not only was the door locked, but the curtains were closely drawn. The place had the air of being hermetically sealed. Nor was its owner to be seen on the street mingling with his fellow-citizens in the pleasant bustle of preparation. There were those who said he sulked behind his darkened door, being deficient in public spirit. The town clerk, that wily politician responsible for the corporal's humiliation, said bluntly in front of the post office that no man who would not bow to the will of the people, veteran or no veteran, was worthy of a post of trust and honor. Grand marshal elect, Sam Gates, who was trying out horses up back of the livery stable-he wanted one that would prance nervously when the band played—announced that the town needed new blood, and that if the old fossil wanted to be huffy, why let him! From which it will be seen that there was scant public sympathy for Corporal William Safford. Such as there was came from Mrs. Kelly, who had her own curtains drawn and kept herself behind them.

The parade, starting from the town hall at two o'clock, was duly impressive. Grand Marshal Sam Gates, having discovered a sufficiently neurotic mount, rode at the head, encircled by a rainbow of fluttering sash and carrying a crêpe-bound baton. He was followed by the Ophirville silver cornet band, which played very slowly Flee as a Bird. Came the mayor in frockcoat and silk hat, the Order of Rebekah in full regalia, the uniformed Knights of Pythias, school children carrying bouquets of wild flowers, a platoon of national guardsmen and the ladies of the Spanish-American War-four of them in the depot hack. Prominent citizens trudged in the dusty rear.

Grand Marshal Gates caused his charger to do fancy steps as he passed the cobbler's shop, whereat the band played with an added emphasis, especially the E-flat cornet, who was related by marriage to the grand marshal. And so the line wound its way to the cemetery.

Inside the closed shop Corporal Billy sat at his bench, his withered shoulders hunched forward, his head in his hands. The music became fainter; even the strains of the taunting cornet expired. Sadly the veteran arose and threw off his leather apron. In his bedroom back of his shop he arrayed himself in his G. A. R. uniform, carefully as if for a public appearance. He brushed the worn fatigue

cap and adjusted it before the mirror. Last of all he upduced a saber of an obsolete type and buckled the belt about his waist. Then, back in the dim light of the shoo. he waited tensely.

From the distant hillside where lay Ophirville's censtery there came at length the muffled crash of a volley d musketry, then another and another.

With a brisk rattle Corporal Billy drew his saber from its sheath and smartly swung it to "Present!" Faintly, sweet; came the bugle-call of "taps."

"Cumruds, I salute you," murmured Corporal Billy, So he stood a moment, dreaming back to the days of his fighting youth. Unsoldierly tears welled to his old eye. And then he slumped to his bench, drooping in every lng his head again in his hands. A long time he sat there. His need for the setting-up exercises recommended by Captain Webster had perhaps never been so apparent.

In the depths of his despondency he lost track of the hours. He was dimly aware that the parade had returned and scattered; the revived street life came faintly to be dull ears. And then, mingling with this came sharper, unaccustomed notes, the gallop of a horse, two horses shouts; the hurried, excited speech of two men before his door, and swiftly running feet along the sidewalk. At last he became alert to this flurry. He stepped to the door. turned the key in the lock and stood out in the glare of the afternoon sun. Citizens in unwonted haste were speeding from all quarters toward the town hall. Here and there two would pause briefly for speech together. World some novel event ran among them. Two of these neg in door were hailed by Corporal Billy. "What's doin'?" he asked.

In unison they spluttered at him incoherently. He was obliged to demand the news of two others before he canprehended it. The thing was simple enough. Seavy, the negro murderer, a life prisoner over at the Folsom pententiary twenty-five miles distant, had escaped early that morning. The single telegraph wire being down, the new had just reached Ophirville. He had taken to the hills and it was thought that he would not easily be recaptured. But the guards from Folsom were tracking him and already Sheriff Kritzler was forming a posse. The hunted man wa known to have started toward Ophirville.

Instantly Corporal Billy was thrilled to a foolish ambtion. He would show them! He would be a member of that posse. He would let them see that veterans didn't flinch from danger. He might be in at the capture. He might distinguish himself. He might "come back," as the boy scout had put it. Accoutered as he was, he set out for the town hall. On his way he gathered bits of information that might have daunted a less foolish cobbler of seventyfive. Seavy, an enormous black fellow, had sworn is would not be taken alive; he had throttled a guard who tried to prevent his escape. Once in the hills, he had left a wale of destruction-he had murdered a rancher, the rancher's family, two families of ranchers, burned their houses. He was savage, wild, mowing down all who opposed him Such was the gossip Corporal Billy encountered. A notice glimmered within him that perhaps he would be of small use to the posse; that perhaps, while there was yet time he would do better to seek once more the dignified setsion of his locked shop; but he was helpless-his feet arried him on. He felt that his feet were his masters. He could no longer control them.

And then he was pushing a way through the crowd shoul the sheriff's office. It was an excited crowd, each man of E

seeking to voice more load; than his neighbors his plan for taking the prisoner, for esciman, it seemed, had shrevd; guessed his hiding place. And yet Corporal Billy for a moneti quelled the eager voices. Some thing in his military bearing and uniform must have done it. 🗄 rested a hand upon his saler hit and saluted Sheriff Kritzler wha frowning with fat importance. paused to stare amazedly at him A dozen mounted men, the Spanish-American veterate among them, were on the outskirts of the group armed with rifles and revolvers, awaiting word from the sheriff to be of And Corporal Billy held them ₩ until he could speak his lines:

"Corporal William Safford formerly of the Twenty-third Indiana Infantry, reports as 1 volunteer, sir!"

The sheriff gasped and frowned importantly: "Car bother with you, Safford Posse's big enough already.

There was a murmured erdorsement of this reply inc (Continued on Page 45

# MEN WHO LIVE ON NOTHING

70U know Rupert Vallon?" said my wife as the butler was bringing in the coffee.

I nodded, tossing away the match with which I had ighted my cigarette. Of course I knew Rupert Vallon.

"I mean, do you really know him, anything about him?" "Of course I don't really know anything about anyody here in New York," I answered with absolute truth.
"Well," she went on, "there's some mystery

thout Rupert. What do you suppose he does or a living?"

"My dear Clare," I replied, "I never ask the andsome gentlemen who sit in the boxes at he opera what they do for a living. It might mbarrass them. Moreover, it doesn't matter, hat I can see, what they do or whether they do mything. Generically all rosy young eligibles ave always been in Wall Street-that is, they vere until the Supreme Court began to construe he Sherman Law. I suppose now they are on "ifth Avenue. But what about Rupert?"

"I tried to get some one to fill a place at our inner tomorrow night—Tom Hartfield has been aken down with pneumonia, you know-and alled up the Stuyvesant Club. You instructed se always to ask old Peter, the doorman, who in the club; so I told the boy to send him o the telephone. 'Is that you, Peter?' I said. This is Mrs. Marathon.' 'Yes, ma'am,' he rswered. 'What can I do for you?' 'I'm aving a dinner tomorrow night for Lady Van rchid,' said I. 'Some one has given out and want to fill his place. Will you kindly tell me ho is in the club?"

"There was a confused mutter at the other ad of the wire, from which I gathered that eter had said he'd go and look at the pegs the doorlist. He came back in a moment. There ain't nobody here at all, ma'am,' said e, 'except Mr. Wiggin—and I'm sure you don't ant him! None of the ladies ever do. Oh! xcuse me-there's Mr. Rupert Vallon just ming in. Shall I ask him?' 'By all means!' acquiesced, much relieved. A moment later eter informed me that Mr. Vallon accepted with leasure Mrs. Marathon's kind invitation to ine the next night at half after eight o'clock." She paused, her eyes smiling with mystery.

"I don't see anything extraordinary yet!" I remarked.
"Wait!" she ordered excitedly. "The Stuyvesant Club on the corner of Thirty-third Street and Fifth Avenue, n't it? How far is that from here?"

"Two miles and a quarter," I estimated.

"How long would it take a strong-legged man like upert to walk it?"

'Half an hour-if he kept going right along." "Listen! Five minutes after I had called up the club I

ent out for a little stroll before lunch and ran right into fr. Rupert Vallon at the corner of Sixty-ninth Street and ifth Avenue. 'So glad you are coming tomorrow night!' said, without thinking. 'Ah! Yes!' he answered in a ther vague way. 'Delighted!' And then I suddenly alized that if he had actually got my message himself he ust have flown from the club in an aëroplane in order to standing there talking to me within less than ten minutes. "I'm not a clever talker, as you know. If you'd been ere I'm sure you would have got at the truth of the atter; but before I could frame a leading question he as off on the opera and the opening of that new dancing ace the other night, and I forgot all about it until after had gone home."

"Gone home?" I queried.

"Yes-I invited him in to luncheon-and he came."

I laughed.

"I fancy you will find that you've invited two separate d distinct individuals to fill Hartfield's place. You uply misunderstood the name, and Peter has asked some e else."

"No, I didn't!" my wife asserted.

"Anyhow, it doesn't seem worth taking much trouble out," I commented. "So long as he got the message and coming to dinner, why does it matter?"

"I'll tell you why," she replied with sudden seriousness. Rupert's rather a pal of mine. I like him. I've-we've th known him for years. He's visited us at Newport, ne on motor trips with us, and is always dining and aching here. Superficially he is apparently one of the st friends we have. He's a dear, too-kindly, courteous d faithful. Yet it is a fact that I don't know a single ing about him—and, what's more, I don't remember at is minute where I first met him!"

"We met him at the Osgoods', on Long Island," I

THE PET CAT

"I beg your pardon," my wife retorted; "we've known him ever so much longer than that. I remember now-I met him at Helen Hapgood's at tea and he walked home with me."

"Monstrous!" I cried. "And this is the viper I have taken to my bosom!"

"What does he do for a living?" she persisted.
"I don't suppose he does anything," I admitted; "in

fact I always supposed he had an independent income."
"I'm going to find out," she asserted. "Here is one of
the few people who would really care if I were suddenly killed in a railroad accident—one whom I introduce to all my friends and for whom, to a certain extent, I am a social sponsor -

"You, with fifty other women!" I interjected.

"Who is a constant visitor at my house and who knows practically all there is to know about me!"

"Thinks he does!" I amended cruelly.

"And, while giving the impression of having withheld no confidence, is as much a stranger to me as my butler!"

Well," I replied, "what do you propose to do about it? What do you care how he exists, so long as he is, as you say, faithful and courteous and kindly? You may go prying over this castle of friendship and suddenly find yourself in a secret chamber full of murdered wives. Be careful! So long as you don't know anything about Vallon and he doesn't borrow money, let well enough alone!"
"You're perfectly horrid!" she cried. "You ought to

e more loyalty!"

"But you yourself have just said that you propose to solve the mystery of Rupert's existence!"

"You lawyer!"

"And how are you going to guess the riddle of this social sphinx?" I continued.

"Leave that to me!" she exclaimed. "I've a plan." "All the same, I don't like the idea of your snooping into a friend's affairs like this!" I insisted. "I don't see the

"You don't?" she queried. "Well, suppose he wanted to marry Myra?"

Her answer staggered me. Myra was my wife's cherished younger sister, a mere haby of twenty-three—and a beauty.
"I never thought of ——" I began.

"Don't worry!" she laughed. "He doesn't. But, after all, she's been out four seasons."

During the next two months I heard nothing more of my wife's proposed activities as a society detective. Vallon, except as one of innumerable Vallons, passed out of my mind. Yet he was forever at the house, filling a place at luncheon or dinner, making the extra man in our opera box, and performing the absolutely necessary function of gentleman-in-waiting to Her Majesty My Wife. In these

modern days, when the ordinary New York society woman lives more luxuriously than did the queens and duchesses of medieval times, she has need of some one round her to play the part

of page, courtier and jester.

We have our menservants and our maidservants, but we must have our minstrels and our gallants as well. Hence the development of the Pet Cat in a social system that in the older generation had its beaus, its dandies, its Ward McAllisters. The grandam of fashion the world over has always had her court, with its attendant gentlemen, its parasites, its sycophants; and in a lesser degree this has been true everywhere of those whose wealth enables them to entertain lavishly and to throw open their houses to a large circle of people.

Thackeray has pictured, with a master hand, English society under the Georges and during the early Victorian era; but until the comparatively recent concentration of wealth in America our social system did not afford opportunity to the merely ornamental to make a living.

Twenty years ago men like McAllister were regarded as human jokes. The society man was the daily butt of the paragrapher and the squib in the comic paper. We boasted loudly that we had no leisure class. The shadow of the Puritan still stalked abroad. We felt in a vague way that it was wrong to be happy and damnation to be gay. To admit that one did not work at some productive form of task was to plead guilty to general worthlessness and neglect of duty as a child of God, an inheritor of the Kingdom of Heaven, and a citizen of the United States.

Things have changed surprisingly in the last couple of decades. Social life may not be any happier, but it is vastly gayer. We may not be any better and we may be a good deal worse-

let others decide-but we are indubitably better company, behave more naturally and are better informed, except possibly from a purely pedantic point of view.

A girl of eighteen today is a far better equipped human being than she was twenty years ago in almost every respect. She is more cosmopolitan, better able to look out for herself, and less amenable to social bunk than her mother and her mother's friends were at her age. The girls of today are not easily fooled. They are not deceived by the shams of a society that glitters but does not satisfy and they play the social game for only what it is worth.

And because their college friends, whom they will eventually marry, are hard at work in law offices, hospitals, banks and factories, and have small time or inclination for the more trivial social frivolities, the requirements of our young ladies have given rise to a class of men of ambiguous age who year by year keep the social ball rolling and do the work which the younger fellows have too much sense to want to do.

The dearth of presentable young males in New York society is such that anything which wears clean linen, can speak in an intelligent dialect and has not been convicted of crime need never go hungry. The less known about him the better. If he is a foreigner he leaves nothing to be desired; and if he be young besides, his life will be all pink roses and yellow satin-until he is foolish enough to marry or enter some employment that will interfere with his rounds at five o'clock.

The average man of adult age finds his business life engrossing and fatiguing. If he is able to tear himself away from the office before it is time to dress for dinner he usually has only leisure enough to drop into the club for a glance at the paper and a cocktail.

Moreover he is too tired to make a particularly agreeable companion over the teacups. Hence calling has gone out of fashion-not because the women do not wish to have callers, but because the men are too busy. And as it is out of fashion the men who are not too busy make that an excuse to stay at the club and play billiards or bridge, instead of performing what used to be regarded as their

The fact, however, that the men who work no longer make calls only makes the others the more welcome; and by assiduously leaving pasteboards on his new acquaintances a comparative stranger in the city will find that he has immediately roused in the hearts of the ladies whose doorbells he rings a grateful and responsive regard.

There is no true woman who does not like attention, and few women care what the underlying motive of their pseudo-admirers may be. Alas! there are few, also, who will not accept it blindly as a tribute to their personal attractiveness rather than to the excellence of their dinners—as it more probably is.

Though the majority of the five-o'clock-tea men are not the ones of her acquaintance whom the hostess would prefer to see, she is nevertheless glad enough to get them, whoever they are. Most men have a natural distaste for laying themselves open to the accusation of being toadies, and their tendency is to neglect their women friends rather than hazard the chance of being classed with the Johnnies; but the foreigner has no false pride and calls regularly.

He knows women. To do so is part of his stock in trade, and his flattery is often no more insincere than our own crude compliments. His hostess is grateful to him for not being afraid publicly to recognize the fact that she is a charming woman, and to say so. The blush may spring to her faded cheek, but the marquis inevitably stays to dinner.

Of course the women are not the only ones.

'Tis an old maxim in the schools That flattery's the food of fools;

Yet now and then your men of wit Will condescend to take a bit.

After all, who would not prefer to be told she is ravissante than to receive the somewhat ambiguous compliment of looking "rather fit"? And so when my lady wishes to fill her opera box or country house it is the flattering foreigner to whom she first fondly turns; then to the good-looking boy just out of college, who has not yet found a job and who hankers after the fleshpots; and then, in default of others, to old reliable Mr. Pet Cat, who is young enough to be agreeable and is generally old

enough to be quite safe—even with Myra. The seething currents of New York society, with their dangerous undertow, are too complicated for adequate analysis in a few pages; but society in America is primarily a show window in the Bond Street of matrimony, and its psychology can truly be understood only by accepting this simple major premise.

Each succeeding season brings out its galaxy of girls of charm and beauty. The choicest dozen of these are absorbed into the whirl of adult society, where wealth is almost an essential; the others marry inconspicuous men, go away, or gradually drift into the backwater of mere respectability. The circle of respectable people in New York who are socially impeccable without being at all fashionable is enormous.

In a word, smart society is the survival of the fittest, and it exists for the ultimate purpose of satisfying woman's craving for admiration. To this end man is indispensable. Without him society would lose its ultimate object—and his years make no difference. Hence the Pet Cat is of all ages—from eighteen to sixty-five. He is always a Tom and he has nine long lives.

In France, Spain and Italy, to exert an attraction for women is a thing to be boasted of; while in Anglo-Saxon countries the term ladies' man has inevitably been one of mild reproach, carrying with it the imputation of effeminacy. Carpet knights have always been pictured as coxcombs.

Even today, for a man to overdress is the quickest and surest way to excite hostile criticism.

All these things make easy the path of the man who lives on nothing. He has but to possess the conventional swallowtail, a toothbrush and a safety razor to challenge in the lists the most arrogant son of the plutocracy. The rest depends on himself alone. He will work his passage and purchase his rations with a smile. The man who lives on nothing! Who shall say that he does not pay for all he gets—and for all he loses?

According to an old story, which bears the earmarks of authority, Mr. John L. Sullivan—once fistic champion of the world and proud holder of the Diamond Belt—had a certain inseparable companion who, whenever the great man went into a saloon to buy a drink, always stationed himself at the hero's elbow. Sullivan, much too fine a gentleman to bother about change, invariably threw a dollar bill on the counter in payment for his refreshment and turned grandly away; but his friend, having no such absurd scruples, carefully swept up the despised coins, put them in his pocket, and by so doing amassed a comfortable fortune, on which in due course he retired. Thus ran the tale.

One hesitates to speculate on the number of drinks involved in the accomplishment of this result. I believed the story as a boy and I refuse to disbelieve it now. I have seen too many similar instances among my contemporaries to doubt its substantial accuracy. I doubt not the great John carried many a poor man to affluence on his coatfails.

Even in Nature we find the prototype of this friend of the prosperous. The rhinoceros bird, whose performances are vouched for by our naturalistic ex-president, otherwise known as Buphaga erythrorhyncha—I refer, of course, to the bird—is familiar to the reader as an African sturnoid hornbill, which takes a free ride on the back of the unsuspecting rhino in order to partake of the parasites that infest the hide of the larger animal. And there is even a

Metropolitan. Vallon himself dines and goes to the open every night of the season. He is in great demand; for he knows the plots of all the operas, the intimate private histories of the prima donnas, and all the scandals of the Diamond Horseshoe. He is a genuine musical handbook and saves buying a libretto.

"Do you notice that young chap—directly opposite" he asked me once during a performance of L'Amar de Tre Re. "The fellow with the sandy mustache—who; just come in—shaking hands?"

"What about him?" I inquired. It was during the

intermission after the first act. "Watch!" said he, smiling.

The curtain went up—the lights went down. Using my glass I could see that the box already contained in persons—two women and four men; but the newcone remained seated unostentatiously in the rear almost throughout the act. Just as the barytone was concluding his final aria the visitor disappeared. Once more light appeared and the boxes moved and swayed like rosebut in a breeze. Vallon touched my arm again.

"There he is," he remarked, "in Mrs. Vann's box now."

I looked down the Horseshoe. Yes, our friend had shifted his position to our side of the house and was aready bowing over the gloved hand of a later just on our left. Endently he was full of merry quips and crarks for his hostess and he companions laughed constantly at what he was saying.

Ten minutes passed Once more the men streamed back down the aisles, and the leader of the orchestra returned to his seat amid a scattering of applicafrom the galleries. The lights sank again. The young man bowed, rose and moved into the back of the box; but. as before, he remained there throughout the act-only to disappear just before its conclusion. "To see is to know,"

remarked Vallon. "Thi young gentleman gets opera de luxe at a dollar a nightthat is, when he does not get it for nothing."

"Just how do you mean?" I asked, my mind still at entirely clarified.

Vallon gave a deprecating shrug.

"Perhaps I ought not to disclose trade secrets," said he.

"That young man, when he is not invited to the open, buys an entrance ticket for a dollar. Very likely he gos without his dinner to do so. He stands in an inconspicuou place during the first act—or perhaps he does not arrive until the first act is over. Then he checks his hat and cout, pulls on his white gloves and pays his first visit to some patterne box—only he doesn't leave it when the curtain gos up, but sits there throughout the act until it is almost time for the curtain to be rung down; then he beats it to another ""

"Necessity is the mother of polite invention!" I sign!
"Why own an opera box?"

"Why own an opera box?"
"Why, indeed!" said he. "If kind hearts are more that

All of which brings me to my good friend Vallon himsel, the intimate companion and social shadow of my wife, he mirror and mentor of fashion, her younger sister's CAVI-lier, my comrade in travel, the haunter of my fireside-Vallon, who has his own peg on my hatrack and cook almost have a latchkey to my door—could have if he said for one!—Vallon, who would walk behind my coffin at my funeral and execute my will.

One would suppose that the description of such a doe friend would be an easy thing, but it is not; for what is come to the actual drawing of the picture I find that is some strange reason there is no salient feature to limn—approximent characteristics; no definition. I find make thinking of Rupert all in negatives. I cannot truthfully describe him as handsome, brilliant or cultured; but he is distinctly not bad looking, dull or uneducated.

The casual stranger would see a rather muscular mat of five feet eight or so, with ruddy complexion and black had plastered carefully back from a part exactly in the middle of his rather high forehead. Vallon's features are by the means classic, and yet neither are they insignificant. It has an alert, good-natured face, a ready smile and almost a superabundance of manner. He talks a good deal-makes conversation, I believe the phrase to be larger

piscatorial sycophant, which follows the shark wherever he goes and feasts whenever the latter makes a killing.

So, naturalists observe, a flea
Has smaller fleas that on him prey;
And these have smaller still to bite em—
And so proceed ad infinitum.

The Pet Cat, like the rhinoceros bird, serves a useful purpose. Indeed he is not in most instances a parasite at all; but just as the bard and jester paid their board in older days by their songs and horseplay—and on rare occasions by their wit—so he pays his by coming when he is bid, playing cards with his elderly patronesses, chaperoning the débutantes, and being neverfailing in his attentions to the entire family. One may pity his choice of an occupation, but at least give the poor devil his due.

My first suspicion of the existence of a leisurely class of gentlemen who live on nothing was when I caught an ancient member of one of my clubs surreptitiously removing some paper and envelopes from a receptacle in the writing room. At a safe distance I observed him smuggle the loot into his ample pocket and stroll innocently away. I held my peace. Rankin was a friend of my father. But I inquired of the captain on the library floor how much writing paper was used in the course of the year. He looked at me in a scandalized way.

"The pyper an' henvelopes some members swipes is sumthin' hawful!" he whispered. "That old gentleman— Mr. Rankin, now," he went on complainingly, "'e tykes 'ole quires!"

I left him hurriedly. I did not wish to hear more of the sins of the antique Rankin. But what did he do with it? Carried on a clandestine correspondence from his bedroom probably. Poor old Rankin! He is always at the club—the earliest to get the evening papers—the first to scuttle into the dining room when the club has a free supper. I often see him in a corner drinking a glass of milk and eating a plate of crackers while the rest of us are going upstairs to dinner. And he smokes a pipe! I wonder about Rankin! Perhaps, after all, he is the uptown brother of the Bowery gentleman who lives by the grace of the free-lunch counter.

I am straying from Vallon. However, I shall get back to him. I remember now that it was he who told me how some younger men got their music de luxe at the eadily and gives the impression of always being thoroughly at home and enjoying himself. I am giving his convex.

He is inevitably on the job-Johnny on the spot. He nakes it his business to know everybody he ought to know, and to know who everybody is whom he ought not to know. He convoys débutantes to and from their dancing parties and the opera. He is Rupert to all of them. He is the utural trustee of their reputations—and he has given no and. He is the friend of the old as well as the young, and s always to be found on Sunday afternoons in the drawing ooms of the dowagers. He has a soft, thick, flannel-like pice, some sense of humor and great tact.

In a word he is a useful person to a very large number of seful people and is disliked by nobody-which, now that come to analyze it, is probably equivalent to saying that e has all the superficial qualities which make a person ttractive, and few of the deep or profound characteristics

hich make a man either loved or hated.

Vallon is the greatest common divisor in society. He is opular not for what he is but for what he is not. He never ays anything clever or very amusing; but, on the other and, he never says anything impolite or caustic. Rupert always smiling. If there were no smile on his face I metimes wonder what would be left.

He is not distinguished exactly, but he has an air about im-an elusive suggestion of class. He is a good sport, lays all games well, and is an expert with rod and gun. le is a handbook of useful information, equally at home in

be woods or the crosstrees.

He will follow a moose all day on snowshoes over a heartreaking crust of snow, cast into an eddy with a thirty-sixunce rod for eight hours on a stretch, and sit in a blind in n icy wind from starlight to sunset waiting for ducks that ever come. After you have camped and cruised with a ian time and again, with never a cross word, you get to ave a peculiar fondness for him-and that is what we all

Moreover, he has an excellent position and has a distinct ad well-recognized value merely as a social asset. More an one débutante owes her present vogue to Rupert's reful and diplomatic generalship. And, when all is said ad done, a fellow with no corners is a good sort to have sund at the end of a hard day's work, or when you are ying to pilot a female family across Europe in a cranky otor.

Yet, with all my fondness for him, I did not, as I truthily told my wife, really know anything about him. There as no need to know anything about him. Nothing would we made any difference. One felt instinctively that, no atter what his origin, his connections or his sources of come, he could not be any the less the gentleman he was. nd so he remained a friend taken for granted, a somewhat ysterious friend-none the less valued. And he dined at ir house several times between my wife's laughing chalage to my ignorance and her first report as a society

"Well," she announced more than a month after our first oversation about Vallon, "I've discovered one thing!"

Did He Jee Himself

"Wonderful! Marvelous!" I ied-a Doctor Watson to her

"Rupert, I feel sure, has some rt of understanding with old ter at the Stuyvesant Club. I unditoutrather cleverly, I think. ou see, Dorothy Post and I both spected something; so we agreed at she should call Rupert up at eclub and invite him to dinnerien we knew he wasn't there."

"Talk about your lowdown duicity!" I growled; but Clare ent on unperturbed.

"You remember Rupert lunched re yesterday?" I nodded.

"I called up Dorothy as soon he arrived and she at once telephoned the club and asked Peter who was there. As usual he said the club was empty, or something; and then after a minute he added that Mr. Vallon had just come in-and wanted to know whether he should ask him. Dorothy said yes; and pretty soon Peter came back to the telephone and said that Mr. Vallon would be delighted to dine with her on Thursday. Then she called me up and told me."

"You young devil!" I cried indignantly.

"Oh, that's not all! I've sunk to far worse depths of infamy than that," she retorted. "So instantly I asked Rupert to dine on Thursday, too, just to find out whether he'd accept; but he was too smart for me-said he'd left his engagement book at the club and should have to let me know later. Sure enough, about five o'clock he telephoned that he was sorry to find that he had a previous engagement to dine with Mrs. Post!"

"From which you infer," I began, rather amused in spite of myself, "that Rupert has a deal with Peter to the effect that if certain people call up the club and want an extra man for dinner, Peter will accept the invitation for him?"

"Of course that involves Peter's having a list of all his engagements," she commented; "but that's simple enough."

Well, suppose he has such an arrangement—what does it prove?" I demanded.

My wife laughed.

"It proves that Rupert wants the dinners pretty badly, doesn't it?" she asked.

"Lots of people want dinners!" I muttered; but, in spite of myself, I felt annoyed with my wife for having been guilty of tricking a friend-and amazed at my friend for

having attempted to trick my wife.

After all what did it matter? Yet-the thought refused to remove itself from the back yard of my mind—why should Rupert care so much about being asked out to dinner? He was the most invité man in New York! I knew of my own knowledge that inside of two weeks he was going off in a private car to spend a month on Jack Sheppard's houseboat on the East Coast of Florida; that on his return he was sailing for Algiers, to be gone on a six weeks' motor trip with the Churchills in North Africa; that he was booked for the June salmon fishing on the Restigouche with Charley Keene; was to spend July on a yacht; and was full up with visits at Newport for August and early September.

I knew all this because I myself had tried to get him to go with me on a camping trip to New Brunswick and told him to fix his own time. So why did one with such a surfeit of friends and pleasures stoop—was it a stooping? I was not quite sure-to an intrigue with a club servant to get an

extra invitation or so to dinner?

In the whirl of the closing social season, however, the matter passed from my thoughts and I saw no more of Vallon save to hear of him distantly as shooting alligators in Florida and photographing Arabs in the environs of Biskra and Tunis. Then came summer, and Clare and I donned khaki and plunged into the primeval forests of the Canadian wilderness.

Pride and Calls Regularly

Lean, hard, mosquito bitten and happy, having fought with salmon and toyed with trout, lured the moose from the ridges to the bogun, and photographed him at sunrise, we emerged from the burnt land, paddled down the Tobique and reached Plaster Rock after an absence of twenty days, hungry for news and white-man's food.

The day was just beginning to fade as we beached our canoes just below the log drive and pitched camp for the last time, half a mile above the town. Tomorrow we should take the railroad and the day after be back in New York.

A hundred yards beyond our campfire stood a small lumber mill; and near it, in the river, a stalwart old man with a white beard was climbing round on the floating logs and poking at them with a pole. As Clare and I approached he leaped ashore and, leaning on his pole, accosted us good-

naturedly. He was a lusty specimen of the frontiersman thin and spare, with keen gray eyes and a lurking humor about the corners of his mouth.

"Lookin' fer a camp site?" he inquired genially. "Make yourselves to home anywheres ye want-only be keerful to put out your fire in the morning."
"Much obliged," I replied. "We'll take good care to

put ours out. Can we buy some eggs round here?"

"You can get all you want down to the store," he answered. "Been long in the woods?"

"Three weeks."

"Where be you from?" was his next question.

"New York City."

"Don't say!" he remarked. "That's some ways off. 've never been thar. I'd like to go sometime 'n' see Harry Thaw and the Tombs and the gunmen, and all the rest of it. I had a good chance last year to get reduced rates to the Sportsmen's Show in Madison Square Garden; but times is hard. My son went instead. But the rich food upset his stomach. What might your name be?"

"Marathon," I answered. "And yours?" He turned to the mill and waved his hand toward a large sign over the door, which neither Clare nor I had noticed

#### VALLON BROTHERS-LUMBER

PLANKS, DEALS, BOARDS SHINGLES, SCANTLINGS, PULP, CLAPBOARDS KINDLINGS, BOXWOOD, SAWDUST, ETC.

FOR SALE

"I'm Vallon Bros.," he said. "I'm the only Vallon left on the river. Know any folks by that name in New York?" "Why-yes," I hesitated. "It isn't exactly an uncommon name."

The old man took out a corncob pipe and shaved a filling

from a plug he took from his pocket. "I've got a nephew down thar," he continued rumina-tively. "I ain't seen him in ten years. Rupert's his front name. Ever run acrost him?"

I caught Clare's eye.

"Oh, yes," I answered. "We both know him-rather well: but I never knew he came from New Brunswick."

The old man grinned good-naturedly.

"Oh, Rupert-he'd fit in most anywhere, I guess! I ain't got nothin' agin Rupert. Nice feller to talk to-but he never was no great shakes to work. He never cared none for the river and he had all kinds of highfalutin idees. How's he making out?"

"I don't know anything about his affairs," I returned; "but he seems prosperous. He has plenty of friends."

"Rupert always made friends!" assented his uncle. He looked pensively across the logs, which choked the river from shore to shore. Then he shook his head. "But he'd never have made a riverman!" he concluded.

Was he born here?" asked Clare.

The old lumberman pointed with a bony index finger to a frame house fifty yards below the mill.

#### PHILADELPHIA, MAY 30, 1914

### Food From Argentina

TO SHIP a bushel of corn from the interior of Argentina to New York costs about the same as to ship it from Buffalo across the Empire State. If you go some hundreds of miles farther up the Plate River, the rate thence to New York is about the same as from Chicago to New York. To Galveston, of late, the rate on corn from upriver ports in Argentina has been considerably lower than from Kansas City.

Taking the average of the last five years Argentina produces about six per cent as much corn as we do—less than one bushel to our fifteen. While we use all of our own corn, and this year some more, the southern republic exports considerably more than half her relatively small output.

Argentina also slaughters something over two million cattle a year—so many, in fact, that her herds have not increased at all during the last five years and have probably decreased. Beef from that country constitutes about four-fifths of the imported supply of England, or about one-third of the total consumption of the kingdom. A little of it has come this way for some years. And since the new tariff act went into effect the Argentine supply has amounted to something over one per cent of our total consumption; but every pound of Argentine beef sent here tends to increase the London price and so attract South American shipments back to that market.

Argentina is bound to be an almost negligible factor in our food supply; but in a time of relative domestic scarcity the pantry may be replenished a little from that source.

#### About Washington

EVERY novice who feels called on to describe the National Capital begins by saying that Washington is unlike any other American city—which, considering its chief function, is a terrible indictment of it. The energy of other cities is expended in buying and selling goods, borrowing and lending money, practicing the professions, building libraries, paving streets.

Washington's energy is most conspicuously expended in discussing other energies. The dominant motive there arises from a struggle for party advantage, which is something that other cities concern themselves with—in a more or less incidental way—about once in two years. The Capital has its special atmosphere, which is mainly a compound of this struggle for party advantage and a scramble for social recognition; and neither of them is a particularly promising element out of which to make an atmosphere.

Nowhere else in the United States are the men who carry forward the major work of a city made so constantly and acutely aware of Mrs. Notch-Higher's dinner invitations and Mrs. Topshelf's receptions. Nowhere else are the motives from which men habitually act so roundabout and uncertain.

Citizen Jones knows exactly why he is going to put a new plate-glass window in his grocery—because it will help his trade. Congressman Brown is going to vote for a certain measure because the party leaders whom he regards as the best guessers think it will be popular, or because thereby he can get Congressman Thompson to vote for a bill that possibly may induce Citizen Jones to vote for Brown at the next election.

A charming place, of course—in early April one of the most charming in the world. A delightful place to visit and in which to loaf round. Going from it to Chicago or New York, we sometimes get a queer impression that if it were drawn to scale with other cities the domed building on the hill would fit nicely in the show window of a toyshop.

#### Government Pensions

A CORRESPONDENT writes: "A bill before Congress provides for the pensioning of superannuated Government employees in the classified civil service. In Congress and the press there is a wide difference of opinion as to the need of such a law. What do you think of it?"

Not a great while ago we happened to be in a Government office on business. Its chief was an aged and ailing man. His appearance suggested an infirmary rather than an administrative desk. In apologizing for the office the chief's superior said:

"That office is a drag on our whole work. But what can I do? The old man has been in the Government service many years. I cannot turn him into the street, and while he is on the payroll I cannot put another man in his place. It would pay the Government to grant him his full salary for the short remainder of his life and send him off to a sanatorium, and put an efficient man in his place."

There are a good many such cases.

#### The Whole Truth

A BERLIN dispatch says: "A banker representing many members of the Bourse applied to-day to the listing committee to exclude any further listings of Canadian Pacific stock, because the prospectus issued by the company in March for sixty million dollars of new stock contained no mention of the case pending for the reduction of freight rates."

The railroad mentioned issued some new stock and gave a description of it from which investors might deduce an opinion as to its value. A freight-rate hearing was pending at the time. An adverse decision would injuriously affect the road's earnings. Some time later there was an adverse decision and the stock fell sharply.

The road can plead that it is not customary to mention pending litigation of that sort; but it ought to be customary. Every fact that has an important immediate or contingent bearing on the value of a security should be set forth. A prospectus ought to contain just what an impartial investment expert who was examining the security for an individual client would show in his report. If water will spot a piece of dress goods the intelligent merchant says so when he sells the goods. In the long run he finds it pays.

No one road is more blamable than another, for to set out truthfully the good points of a security is all that custom now requires; but if present or contingent bad points are known to the prospectus writer they should be stated.

#### Regulation and Vexation

NEARLY every issue of the Congressional Record illustrates a unique condition in the United States—namely, that persons who know nothing about business are saying how business shall be conducted. No parallel condition, we believe, is discoverable elsewhere in the world.

Business should be regulated. Public-service concerns should not be permitted to charge more than reasonable rates. They should be required to safeguard the lives and limbs of their employees, to compensate for industrial accidents, and so on; but all that is quite different from reaching into the mechanism of business and shifting the cogs to suit one's uninstructed fancy.

Our statesmen's readiness to fool with the works knows no bounds. We have no ocean-carrying trade. England and Germany have immense businesses in that line. Yet, in the very field where we have dismally failed while they have brilliantly succeeded, we do not hesitate to tell them how they must organize and conduct the trade—and all on our own closet-spun theories as against their actual experiences!

Regulating a clock so that it will run true, and tying a flatiron to the pendulum on a theory that that will make the days longer, are quite different things.

#### The Historical Argument

FROM Noah down men have used and abused intoxicants; but that signifies nothing whatever. From Noah down men have done all sorts of fool things, and as to some of the things have gradually learned that they were follies and so eschewed them. George Washington drank rum before breakfast. There is no more reason for sticking to George's rum than for cupping and bleeding patients for every illness. The use of tobacco is much more general than the use of intoxicants. That human nature does not

require tobacco we know from the simple fact that it got along very comfortably for several thousand years without it. That normal human nature does not need alcohel to know equally well from the millions of men and women the do without it—and female human nature has always been able to subsist without getting drunk.

The historical argument is bogus. The moderne drinker need not be considered at all; for if a man is truly; moderate drinker, alcohol is of such slight account to him that its presence or absence can make no difference. Mer who really want alcohol are not moderate drinker, although a great majority of them so miscall themselve. Rational men, if they drink it at all, do so precisely in true to become intoxicated in some degree or other. They drink it because they want to have its warmth and sale and cheering lies in their brains.

#### Public Bookkeeping

THE Census Bureau has been asked to devise a standard system of state accounting. Perhaps that is not the best way to go about it, but we do need an intelligent and uniform method of bookkeeping for states and cities. Redroads are obliged to keep books after a standard pattern formulated by the Interstate Commerce Commission. Every road must treat every like item in the same way. Consequently every railroad report has a precise meaning and is strictly comparable, not only with the reports of other roads but with reports of the same road for previous years.

States and cities keep books in any way they choose and, in spite of notable improvements in the last three or four years, many of them choose the worst possible way. In plain language, some state and city accounts are real forgeries that would well entitle the perpetrators to peal servitude if they were used to deceive commercial creditors instead of merely to deceive voters.

When there is no standard for accounting it is expensed to juggle receipts and payments from one fund is another and conceal the fraud under a mass of meaningles, non-comparable figures. Your report may disclose that the police department bought eighteen papers of tacks at three cents each and conceal the fact that five hundred additional jobs have recently been created in the wave department.

State and city reports should be not only accurate at intelligible, but comparable. We hope the House of Governors, if it is still extant, will take up the subject of standard state accounting.

#### In the Right Direction

HERE are two fiscal reports by Ohio. The older one is a mess. It consists mainly of a great mass of uncoplained and unintelligible details. Every petty transaction is set forth and the essential facts about the state's condition are buried in a maze of figures. The state's field year ends November fifteenth; but the preparation and publication of this huge obscurantist report took so much time that the volume was not off the press until near the end of the following fiscal year. Of course mobily had any interest in it then, even if anybody could have understood it.

The plan on which the newer report was compiled a sufficiently indicated by this paragraph in a letter feet the auditor: "Government reports should contain only such matter as is of public interest and only so much a will receive public attention"—that is, the essential furbriefly and intelligibly stated. This report was published within six weeks of the end of the fiscal year, and size it publication the auditor's office has received from fifty a hundred requests a day for it. People want it because they can understand it.

Not only should every state make a concise, intelligible fiscal report, but the reports for all states ought to we strictly comparable—made up in substantially the same way and embracing substantially the same items. The E Indiana had an economical government and Illinois at extravagant one the people of the latter could put the fingers on the difference.

#### Capital Punishment

THIRTY-FIVE boys, all under sixteen years of age were gathered in a boys' club in a social settlement on the East Side of the city of New York. They were—says The Survey—exceptionally keen, ambitious and clean-minded a few of them wage-earners, most of them in the published schools. It was the evening of the day on which for murderers had been electrocuted.

A member aged fifteen addressed the chair as follows:
"I move that the whole club stands for two minutes is
honor of the four gunmen who died to-day!" Which is
club did. Many of the boys commented, with thribit
admiration, on bow gamely the murderers had died—a
related at much length in the newspapers.

Making boys' heroes out of hired cutthroats seems a dubious proceeding.

Scrious and Frivolous Facts About the Great

and the Near Great

eris, triuses a cuise, assession, s. c. Plans for Reforming Jenators

SENATOR William Squire
Kenyon, of
Iowa, is an earnest
young man, and typically so. Indeed, it
may be said that William Squire Kenyon
is The Earnest Young
Man.

uplift provider; but
it has happened
mostly that he has
Did you ever wal
twig, and as you wa
twig, and as you wa
of one kind and ar
machine, to cut the
at that. Instead, h

Life, to the senator. is merely one darned problem after another to be solved; and he is the Earnest Young Man who always has a solution ready for any and all that come in such unending procession. He is not to be set down as an indiscriminate problem solver, for the problems he solves are usually the problems that come within the purview of his immediate gaze; but there exists no problem that he will not solve if given an opportunity-provided, of course, it is a problem that has none but an uplifting effect on the voters of Iowa.

Though the senator is a problem solver who has few peers, he,

the other hand, takes a few peers himself into the polital aftermath of such problems as he may have it in mind solve. There is nothing reckless about the senator—thing at all. He is no harum-scarum solver. Rather tit be said of him that he is a good, steady, equilibratory former, who looks before he leaps to relieve the woes of a body politic.

Two of the principal objects or subjects of his reform ork have been and are the Senate itself and the District Columbia—both, no doubt, sadly in need of regeneration, id neither having any votes that may be lost to the

nator if his reforms ould happen to be omerangish in effect. e is in the Senate withit right of question, til 1919, and can go as r as he likes with the making and reclamam of that body. So so with the District of dumbia. He has nothg to lose there-which, the way, is the intense tuating motive for that ditional grand galaxy statesmen who desire make Washington a odel city, but seem to tertain no such desires ncerning the suffragelding cities of their me states.

I do not intend to cree an impression that e senator is not willing d anxious to enter on y reform work of any aracter that may be cessary. He certainly

His is a temperament at will not permit an use to exist or a wrong go unrighted, proded the exigencies of e case are not exigent an Iowa sense, for exiple. He is an all-round solesale problem solver d abuse corrector and it has happened mostly that he has confined his efforts to the retail trade.

Did you ever walk through a field, carrying a cane or a twig, and as you walked snap tops of weeds here and there? Thus with Kenyon. He sees, to his great abhorrence, a governmental field wherein there is a rank growth of weeds of one kind and another; but not for him, as a reaping machine, to cut them all down, though he is a good reaper at that. Instead, he proceeds across the field and snaps the head off a weed now and then—or what he considers to be a weed; and at the end of the session he has done considerable cleaning up.

One of the principal objects of the tendencies of the senator is the very Senate of which he is a member. The Senate is an institution that has been making its dignified progress across the space of years in its own accustomed manner. It has its faults, mayhap, but those faults are its own faults and very dear to the Senate. Likewise it has had its little perquisites and pie. Still, there can be no manner of doubt that it has long been susceptible of reform; and it occurred to the Honorable William Squire Kenyon that he was the identical reformer to reform it.

#### The Strategic Reformer

HE WAS a member; and regeneration, to be enduring and valuable, must come from within and not from without. Casting about for a suitable place to begin, his fearless eye chanced to fall on the barber shop. There, gentlemen, was a valuable starting point! There was a blot on the 'scutcheon of the Senate! There was an abuse, an outrage; for not only was the luxurious Senate and the luxuriant members thereof maintaining a barber shop, but also the same Senate was maintaining a series of baths wherein aged and dilapidated Solons might be rubbed together each day by skilled masseurs, who, it may have been, were carried on the rolls as clerks, in order that these statesmen might go through another day without falling into pieces ere the shades of evening fell.

This, it seemed to Kenyon, was a clear subversion of the Constitution and a gross and profligate waste of the money of the people. Also, being sparsely provided with whiskers and owning a safety razor, and not one of the barbers or bathmen voting in his state, he determined to call the Senate to a halt on this iniquitous outlay. He entered into this crusade so vigorously that the Senate bathroom is no more and the Senate barber shop is a mere reminiscence, a mere fleeting exhalation of witch-hazel; whereas in the gay old days there was always attar of roses there for

the whiskers of Eugene Hale and pomade for the luxuriant tresses of sundry other statesmen. He had help, but that only proved the justice of his contention—a great and advantageous reform!

More recently he has sought to reform the Senate in other ways, and principally as to executive sessions. Almost coincidentally with his earnest crusade against free telegraph facilities for his fellow senators, Senator Kenyon tackled this question of executive sessions.

It came about in this way: The President nominated a man for the Interstate Commerce Commission. There was opposition. The senator was of the opposition. However, steam-roller tactics were adopted and the candidate for the commissionership was confirmed. This so fixed in the mind of the senator from Iowa the iniquity of secret sessions, wherein his contention lost, that he hastily determined to reform the Senate in that particular and now demands open sessions for the consideration of executive nominations. Once secured, this will be a remarkable reform, and it will have no political reverse English on it, or any effect in Iowa in 1919, at which time the senator's present term expires.

These and other similar measures are in all probability simply the beginning of the senator's plan to make over the Senate to suit his own ideas on the subject. What we must have, as he views it, is a Senate that shall operate along lines laid down by William Squire Kenyon; a Senate that shall shave itself and cut its own hair; a Senate that shall not use the wires when letters will do as well; a Senate that shall be compelled to wash its dirty patronage linen in public and its membership at home, instead of in the Senate bathroom; and a Senate that in all other respects shall conduct itself in accordance with the austere and earnest convictions of W. S. Kenyon, of Iowa, aged forty-five, and having completed his third reconstructive year in that body.

And it is well. The Senate has been in existence since 1789, and struggled feebly along until April 24, 1911, in a desultory and aimless fashion, without the guidance, supervision and reformatory measures of William Squire Kenyon. Since that day, when he took it in hand, it has gone steadily forward; and there is every reason for the hope that by 1919 it will be completely Kenyonized.

You observe the picture of the senator that accompanies these lines of tribute. It is regrettable that the senator was not depicted when engaging in some notable work of reconstruction. As it is, he is shown in a preparatory attitude, carrying in his hand a roll of paper containing outlines of various other projects for the betterment of his colleagues, all drawn down to the scale of his own

thinking - or about seven to the inch.

The senator was prosecuting attorney for Webster County, Iowa, for five years and then became a district judge, which position he held for two years. He was made a local attorney for the Illinois Central Railroad in 1904, and in 1907 was promoted to a general attorneyship, which he held until 1910, when he became an assistant to the Attorney-General of the United States. He had to do with the beef investigations and, after Senator Dolliver died, contested the election Young, who held it by appointment, and was elected. He was reëlected in 1913.

As I have said, he is an earnest young man. He is also a clever young man, and will never be found promoting any project that is likely to be too vexatious in Iowa. He is a strategic reformer as well as an earnest one; and strategic reform is rarely schismatic—back home!

# THE LAME DUCK

#### Viewe of an Innocent Byetander

WASHINGTON, D. C. WASHINGTON, D. C.

DEAR JIM: One of the minor but always attendant horrors of war as it is conducted in Washington, or of rumors of war as they are inducted in the same, is the story of the split in the Cabinet. It always arrives along about the third day, or the fourth day, when the keen edge is off the news and the editors are howling for stuff they can sell extras on. So the correspondents take out their tom-toms and the Cabinet blows up-strictly in the dispatches.

net blows up—strictly in the dispatches, Jim—strictly in the dispatches.
"Secretary Lane pulls out a bunch of Secretary Redfield's whiskers and a grave crisis results!"

"William G. McAdoo intimates that Josephus Daniels is no better than he ought

Josephus Daniels is no better than he ought to be and resignations are expected!"
"Entire Cabinet opposed to President's policy and disaster is imminent!"
"William J. Bryan tells Lindley M. Garrison that 'War is Hell,' and L. M. Garrison tells W. J. Bryan to go to it, which must work great delay in war plans!"
"President steps on the face of his Secretary of Labor and discord is hinted at!"
And so it goes. Take it from the correspondent boys, who are required to furnish

spondent boys, who are required to furnish the stuff for the red-ink headlines and the extras, and a meeting of the Cabinet in wartime, or near-wartime, as the case may be, begins with a general denunciation of every-thing the President proposes by all others present, and an immediate renunciation of everything all others propose by the Presi-dent. From that sort of start it works up to a free fight, in which none of the rules of warfare as countenanced by civilized nations prevail, and in which mayhem is the slightest of the attentions paid by statesmen one to another.

### Why Cabinets Do Not Split

Hence there must be a split—of a cer-tainty there must be a split. Resignations are demanded by the circumstances. These sterling patriots the President induced to become members of his official family can never sit by, it is stated, and not make a vigorous protest against his supine or other-wise policy by giving up their portfolios. The situation is very dark and smells like cheese, and internal dissensions predicate external disaster.

However, the split doesn't come. It never has and it never will. The reason for that, my dear James, may be imparted to you in a few words. The reason there isn't a split in the Cabinet is because every man in the Cabinet is a split in the Cabinet is because every man in the cabinet is the lose his right less than the cabinet is the split in the cabinet is the split in the cabinet in the cabinet is the cabinet in the cabin in the Cabinet is because every man in the Cabinet would rather lose his right leg than his job. You couldn't get that bunch of patriots to quit unless the President ordered them on the firing line; and I guess they wouldn't quit then, but would take the official carriages and drive down slowly and trust to time to straighten things out. The men in the Cabinet are not trying to get out, Jim. Their principal concern is with staving in.

staying in.

When a Cabineteer pounds the table at another of his set, however, it is immediately taken as an evidence of the gravest of rows. I have learned, after long observa-tion, that what a Cabinet member may think privately of the policies of his Admin-istration, or of the plans of any one or all of his colleagues, doesn't count much in bring-ing about a split. Plenty of times they shout at one another, but it is entirely spectacular and momentary.

Pounding the table at one another doesn't mean resignation, and usually does mean that after the Chief Person, at the head of the table, has said soothingly, "Now, boys, you behave!" the disputants will go out and the disputan get a drink at some convenient and not too public place, and forget it—unless, of course, said disputants happen to be Mr. Bryan and Mr. Daniels, who will seal a new compact of eternal friendship with beakers of buttermilk.

Don't you worry about splits in the Cabinet. There are no such things—officially, I mean. It is quite true that certain mem-bers of this Cabinet have rather set opinions concerning certain other members, but that sort of thing doesn't provoke a split or even

## Learn the Secrets of Famous Chefs

On page after page of Cox's New Manual of Gelatine Cookery are revealed the many little "knacks" by which you can serve just as appetizingjust as attractive dishes as a che can serve. Here are dishes for formal occasions and dishe: for everyday use—all distinguished from the commonplace So carefully explained and so easily understood!

Jellies, puddings, creams frozen dishes and other dessert are given in endless variety.

## Cox's New Manual of Gelatine Cookery

is indeed a storehouse o indispensable recipes. A remarkably complete book compiled by Marion Harri Neil, head of the Philadelphi School of Cookery, and cov ering every course from soup t dessert. We will be very glad to mail you a free copywith our compliments — if yo will but ask us:

THE COX GELATINE CO. Dept. E, 100 Hudson St., New York Cit

Sole Agents in U. S. A. for J. & G. Cax, Lis Edinburgh, Scotland.

"There's the coffee we use-Barrington Hall, the Bakerized coffee. You can generally count on things advertised in this magazine.'

CEND for a trial package. Then you can see for yourself that it is not only better and purer, but that it costs less per cup than ordinary coffee, as it makes more cups to the pound.

### A Trial Can Free

RITE us your grocer's name and we will send you a trial can of Barrington Hall, enough to make six cups of delicious coffee, and booklet, "The Evolution of Barrington Hall." This explains the three stages of progress through which this famous coffee has passed.

# BarringtonHall The Baker-ized Coffee

At first Barrington Hall was sold whole or ground as ordinary coffee is today, then steel-cut with the bitter chaff removed, and finally Baker-ized. In it we have retained the good points of our older methods and adopted new features (explained in booklet) that make it economy without economizing. A luxury not at the expense of health, but one that is an aid to correct living

#### Baker's Steel-Cut Coffee

Steel-Cut Coffee lacks a little in quality and in evenness of granulation when compared with Baker-ized Barrington Hall, but the chaff with its objectionable taste is removed from it also. It is far superior to the so-called cut coffees that are offered in imitation of Baker-ized Coffee.

Our Coffee is for sale by grocers in all cities and most towns. Where not for sale, we will send it by Parcel Post prepaid until arrangements can be made with your grocer to supply you.

#### BAKER IMPORTING COMPANY

116 Hudson Street, New York, N. Y. 246 No. Second St., Minneapolis, Minn.

a splinter; for, when it comes down to brass tacks, the only opinions held in that Cabi-net worth considering in their final form are the opinions held by the President. In-asmuch as the President has it in his power to demand resignations, there may be polite differences, but there are no here's-where-I-quit features. You couldn't jar one of those men out of the Cabinet with a blast of dynamite. They are pleased with their jobs. They are not splitting with anybody or over

anything.

The most circumstantial story of the lot concerned the resignation of Mr. Bryan as Secretary of State. There are two reasons why this story is not true. The first is that Mr. Bryan doesn't intend to resign—now or at any time in the near future. The second at any time in the near future. The second is Mr. Wilson does not intend that Mr. Bryan shall resign. Inasmuch as the President and the Secretary of State are the two high contracting parties in this business, it may be set down that Mr. Bryan will remain in the Cabinet indefinitely and that Mr. Wilson intends to see that he so remains. Inasmuch as Mr. Wilson put Mr. Bryan in the Cabinet for certain, definite Bryan in the Cabinet for certain, definite reasons, largely political; and inasmuch as Mr. Bryan went into the Cabinet by the same influences; and inasmuch, again, as those certain, definite political reasons are as powerful now as they were in the fall of 1912, Mr. Bryan will stay where he is and Mr. Wilson will keep him there.

Many persons have said they cannot see how Mr. Bryan can stay in a Cabinet that is staging and managing a war, owing to his well-known peace proclivities. These per-sons do not stop to think what the effect on Mr. Bryan, Mr. Wilson and the Democratic party would be if, right in the midst of a situation like this, Mr. Bryan should go out or Mr. Wilson should put him out. Mr. Bryan is sincerely enough for peace, and so is every other man who thinks twice about what war means; but Mr. Bryan is in exactly the same status as a man enlisted exactly the same status as a man enlisted for a war. He has enlisted and he will not let his fondness for peace bring him to the desertion of his chief, and all that would mean as the Democratic party is now consti-tuted. Moreover, Mr. Bryan likes his job, even if we do show some symptoms of war.

#### Peaceful War Preparations

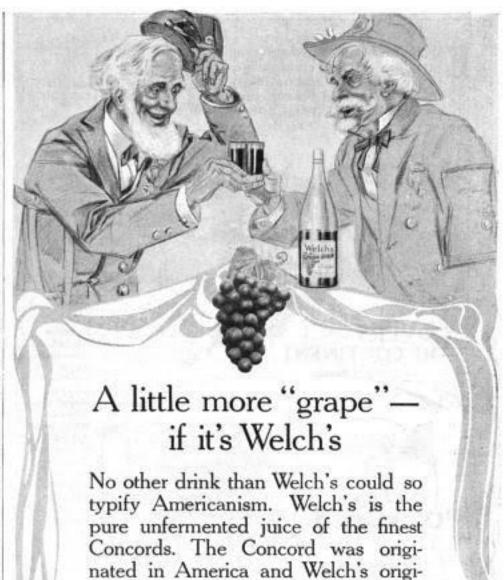

Nevertheless, though there are no splits in the Cabinet, there have been occasions, numbering two or three, when certain sections of the Cabinet rather put over something on certain other portions—that is to say, though there was no particular show of opposition in regular Cabinet meetings, there have been moments when the army, for example, rather resented interference from other quarters and did a little of its own. There was that little question of re-storing the embargo on arms. Though it is quite true the Administration has high hopes and pleasant anticipations of the friendli-ness of Carranza and Villa and the other Constitutionalists in Mexico, there was a measure of doubt of some of those eminent statesmen and soldiers in the minds of some of the army people, who knew them and their soldiers. It was not beyond the possibilities, these army people said, that the arms which this country allowed to go across the border to the revolutionists might, in turn, be used against the soldiers of the United States; and the army people thought, as things were at a crisis, it would be well to stop the shipment of arms and munitions of war.

Now, Jim, I am telling you this story as it came to me. Perish the thought that I should even intimate that the War Department took any step not fully decided on by the Administration! Perish the thought-

but listen to the story:

The question of restoring the embargo was warmly discussed. There was opposition to it by certain members of the Cabinet. It was pointed out that this might mean the severing of friendly relations with the Constitutionalists, who needed the arms and who had large orders in this country in process of filling. To be sure, the American gun makers and ammunition makers, to a man, patriotically and immediately notified the Government that they would cancel all orders for cartridges and rifles, and didso; but there were arms and ammunition in transit.

Considerable debate ensued and considerable delay. So, as I hear it, while the debate and the delay were on, somebody somebody, name not known, but a highly efficient person none the less - sent an innocent telegram to General Bliss, commanding at the border, which was to this broad general effect:

You get the Nation's best, and Nature's best AT its best in

nated the popularity of Grape Juice as

a beverage.

# Welch's

Keep a case of Welch's in your home, and be prepared always to give your family and friends a treat they will enjoy. Try one of these favorite ways of serving Welch's:

Welch Julep Fill an ordinary size tumbler full with welch's. Crush the tips of about twenty mint leaves (do not use the stems). Add a tempoonful of sugar. After this has "drawn" for about two minutes, strain into a tall glass filled with ice cracked the size of a walnut. Add two slices of orange and serve with sprigs of the mint sticking out of the glass.

Welch Punch For a dainty unfermented punch, take the juice of three lemons, ruice of one orange, one pint of Welch s, one quart of water and one cup of sugar. Add aliced oranges and pineapple and serve cold. This punch has become a standard of excellence.

#### A Suggestion

To extend the use of Welch's, June 29 to July 4 is "Welch Week" in the stores of the principal distributors of Welch's. A Welch Week or at least some Welch "occasions" will

be appreciated by your family and friends—don't forget the youngsters.

At the party, at that veranda "affair," at the picnic on the Fourth-nothing quite so good as Welch's.

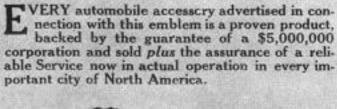

Look for the store with the Welch display. The National Drink for the National Day.

## Get the Welch habit it's one that won't get you

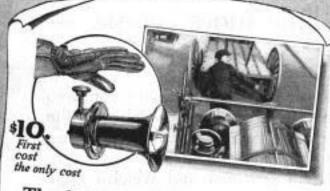

If unable to get Welch's at your dealer's, we will send a trial dozen pints, express prepaid east of Omaha, for \$3. Sample four-ounce bottle, 10 cents. Booklet of recipes free.

The Welch Grape Juice Company Westfield, New York

# COVERS THE CONTINENT

# The Signal that spells SAFETY

Without wires, without batteries, with nothing to get out of order, the Long Horn gives the surety of cer-

tain response the moment it is needed.

Your hand or elbow furnishes the only motive power required, and with the pressure applied you can gauge your warning from a persua. sive request to a positive

command-something you cannot effectively do with the electric signal,

> The Long Horn means real economy. Nothing needs fixing. there's no cost

the mechanism is in one indestructible unit directly for repairs, All under your control. Ball bearings, machine-cut hardened gears, built to elast the car.

VILLE CO.

"We understand large quantities of arms and ammunition are being smuggled across

the border. Please investigate and report."
General Bliss is a citizen who instantly
can tell a hawk from a handsaw. Also, he can read between telegraphic lines. Also, he knew what might happen if these arms and munitions of war went in. Officially he had been warned that smuggling was going on; and far be it from so good a soldier as Tasker Bliss, commandant at the border, to

allow any smuggling.
So he sent out men to see whether there was smuggling and stop it by seizing what was being smuggled, especially if the smug-glers were smuggling guns and cartridges. Naturally this took time. Investigations of that moment cannot be concluded in a that moment cannot be concluded in a moment. The exact amount of time it took to gather in all the guns and cartridges was seven hours. He sent a telegram that read somewhat like this:

"I have the honor to report that I took your telegram to mean that all arms about to be sent over the border should be seized; and I have seized them."

and I have seized them."

When that telegram came to the War
Department there was consternation. Here
was a general of the army who had actually seized arms before the embargo had been restored. It was amazing! Also, it called for long discussion, and great care was ex-ercised in replying to the general. After four hours and a half the War Department

recovered from its amazement sufficiently to send a telegram to General Bliss, which was somewhat like this:

"Oh, our dear General, what have you done? Fie on you! Consider this a slap on the wrist. You were fully aware that the embargo was not restored when you took this summary action. Bully boy! But in future please regard our instructions more future please regard our instructions more carefully."

You see, the War Department knew Bliss and knew what it wanted; and while the Cabinet was debating the question the War Department took a twelve-hour advantage of the situation.

#### War According to Hoyle

One of the most interesting features of One of the most interesting features of the situation, as it developed, was the vast and public fondness displayed by the spokes-men of the Administration for Villa. It seems that Villa, who had been of the opinion that war is a business of fighting

and fighting is a business of killing, was told by General Scott, not long before the battle of Torreon, that he should not conduct his part of the war on the broad, general theory that every one of the enemy who fell into his

hands should be slaughtered immediately.
"Why not?" asked Villa. "That is what
we are fighting for, isn't it?"
"But," General Scott replied, "there are

certain rules of war that are regarded and practiced by all nations. You should seek the good opinion of the world by observing

"What rules?" asked Villa. "I never heard of any rules of war except to kill as many of the enemy as I can and keep from getting killed myself."

getting killed myself."

Whereupon General Scott gave Villa a book on the rules of war, which Villa, having learned to read English when he was in prison, read with interest, and which he had translated into Spanish for his generals. The result was that at the battle of Torreon, when the Federal general proposed a truce so the wounded might be taken care of, Villa sent word that he needed no truce as all his wounded were in the hands of doctors. all his wounded were in the hands of doctors and nurses. It developed that he had fitted up a train, with a tile-lined operating car, in charge of a surgeon from Johns Hopkins, and that his wounded were cared for as soon as they were brought in. This sort of thing gave Villa a fine mark

with the Washington people and they depend more on what he may do in the future than they care to say. They think he is the one real friend this country has among the fighters in Mexico.

But, returning to the question of discord in the Cabinet, I am given pause by this item I read in a local newspaper:

"The President left the White House early this morning for the Virginia golf grounds and played nineteen holes with Doctor

You know what that nineteenth hole at golf is, Jim; and I'm wondering how the President will explain to Bryan and Daniels when they hear about it! However, let's hope he enjoyed it. Yours, in a tall glass,

### *Pulling off a* BIG DINNER

(Concluded from Page 13)

constantly tied up in chairs at a hotel would finance many a prosperous business

Then there are depreciation and loss. If a waiter drops a tray of dishes it furnishes a laugh for the diners and bright remarks about deductions from his wages; but the loss from dishes broken by waiters is a mere incident, a pleasantry of hotel management compared with the relentless breakage of china and glass that goes on in the kitchens. One large New York hotel has losses of this kind amounting to more than a hundred thousand dollars yearly.

If an efficiency expert could prevent breakage in the dinner season alone it would be equivalent to a magnificent salary, for the weekly crockery bill then often rise four or five thousand dollars. Most of the breakage occurs in dishwashing. A chip or crack in glass or plate is as effective as a complete smash.

From time to time the attempt has been made to feed pigs on hotel swill, but with little success, because no way has been found of separating from it the bits of glass and crockery which kill the pigs. Not only glass and china go out in the swill but knives,

forks, spoons and other plated ware.

The depreciation and loss on silverware are high, and the loss in linen amounts to more than a thousand dollars a week during the dinner season—not from wear alone, but from burned tablecloths and torn napkins.

The plant downstairs is a comprehensive factory for the manufacture of good cheer. Separate cold storage is provided for sup-plies like milk and cream, butter and eggs, fruit, vegetables, meats, poultry and game, fish and oysters.

Ice is made; water bottles frozen solid; ice shaved, crushed and cubed for table use;

frozen desserts prepared.

Machinery is everywhere, run by the clean, flexible electric motor, delivering energy wherever wanted at any rate desired, from one-twentieth of a horse power up. Potatoes are peeled by having their jackets ground off quickly and economically. Bread is sliced by apparatus that makes several

cuts at once—and vegetables too.

The steward goes to market looking for long cucumbers, which lend themselves to results under such a continuous process. There are machines for washing, mixing, kneading, whipping, grinding, cutting and making food ready in countless shapes and

ways.

When plain John Smith pays ten dollars for his place at a big banquet he wants to see and hear the animals, and also to feel that the occasion is out of the ordinary. Perhaps he does this only once or twice a year, and he expects a certain degree of

luxury and even extravagance.

A big dinner is staged to give him full value in that way, besides in good food and entertainment; but behind the scenes, after all the costs, risks, losses and other items have been figured, there is no extravagance at all. The dinner industry produces its goods on a staple manufacturing basis and sells them at a pretty close staple profit.

## Sponge Muscles

RUBBER-SPONGE muscles is a vivid description of a new method of filling up a hole in a person's body caused by accident or perhaps by a surgical operation. Some operations leave a hole that in size is serious, and that can be repaired with diffi-culty—if at all—by one of half a dozen surgical methods; and the only time the rubber-sponge method has been tried on persons, so far, is after such operations.

A rubber sponge accidentally left in a wound was found months afterward with new flesh grown all through its cavities. Experiments that followed, during the past two years, show that, at first, a rubber sponge in a wound causes a swelling; but soon the flesh begins to work through all the interstices until the sponge becomes a solid plug, which does not seem to cause inconvenience of any kind. Lately the idea has been used to obtain the flesh plug needed after some operations.

You could write an almost perfect description of this wonderful little car just by putting down the car qualities you have wanted for years: lightness, low fuel cost, lowest possible tire cost, the rugged strength of a truck and the graceful, stream lines of an imported racer, all achieved without freakiness or experimental vagaries.

The Trumbull is an evolution. It stands for all that is known of automobile design and construction. Every mechanical device that insures strength and durability, every refinement of design that has been developed in the automobile industry, is incorporated in the Trumbull. Nothing is lacking.

To read Trumbull specifications is to recognize them as the specifications of a highly developed, ultra-modem automobile. The only difference is in size. Mechanical starter? Yes. Electric lights? Yes. Comfort? Ample for two, with compartment in reat for two hundred pounds of luggage. Four-cylinder water-cooled motor. Splitdorf high-tension magneto. Non-skid U. S. Tiees. Top, windshield, electric lights and hom, mechanical self-starter and tools are included as regular equipment at the extraordinary mine of

was designed by an eminent automobile engineer. These designs were checked over, down to the minutest bolt. Then car after car was built solely for testing purposes. There is literally not an ounce of metal in the Trumbull but has been proved.

The motor is a marvel of compactness and reliable, silent power. It speeds the car from forty-five to three miles an hour. The control, brakes, transmission, steering gear, are perfect. The mechanical starter is operated from the seat.

In appearance, the Trumbull is elegant. Proportions, finish and little niceties of detail are adequate beyond your keenest anticipation. It is a car you will be proud to drive and display to your friends. It seats two people, with ample leg room. But above allit's economy: It runs thirty-five miles on a galion of gasoline. The cost very low.

Trumbull Cycle Cars are on exhibition in various sections of the country. Write to us for the name of nearest agent and for full description and specifications.

## THE STORY OF A HARLEQUIN

(Continued from Page 15)

decent paper would print; but this is enough

decent paper would print; but this is enough to show the desperate character of the man. When I first tried the Apache Dance with Louise Alexander ber hair accidentally fell down, which greatly added to the effect of the thing. "A good idea!" I exclaimed. "We'll keep it for America." So I had big bone hairpuss made, with weights to them. These she wore, and they would drop out and her hair would fall down during the dance.

From the original Whirlwind Dance, which I invented, I got the reputation of being the first man to dance on the stage in being the first man to dance on the stage in a dress suit; but such reputation, as well as the invention of the dance itself, was quite a matter of accident. I was dancing in London at the time. One night I was late in getting to the theater. I was supposed to dance in tights, but was so late I had no time to change and had to rush on the stage in my dress suit. In turning I graphed the time to change and had to rush on the stage in my dress suit. In turning I grabbed the girl with whom I was dancing more quickly than I intended, not being accustomed to dancing in anything but tights; and, having lost my balance, her weight pulled me over. To regain our equilibrium we had to get up great speed, like spinning a top. My coattails began to fly in this furious dance and everything was wild and hilarious.

Later the manager came back to me and

Later the manager came back to me and

That is a wonderful idea! You are going to wear your dress suit right along

"No," said I; "that was an accident."
"Don't wear your tights again," said he;
"wear the dress suit."

I did not work half so hard after that; in fact I could not work so hard in my dress suit as in my tights.

#### An Accidental Success

Another dance I was credited with hav-ing carefully worked out was also a matter of accident. This dance was put on really in the instact of Madame Sherry, and was called the Dance of Danger. Derothy Jardin was playing the part of the Spanish woman. They had put a song in the last act to hol-ster the thing up, but when Lederer heard it he wild.

it he said:
"I don't think it will do."
"Why not fix a dance in there!" I suggested.
"Do so," said he.

"Do so," said he.

Then something occurred to me and I said to Lederer: "Leave it to me!" And this he seemed quite glad to do.

Just before we went on the stage that night I said to Miss Jardin:

"I'm going to pick you up and throw you round, but don't be scared—I'll put you hack on your feet every time." She weighed one hundred and fifty-five rounds.

one hundred and fifty-five pounds.

"All right—I'm game!" said she.
Well, we danced like mad; and every now and then, with the change of music, I would pick her up and whirl her round. The dance was a sensation; but my desire to help got me into trouble, for when it was over Lederer said: "Great, my boy! Great! But you'll

have to go on and do it every night. She's such a tall woman, and so large, nobody else can handle her." And I had to do it! Again, in this same Madame Sherry, one of

he most important things was more or less accidental. Lederer was opposed to putting in the piece Every Little Movement Has a Meaning All Its Own, which is a dance accompanied by a song; but I urged him so hard that finally he consented.

"Very well; I'll ring up the curtain with it," he said, which is the worst insult you can offer to one in the profession.

can offer to one in the profession.

I said nothing; but the answer was that the piece, instead of being killed, as Lederer had expected, by being put on first, when there was practically no one in the house to hear it, made the hit of the show. People got into the habit of getting there on time ust to enjoy this part of the performance. Lederer was quick to recognize this and made Every Little Movement the theme of the entire play.

I was the first to put long dresses on the stage for dancers. I did it in the extrava-ganza called 1492. When I proposed the thing Manager Rice told me I was crazy that nobody wanted to see gowns on the

"That may be true of the men," I urged; "but if you put long evening gowns on your ladies the women will bring their husbands

and talk them into buying the same things for them. That will help the drygoods trade, I'll make a bet that the merchants will do-nate the gowns if you'll give them credit on the program."

nate the gowns if you'll give them credit on
the program."
"I won't do it, even if you get the gowns
for nothing!" Rice said.
Notwithstanding, I went to the head of
one of the leading dry goods stores, and had
a long talk with him. He donated the
gowns; and I put on a gavotte, with twelve
girls in it, called Twelve Daily Hints From
Paris. The gowns made the thing a big success. A year later George Lederer adopted cess. A year later George Lederer adopted the idea, calling it the Show Girls; and then George Edwardes took it up in London.

I created the first Pony Ballet; in fact I have had something original every season. And I have danced twenty-two years con-secutively on Broadway.

#### The Little Red Domino

My creation of novelties has not been confined wholly to dancing. One day Mark Lucien told me he had to get a sensation for the New York Roof Garden and asked me to help him think up something. So we conjured up a scheme. We engaged Little Daisy, who was then dancing at the Majes-tic. We put a red domino on her and sent her to Europe, where we had arranged that a newspaper man should meet and exploit her. She was to travel over Europe, always earing a little red domino.

This she did for eighteen months, taking in Paris, Berlin and London. Wherever she went an air of deep mystery enshrouded her. She got to be an object of the keenest interest on the part of newspaper men and soon acquired a world-wide reputation as the Red Domino. Then we brought our wonderful European catch to New York.

For days before her appearance at the New York Roof Garden she was driven through the streets in an open barouche and took daily drives in the Park-always wear-

ing the red domino. Nobody knew who she
was but Lucien and myself.
That she made a big sensation is a matter
of history. Oscar Hammerstein characterized our work as the most remarkable bit of
exploitation he had ever seen

exploitation he had ever seen.

The late dancing craze occurred—why?

Dancing has been in the air since the world began, but few could do it well. The waltz is the basis of all parlor dancing, but it is the most difficult to learn, because to do it gracefully depends so much on perfect rhythm of movement. Therefore any modfication of this dance that was easy to learn

vas hailed with delight.

Dancing contributes to vanity. It makes the old young. The Tyrolese retain their youth by nightly dancing. It makes the ungainly graceful. It brightens the eye and redders the cheek; and if there is a possibility of beauty in a homely woman it brings. it out. A woman who never knew how to walk or carry a dress learns to do so through dancing. It has made the elderly man graceful again. Instead of worrying about his business he is dancing.

No one is barred. The very old and the very young, the very rich and the very poor—all areat it. Even the lame, the halt and the blind tre doing it now. Speaking of the lame dancing, the most beautiful waltzer I ever saw was a man with hip disease my father taught. He was so lame that he overbalanced almost six inches when he put his foot down. When he danced he put his weight on his ong leg and with the short one worked on he tip of the toe. Stout people are the easiest on the floor.

I do not know vhy, unless it is that they feel their weight and work it into grace. There was a German woman in Philadelphia who weighed three hundred and fifty ounds. One night I danced with her and found her to be one of the lightest waltzers ever met.

Dancing is hygienic. It stimulates the quickened circulation promotes high spirits. The tired businessman finds recreation in it, for recreation means change, not inaction. As surely as thenight follows the day the

present dancing craze has developed a great army of teachers—an army made up of all kinds and conditions of men and women, old, young and middle-aged.

Of all the new teachers the barber seems to be the most adaptable, possibly because he is so slick. It would be hard to trace relationship between the barber's at

200

dancer's arts; but the aforesaid gentleman seems to be nimble-footed as well as nimblefingered, spider-legged, sprightly and alert of movement—all of which lend themselves to dancing. The fact that one of these spindly persons could be a good dancer would be quite as accountable as that a grasshopper could dance well; but that a car conductor or a policeman should be able to dance gracefully, with his notoriously big feet, is quite as difficult to imagine as it would be to fancy a broken-arched ex-headwaiter doing it. Yet all these and more are posing as teachers of the Tango and the Turkey Trot—all hanging out their shingles. But people who themselves dance badly often make good

teachers.

And those of the unemployed who do not teach spend their time in dancing in the cabarets for what they can get out of it.

But they're all fooling the public, for the present-day dances are nothing but graceful walking. You go into any of the cafés and you will see people dancing on the floors guests-who are better dancers than those who are hired to amuse them.

#### New Dances Easy to Learn

These mushroom dancing teachers—obviously to boost prices—dilate on the diffi-culty of learning the Tango and the Turkey Trot; but that's all rubbish! I will guarantee to teach any normal person a one-step, waltz, Tango, Turkey Trot, Maxixe—any-thing they are doing today—in one hour! There is a vast difference between danc-

ing and teaching dancing. After I had spent ten years working with my father he

"Now I am going to teach you how to teach.

teach."

The first essential in teaching is never to lose patience with your pupil, and also to keep him from losing patience with himself.

Do not start by teaching your pupil to watch your feet or to watch his own. If you do you will get him into the bad habit of looking down when he dances, like a mourner at a funeral. Tell him to keep his head up and you will be responsible for his feet. I can tell by looking at the eyes whether the feet are going wrong. Impress his feet. I can tell by looking at the eyes whether the feet are going wrong. Impress on him that dancing is done with the brain and not with the feet. However, after he has learned the steps, it is a good thing to practice before a mirror. By teaching your pupil not to look at his feet you help him to overcome self-consciousness.

These mushroom teachers do not know These mushroom teachers do not know anything about all this. They cannot explain a point. They cannot tell a pupil why it is difficult to take a certain step or what is the remedy. Yet they go on teaching and pretending to get all kinds of fabulous prices for doing so; but the fabulous prices generally resolve themselves into a matter of fifty cents an hour. cents an hour.

Anybody can learn to dance. Age has nothing to do with it. And I have already shown that neither lameness nor obesity stands in the way. It is not easier to teach a child than to teach a man or woman of ninety; in fact the youngster does not learn so well, has not the intelligence, is too flighty. He may pick it up quickly, but he will not do it correctly.

Take a man who does my style of dancing, for example. Though he must begin al-most as a baby, he is no good at it until after he is twenty years old, because he has not the balance, the precision, the physical con-trol. Today, at forty, I am more finished in

my dancing than I was at twenty-five.

The girl learns more easily than the boy, because she is less awkward; and the woman is much easier to teach than the man, because she is a natural dancer and can more easily abandon herself to the motion of dancing. But the same may be said of the male and the female along all lines. The girl in school is always the bright one and the boy is always the dummy.

## An Obliging Enemy

NEGRO truck driver backed his into the space allotted to a rival transfer concern at a railway freight depot in Dallas, Texas.

"Hey, dar, niggah!" yelled the driver on whose territory the other had transgressed.
"I'll knock yo' outa yo' house an' home ef
yo' don't back up!"

"I's got no home," retorted the offend-g driver. "Now what yo' gonna do ing driver. bout dat?"

I'll dig yo' one, niggah-I'll dig yo'

"Way down upon the Swance Ribber, Far, far away, Dere's whar my heart is turning eber, Dere's whar de ol' folks stay."

# How You Bring Back The Tenderness of That Old Song

When Played On The Virtuolo By Instinct

NVOLUNTARILY you picture the old plantation days, the sunny cotton fields, "the little hut among the bushes," and "the bees a-humming-all round the comb." You feel the loneliness of the poor old darkey, wandering the earth over, and longing, longing, longing for his old folks at home.

You bring back the dear old home days when your mother taught you that song's humble words, playing its simple chords on the old melodeon-bring back the feelings that stirred you as you snuggled to her and rejoiced in having such a home and such a mother.

You bring back that true, homely sentiment which must have stirred the composer, Stephen C. Foster, when he created this masterpiece of human tenderness. He who also wrote "My Old Kentucky Home"; "Old Black Joe"; "Camptown Races"; and many other songs that live deep in the hearts of the American people.

Yes, you bring all the tender feeling back—in a flash—when you play "Swanee River" on the Virtuolo by Instinct. Sitting with closed eyes, your fingers resting on the simple Acsolo buttom, you literally open your feelings with this sweet old song.

Oh, the world of beauty the Virtuolo and its Instinctive Playing opens up to you!

#### HALLET & DAVIS

How can you bear to have a home withut music - to see your children go away to their parties and dances when the Virtuolo

would give them most of their good times right at home?

## Out-of-Doors

#### Your Campare-How to Use It

THE same as yourself, when I was a kid there were two questions that not even my Sunday-school teacher was able to what holds the stars up? The other was: What holds the stars up? The other was: Where does fire come from? It is not absolutely sure to me, even yet, that anybody ever has answered those questions lucidly and comprehensively—so many answers being just different ways of looking at questions.

Which of us does not recall lying awake at night and looking up at the stars and wondering why they did not fall down? They do sometimes, as any boy can tell; but why not all the time? Sir Isaac Newton propounded a certain theory about it; but it is like the critic's comment on the heroine in a novel—she is not convincing. Not even my college professor could ever put the law of gravitation across with me. It is thin stuff. But, anyhow, the stars are fine to look at.

Then again, that question of the fire. How many times have we all asked mother what made the match light when you struck it? And where did the flame of the candle go when you blew it out? And if it was hot before it went out, why did it not stay hot where it went? And where did it go anyhow?

The dear lady never could get those questions answered to suit us at all. Has this ever been plain to you? If you have got that and the question about the stars settled so that you understand them clearly you are some wise.

There is something mutual between the stars and the campfire—that seems plain. The camplire at night under the stars—who has not studied in that school and found out that perhaps answers are not so important in life as just questions? Certainly life in the open would be robbed of all charm were

it not for the stars and the fire.

Where did the first fire come from? Who
made it? How was it discovered? Interesting books have been written on those questions; and some of them have paid fair royalties, though under false pretenses. The only thing certain is that a first campfire was made; and without the campfire there would be no sport, no geography and

#### Father's Magic Fire Stick

Books have been written about the campfire itself—how to make it and use it—proof that man is drifting away from that day and age in the world when every man knew how to build a fire. We face the time when the only man able to build a fire will be the janitor—and he will belong to a union and he liable to malk out any minute. be liable to walk out any minute.

In the old days father used to get up before the other members of the family—did he not?—and build the fire in the kitchen stove, summer or winter. He always built the first fire in the kitchen stove, because that was where the later operations of the

day began. He went out into the kitchen without much on but a pair of carpet slippers; and what he did—in a climate where perhaps the thermometer was far below zero and the kitchen floor well covered with snow that had blown in under the kitchen doorwas something direct, simple and highly efficient.

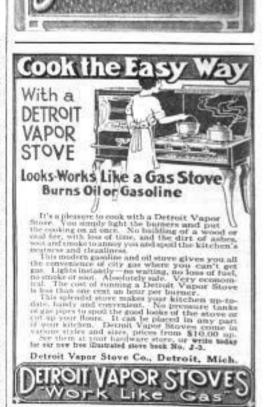

You can gamble father did not make any false motions about that fire. He had been

Besides, it was cold.

The preparations for these matutinal pyrotechnics were made on the evening previous. Before he went to bed, father went out into the kitchen and got his kindling wood ready for the next morning. He had a trusty hatchet sacred to the purpose of splitting kindling, and with the said hatchet he would reduce certain pine boards to inflammable sizes. The day the ten-cent bundle of kindling wood, with resin on the end—the sort you buy at a delicatessen store—had not yet dawned in American family life, and in those days people did things for themselves. After father had split his own kindling

wood, the last thing he did was to take a straight pine stick; and with the trusty pocketknife—which at that time made part

## *'HEOSOPH'*

UNITED LODGE OF THEOSOPHISTS

of every householder's personal equip-ment, for all householders then chewed tobacco instead of smoking cigarettesraise along the edge of this stick a series of undetached shavings, which stood out fan-like from the parent stem, fine and thin at the free ends. This stick was the essential ingredient of the next morning's fire. It is

ingredient of the next morning's fire. It is very much worth remembering as a historical institution in American folklore.

The next morning, rising in his whiskers and carpet slippers, father would pass through the "settin" room, "dinin" room and pantry to the kitchen. There he would make a pass or so with the poker to free the grate of ashes, take off the stovelld and insert his prepared shaving stick in such fashion that the free edges of the shavings would just protrude through the firegrate.

Over this he would place small sticks, then larger sticks, then dry stovewood; and then other stovewood—or maybe soft After that he would replace the stovelid. Then he would open the two little doors in front of the stove above the hearth, or castiron apron, which is in front of all good cookstove

Probably you do not know what this sort of hearth is, since you mostly have read about hearths in books that have Yuletide written on them in gold letters, and that cost anywhere from ten cents to a dollarforty, according to the value you place on the folks you send them to. A real, true, honest-to-goodness hearth is made of cast-iron and is situated east of the cookstove and south of the two little doors aforesaid.

#### The Old Timer's Methods

Well, anyhow, when those two little Well, anyhow, when those two little doors were pushed open father saw the edge of his shaving stick protruding between the bars of the firegrate—not the sort of shaving stick you use, but the one he had made the night before. Whereupon he scratched a match somewhere and touched off the shavings, drawing the little doors a trifle closer together and fixing the damper in the back part of the stove so she would draw well. After this father went back to the sitting room, shook down the base-burner, put in another hod of coal, and

went back to bed to get warm.

About this time you could hear sister begin to move round upstairs, where there was no fire, about as swift as a grasshopper in the dew. Then sister would stroll con-

in the dew. Then sister would stroil con-gealedly down and put some more wood on the kitchen fire and get the crock out from behind the cookstove, where it had been wrapped up over night, and start in to getting the cakes ready—What? Afterward, when the baseburner was beginning to get red round the middle, buddy—also, son—would get up and before long all would meet in the sitting room for family prayers. We needed them? Maybe. But then, as compared to the be-ianitored But then, as compared to the be-janitored flat of today, I am not so sure. Still, you can find the same stars and, for that matter, can use the same old kindling

stick in making a fire for yourself out-ofdoors; in fact you will find it extremely

useful in building a campfire—which is just
what we started to remark a while back.

Now, to use the same phrase you did in
your first composition, there are a great
many kinds of campfires—too numerous to
mention. Bad as some of them are from a technical standpoint, none of them is any-thing but good from a human standpoint. Most of them are built by amateurs, and this is eminently fitting.

The bigoted old-timer, who knows it all and insists that his way is the only good way, is of all beings the most intolerable. The amateur needs but little of his lore, but would best figure out for himself what he wants to do and how to do it-which is the

practical and usual way in human life.
One good rule is advanced by most authorities—and that is not to build a campfire too large. A small campfire is warmer, safer, more convenient and more comfortable. Of course your fire must be larger than that of the old cookstove, unless you have contrived some retaining walls to hold in its heat. A big campfire takes too much wood, is too apt to set the tent on fire, even if it does not set the woods on fire; and it is hard to put out when you leave. It will make you uncomfortable when you cook at it and it will burn the grub. Still, you will probably build your own campfire just as large as you like. Pax robiscum! It is much better than not to build it at all.

Different campfires are used for different purposes. Suppose you were traveling

# A SPECIALIST IN HOMES

Philadelphia is a city of homes to a degree which is not true of any other large city in the country. Every home is a buying center. The better the home, the greater the buying power. Philadelphians have homes in the real sense of the word-not flats and tables in restaurants. This makes Philadelphia a market for everything that is bought to be used, or worn, or consumed in a home.

In every one of these homes where the buying power is measured by an income large enough to be taxed, you will find the

# PUBLIC EDGER

fast through a country, making one-night stands and cooking four meals a day. That requires one sort of fire. A permanent camp, where there is plenty of wood, asks for a different sort. Deep snow requires yet another kind—a pleasant summer site still another. A score of things may affect the fashion of your campfire, and it is your own part to make each fire in workman-like fashion, adjusted to the needs of the bour.

A very common rule laid down by makers of helps on outdoor sports is that the campfire should be laid between two small green logs, each four or five feet long, hewn flat on one side, and placed six inches apart—or maybe sixteen inches; I forget which. That is all very well if you have plenty of time to make your fire.

An Indian lives out-of-doors all his life, but he never builds a campfire that way.

but he never builds a campfire that way. Neither can you build a campfire that an Indian will not take apart and make over again to suit his own notion. Some of these

again to suit his own notion. Some of these notions are good ones and are accepted by white men that live in Indian countries.

Suppose you are traveling with a party of Indians or breeds, with a packtrain or canoe, in some Northern wilderness country. You will not see any of these nice little side logs cut at all. Perhaps, also, you will revise your idea as to the assertion that the Indian always builds a small fire. Sometimes he does because he is lazy. Some-

Indian always builds a small fire. Sometimes he does not because he is lazy. Sometimes he does not because he can save time by not doing so.

In fast traveling, forty minutes is about all the time allowed to unpack, make a fire, cook a meal, wash the dishes, repack, smoke a pipe, and hit the trail again. Your half-breed usually makes one of these kettle fires out of poles—long ones, dry ones; such as he can find already drying on the ground. He puts these poles together not in cobbouse fushion and not in a loose heap, but in a long pile, side by side. He will provide as kindling certain dry twigs.

#### Cooking With a Teastick

Sometimes he will use birchbark, but most Sometimes ne will use birchbark, but most often you will find him whittling up a row of semi-detached shavings on the side of a stick. This is precisely father's old kindling stick. No one knows who first discovered it, but it is worth remembering by any one who needs to start a fire out-of-doors.

When Pierre has raised some shavings on the edge of his stick, he stands it upside down under his pole pile and throws some loose, dry kindling over it—perhaps shel-tering it all with his hat if it is raining.

loose, dry kindling over it—perhaps sheltering it all with his hat if it is raining.
Then he touches a match to the lower edge
of his shavings and by and by they set fire
to the solid stick, and that sets fire to the
twigs, which in turn touch off the whole
works. And this fire, begun at the center of
the log or pole heap, spreads both ways.
There are no side logs, because there has
been no time to get them—it would be
considered finicky to use them; but as the
poles burn in a bright flame Pierre hangs
his teakettle in the flame, dependent from
the end of a slant stick the butt of which he
has stuck into the ground—the teastick or
'quorgan stick of the Northern woods. He
does not usually set the teakettle down on
the poles; but perhaps be can find a place
where two of them will hold a frying pan.
And at the other end of his long fire he will
hang the stewkettle, which was not cleaned
out after the last meal—an affair of squirrel, rabbit, duck, partridge, rice, potatoes,
onions, or anything else that happens to be in onions, or anything else that happens to be in camp. A good stew-pot may begin at the first of a month and still be going thirty days later, additions being made from meal

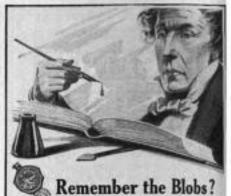

days later, additions being made from meal to meal.

Besides these three utensils, there may or may not be another in which to hoil dishwater. If so there will be room for all on this long fire, which has been kicked together with no loss of time at all.

The Indian's idea of a long, narrow fire is a good one. It is only the rank tenderfoot who builds a circular fire, made by heaping the firewood up in the center so that the

flames run entirely about. You cannot get near to that kind of fire, which is wasteful of heat and room alike. So a general rule regarding your campfire is to make it long and narrow.

An Indian does not usually build a big campfire to last through the night, unless the weather is very cold. He will have far less bed covering than a white man and in a single blanket will sleep out in weather where a white man would perish in four times as much bedcovering.

The old-time inkwell used to give up many fearful and wonderful blobs. Carter's Inx have had a leading part in making blobs a recollection of the inks of other days.

Carter's Inx are as scientifically com-pounded as the most important labora-

New 1/4-horse Motors \$19 each For alternating current, 1 phase, 60 cycle, 110 or 220 volt current. Several hundred other Dynamos and Motors. GEO. BENDER, 122-130 Centre Street, New York

Interesting and Valuable Information PATENTSWANTED A campfire really has two purposes—it may be used for cooking or for warmth, or for both. If you cook in kettles or pots you can use the direct flame. If you are frying or broiling you want to cook over the coals and not over the flames.

There are all sorts of fads and poses in sport, as in everything else. Some of us like to affect the D. Boone and S. Kenton simplicity stunt and scorn to use anything modern. As a matter of fact, you cannot very well beat a Dutch oven as a camp utensil. At the same time, an aluminum reflector is much lighter and will cook just

as good biscuits.

Also, a little folding grid, with legs that you can drive down into the ground, is something that weighs very little and is very useful in steadying a coffee pot or holding a broiler. Drive them right down over your bed of coals, so that the top will be only four or five inches above the ground. It will be handy to set things on; and if you do not try to use too much fire it will make a very comfortable broiler.

Neither, as I have often said, need you despise the long, wooden-handled fork of commerce, or a patent handle for your frying pan-one into which you can drive a long pole-so that you may sit off from the fire and cook without burning your hands.

Of course these things will sound effete to some, and to yet others not sufficiently effete. The latter will want to rig a stovetop or a vast gridiron made of steel bars laid across the two side logs, as recommended by the textbooks.

#### A Campfire in the South

If you are actually in the wilderness your fare will be rough and it will be condensed— such stuff as beans, dried fruits, and the like. It takes time to cook beans. An iron pot is best; but you can do very well with a tin vessel if you have nothing better.

Before you build your long-pole fire take the butt of the ax and knock out a trench, over which the fire may be built. It will fill with coals gradually, and after you have finished the meal you may set the beanpot down in this trench, and cover it with ashes and coals and let it cook over night—shifting your complies to some other point. shifting your campfire to some other point if it must burn all night.

Suppose you are fairly modern and fairly well equipped, that you want to have a quiet time in camp in the woods, and that you are out in the fall when the nights are cool, though there is no snow as yet. Your first thought is a wall tent and a sheetiron stove. Men can winter in these conditions, but it would be hard to devise anything more uncomfortable or more unhealthy. You will be more comfortable if your tent is open in front, so that you may get the light and heat of a good campfire. It will be all the better if your tent has

a back so arranged that it will reflect the heat down. The openface camp or shanty

heat down. The openface camp or shanty or lean-to looks like all out-of-doors, but it is quite comfortable if your campfire is made correctly and kept up adequately. I proved this not long ago in the winter-time, in one of the Southern States, under circumstances which convinced all the neighborhood that I was crazy—and which convinced me, on the other hand, that everybody else was crazy who was not everybody else was crazy who was not privileged to sleep in precisely the same

way.

It came about that a hospitable planter insisted on sending down a couple of negro boys to do the campwork. These boys pitched the tent, secured abundant hay for a bed, and provided an excellent woodpile of sound oak timber eighteen inches in diameter-likewise other oak, hickory and divers priceless materials of like sort, wherewith to light the altar fire.

I slept alone a few nights thus—the fire in front, the same old stars above. It was warm in my tent. I do not know just how it was in the shelter where the negro boys lay huddled in their cotton quilts, but it was fine, along toward morning, when the dawn was becoming gray and the fire had burned low, just to follow the advice of the old planter: "Lie still and holler for the colored population!"

I have never found a scheme that beat this, though it is not in the textbooks. It was a trifle hard on the youngsters, but they were used to it anyhow; so they would get up, build up the fire, cook a very decent breakfast of broiled quail and bacon, with a good cup of coffee-and then stand round. afraid to wake the boss up for breakfast. Can you beat that for a campfire? You cannot!

That enviable pleasure of comfortable motoring-regardless of how rough the roads or how fast you drive-is yours, made possible by

Quickly applied to your Ford Car

HEY take the roughness out of the road and eliminate the pitching, swaying and vibration that racks and shortens the life of your car. K-W Road Smoothers seem to level off the high places and fill up the low places. Wherever you ride the bumps and jolts are gone — ironed out by the K-W Road Smoothers. They give you big, heavy car comfort, combined with light-weight car advantages.

#### What K-W Road Smoothers Do

They save tire bills by keeping the wheels on the road where they belong. They add to the life of your car by stopping vibration.

They add greatly to your safety by making the car wheels cling to the road. They save gasoline bills because the weight of the car doesn't have to be lifted out of every hole and over every hump in the road. It is only the wheels that follow the contour of the road's surface. The body and its load of passengers travels along on the level, "just like floating through the air."

The "anti-rebound air chamber" prevents the rebound of the spring. It is an essential feature and found only in the K-W Road Smoothers.

The "anti-side-motion links" of the K-W Road Smoothers prevent side rocking and swaying when turning corners, and greatly reduces any tendency to skid.

There are no wearing parts or friction surfaces, consequently no oiling or packing in grease is necessary. No attention required after installation.

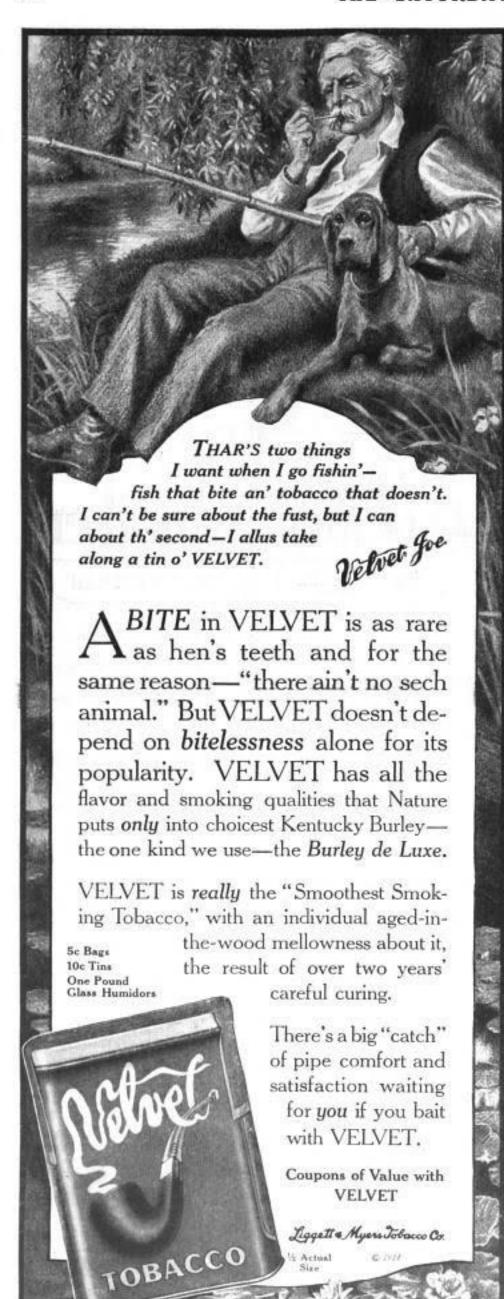

#### K-W Quality Throughout

K-W Road Smoothers are built of the very best materials obtainable. We use no cheap castings but instead, high-grade, heat-treated drop forgings. Our springs are made of electric smelted chrome, Vanadium steel - the most expensive spring steel that money will buy. They will not bend - they will not break - they will not lose their easy riding qualities because K-W quality is built into them all the way through.

The principle is right-the design is right-the workmanship is right-and the price is right.

K-W Road Smoothers are sold by reliable dealers everywhere. If your dealer cannot supply you, we will send a set direct to you on receipt of price. Don't confuse these with ordinary shock absorbers. Write for free booklet—"Taking out the Bumps." We will gially send it on request.

# Sense and Nonsense

#### Steel Windmills

WINDMILLS are now recording some victories in the battle with gasoline engines that has been waged in recent years, a struggle which threatened the disappearance of the picturesque windmills of Holland.

Steel windmills, with steel towers and steel sails, are displacing gasoline pumping engines in some parts of Holland, the gasoline engines having displaced the old wooden.

line engines having displaced the old wooden windmills. They are used entirely for pump-ing water in keeping the low-lying fields well drained.

#### A Portable Boundary

A NEGRO trooper of the Tenth Cavalry, spick-and-span in his uniform, was walking on one side of a street in Nogale

walking on one side of a street in Nogales,
the Arizona town that is partly in this
country and partly in Mexico.

A Mexican, walking on the Mexican side,
called to the trooper:

"You going to invade Mexico?"

"No, suh," the trooper replied.

"You going to fight Mexico?"

"No, suh," said the trooper.

"What you going to do?"

"What you going to do?"
"Well, suh," said the trooper, pushing
out his chest, "as soon as them folks up in
Washington gives us orders we is jist naturally goin' to take this yere border line right up in our hands and never stop with it until we has laid it down on the other side of the Panama Canal."

#### Water With Meals

TESTS on a poison squad have recently shown that the common belief that drinking much water at mealtimes tends to make one fat is apparently without foundation. Students were given carefully controlled diets for fixed periods, and every drop of water and ounce of food was carefully meas-ured and recorded.

After a preliminary period they were required to drink water copiously at every meal; and then followed another period during which they had little or nothing to

drink with their meals.

The compared results showed that in some instances there was a very slight increase in the utilization of fat in the food during the water-drinking period; but this was about balanced by negative results in other cases, so that the final conclusion was that the amount of fat and carbohydrates utilized by the body from food eaten was apparently uninfluenced by the amount of water taken at mealtimes.

#### Defying the Bullikin Board

APROPOS of the war spirit Represent-ative Heflin, of Alabama, tells of a negro who, at the time of the Spanish War, was much afraid he might be sent to Cuba to fight.

He was told that if he went to work he would not be drafted; so he got a job ditching and kept at it faithfully. One day another negro came along and called:

"Hey, Jim, we-all mus' go to war."

"Not me," said the ditcher, bending to

his work.
"Yes, suh—you an' me an' all de res'.
It's up on them bullikin boards that we-all

mus' go to war."

"Not me," persisted the ditcher. "Ise got my wuk to do."

"But th' Maine's done bin blowed up!"

"I don' care if de mane an' de tail too is blowed up—Ise not goin'!"

#### A Round Trip

THE attorney for a street-railroad com-I pany in a Kentucky town was examining a skinny sixteen-year-old negro boy who had sued for injuries ostensibly incurred in

a collision on the highway.

"You say," he asked, "that when this street car hit that wagon you were riding on the front seat of the wagon?"

"Dat's whut I said," answered the little

"And you say the force of the blow knocked you up in the air?"
"Yas, suh—'way up in de air."
"Well, how long did you stay up there?"

demanded the attorney.
"Not no longer dan it tuck me to git
down!" answered the truthful complainant promptly.

#### Union Repartee

TABOR unions are strong in the West and Li especially strong in a city where, on Halloween, the boys pulled a lot of pickets off the fence belonging to a house in which a union barber lived and made a bonfire of them.

The barber bought some new pickets and nailed them on his fence himself. Where-upon he was promptly fined fifty dollars by the council for doing carpenter work which should have been done by a union carpenter.

The barber thought over this for some time. Then he presented the Carpenters' Union with a bill for thirteen hundred and

seventy-five dollars.
"What's this for?" asked the chief of the

Carpenters' Union.

"Why," the barber replied, "that's what's due the barbers because the carpenters shave themselves."

His fine was remitted.

#### Some Prosperous

"SPEAKING about prosperity," said Fred B. Lynch, Democratic National Committeeman from Minnesota, "I have

the prize story,
"A merchant who runs a general store in a town in the middle of my state came in to

see me one day.

"'How are things, Bill?' I asked him.

"'Fine,' he replied. 'I've just closed up
the season's business and I've made twentytwo thousand dollars. I had some extra expense this year too.'

What extra expense?' I asked. "'Why,' the merchant replied, 'I had to hire a footman to stand outside the store to open the doors of the automobiles in which the farmers' wives brought their produce.'

#### Divorce Teamwork

KANSAS woman, weighing two hun-A dred pounds and as strong as a female White Hope, came before a Kansas lawyer with her puny, one-hundred-and-thirty-pound husband and said they desired to

pound husband and said they desired to get a divorce.

"On what grounds?" asked the lawyer.

"Extreme cruelty," said the woman.

"But," said the lawyer, "that is absurd. Here you are, big and brawny, and you say this little, weak man has been tyrannical and cruel to you. You must do better than that. You could turn him over your knee and spank him and not half try!"

"That's all right, Mister Lawyer," broke in the husband. "I agreed to let her have an extra thousand dollars in alimony if she would put that in. You see, I want to send the petition back to my folks in Ohio. When they read it they'll think I have spunked up to beat the band since I came West."

#### An Inexcusable Error

CYRIL MAUDE, the English actor, and his pretty daughter, who supports him in his plays, were the guests at a tea given by the American Dramatists' Society in

New York not long ago.

A newcomer inquired of an earlier arrival who the two guests were. The second person, desiring to be humorous, said gravely:

"That is Cyril Maude, the English actor and his daughter, Miss Maude Cyril."

A hand plucked at his elbow and from behind him a member of the imported

behind him a member of the imported English company spoke in tones of well-bred

surprise:
"Pardon me," said the voice; "the young lady's name is Marjory Maude."

#### Logical Reasoning

A PRIMARY-GRADE teacher in New York—so Bayard Veiller says—was describing a horse race to a class of intensely interested little foreign-born Americans. She explained that, though a certain horse was first under the wire, the jockey fell off him in the home stretch, so that the purse—fifty thousand dollars—went to the horse that had finished second.

"I know why that was, teacher," put in an eager youngster. "It was because the horse was so much lighter after his jockey

fell off that he could run faster."

"Naw: that ain't it," spoke up little
Herman Feldsberg. "Wot would a horse do with all that money?"

## THE NATIONAL PASTIME-INDOORS AND OUT

to tell you what I think of a lot of grown men, experienced cardplayers, who would sit down night after night to gamble with a half-baked kid. Some of you are getting five and six thousand a season. You didn't need

his pitiful little two hundred a month.

"Mike has asked me where I come in on
this. I come in where every other man on
the payroll comes in. You sharks have won a few hundred apiece from Doty at the outside, but you've put the rollers under the best pitcher we've got—the pitcher that could win the World's Series for us if he was right. Where do I come in? On the difference between sixty and forty per cent of that gate! That's where I come in! Your cradle-robbing poker game is liable to cost

s about thirty thousand dollars!"

Tod stopped for breath and we looked at each other. There didn't seem to be anything to say. It was a true bill. Walker reached for his pocketbook and took out half a decree slips of paper.

reached for his pocketbook and took out half a dozen slips of paper.

"Hell!" says he. "I didn't know it was as bad as that, Tod. I've been wanting to do this ever since the kid blew up!"

"Hold on!" says Tod. "Don't destroy 'em! That won't help matters any. Doty is a fool, but he's an honest one. He's got a record of every cent that he owes and he'll pay to the last nickel. Tearing up his I o U's won't square this."

"I guess that's right," says Owly Elliott. "We'll have to find some other way—but how?"

"Huh!" says Jib Smith. "The easiest proposition in the world! You know how Doty has been hollering for a chance to get even. Well, he'll get it in my room tomorrow night—three-nineteen. There's a big round marble-topped table in it that's just the thing. We can tell Doty we've decided to give him one more session—and only one—with the blue sky for the limit. "I don't know how much cash I've won

only one—with the blue sky for the limit.
"I don't know how much cash I've won from him during the season, but I'm willing to toss some bread on the waters and look for it to come floating back in October, buttered on both sides. I'll contribute fifty bucks to the conscience fund-besides the I O U's. A little dough in his pockets ought to brace him up. If his poker debts are all that keeps him from pitching in his oldtime form it's me for easing his mind right away—quick. What d'ye say, boys?"

"But—suppose he doesn't win?" asks Sholter.

Sholter.

Smith laughed—the first real laugh of

the evening.
"He'll win, old son—don't you worry about that! The only question is, how much—eh, boys?"

We figured it out between us, and every man pledged a certain amount of cash for the conscience fund, as Jib called it—and the conscience fund, as Jib called it—and you could pretty near tell how much of a conscience each fellow had. As near as we could come to it, Doty had lost between six and seven hundred dollars into the game. We made up an even three hundred dollars. The I O U's amounted to pretty near two thousand. No wonder they barred him!

"All right, fellows!" says Tod. "I knew I wouldn't have to do any more than explain matters. Be careful in pulling this poker game. Silvertip is beginning to suspect that Doty's smash was due to gambling. He was buzzing me about it this

bling. He was buzzing me about it this afternoon, but I didn't tell him anything. When you pull this game, pull it on the quiet. Do you get me?" We got him, and later we got Silvertip too.

The old boy rounded us up one at a time and talked to us like a Dutch uncle. He warned us about playing cards with Doty, and said that if we did—and he found it out—he'd soak every man in the game with a fine of one hundred dollars.

"If I had the goods on you I'd fine you

now!" says he.

ON THE dot of eight o'clock, which was the time set, Doty showed up at threenineteen—white round the gills and very nervous, but itching for action. He re-minded me of Daniel in the lions' den. He brought his last salary check with him, laid it down on the table, and piled a little silver on top of it.

We were all present and waiting for him. As a matter of fact we'd been there for

some time, rehearsing the miracle that was to happen when the game warmed up. There were six of us, and the vacant chair at Jib Smith's right was reserved for Doty. "What kind of game shall we play?"

"What kind of game shall we play?"
asks Doty, trying to keep his chin from
wabbling, but not getting away with it.
"You name it, kid," says Owly. "You're
the guest of honor."
"Table-stakes—dollar ante—jackpots go
with the buck."
"Fair enough!" says Walker, who was
riffling the deck. "Jib is banking. Whites
one dollar—reds five—blues ten."
Of course we all bought chips to the

Of course we all bought chips to the or course we all bought chips to the extent of our conscience money, and then Elliott pulled out his wallet. You understand, the theory of table-stakes poker is that a man may bet just as much as he has in front of him, but no more—unless he declares himself as playing a certain amount behind his stack.

"I've got some collateral here that's just

amount behind his stack.

"I've got some collateral here that's just as good as cash," says Elliott. "Doty, you don't care who collects these I O U's, do you? I'd like to play 'em behind my stack."

"Sure! Play 'em!" says Dowling.

"They're just the same as cash. Is that satisfactory to you, kid?"

Doty nodded and swallowed a few times, and the I O U's come out all round the

and the I O U's came out all round the

and the I O U's came out all round the table. By this arrangement nobody was liable for more than Doty owed him and the amount of his conscience money.

We had a tough time getting the kid started. Evidently he had been doing a lot of thinking and had made up his mind to play a conservative game. He stayed out of the first four pots—and that was a world's record for him—but when he did come in on the fifth everybody chipped and drew cards. Doty bet five dollars after the drew cards. Doty bet five dollars after the draw and four of us called him-me among

the rest.
"Tens and sevens," says Doty.
"That wins!" says Dowling, showing me queens and sixes.

queens and sixes.

I put three jacks back in the deck without saying a word and Doty was off to a flying start. The idea was to fatten Doty to the point where most of the chips would be in front of him; so whenever he horned into a pot it didn't make any difference what he had—it was enough to win. An outsider watching that game would have seen some mighty queer things.

Along about nine o'clock Doty began to prattle like a kid will when he's excited and happy. He was about two hundred and

happy. He was about two hundred and fifty to the good. There wasn't any sense in prolonging the agony or taking a chance on being caught by Silvertip; so when it came Jib's turn to deal a jackpot he gave us the wink and we went through with the sketch

as it had been rehearsed.

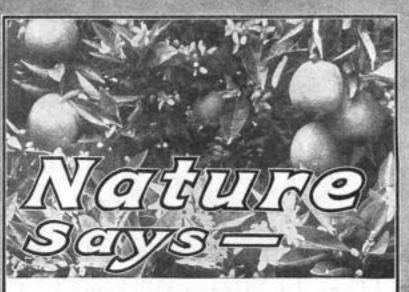

As Jib began to shuffle the cards I called Doty's attention to my new seal ring with the monogram on it; and while Doty was trying to figure out the letters Jib went down in his hip-pocket and dug up a cold deck, with seven of the hottest poker hands in it that ever appeared in company. It took us half an hour to stack that deck and

you can bet we did an artistic job.
"Cut 'em!" says Jib; and he slid the
warm deck over to Doty.
The cold one was under Jib's left hand
and the switch was made without a fumble. When I picked up three kings and a pair of treys I knew the stacking was correct. I heard Doty suck in his breath as he looked at the last one. He always picked up his cards one by one, which is a sure sign of a bad poker player. Elliott, on Jib's left,

"Boys," says Owly, "I hate to do this—right under the gun; but here's a hand that won't play itself. Five little castiron dollars to associate!"

"Just to keep out the pikers," says Hetherington, "I'll make it ten." "Pikeryour ownself!" says Walker; and he hurls a twenty-dollar I O U into the

"Play to that!" Dowling saw the twenty and so did I, which put it up to Doty. While we were stacking the deck we had quite an argument as to how he'd play that hand when he got it—whether he'd go wild and bet his head off before the draw; or whether he'd be foxy enough to let everybody draw against it, which is the correct thing to do when you've got a hand they can't beat by

# "Eat Sunkist Oranges"

Nature made them for you and your children. She knows how good they are. So does your physician—ask him.

People who fast to improve their health eat only oranges. And orange juice is one of the first foods that the tiniest babies get.

Sunkist Oranges—solidly packed with thousands of tender little juice-containers - are heaviest, most luscious, sweetest and most healthful now.

Easy-peeling, richly-flavored. Tree-ripened Sunkist Oranges are glove-picked in California every day the year 'round, tissue-wrapped and shipped right from the tree by fast freight. No matter where you live you get them fresh.

Keep well this summer on Sunkist Oranges. Eat them at meals, between meals and at bed-time. Oranges now and then are of only temporary benefit.

Learn the permanent health-giving qualities

of Sunkist Oranges through regular use.

The world's most perfect fruit is offered you in Sunkist Oranges at trifling cost, so see that you get "Sunkist."

# Sunkist Oranges Sunkist Lemons

Get Sunkist Lemons, too-juicy, full-flavored, practically seedless.

The most appetizing looking lemons with the most appetizing tang. They make the prettiest appearance on the table, sliced or quartered and served with fish or meats.

Try "Sunkist" lemonade. Use "Sunkist" lemon juice in place of vinegar in salads or any other dish that calls for vinegar. Many noted chefs add the connoisseur-touch with lemon juice. See what you can do.

Don't forget. Don't ask any longer for merely "oranges" or "lemons," Say, "I want the Sunkist brand,"

Mail us this coupon and we will send you our complimentary will send you our complimentary
40-page recipe book, showing over
110 ways of using Sunkist Oranges
and Lemons. You will also receive
our illustrated premium book which
tells you how to trade Sunkist weappers
for beautiful table silver. Send this coupon on
call at the above address.

taking the rest of the deck and going as far as they like with it.
"I—I may be beat," says Doty, "but—

I'll have to see that twenty!

I felt like patting him on the back; he was really learning something about poker after all. Jib Smith put up his twenty, and Elliott and Hetherington made good—"on percentage," as they said.

"Lucky is the dealer of a large Johnpot!" sings Jib, picking up the deck. "Cards, gentlemen?"

Elliottstudied a while and then took two.
Hetherington said one would suit him.
Walker stood pat; Dowling took one; I
said I didn't need any—and Jib looked at
Doty, who was still squeezing his five cards with all his might.

"I-I'll play these!" says he, clearing his throat.

Jib whistled.
"Three pat hands!" he says. "If I make fours you'd better run with 'em. Dealer takes a couple off the top. Now then, Elliott, it's up to you.

Owly scratched his head, counted what chips he had left, sorted over his I O U's

and cussed a little under his breath.

"This may be bad poker," says he, "but this was a good hand before the draw and it's better now. I helped it some, and—I'll just step down and bet a glittering gob! Weak sisters to the fire-escapes! One hundred is bet!"

Hetherington, Walker, Dowling and my-self did considerable acting, but we all man-aged to get one hundred dollars into the pot. The bet nearly cleaned me—I didn't

"Well, kid?" says Jib to Doty. "Be careful what you do, because there's a lot of money in this pot!"

Doty didn't say a word. He laid his left hand flat on his five cards and picked up his salary check with his right. It looked for a minute as though all he was going to do was to call—but maybe he was just thinking. He gulped once, and his Adam's apple moved up and down like a slide on a trombone. Then he dropped the check on top of his chips and shoveled the whole pile into the center. If Jib hadn't made a quick grab Doty would have mixed up the pot then and there.

"I raise it!" he croaks.

"I raise it!" he croaks.

Well, sir, my statistical friend with the whiskers would have appreciated the figuring that was done after that bet. Roughly speaking, there was about twenty-two hundred in the game, divided in seven equal parts. Four hundred of it was in cash—

Doty's salary check for the half month and Doty's salary check for the half month and the conscience fund. The rest was in

collateral security.

Doty tried to count his chips without letting go of his cards, but he was too nervous; so I audited the pile for him. He had raised us two hundred and thirtyseven dollars-more than enough to wipe the table clean. That was the main idea

of course—to get every chip and every I O U into the pot, one way or another.

"Kid," says Jib to Doty, "if you're trying to steal something you're in a bad fix. Let's see—three hundred and thirty-seven dollars to call. You've got a customer: and dollars to call. You've got a customer; and if you're out on a limb I'm certainly sorry for you!"

The call traveled slowly round the table

and I never heard such a lot of beefing and roaring in my life! It sounded like a real poker game at that. Elliott and Dowling started an argument, and Dowling offered to bet Elliott a thousand on the side that he had him beat. Walker and Hetherington pretty near got into a fight; but all the time the I O U's were coming to the center. Those who didn't have enough to make the call borrowed from those who had too make the call borrowed from those who had too much; and when it came my turn I swept the table bare and took a short interest in the pot.

Jib, who is a great stage manager, infigure out how much would be coming to me in case I won—and that was cruel, because

man with the ague.

"All set!" says Jib. "Turn 'em over!
I don't mind saying that I can beat an ace full!" He boarded four sevens.

"No good!" says Elliott. "Four nines here!"

"Wait a minute! Wait a minute!" says Dowling. He had a straight flush in hearts, from the deuce to the six.

Doty couldn't stand the suspense.
"Look at 'em!" he yelled, and his voice
cracked like a whip. "Look at 'em! A
royal flush in diamonds!"

Well, that was what we had given him. because we wanted him to have something he could play with confidence. It's the son of hand that you can't beat-and once in a million years you may tie it.

It was half an hour before Doty was fit is leave the room. The nervous reaction gave him a terrific jolt and I never saw a human being go to pieces like it in my life—I hop-I never will again. He wanted to lings and cry and talk—all at once. Then he insisted on tearing up each separate I o'll and making a ceremony about it. After that he thanked each one of us for giving him the chance to get even. him the chance to get even.

"I was sure the luck would turn sometime!" says he.
"Listen to me!" says Dowling petending to be very sore. "Such luck as you had tonight comes only once in a lifetime You beat a straight flush for me and if you played a thousand years you couldn't do l again. To show you what I think of your luck, I'll never turn another card with you!"

"You won't have a chance!" says Doty.

"I'm done!"
Doty shook hands with us all round and Doty shook hands with us all round and said he had to go and write some letters. He was on his way to the door when it opened in his face—and there was sit Silvertip, fairly bristling.

"Aha!" says the boss, looking round the room. "And I warned you fellows to: Doty, have you been playing poker—alter what I told you?"

"Yes—yes, sir," stammers the kid.

"That's right! Tell the truth and shame the devil! You're fined twenty-five dollars!"

lars!"
"Yes, sir," says Doty.
Never having been fined before, he didn't know that it would be deducted from hi next salary check. He reached down in his pocket and brought out a roll of hils a thick as his wrist. I thought Silvertip's eyes would pop out of his head. Dog skinned off two tens and a five and haded the bills to the boss.

"Get out of here!" says Silvertip. "I want to talk to these pirates!"

Doty was only too glad to get away; and then Silvertip turned loose on us. I'll state that I've heard many a good ross in my time, but never anything like that one. Silvertip picked up where everybody else quit and went on from there. Bodysnatchers was the nicest name he called u Jib Smith butted in once when Silvertip

ran out of adjectives for a second.
"But, boss," says Jib, "you—you don't
understand! You——"

I kicked him on the shin good and hard and he quit. We had done a fine piece of work, but we couldn't get any credit for it

work, but we couldn't get any credit for it without explaining why it had to be done.

"I fine every one of you one hundred dollars!" says Silvertip when his vocabulary petered out on him.

There was considerable silence and a lot of deep thinking after the door closed behind him.

"Well?" says Owly.

"Boys," says Jib Smith, "there's only one way out: Mr. Doty has got to find his pitching habits again between here and October. A piece of bread on the waint is all right—but heaving in a whole loaf is wasteful. Yes; we've got to ready him up for that series!"

AS EVERYBODY knows, it wasn't a bad investment. Doty told me—on the bench before the first game started-that his girl would be at the telegraph office in

North Platte waiting for the returns.

"Give her something to cheer about kid!" says I.

"Watch me!" says Maxwell. "These tramps will be lucky if they get a foul of me today!"

That was the thought he took into the

was the thought he took into the box with him and he never lost it through the entire series. He worked in two games and had those Panthers pulling their chira out of the way of his fast one from start 10

The difference between sixty and love per cent amounted to \$1375.23 a man: \*\* we all cleaned up nicely on the poker game in Room Three-nineteen.

Doty is married now and his wife travel with him. She plays casino with him in the evenings-at five cents a game-and beats him out of all his small change. On ther first wedding anniversary we are going to chip in and make 'em a present of that marble-topped table.

# "SIXES" RUN 32.8 MILES ON ONE GALLON OF GASOLINE

# NINETY-FOUR CARS MAKE STARTLING AVERAGE IN "FRANKLIN" TEST

"Stock" Machines With Three Passengers Each Make Simultaneous Record Runs in All Parts of United States

## VICTORY FOR LIGHT-WEIGHT IDEA

Many Dealers, Sold Out, Compelled to Borrow the Machines of Local Owners to Take Part. Varying Weather Conditions Met.

Syracuse, N. Y.—On May 1st, 94 Franklin dealers in the United States and Canada, in 94 Franklin Six-Thirty stock touring cars, regardless of weather conditions, made a test to demonstrate the best possible mileage on one gallon of gasoline.

The rules required that the finish be as near the starting point as possible. Each test was made with two official observers, and results sworn to before a Notary Public. The test represents the average of 94 cars, 94 drivers, various road conditions, all kinds of weather, different grades of gasoline and, therefore, what can be obtained by skillful driving in the scientifically light-weight six-cylinder Franklin car.

The highest mileage was made by Wm. F. Sanger, Milwaukee, Wis. (See list.)

The different conditions under which the tests were made are graphically shown by the following telegrams:

Salt Lake City, Utah — "40.1 miles. High wind and wet roads or could easily have made 50."

Laramie, Wyo.- "32.1 miles. Weather cold. Roads rough but hard."

San Diego, Cal.—"33.1 miles. Roads very slippery. Drizzling rain during run. Rather cold. Conniry drove. Top and glass front down. H. C. Covell, Club representative, Louis Elmgren, Fire Chief, observers. Car with load weighed 3385."

Georgetown, Texas—"Made 17.2 miles. Top and windshield up. Wet and badly washed pike roads. Very little wind. Three passengers and car weighed 3310 including accumulated mud. Showered just before starting. Average speed eighteen miles per hour. Affidavit follows by letter."

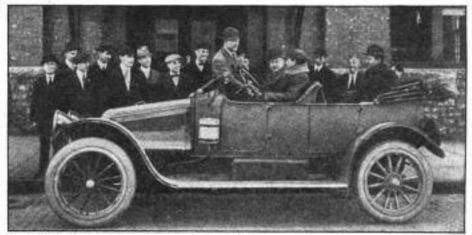

Bangor, Maine—"21.5 miles. Dry dirt roads, rough in places, and hilly. Weather told, thermometer 31 at six, 45 at end of run. Strong wind. Driver, Hall. Weight 3250. Glass front and top down. Snowed lightly during night. Started at ten, finished at eleven-thirty."

Newark, N. J.—"On official test obtained 34 4-10 miles. Roads dry, fair condition. Weather clear, mild. Driver, Walter Parcells. Weight of car including passengers 3320 pounds. We doubled back over identical course. Course contained 15 hills (grades from 2 to 8 or 10 percent). Demonstrating car used, run total 5,000 miles covered period 6 months."

York, Pa.—"Made thirty-seven and nine-tenths miles on turnpike which was covered one-tenth of way by deep blue stone. Can do forty-five miles if roads are in good condition."

Kansas City, Mo.—"Williams makes forty-two and eighty-eight hundredths miles on one gallon gasoline. Weather cool. Slight wind. Roads good."

(Continued in booklet, sent free on request by Franklin Automobile Company, Syracuse, N. Y.)

# National

# Beauty, Luxury and Utility

OUR advanced design, the symmetry of creative lines -beautifully and distinctively original-reflect your good taste and judgment.

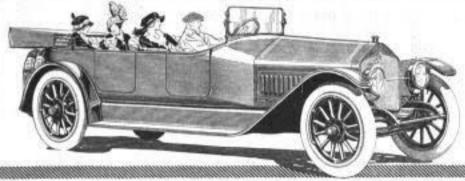

The smart, sloping hood and pointed effect of the National (due to the body converging towards the radiator) adds a distinct note of attractiveness. The wide metal guards are enclosed, continuous and unobstructed. These points of refinement and care help to give the National its ensemble effect of a long, low, graceful craft.

The admitted mechanical superiority of the National, added to its comfort and convenience, gives you the ideal combination of a quality car, built and guaranteed by an old, reliable and suc-cessful institution. The rear springs on the new "SIX" are of the Canti-lever type, which, combined with the National's wide, deep, resilient, spa-cious body and general balance, enables you to enjoy unexcelled comfort in riding. The left side drive center control, convenient and simple dash equipment and easy access to all four doors add to your comfort and satisfaction.

National cars are built for service, proved by their fourteen years of dependability and reliable performance; their ample reserve force and speed when you need it, or two miles an hour if you prefer.

We say "you don't have to raise the hood" because the National's success justifies your confidence in our mechanical

The one and only American-made car that remains superior to all foreign cars in the International 500-mile races is the NATIONAL.

### The Fakers

"Do you mean you won't be a lawyer?" and Mrs. Hicks' voice broke a little, for she had earnestly wished her son might follow in his father's profession.

"No," Tommie said as he rose from the table, "I'll be a lawyer all right, but this opportunity is too good to be lost."

That afternoon he went down to the office of the Salestown Beacon. Grandison, the editor and proprietor of the Beacon, was busy with some auction bills that

was busy with some auction bills that meant ten dollars cash when delivered, and he was not very cordial when Hicks entered

he was not very cordial when Hicks entered
the composing room.

"Mr. Grandison," began Hicks, "I am
going down to Washington to attend the
inauguration and see my old friends Mark
Hanna and Senator Paxton."

Grandison was cutting some leads and
he stopped and looked at his visitor. "You
don't say," he commented.

"Yes, and it is quite probable I shall not
return for some time. In fact I expect to
enter the Government service."

"Do tell," said Grandison, resuming his
leadcutting.

leadcutting. "I thought," continued Hicks, "that you might want to make mention of my

departure in the Beacon."
"I'm busy, gol-durned busy."

"I'm busy, gol-durned busy."
"I see you are, and I thought I might help you by writing the notice myself."
"Go ahead," said Grandison; "go as far as you like. There's copy paper in there."
"Oh," said Hicks easily, "I brought down a little piece I fixed up on my typewriter. I'll put it on your desk."

writer. I'll put it on your desk.

writer. I'll put it on your desk."

When Grandison had his auction bills on the press he went to his desk and read the Hicks communication. He laughed a little and hung it on the copy hook. Grandison liked Hicks and so did almost everybody in Salestown. Hicks attended to that. He desired to be everybody's friend, and was; and though he welcomed reciprocity in his friendships he did not demand it as a requisite of continuity. He paid no attention to rebuffs, or to ridicule, or to sneers. If a man tried to be sarcastic at his expense a man tried to be sarcastic at his expense Hicks blandly took the remarks at their word value and was grateful. He was ubiquitous and urbane. Some of the vil-lage folks said his hide was as thick as the hide of a rhinoceros, and Hicks heard these comments with a smile, and invariably

sought a way to say something compli-mentary about the detractor or do him a favor if the opportunity came.

When the Beacon came out on Thursday Judge William Percival Smith read the notice about Hicks to Col. Seth Howard, an old crony who spent much time in the judge's office. "Listen to this, Seth," chuckled the judge, and he began:

"'Our esteemed fellow townsman, Mr. T. Marmaduke Hicks, has in contemplation a trip to Washington, the capital of the nation, to participate in the inauguration ceremonies incumbent on the installation ceremonies incumbent on the installation of William McKinley as president of the United States. Mr. Hicks was active in the campaign that culminated so gloriously in the election of Mr. McKinley, and his powerful efforts have been recognized both by Chairman Mark Hanna, of the Republican National Committee, and by Senator William H. Paxton, of this state. Mr. Hicks has letters from both of these distinguished statesmen inviting him to come to Washing-ton, and it has been intimated he will receive from the new administration an adequate measure of reward for his valiant services in the cause of the gold standard. We congratulate Mr. Hicks on this auspicious and well-merited recognition both of his Republicanism and of his success as a political leader."

"There's only one thing lacking so far's can see, commented Col. Seth Howard after the judge had finished the paragraph.
"What's that?" asked the judge. "It
seems to me to be a pretty reasonably com-

plete statement of the case.

"It ought to be signed by T. Marmaduke

"Probably," continued the judge. "But you must say this for Tommie—he certainly doesn't lack the nerve to push himself in anywhere he wants to go, and I wouldn't be surprised if one of these days he got somewhere."

"He'll get somewhere," agreed Colonel Howard. "I don't know whether it will be in the Senate or in jail, but he won't stand still, you can bet on that." "Oh, pshaw, colonel!" laughed the judge; "don't be too rough on him. He's a clever boy, and the Congress of the United States, for example, is all cluttered up with men who have developed to a paying poinical basis just these traits we observe in

our young friend Tommie."
"I tell you he's a demagogue already, and he ain't hardly dry behind the ears yet. I met him the other day and what do you think he said to me-what do you think

think he said to me—what do you think he said?"

"What did he say?" asked the judge. "Tommie is likely to say almost anything pleasant. Told you you are getting younge every day, I suppose, and that you are one of the great men of Salestown, whose example and daily walk and conversation are an inspiration to him."

"Well," admitted the colonel rather sheepishly, "he did show some sense in those remarks, but he got to talking politics and he said something like this"—and the Colonel rose stiffly and assumed as

the Colonel rose stiffly and assumed as

oratorical position:
"'Colonel,' he said, 'Colonel, I feel that there is a great opportunity for me in pub-lic life. I have made a study of conditions and I have firmly resolved to espouse the cause of the people, to help lift the burders of the toiling masses, to relieve them of the oppressions that now dismay them, to lead

oppressions that now dismay them, to led them into the sunlight of a happier day."

"Hooray!" cheered Judge Smith.

"Yes,' he said, 'the people are to be my first concern. I shall address my shilties to the improvement of their political and social conditions. I shall labor for them and with them. I have decided to enter politics for no other purpose than to protect the toiling masses from the cruel and rapacious oppression of the classes."

"Hooray!" shouted Judge Smith again.

"And what I want to know," continued the colonel, "is how he squares that sort of a program with his support of McKinley.

a program with his support of McKinley and the goldbugs."

"My dear colonel," answered the judge,
"he doesn't have to square it. If he gets
a job under this administration he'll forget it. If he doesn't get a job he'll have nothing to square, for that naturally will be his

"A demagogue," insisted the colone again, "a demagogue before he's dry behind the ears."

"Well," answered the judge, "I guess that's so; but so far as I can see from this angle, there access to be a better make angle there seems to be a better market for demagogism than for any other political

commodity in these days."
"Humph!" retorted the colonel, who
could think of nothing better to say, and
stalked out. He met Hicks at the foot of
the stairs that led to the street from Judge
Smith; office. Smith's office.

"Going to Washington, I see," the colonel greeted him.

Yes, colonel; that is my intention."

"Yes, colonel; that is my intention.
"Going to take a job under McKinley!"
"It may be."
"Now look here, young man," and the colonel was indignant, "how in blazes are you going to join out with this goldbut administration and believe in all that stuff about the common people you handed to about the common people you handed to

me the other day?"
"Why, colonel," Hicks replied suavely

"Why, colonel," Hicks replied suavely.

"reforms can be more easily accomplished from within than from without the party organization. If the people—

"Great Scott!" shouted the old man.

"Quit it! Don't insult my intelligence by that sort of rot. I'll tell you where you be long—not here in this community, but out in the prairies with the Populists. Good afternoon."

Hicks looked after him and laurebed a

Hicks looked after him and laughed a little. "There might be something in that too," he said to himself.

Hicks made his preparations and went to Washington, where he arrived with many thousands of other people on the night of March 2, 1897. He had written to a friend who had a place in one of the departments. and had the address of a good boarding house. He secured a room and spent the next three days in happy enjoyment of the crowds, the clamor, the parades, the fre-works, the glitter and the glamour of an inauguration and its aftermath. He called on Senator Paxton, found him out, but secured from Paxton's secretary a gallery ticket for the ordinary sessions of the Senate, and jammed his way in on the busy March third and saw the hurly-burly of the closing hours

That's the way you will talk about it after you have ween one. Hilker - Wiechers Mfg. Co. 1260 Mound Ave., Racine, Wis. Manufacturers of the famous Signed Brand

of a Congress. He watched the proceedings carefully, tried to pick out the famous sen-ators on the floor, and was somewhat hurt because Senator Paxton did not send for him and give him a ticket admitting him to the inauguration ceremonies in the Senate chamber and on the stand outside. However, he was up early on March fourth, se-cured a good position in the crowded plaza, and was much impressed with the ceremony that made Mr. McKinley president and retired Grover Cleveland to private life.

Senator Paxton was busy, exceedingly busy. The change of administration from Cleveland to McKinley brought many pat-ronage problems to him, and he was early and eagerly trying to find places for some of his leaders in the home state. Hicks called three or four times a day at his office, but each time was shunted off. He stood for hours in the corridor waiting for Paxton to come out, unconscious of the fact that the senator had a side door to his office through which he escaped from the office-seekers. Hicks carried himself jauntily, although secretly much depressed because of the tardy recognition of his merits and claims, and exerted himself to make the Paxton corps of clerks and secretaries his friends. He sat a good deal in the outer office of the Paxton suite, reading the papers and waitng for the senator, positively refusing to be turned away by any of the subordinates who constantly assured him there was no chance for him and that he'd better go home. One day as Hicks was sitting in the outer office, about two weeks after he arrived in

Washington, the door to the inner room opened and Senator Paxton came out with

opened and Senator Paxton came out with a great bunch of papers in his hands.

"Look here, Madden!" the senator shouted to his secretary, "you're a thousand miles behind with this correspondence. What's the matter? Can't you keep up with it?"

"I'm doing the best I can with it," Madden answered sulkily. "You don't seem to appreciate that since McKinley came in your correspondence has increased about six

our correspondence has increased about six

hundred per cent and you are making us handle it with the same old force." "That'sso," admitted Paxton. "I hadn't thought of that. Get another stenographer or a typewriter or something, and clean

Hicks started eagerly from his chair.
"Senator," he said, coming forward, "let
me take hold of it."

"Who are you?" asked Paxton brusquely.
"I never saw you before."
Hicks winced. "Oh, yes, you have," he
replied. "I met you out in Salestown and
you wrote to me. I have the letter here."
He took out the well-worn letter. Paxton

He took out the well-worn letter. Paxton glanced at it and smiled. "That won't get you very far," he said. "Who are you?"
"I am T. Marmaduke Hicks, of Sales-

town. I am a competent stenographer and typewriter and I want a job with you."
Paxton looked at him. He saw a tall,
well-dressed young man, his eyes alight

with eagerness, a young man who had a bright face and an agreeable manner. From Salestown, are you?

"Yes, sir."

"Whom do you know there?"

"Everybody. I have studied law with Judge William Percival Smith." "Studied with Billy Smith, have you?

Well, that's a good start. Will he recom-mend you?"
"I think so."

Paxton turned to his secretary. "Mad-den," he said, "wire Judge Smith at Sales-town and ask him about this young man. If he's all right put him on extra in the morning. We've simply got to get this mess of stuff cleaned up. Meantime try him out on the typewriter and see if he is any good. Give him some of the form-letter stuff."

Paxton turned and went back to his room without another look at Hicks. Madden said: "Pull off your coat, young man, and get busy. Take that machine over there and use these addresses for this letter."

He handed Hicks a printed form. "Copy exactly," he ordered, "and do them as neatly as you can so each rube will think he has a personal letter from the senator.

Hicks took the form letter and the list of addresses and began work at the typewriter assigned to him, but his heart was heavy within him. His letter from Senator Paxton had been a form letter also.

JUDGE SMITH telegraphed to Senator Paxton that Hicks was honest and smart, came of a good family and had no had habits. He wrote at length detailing

They'll think clearer, accomplish more and make things move faster, because their

energy hasn't been supped by enervating heat!

A Robbins & Myers "STANDARD" Fan is a good investment. It'll pay big dividends in increased efficiency, in a better quality of work, in keeping employees comfortable and satisfied. In many offices a "STANDARD" Fan is considered as necessary as a typewriter.

Robbins & Myers

#### Most Economical

Less than half the current consumed by an ordinary electric light keeps a "STANDARD" Fan going at top speed, blowing billows of cool comfort through the room. So cheap you can't afford to be without its refreshing aid Jkis summer. 18 years of specialized effort have produced

for you the utmost in an electric fan. Swift, allent, steady and umatingly durable. Pricesfrom \$9.00up, according to size or type.

#### Find Out More About It

Write for our Free Fan Book, showing all "STANDARD" styles—ceiling, desk, bracket, uscillating, exhaust—for either direct or alternating current—for offices, factories, stores, cufés, places of amusement and homes.

We'll also tell you where you can see Rob-hins & Myers "STANDARD" Fans in dealers' stores in your vicinity. Your name on a postal will bring full information.

## How to get Customers' Statements Out on time and at less cost

Thousands of business houses have helped us to revise this Information Bulletin (3d edition) -told us how they get their statements out on the firsthow they cut the cost of getting them out—how they save time, and clerk

"Net Profits" nowadays must come by economies and by business ingenuity. It is the experience that if you get your statements all out on the "first," you get them paid more promptly. You have the use of your money while the other fellow is still sending out his statements and talking about "slow collections," You make more turnovers, discount your bills more easily, and borrow less money-all meaning greater profits.

Prompt statements mean fewer bad debts, better collections; therefore, better standing at your bank,

This Bulletin, "Customers' Statements," shows how successful business men are saving one-third in time in making customers' statements the Burroughs whether they get out thousands of statements, or only a hundred. There is no "new system" about it. You won't have to change your present office methods—they will simply be shortened.

Bend me a copy of the "Customers' Statements"	
Selictin-Free,	
Ment time your representative is in this vicinity	
I will also be gied to have him call and espine- lies a Bureaughe Statement Machine could be professive applied to my business.	
0.K	

Burroughs Adding Machine Company 99 Burroughs Block, Detroit, Michigan European Office, 76 Cannon Strort London, E. C., Eng.

Makers of adding and adding-neitrocting bookkeeping machines, listing and non-listing adding and calculating machines, exable-printing adding and calculating machines—88 different models in age combinations of features — \$150 to \$550 in U.S. Easy payments if desired.

# Every Boy Has His Hobby

He may spend his vacation fishing in the stream below the dam for bass and suckers. He may take long jaunts over the hills with his camera slung over his shoulder. He may be planning a wireless station of his own-and with a friend or two, rigging up his aerial and connecting his apparatus. He may be building a shop in the backyard so that, when winter comes, he'll have a place to work on stormy days. But whatever it is, it's his hobby - and his heart's in it.

Now, good fishing tackle and cameras are expensive. So are the detector, tuning coil and other odds and ends that go to make up a wireless outfit. A carpenter's chest with guaranteed tools - this costs good money, too. Every hobby has a ittle expense attached-

But that's no reason why you shouldn't own what you want and need-and without paying a cent for it. There is a small army of a ert, enthusiastic boys represent-ing THE CURTIS PUBLISHING COMPANY in cities, towns and villages throughout the country. Like grown-up salesmen, each has his own circle of friends and "business acquaintances" to whom he sells his goods -the Curtis publications. On Pair and Jaurnal days he is eagerly awaited as he

makes his rounds with the current issues.

Each copy he delivers nets him a cash profit; many of our boys earn from two to ten dollars a week. And this is not all: he also receives a lot of premiums selected from our Book of Rebates, an illustrated catalogue describing over five hundred splendid prizes. Whatever his hobby is, here he can secure what he needs.

Every boy has his hobby. You have yours. Whatever it is, let us hear from you. You can then see for yourself how these thousands of boys are earning money by selling The Saturday Evening Past, how they have secured the articles they wanted more than anything else - how you can secure what you want. Address your

Sales Division, Box 521

THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PENNA.

some of the Hicksian personal characteristics, and Senator Paxton read the letter, laughed and asked Madden: "How's he doing?

"Pretty fair," the harassed Madden re-plied. "He's a reasonably good typewriter, seems to be intelligent, is willing to work and to learn, and is companionable enough round the office, although he doesn't under-

round the office, although he doesn't underestimate his own abilities any."

"Judging from what Billy Smith says,"
commented the senator, "he has several
kinds of pep in him and may be worth
watching. Put him on temporarily and
give him a good work-out."

Whereupon T. Marmaduke Hicks became an atjaché of the office of Senator
William H. Paxton at a wage of sixty dollars a month. Madden thought he might

lars a month. Madden thought he might remain two or three months, until the great rush was over. Paxton dismissed him from his mind. Hicks himself had no other idea than a permanent billet in the office, and he was right. He grew expert on the type-writer, practiced stenography assiduously, cultivated Madden in every possible way, was willing to labor nights and Sundays, and at the end of the third month was a fixture and had his pay raised to a hundred dollars a month. This was done by the simple Paxtonian expedient of placing him on the senate roll as an assistant committee clerk, which not only gave Hicks more money but relieved Paxton of the necessity of paying Hicks sixty dollars out of his own pocket.

Hicks had a natural bent for politics and he studied Paxton's methods carefully. He had a retentive memory and applied it to all of the minor matters that came up in the office. He remembered names and dates and kept close track of the files. He studied state-patronage questions, briefed applica-tions, watched the Senate when he could, read the newspapers assiduously and kept in touch with all important measures, and especially those in which his chief was interested. He started a little clipping bureau of his own, reading the state papers closely for all articles and editorial comment having a bearing on Paxton's activities, saved up small items for the correspondents of the home newspapers, and before he had been there six months knew as much about the inside routine of the office as Madden did, who had been with Paxton for fifteen years.

One morning he arrived at the office at eight o'clock and to his astonishment found Senator Paxton there, fussing and fuming

for a stenographer.
"Where's Madden?" asked the senator

crossly.
"He doesn't get here until nine o'clock." "He doesn't get here until hine o clock."
"Damn!" exploded Paxton. "I want to dictate a few paragraphs of a speech."
"I can take it," said Hicks eagerly.
"Are you a stenographer?"
"Yes, sir."
"Came on them and don't hash it any."

"Come on, then, and don't hash it any more than you can help."

Paxton dictated swiftly for half an hour.

Hicks concentrated every atom of intelli-gence he had on his work, and when Paxton had finished and ordered, "Make a carbon of it," he went nervously to his typewriter and began to transcribe his notes.

He handed the typewriter sheet to the

He handed the typewritten sheets to the senator and stood anxiously by while the great man read them. Every time the sen-ator made a pencil mark on the paper Hicks felt his heart sink within him, but he was radiant when the senator said, after he had finished reading: "Not so bad." That night at the boarding house he told his table

companions that he was now the confiden-tial stenographer for Senator Paxton.

Six months later this statement became reasonably true, for Hicks made himself so useful and worked with such earnestness and zeal and intelligence that Senator Paxton appointed him essistant to Mad Paxton appointed him assistant to Mad-den and increased his salary to sixteen hundred dollars a year by and with the aid of a friendly contingent-expenses committee of the Senate, of which the chairman was an old friend of the senator's.

This enabled Hicks to move to another boarding house, and he chose the establishment of Mrs. Lake.

Washington is freckled with boarding houses. There are sections of the capital that resemble Bloomsbury in London. Row after row of what were once fashionable residences are now, and were in Tommie's time, establishments of varying merit as places of entertainment, occupied by various grades of boarders, ranging from penurious or precarious statesmen to clerks and other employees in the service of the

The house conducted by Mrs. Lake an her daughter was on a good street and en-cellent of its kind. Mrs. Lake was the widow of a man who had had some proerty and more debts, and had been con pelled to support herself after the lawyer had finished settling the estate. She was well bred, a good housekeeper and a woma of attractiveness and ability. She was wise boarding-house mistress. Her parks and her dining room and her hall were we furnished. She knew the charm of shake lamps and cozy corners and employed the both numerously. Her rugs were good. He pictures were copies of old masters, her ser pactures were copies of old masters, her ser-ice careful and expert, and her food, thous not lavishly served, was of the best qualin and well cooked. The brass doorknot always shone brightly, the small negro wi opened the door was immaculate in a bh uniform and white cotton gloves, and he uniform and white cotton gloves, and he a welcoming smile that was an essenti part of his training. Occasionally Mr. Lake entertained transients sent by see former boarder, but most of her peop stayed with her for long periods.

Tommie took a small room on the talkes which he convent for its in the talkes.

Tommie took a smail room on the use floor, which he secured for sixty dollars month, a sum quite insignificant, as Mi Lake assured him, when compared with a social advantages he would enjoy who under her roof. These social advantages and the resultant social requirement dawned on Hicks on the first Friday nighand at the hearting house. Everylye he dined at the boarding house. Everybo dressed for dinner on Friday nights. It w

the custom of the establishment.

To be sure, Mrs. Lake and her daught dressed for dinner every night and sat regal state at a small table near the de through which the waitresses came into t room, thus giving a "real swell tone" the establishment, as Mrs. Lake put it, h the other guests—not boarders, guests ate in their usual day costumes. Mrs. La rather insisted that the modish resources the establishment should be displayed one night of the week, and it had come be accepted that the guests should tog c in their very best on that night. Usual in order to give an added air of distincts Mrs. Lake served a canapé of caviar ti night instead of beginning the meal w

the customary soup.

Tommie did not know of this cust and he was astounded when he came do to dinner on his first Friday night a found the women, some of them in lowbodices and some in bodices with guing removed, and the men rigged out in din coats, evening coats and stiff white shi fronts. Even the Texan, who had made tenet of his politics not to wear a dress s compromised between his principles a his politeness by wearing a low-cut wa coat beneath the long and flowing fre coat in which he made his impassion appeals for the welfare of the people the floor of the House of Representative Tommie stared a little at the unwon display of elegance but was neither a concerted nor dismayed. Instead he not concerted the results at the more and weappear who we have fully at the more and weappear who we cheerfully at the men and women who w sitting stiffly in their chairs and toying w their minute portions of caviar, and p ceeded easily to the table where Mrs. L

go with his evening clothes, but the friend and sold him he could wear his derby and beingood form, and that gratified Tommie.
But, none the less, he almost bought a
crush hat. He had seen pictures in the
magazines that presented tall and exquistey dressed men carrying crush hats in rations modish crush-hat positions, and he felt award give him much added distinction the could come down to the big assembly the could come down to the big assembly non in the boarding house with his hat carriersly but gracefully disposed beneath his arm, and when going out could open it at the door with a flourish and a pop.

On the following Friday night he came

down to dinner ten minutes late in order to give the others ample time to be at their places, and made an impressive entrance dad in his new clothes. He had placed his hadderchief in his sleeve, for he had ob-seved that an under-secretary at one of the criasies, whom he had closely scrutinized while that rising young diplomatist was taking to Senator Paxton, carried his hand-lesslif that way. Tommie looked round the room. So far as he could observe, no perset there had his handkerchief in his sleeve, and Tommie saw to it that all near hin were made aware of this crowning such of elegance. Indeed he took out his tandkerchief so often that one of his table companions, the motherly wife of a reposentative, asked anxiously whether he had a cold and offered to supply him with

HICKS spent the next year and a half comfortably with Mrs. Lake, laboriusly with Senator Paxton, and profitably to himself in a way, for he skittered through sort of a law course in a sort of a law school, devoting two nights or three a week to the nemulation of such legal knowledge as va dispensed at this institution. He made to serious study of the law, because serious study of any subject whatsoever, save that of his own aggrandizement, was foreign to the mind of Hicks.

He bought notes of lectures from impecurious digs, flattered and cultivated the professors and lecturers, delivered semi-stations when called upon to tell what he key, and was on his way toward his degree nommendation.

He did not care for the law, but he felt he seeded the law as a peg on which to hang is political ambitions. He made a close sady of politics, watching Paxton's every novement-Paxton was a master politican—and had it vaguely in mind to go smowhere, after he had saved a little money, open a law office and depend on his still as a handshaker and his general alertzew of mind and lack of scruples to advance him in politics. He knew most of the usual political tricks, for politics was his passion, and he essayed the various artifices employed by the men who seek votes for ther values as votegetters rather than for

their showing of principle and principles. Hicks had learned one thing. He never of anded any person who might possibly do limany good, and took whatever came from non sources with smiles and thanks; and be never falled to impress on those whom he outsidered on terms of equality with himself his own advanced ideas of his personal inportance and ability. His affability and utanity were famous in clerical circles at the Capitol; his polite attention to his betless made him many friends; and his com-plaisance and readiness to do what was required of him led Paxton to use him, more triess, in semi-important affairs. Madden of course was the real operator for Paxton, the man who stood with broad shoulders ways ready for any shifted responsibility, who ran such risks as there were and who was as loyal as he was pliable.

Paxton's attitude toward politics and public service was that it is a game, with the people as pawns. This also was the attitade of the men associated with Paxton in the leadership of the Senate and the drection of the House. That was the atmosphere in which Hicks worked and the atmosphere he absorbed. Paxton himself was a vise and likable person who never went hather in his philosophy of politics than to usert the theory that the end justifies the means and that power must be retained by the organization at all bazards. He was wiling to do for the people whatever would help the organization in the doing, and almost every act of his and of his controling associates in the Congress was predirated on the political effect that act would baye on the personal and political fortunes of himself and his friends.

Long years of experience with the selfish motives and desires and practices of the men in politics, and long years of observing the ease with which these selfish and selfeeking men deluded the people, had given him a sort of good-humored contempt for the people as a whole, especially as to their politics and the practice of it. He had accumulated a fortune through politics and he had assumed a philosophical view of the game, as he called it, and took nothing seriously that did not threaten his own continuance as a leader of those who played the game with him. He was under no de-lusions as to his colleagues. He knew just how shallow their pretenses were, how much of lip-service there was in their resounding promises on the stump and on the floor of the Senate, how bogus it all was. So he continued at it for the fun he had and for the power it gave him, and though he was as bogus as the rest of them, so far as regard for the general good was concerned, he had the redeeming quality of know-ing himself exactly how bogus he was, and

not assuming virtue.

He had a sense of perspective, a sense of humor, and a full working knowledge of all the weaknesses, follies, ill-considered sentiment and lack of knowledge among the

populace.

"Undoubtedly," he said to Hicks one day, "undoubtedly, Tommie, Mr. Lincoln day, "undoubtedly, Tommie, Mr. Lincoln was right when he said you cannot fool all the people all the time. But the limit hasn't been reached. A large number of men in the politics of this country have been at that business of fooling the people for a great many years and haven't been caught yet. In the long, the ultimate, run the contention may be right, but no one of much consequence as a fooler has been stopped thus far to my knowledge."

Hicks pondered this and similar sentiments from the cynical and contemptuous Paxton. He watched the operations of the organization leaders in the Senate and saw them doing things day after day that were planned carefully, and so executed, for the effect they would have on the political and other fortunes of the party and with small

other fortunes of the party and with small regard for any popular merit except such as might incidentally accrue. He accepted this as the proper theory of politics and the wise theory, and he shaped his own plans and actions thereby. He intended to be a nolitician to cuter politics and he had no politician, to enter politics, and he had no other idea of entering politics than the stendfast idea of getting everything possible for Hicks by whatever means might present themselves. He formed the Hicks party, with himself as sole member, solely to profit thereby, and resolved to operate along

He was encouraged in his attitude by his ccasional visits to Salestown, where the village people looked on him as some sort of an extraordinary person who was shaping the destinies of the nation in conjunction with the famous Senator Paxton. Hicks tried out on his old friends some tentative boasts and assertions of his importance and was amazed to see how unquestioningly they took as true everything he claimed. Once he made a speech at an Old Home Day dinner. He began, rather modestly for him, his recital of his activities at the capital but on observing the pleased. capital, but, on observing the pleased acceptance of his assertions by his audi-tors, threw off all restraint and proclaimed himself as a most potent power behind the

"It is my good fortune," he spouted, "to be associated with these great men at Washington who are directing the affairs of this nation, to act with them, to are with them and to be consulted by them; and want to say to you, friends of my boyhood days, that no one knows better than I the unselfishness, the clear-sighted patriotism, the high nobility of purpose and the unfaltering determination of these states men to conserve the welfare of the people.

There was loud applianse from everybody except Col. Seth Howard. "Tommie," said that unbeliever after the dinner, "I thought the constitution provides for no more than two senators from

a state."

"Why, so it does, colonel," replied Hicks.
"That's the way I read it," continued
the colonel, "but I take it from your remarks our state has three."

"Why, no, colonel; only two."

"I'm glad to be reassured on that point,
for I gathered from what you said that you

are acting as a senator for us also."

Tommie laughed. "Oh, colonel," he said, "I am afraid you didn't listen closely to what I said."

A Notch in the Right Place And what it means to the man who wears "5130" 'HE comfortable fit of a Clothcraft No. 5130 Blue Serge Special is due to care in little things. Little notches in the edges of patterns, for instance. Those notches are not put in by guess-work. Their position is calcu-lated to a fraction of an inch. And every piece of cloth cut from the pattern has a tiny notch in exactly the same place. When the parts that form coat and lining are sewed to-gether, the little notches must correspond — not more or less, but absolutely. Clotheraft linings are designed in advance to fit the gar-ments, instead of being put in afterwards by hit or miss methods. It's just one of several hundred improvements in individ-ual operations that come back to you in better workmanship and - because that saves money - in better materials and Drop in at the Clothcraft Store and try on one of the 5130 models. It's the best all round suit we can make for \$15.00. You might also look at some of the many other fabrics and pleasing patterns in this one GUARANTEED ALL WOOL line at \$10 to \$20.

> There is also a fall weight Clothoraft Stur Serge Special at \$18.50 known as No. 4130 The Joseph & Feiss Company

duction to the nearest Clothcraft dealer.

UR Marine Oil is to the life of your Motor Boat what our Motor Oil is to the life of your Car. Each oil is made only of one uniform, base crude of tested quality and lubricativeness, and is manufactured by a special process which preserves the molecules of the oil and consequently its lubricating value. Thus while they are thoroughly filtered of free carbon and impurities, they nevertheless hold their potency and life.

> By forming an even film of oil between the metal parts, it preserves the life of the Motor and increases its efficiency. This lubricating oil "cushion" eases the contact between parts and leaves the least carbon deposit upon them, because it burns up evenly and cleanly. Frictional losses are thus minimized.

Sold on Land at the Garage, General Store or Grocery

Sold on Sea at the Motor Beat Club ar on the Float

"Many satisfied users attest their excellence # Expansible Bookcases This Solid Oak Letter Cabinet The Weis Manufacturing Co. no strong black \$3.50 68 Union St. Monroe, Mich

"That's the trouble," snarled the colonel. "I was about the only one who did listen closely"; and he stumped away.

Tommie saw to it that the Beacon had a report of that speech, and when the paper came in put a clipping of it on Senator Paxton's desk.

Paxton's desk.

Paxton's eyes twinkled when he summoned Hicks to his room.

"Tommie," he said, holding in his hand the clipping from the Beacon, "I see that you have begun to inculcate the true faith in the minds of the people."

"What do you mean?" asked Hicks.

"Why, I have just been reading this report of the speech you made up at Salestown. I couldn't have done better myself in portraying the high and patriotic aims of such workers in the vineyard of the common people as are the instruments here at mon people as are the instruments here at

mon people as are the instruments here at this capital for ameliorating their woes. I congratulate you."

Madden read the clipping also. "Say," he said to Tommie after he had finished Hicks' glowing account of his own per-formance; "you are wasting your time round here."

"What do not be instruments here at their woes."

"What do you mean?" asked Tommie in alarm, for Madden was a powerful factor in that office.

"I mean you're too good to be working as a stenographer to a senator—any senator—or anybody else. A young man who can get away with that sort of guff as well as you can ought to be out among the dear people. You are not deluding anybody here,

people. You are not deluding anybody here, you know, but it is different outside."

"I don't understand you." Hicks replied.

"Oh, all right," continued Madden, "but I understand you. Now don't attitudinize to me. I tell you there is a future for you in politics if you get the right field."

Madden stopped, lighted a cigar and looked out of the window.

"I have been here for twenty years," he said, as if talking mostly to himself, "and fifteen of those years I have served with the senator. I've seen them blow in, blow up and blow out by the hundreds. If there is any kind of bunko artist, faker, charlatan, demagogue or other professional friend of demagogue or other professional friend of the people I haven't run across in my time, it is some new sort just invented. I tell you, Hicks, you've got the earmarks and all the tendencies and all the traits for a suc-cessful career as a noble and self-sacrificing

cessful career as a noble and self-sacrificing citizen who is actuated by the sole desire to aid the common people. You could bring yourself to love them. I know it."

"But ——" began Hicks.

"Oh, but nothing!" interrupted Madden. "There are no buts about it. If there

ever was a man born to handshake and talk his way to a good place on the payroll, that man is yourself, Hicks, and I don't say this to your disparagement, for I admire your abilities. You are a born friend of the peoabilities. You are a born friend of the people. Moreover, you are rapidly acquiring all the knowledge and details of that pious profession, and it's a shame for you to stay here pounding the typewriter when you might be out uplifting the dear common people from the slough of despond, to your own subsequent advantage both politically and financially."

"I think you misjudge me, Mr. Madden," Hicks began again. "I certainly do not feel that my principles should be weighed in any such sordid scale ——"

"Misjudge you!" broke in Madden. "That line of talk you have just begun stamps my judgment as infallible. Let me have those letters about the Redding case."

Hicks brought the Redding file. He

Hicks brought the Redding file. He thought a good deal that day of what the senator and Madden had said. In his opin-ion their ideas of his abilities and tendencies, to say nothing of his ambitions, were couched in terms that might have been more delicately put, but on the whole he was not dissatisfied. For if two such ex-perts were beginning to consider him adroit enough to make his way with the populace, he felt he might be progressing.

And when the correspondents came in that afternoon to see if there was any news for

afternoon to see if there was any news for home consumption, Tommie handed each of them a typewritten excerpt from con's account of his speech. He had early learned that political success depends to a large extent on the proper appreciation and cultivation of the sources of publicity, and the reporters liked him. They all made paragraphs about the speech, which went with the day's news grist, and some of these were printed, to the great delight of Hicks and to the great amusement of Senator Paxton and Madden.

### *CORPORAL BILLY'S COME-BACK*

the crowd. Corporal Billy was all right, but at his age what would he be doing on a posse after a desperate murderer? Better stick to his last! More than one wit audibly suggested this, and the sally evoked laugh-ter. Before it had died the posse was off, with a final word from the sheriff, who was remaining right there because he felt that was the place for a sheriff.

Corporal Billy turned away. It was the supreme insult! He who had marched to theringing strains of We are Coming, Father Abraham, Three Hundred Thousand More, to be refused as a volunteer to a little Caliiornia mountain posse. And they had hoghed at him; in fact they had laughed at his uniform—insulted the blue! Corponi Billy was near to an unseemly outbreak when he grasped that. He had turned back to the remnant of the crowd, wild words on his lips, when a low, tense voice at his side prested him.

"Hist!" said the voice.

He turned and confronted Cyril Naughton Webster, the intrepid captain of boy

"Hey?" asked Corporal Billy. "What

say?"
"Hist!" repeated the captain. "A word "Hey?" queried th

queried the corporal again. "Aw, com'on over here away from those muse where I can speak to you," said the captain, irritated into a relinquishment of his official manner. By one blue sleeve he tugged Corporal Billy beyond earshot of

the crowd. "What's all this?" demanded the corporal.

"You'll find out soon enough," flashed the captain ominously. "You've got your work cut out. Now not another word! Simply follow me. One incautious word may spoil all."

"All what?" demanded the corporal.

"Who knows what the day may bring who knows what the day may bring brth?" parried the captain, fingering the crippled army pistol at his belt. "Trust in me, no matter if the skies seem dark. And come on! Hurry up!" He turned and marched briskly down the street. Corporal Billy gazed after him briefly and was

suly gazed after him briefly and was shocked to a sudden alarm.

"My good land!" he muttered; "he's gone and done it! He's killed one them indians! He's takin' me to the body!" He started after the swinging figure of the captain, a sickening fear in his heart. Through the town the pair made their way. The captain did not look back. The corporal pursued him. Wrath was growing within pursued him. Wrath was growing within him, even above his fear. He devised a series of ingenious punishments for this youth of undeniably high spirits.

At the edge of town the captain turned of and skirted the railroad track. Cor-poral Billy removed the fatigue cap to wipe his steaming brow, and followed his leader. From time to time he shouted ahead impatient demands for details, but the captain merely waved back a silencing hand. After half a mile beside the track, he leaped lightly up the bank and paused at the edge of the wood. Into this wood and ascending the steep hill Corporal Billy observed well-marked trail; it was the trail lead-ing to the Indians' camp. He was breath-less when he reached the captain's side, not alone with his rapid walk but with rage and siarm. The captain stood coolly there, but obviously restraining with vast effort some

subterranean excitement.

"I knew you were the bravest man in these parts," said the captain before Corporal Billy was equal to speech. "I knew you wouldn't be afraid of anything."

"Where you got him?" demanded the corporal, visualizing a murdered Indian.

"Never you mind! I got him all right all right! But I'm—of course I'm not afraid—but I thought I'd better have you."

"You young foo!! Wha'd I tell you?" You young fool! Wha'd I tell you?"

"Say, you've got a giant's strength, haven't you," asked the captain, curiously

"Well—of course I used to — What
"I have?" replied the corporal savagely.
"You told me you once felled an ox with

one blow of your fist, didn't you tell me that? You know you did. And you're brave as a lion; you can't fool me. Gee whiz, if I could grow up to be as brave as you are!"

'Look here! What's this mean?" But the rage of the corporal was sensibly molli-

The captain turned to ascend the trail. Not a word above a whisper," he hissed,

"Not a word above a winsper,
"and don't make a sound."

"Now look ahere ——" But the captain was stealthily climbing and the corporal followed him perforce. For twenty minutes he toiled up through the gloom of the spruce and pines, stumbling over boulders in the ancient trail, slipping on the damp earth-mold, once more heartily dis-paraging the first born of his only sister. And then, twenty paces beyond him, the captain left the trail, beckoning to his follower, and dove through a dense wall of manzanita shrub. The corporal pursued him at some cost to his uniform, sadly impeded by

the dangling saber.
Beyond the manzanita the captain pointed mysteriously downward and surprisingly dropped from view. Making his way to the spot the corporal looked over a wall of rock to where the captain stood on a ledge some six feet below. His upward glare was so tense, the finger on his lips so eloquent, his beckoning gesture so potent, that Corporal Billy, once more under his spell, dropped precariously to the ledge be-side him. The captain thereupon descended to another projecting bank another dozen feet below. It was only a narrow bank and of soft earth, affording a most perilous foothold, and even to sustain this they had to grasp for partial support at the bushes

grasp for partial support at the bushes growing above them. Corporal Billy did not discover the insecurity of this perch until he stood panting beside the captain. "Look ahere ——" he began indignantly, but the answering hiss was again so truly ominous that he broke off. The captain now firmly grasped a bush and leaned far over the edge of their narrow foothold to peer intently below him. Then Corporal Billy recognized the spot. They were back at the railroad track, still ten feet above its level, and on the verge of a bush-screened semi-circle that a spring had hollowed out of the

The captain squirmed farther forward for a clearer view into the depths. Then suddenly he resumed his upright position beside the corporal, the keenest pleasure

"Still there," he hoarsely whispered, and delightedly dug the amazed corporal in the side with a grinding fist.

"The Indian?" demanded the corporal,

whispering in turn.
"Indian? Aw, wake up! It's that big
coon they're huntin' for!"
Corporal Billy's heart set up a pounding that he thought must reverberate for miles through the forest. He could feel his scalp contracting, though there was little hair for it to move. With a dizzying distinctness there ran through his mind the items be had gleaned back there on the street—"in for murder, big fellow, savage, wild, already killed half a dozen people since he broke away, won't be taken alive." He swayed lightly and reached for a stouter bush to support him. A bit of earth crumbled be-neath his feet and rattled down the sheer bank. He drew a shuddering breath and glanced upward.

"He's sound asleep," whispered the

captain.
"How we goin' to get back up there," whispered the corporal with no want of caution in his tone.

"We can't get back," responded the captain promptly. "I figured out this was the way for you to get him. You got to jump on him."

"My good lands!" groaned the dismayed

corporal.

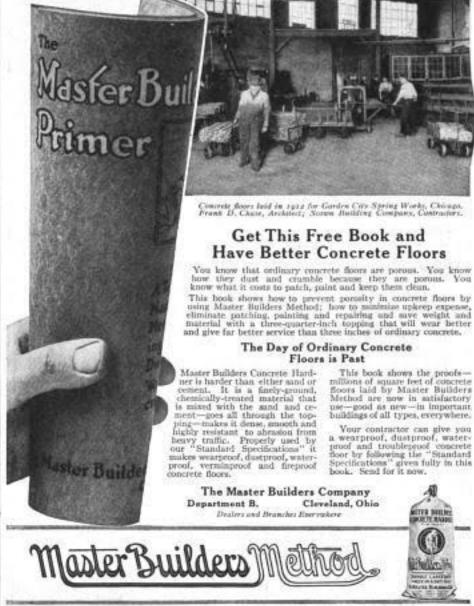

"What would you want to get back for anyway," again hissed the captain. "You want to go back there and give those rubes the credit, when all you got to do is jump on him and take him in by yourself?"

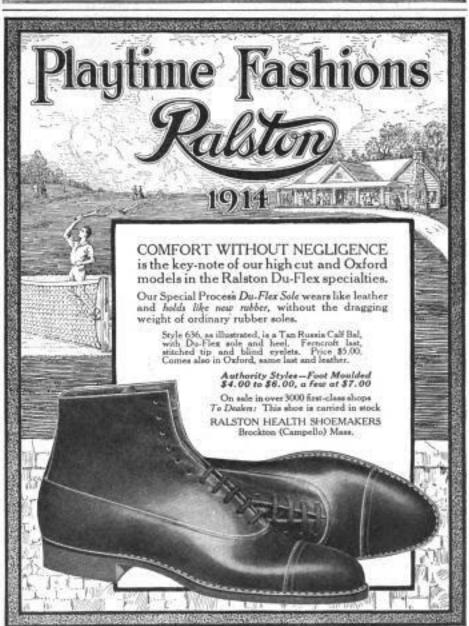

"Jump on him!" repeated the corporal dully.

'Sure, jump on him-if he makes any resistance just tear his heart out." The captain grinned fiendishly. The corporal shuddered.

"I wouldn't trusted any one but you to do it this way," continued the captain. "I knew you were braver than that whole bunch rolled into one. It'll seem like old times, like when those three rebs come at you and you laid 'em all out," he concluded

Once more the captain peered over the bank. Corporal Billy had not yet dared to do so. But now in his ordinarily discreet

## The Extra Quality

You'll know genuine Chalmers "Porosknit" (Guaranteed) by the sewn-in label. Buy by the label.

The label means extra quality in materials better yarn than needed. It means extra care in making-reinforced seams, double-seamed by cover seaming -extra stitches everywhere. It means cleanly making, in a spick-and-span, modern mill. It means underwear fit, comfort, coolness.

This Label on Every Garment - Ask your Dealer

Chalmers "Porosknit" is made in all styles—for man, for boy. (The Union Suits are especially comfortable.) Open in texture, and of sect, absorbent yars, it keeps you cool by absorption and evaporation of perspiration. Your pores breathe the needed air. The yarn's softness elimi-nates irritation of the skin.

#### Our Guarantee With Every Garment:

"If any garment bearing the genuine Chalmers 'Porosknit' label, and not stamped 'Seconda' or 'Imperfect' across the label, fails to give you its cost value in underwear satisfaction, return it direct to us and we will replace it or refund your money, including postage."

and sensible mind there loomed the image of a gloriously intrepid Corporal William Safford, a superb being, primed for feats of the most grandiose daring. Of course it was the audience that in an instant made this reckless fool of him. And the youth of the audience aggravated his folly. With a man of his own age beside him Corporal Billy would doubtless have relied upon the other's understanding in such matters and other's understanding in such matters and acted with a wiser restraint. But who of us would confess to cowardice, even to the tempered cowardice we call discretion, when the calmly believing eyes of youth are upon us, so adoring, so absolute in their trust? Corporal Billy drew a long breath and peered over the edge of the bank.

Ten feet below him in a prison uniform a giant negro lay sleeping on his back. The immense legs sprawled over the damp ground in a weary abandon; one powerful arm partly shielded his face. His mouth was half open. The very snore that issued therefrom was terrifying. Corporal Billy

drew quickly back.
"It took the bravest man in these parts, that's what I said to myself," whispered the captain. "I saw him sneak in there and climbed up here and watched him awhile, and then I thought I'd give you all the provide I know you'd make light of it with credit. I knew you'd make light of it, with your strength."

Corporal Billy assumed an expression

Corporal Billy assumed an expression which he hoped was gratitude.

"He's stirring," warned the captain.
"Quick, draw your sword!"

Corporal Billy stiffened, listening intently, but did not move. The captain himself drew the antique saber and thrust it into the other's hand. The hand was nerveless, but somehow the fingers closed upon it.
"Get ready!" urged the captain. Discretion shrieked alarm to the corporal, but

cretion shricked alarm to the corporal, but there was confident youth at his elbow, and dimly a background of those who had thought him done for, not even man enough for a grand marshal. He did not flinch; yet he did not advance. So tenuous are these lines of bravery that accident may easily earn a credit it does not receive. Again the corporal peered over the edge of the bank.

The captain peered with him.
"Take this," directed the captain, and thrust the wrecked pistol into the corporal's

Below them the vast hulk stirred uneasily, a groan was heard, and two immense fists rubbed the shut eyes open.

"Jump!" commanded the captain in a firm, loud tone. The eyes below them looked upward in affright. They beheld, poised across the heavens, a formidable figure in uniform, arms outspread, one hand grasping a saber, the other a powerfullooking pistol. Even as the fright grew in those eyes the terrifying figure descended with a demon's yell, for the captain had with one foot neatly scoured the soft earth from beneath Corporal Billy's feet, and the corporal, feeling himself going, had made the best of it. The captain had never ques-tioned the iron of Corporal Billy's pur-pose; he had, divining that the moment had arrived merely formed hesitation. He had arrived, merely feared hesitation. He paused but a moment to look below before scrambling down the bank. Two yells had ascended to him, Corporal Billy's and the one inspired thereby. This had emptied the lungs of the hunted one even as the man from the sky had fallen upon him.

When the captain reached their level

Corporal Billy, in a sitting posture, was rub-Corporal Billy, in a sitting posture, was rub-bing both his knees. The negro, gasping fearfully for breath, lay half unconscious from the assault. Corporal Billy arose, picked up his fatigue cap with his sword hand and carefully donned it. Captain Webster regrettably forgot his dignity as an officer and a gentleman and danced wildly about the two

about the two.

"Hurray! Hurray! You got him, Uncle
Billy! You got him! I knew you could do
it. I knew you wouldn't be afraid!"

It was music to the ears of the corporal, and yet he perceived that this was no time for music. Their victim gave a final shud-dering gasp of restored breath and essayed Standing above him, Corporal Billy kicked out vigorously. The recumbent one yelled in supreme pain and grasped both shins. Corporal Billy kicked again, em-phatically and with effect. Then he stood off and turned the ancient pistol upon his

"Look here, you!" he challenged grimly.
"Yes, suh! Yes, suh, Mistah Gen'ral!"
The Corporal felt relieved. The reply had come with a pleading whine,

"You listen. Get up and walk straight down that track into town. I'll be ten

inches behind you, and if this gun goes of it'll blow the whole top of your head off and

it'll blow the whole top of your head off and then I'll cut you to pieces with this sword. Do you understand?"

"Yes, suh! Yes, suh! I undastand."
His eyes flitted over the uniform. "My Lawd! They got the ahmy out afteh me. Yes, suh, Mistah Gen'ral."

"Get up."

Slowly, with many groans, the huge hulk was partially raised. While he still crouched his eyes flashed aside furtively.

"Kick again!" warned the lynx-eyed captain, and Corporal Billy again kicked. emphatically and with a deadly aim. A yell of utter submission was evoked, while the big hands nursed the abraded shin.

"Get up," directed the corporal in steely tones. "Walk down that track and don't forget this gun is right at your head."

The prisoner had been hunted for a day.

He was weary and bruised and spiritless.

And the uniform of the corporal, no less than his fearful weapons and the cool authority of his manner, had been of hypnotic

value. Slowly he gained his feet. Corporal Billy

held the pistol upon him. "If I have to shoot -

corporal.

"Aw, don't shoot him, Uncle Billy."
pleaded the captain. "Just fell him with
one blow like you felled the ox!"

The prisoner flashed a glance of extreme

disfavor at this officer.

"Throw him down and tear his heart out," urged the captain. The prisoner flinched and tamely bowed

his head.
"March!" rang the command.

At the edge of town an excitable small boy observed Ophirville's second parade that day and dashed ahead to the town hall with the news of its coming. The sheriff stumbled down the steps, hurried and incredulous. Remnants of the crowd surged eagerly back. Corporal Billy, behind the prisoner who towered above him, marched unwaveringly to the group which hastily parted to receive them. With military precision the captor raised his saber to "present" and declaimed: "Corporal Safford Twenty-third Indiana Infantry, report one prisoner, sir." one prisoner, sir.

The sheriff called frantically to the

"Hold another gun on him, somebody!'
Corporal Billy permitted himself to
sneer. Then he launched a final kick at hi prize, a hard kick truly aimed. The crow casped and a cry of pained protest cam from the victim.

"A real soldier don't need to hold a gu
on his kind," announced the corporal i
tones of rich contempt. "I brought him a
the way in without a gun, except for tha
there old fool broken thing the kid's bee
playing with. Are you afraid of him, she
iff? Shall I kick him again for you?"

There was another howl of protest free

There was another howl of protest from the prisoner, a howl of appeal from the military to the civil authorities.

"Oh, Mistah She'ff, doan' let that so

"Oh, Mistah She'ff, doan' let that so juhman rough me up no mo'! He bee abusin' me. He ain't got no right!"
"We got him! We got him!" shoute the dancing sheriff. "Put these irons o him, some of you."
"Three cheers for good old Billy Sa ford!" shouted the town clerk, who we ever an opportunist. The cheers rang or vehemently from the enlarging throm Corporal Billy blushed and essayed to slir off, but they crowded about him, cheerir him again and again, proudly wringing h hand. He knew that he was now perpetu grand marshal of all public functions ophirville, but he suffered acutely as I saw his captive led away to the jail. I was wishing he hadn't been so rough wit the fellow. "I kicked the poor devil show off," he muttered. "I'm jest a for smarty! If only I hadn't kicked him the last time!" He looked about him for the face of one who would truly understan and brightened when he saw Mrs. Kel beaming afar on the outskirts of the crow She would know just how he felt. "Hist!" said a low, tense voice at he

beaming afar on the outskirts of the crow She would know just how he felt.

"Hist!" said a low, tense voice at helbow. He turned to see Captain Cyr.
Naughton Webster, B. S.

"Hey? What's that?"

"Hist!" repeated the captain. "The Mrs. Kelly wants us to come up to helbouse to supper. She's got fried chicken And it was even so.

But let us learn from this that braves may be one thing: then again it may be

may be one thing; then again it may another.

# Emancipation for the engine!

Do you realize that—ten chances to one - you are today \* putting up with certain handicaps which limit the performance of your engine?

Do you realize that your power at slow speeds should be far greater than at presentyour maximum speed appreciably highercontrol far simpler and more automatic, - and that starting should be a mere matter of an easy turn without "spinning"? Those handicaps are avoided in cars using

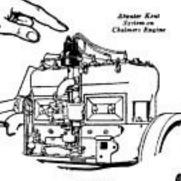

# Atwater Kent Ignition System

with Automatic Spark Advance

Hitherto you have associated a certain performance with certain cylinder sizes. Forget it! It was not the natural performance of the engine, but only of the ignition equipment. The engine will do far better if it has a chance!

Try any of the latest cars in the list herewith-do not choose your new car until you have done so. You will gain a brand-new conception of power, flexibility, smooth running and easy control. You will wonder at the limitations you have suffered

The simplicity and endurance of Atwater Kent Ignition have been proved by nine years of service. 75,000 cars carry it today. Over \$0,000 are being added in 1914. Will you be one of the fortunate ones to secure its benefits? Ask any agent of the cars named above for full information, or write us direct.

## The squarehead

(Continued from Page 8)

Bull Wilson swept the form at his feet

with a giance.
"Gwan!" he growled at her. "This un'd make t'ree o' dat kid." Then, chuckling, he nodded her and Crocky out of the room. As he closed and locked the heavy door he called to the woman as she went toward the bar: "I've allus had a sneakin' idea yuh was soft on dat squarehead kid, Olga.

A light laugh was her answer; and it was b dark in the narrow hallway that Bull Wilson could not see that his wife and Crocky were holding hands. In the dead of that night Bull Wilson

opened the ice-chest door again to bring forth the thing he had to sell. And as day broke Olaf Greig opened his eyes in a coffin-like space, which creaked and moved as though being borne by stumbling men; but consciousness did not return all at once. For a moment he believed himself in a coffin and being carried to his grave. Then he imagined himself in the tight berth that had been his on old Jon Thorsen's fishing smack. This thought suggested the sea and proved a spark. It exploded the mine

of memory.

The mist in his brain was swept away.
He brought himself up to the point where
he had leaped from the wagon in front of the Bowhead. Bull Wilson, the man in the tall, shiny hat—his enemy—had been within his grasp and he had just taken a deep breath before crushing him when—— Something had happened then. He could not remember what. But here he was on a ship. This was a forecastle bunk in which he was lying. He was at sea. He had been shanghaled again. He had been cheated of his vengeance!

With a cry of rage which choked, half uttered, in his parched throat he hurled himself from the bunk and went staggering toward the scuttle through which the new day was beginning to drop a square shaft of light. His way led over a corduroy road of prostrate men—some sleeping in drink, some under the influence of drugs.

As he came to the gangway ladder a form darkened the scuttle opening. Upward he plunged, red-eyed, unseeing. With a side lunge he sent the man in the forecastle entrance sprawling on all fours and kept on until he came to the waist of the vessel. He was on a whaler—a steamer called the Karluk. Then he stopped short. He knew where he was. There was no swimming ashore from here. Over the side were the Farallones Islands, their light tower shedding its final night ray on their bleak and lichened rocks. Astern, full thirty-five miles away, lay the coast behind a haze. There was Bull Wilson—safe!

"Yet Ay vill come again!" be was crying when the sailor he had knocked down as he burst from the forecastle scuttle seized him by an arm and faced him round.

"Yuh big bum! What'd yer mean by dropping me?" he demanded in open

"Huh? Vat?" stammered the Squarehead in bewilderment, compelled to bend down to meet the other's lack of height.
"Huh!" repeated the smaller man

angrily.

With that, his right fist crashed on the point of Olaf Greig's jaw. A repetition of "Vat?" was followed by the left under his chin and the Squarehead measured his length on the deck. He started to rise, got

as far as his elbows, and there paused, smiling, the while his opponent bade him stand up and fight. He was smiling because this little man, whom he could have broken in two, had crumpled ears like Bull Wilson's, and because he remembered that with lightning blows, like those that had laid him where he was now, his eternal enemy had twice encompassed him. In that moment cunning was born in Olaf Greig.

An officer came running forward, swing-ing a peace-invoking belaying pin, and closed the incident.

closed the incident.
"I'll take th' fight out o' ye in th' next sixteen months!" he flung at Olaf; and thus the Norseman learned the term of his

The following night he was at the wheel and overheard the chief mate say to the captain of the Karluk:

That rat with the cauliflower ears in my watch is Shadow Larkin. Used to be champion lightweight of the world—greatest of

em all. But he's a bad ——"
Then they passed out of hearing, but they left the Squarehead smiling grimly.

A week afterward Olaf and the Shadow were put at overhauling the whaler's points supply. Neither had spoken to the other since the first morning at sea. Both lived in a silence apart from the rest of the crey. in a silence apart from the rest of the crew, without cronies. This silence continued now, though they were side by side, until Olaf suddenly touched the Shadow and, without a word, directed his gaze to a large potato, solid and firm and edible, lying in the open palm of his outstretched right hand. "Well?" snapped the Shadow. "See!" answered the Squarehead; and his hand closed, crushing the tuber to apulp. "Whatcher tryin' on, ch?" exclaimed the Shadow, snarling and leaping to his feet. "T'ink yuh can run a bluff on me wid bull stren'th?"

"Naw. Ay lake be frands vit you. Ay

"Naw. Ay lake be frands vit you. Ay lak you t' learn me hoo t' praze fight." A scornful laugh burst from the Shadow; and that was an end of the conversation, for the mate separated them, sending the Squarehead aloft to a job that required his real sailor skill. During the rest of that after-noon, however, Olaf Greig made no move that escaped the terrierlike eyes of the

former champion.

A potsto had started Shadow Larkin dreaming. And his dreams took new wirgs and inwardly he glowed when, at the end of the day's work, he beheld the Norseman standing stripped in the Karluk's waist and sloshing himself with sea water. Never before had be seen a man wand like this and fore had he seen a man made like this, and he was familiar with the prize-ring masters of twenty years past. In comparison the other bathers were but grotesques beside

"If dis feller's only got a heart inside he can clean up de woild! He's de White Hope!" murmured the Shadow.

As he watched Olaf dress he asked him As he watched Olaf dress he asked him why he wished to learn how to fight.

"Ay yust lak to knaw," answered the Squarehead.

"Yuh want tuh lick somebody, ch! Ain't dat it?"

"Jes," was his simple reply; but neither then nor afterward did he reveal the identity of his country. Shadow I wished to the same to to th

of his enemy to Shadow Larkin. of his enemy to Shadow Larkin.

There and then began the Norseman's first boxing lesson. The mates and the crew thought the Shadow and he had reopened hostilities until between puffed lips Olaf explained he was Larkin's pupil and that they were the best of friends. Every evening after that, except when work or the weather forbade, it became the custom for the ship's company to foregather to watch them. It was rare, fascinating sport for the rough.

It was rare, fascinating sport for the rough and motiey onlookers just to see the Shadow in action. They knew what his fame had been; but to see him, a lightweight, a wist of a man compared with Greig, play with the giant and strike him where he willed was uproarious fun. As the Karluk's chie engineer put it, it was like watching a New foundland pup trying to catch a fame. But while the spectators laughed and mad-jokes the Shadow held his peace. He was exploring, endeavoring to find out whether his pupil possessed the two essential qualities for ring suggests board or what he ties for ring success—heart, or what h called sand, and head. And on a Sunday a the month's end he decided that the Square head was the champion for whom the worl was waiting. Not once had his crueled blow stopped the Norseman, not once had the giant lost his temper. So the dream that had started with

potato sprang into the form of a weirdl drawn and misspelled contract, in whice Olaf Greig agreed with James Larkin the for the next fifteen years the said Larki should be the manager of the said Grei and share and share alike in all the earning or prizes that should come to the said Gre and, further, that the said Greig bound him self during that time not to engage wit anybody in any fight or athletic conte without the written consent of the sai James Larkin. But when the Shadow in finished reading this composition the Norseman shadok his band of the said Norseman shook his head.

Norseman shook his head.

"But yuh goin' tuh be a champeen!" pretested the Shadow. "Every champeen his gotta have a manager. Champeens don light grudges ner mix wid nobody 'cept i de ring an' fer coin. Yuh t'ink I'm goit tuh teach yuh an' train yuh, an' den hav yuh give me de rinky-dink? Nix!"

"It is naw dat, Yimmy. Ay promise A no run avay," answered Olaf. "But vope Ay fight vit von faller, und you—Nobody can say me nutting!"

Ay fight vit von rauer, u Nobody can say me nutting!

The Squarehead's eyes blazed like live coals as the last words burst from him; and if only the Shadow could have looked into his brain at that moment he would not have

his brain at that moment he would not have pleaded for hours to turn his decision. At last he gave in and interpolated in the final clause of the contract: "except one fight."

"A couple o' years, Dutch, an' we'll be on Easy Street—on de sunny side!" he exclaimed as he watched Olaf affix his scrawl to the agreement. The Shadow was jubilant. "De kink o' Norway'll have nuttin' on yous! All yuh gotta do's cut booze an' women, an' de woild's yours!" Then, patting himself on the chest, he added: "An' here's one ex-champ dat's goin' tuh come here's one ex-champ dat's goin' tuh come back wid bells on!"

The Norseman for a moment studied him

incredulously.
"So mooch money ve make—so mooch as Ay can make bay de gold mines?" he asked.

The Shadow doubled with laughter, and at the sound of it many an eye went forward to where he and Olaf sat together on the

to where he and Olai sat together on the forecastle head. It was the first time Larkin had been heard to laugh since coming aboard the Kariuk.

"As much as yuh cud make in de gold mines!" he chuckled. "Dere's a mint!" He slapped the back of one of Olai's big hands. "An' dere's anudder!" And he also need its mate. hands. "An' de slapped its mate.

Olaf looked away at the sea and pondered

this for some time.

"You bane champeen vonce, Yimmy,"
said he, turning round again. "Vay you
come here? Huh?"

The jubilant light went out of the Shadow's face; his square, pugnacious jaw set, and his small black eyes became pinpoints as he met the Norseman's gaze.

"If I wasn't here, Dutch, dey'd have me in jail back dere—see?" he answered eva-

in jail back dere—see?" be answered eva-sively. "Dey's a indictment 'gainst me in Frisce fer votin' four times too many last 'lection day. But yuh don't unnerstan' dese t'ings. Yous is a furriner. But I'll fix dat indictment up wid de foist poise yuh

The Shadow was right. Olaf did not understand any of this, except that his ques-tion had not been answered, and stolidly he

repeated it.
"Vay, Ay ast, Yimmy—vay air you no
more day champeen praze fighter?" was
the way he put it; and the Shadow's wit

failed him.

"John Barleycorn!" he snapped in answer. "Booze, Dutch, an'—an' a—an' a woman. . . . Come on an' take yuh lesson!"

And that evening the Squarehead felt a new sting in the Shadow's gloves, the box-ing gloves they had improvised from pieces of canvas and stuffings of oakum. They cut like knives, bruised like slungshots; and the master was savage, merciless. Yet his pupil made no complaint, though he wondered much at Yimmy's mood.

That night, as they turned in at the end of the second dogwatch, the Shadow, who was already in his bunk, suddenly drew a

was arready in his bunk, suddenly drew a battered heart-shaped locket of silver from under his pillow.

"Dere she is, Dutch—de goil what trun me down," said he, holding out the locket toward where Olaf stood unbuttoning his coat. "I'd be champeen tuh-day ef she'd stuck. She was me wife—oncet."

coat. "I'd be champeen tuh-day et sne d stuck. She was me wife—oncet."

The Squarehead crossed the forecastle to the guttering lamp which dimly lit the hole. As he raised the heart to the light it fell open loosely on a worn hinge, and he found himself looking into the face of Olga, Bull Wilson's wife; and thereupon he understood much. Silently he handed the heart back to its owner. heart back to its owner.

"A feller what I was good tuh w'en he was down an' out—he stole her, Dutch!" whispered the Shadow.
"'Vay you naw have killed dat faller, Yimmy?" asked Olaf with solemn mien;

but he was a seething furnace inwardly.
"I'll have tuh do it some day! I'll have

The rest was smothered in his pillow; and, all atremble, the Squarehead climbed into the bunk over Jimmy Larkin's, but not to sleep.

The Karluk fished her way into the Arctic by way of the Kamchatkan coast. By June she was up with Wrangel Island. Thence she went off to the eastward and the world heard of her no more until one September day the lookout on the rocky brow of Point Barrow sighted two specks far off to the northward in the ice-packed sea.

The revenue cutter Bear, taking aboard the last home mail in the harbor below,

way of resistance? Norking. Absolutely nothing! She would be helpless—helpless as a little child. Get her the "human arsenal"—the new Savage Automatic. We call it a pistol, but, in reality, it should be called a "human protector"—a human protector in the

condensed form of pocket arm. It converts your home from a helpless, defenseless egg-shell of a place into an arsenal. It converts your wife, mother or sister into a human arsenal. It actually makes a woman able to put up a crack shot's defense. For any novice can aim it as expertly as any crack shot. Show her how she can shoot once for

Shoots ten shots—double the number of an ordinary revolver, two more than other automatics. The only automatic that guards her against the old excuse, "didn't know it was loaded." Made in .32 and .380 calibre.

Makers of famous Yellow Strand wire rope

forthwith smashed out through the floes and a couple of hours later came up to the specks-two boatloads of all that remained of the whaler Karluk's company. A week they had been fighting their way toward the land from where the bergs had nipped their ship.

In the stern sheets of the first boat sat the Karluk's captain, in command and alone. In the stern sheets of the second sat a giant Norseman in command, but not alone. Cuddled up against his side, where the Norseman had tried to keep him warm and where death had turned him to ice, was

and where death had turned him to ice, was all that was mortal of the once great Jimmy Larkin, surnamed by men the Shadow.

A fortnight afterward the Bear went south through Bering Strait, carrying Olaf Greig, a person distinguished among all her company simply because he had been a friend and the pupil of the Shadow. Such is fame! Dead though Jimmy Larkin was, yet he lived again, as the cutter's crew saw it in this Normann, when they heard the yet he lived again, as the cutter's crew saw it, in this Norseman, when they heard the Karluk's survivors tell how the Shadow had proclaimed him the White Hope. They gave him of the best of their bedding and food; they gave him shore clothes and money. A king could have commanded no more service.

But silently the Squarehead accepted all but sliently the Squarehead accepted all that was thrust on him, and this silence was construed as a proof of the greatness to which he was considered heir. Such is the fetish of hero worship. Yet never for a moment did Olaf Greig's mind open to one thing extra-neous to the vengeance he had vowed and renewed again when Jimmy Larkin's fare-well breath, calling "Olga! Olga!" froze against his ear. against his ear

He and Bull Wilson were alone once more in the red world he had entered on that September day, two years before. Still, often as he counted the Bear's screw throbs, every one of which carried him closer and closer to his goal, he felt that he was not alone. Sometimes he even imagined he could hear a voice whispering: "He stole her from me, Dutch; an' I was good tuh him w'en he was down an' out!" And, with this whisper, always a battered silver heart would fill his vision, the heart with which the Shadow, his friend, slept in Point Barrow's icy flank.

It was on a Sunday morning, a new October day, sparkling with sunshine and blue of heaven, that the Bear went through the Golden Gate. It was a day to make the soul soar. The tang of new and heady wine was in its air. Down from the city on the hills the sound of many worshiping bells floated to the sea. Now and again the laughing and calling of children at play came off from the waterfront streets.

Aboard the Bear the men whom she had

saved from death saw and heard and were thankful, and thought deeply of the life that lay ahead of them. All save one cast their thoughts in this wise; but his life's course ran only so far as the door of the Bow-head, a sailors' boarding house in Drumm Street. That door was the portal of the end.

An hour after the Bear anchored in the

An hour after the Bear anchored in the stream one of her boats was landing the Squarchead and the rest of the Karluk's survivors at the wharf float where, with only kindness and dreams in his heart, he had first come ashore. Greig, with cunning, eluded his companions. One moment he was among them; the next they stood in bewilderment, wondering whither he could have disappeared. And while they looked round and made inquiries the Norseman was holding toward the Bowhead. As straight as a bullet he went, ignorant though he was of the streets. he was of the streets.

Had he been blind he could have found his way. A thousand, a million thousand times he had traveled it!

And suddenly the Squarehead halted. Across the street was the Bowhead, and in a chair to the right of the swinging bar door sat Bull Wilson. There he was in his shirtsleeves, basking in the sunlight. A boy flying a kite ran along the sidewalk, obscuring him for a second. As the youngster passed on, Olaf Greig started on a run toward his enemy; but as he reached the opposite curb in front of his prey he stopped as though he had butted into a brick wall.

The chair in which Bull Wilson was sit-ting had wheels under it, and his legs were wrapped in a rug. His hair was long and gray; the florid countenance of old was now a pasty, sickly white. The diamond stud was missing from his blue-striped shirt front. The silk tile was roughed and its black nearly green.

iront. The aik tile was roughed and its black nearly green.

"Hello, sailor!" hailed the crimp, with an effort at his old stage heartiness. "If yuh lookin' fer a good boardin' house de Bowhead's de place tuh bring yuh dunnage." He did not recognize Olaf; but if he had it would not have mattered. From his point of view, and everything is in the his point of view—and everything is in the point of view—he had not wronged this

point of view—and everything is in the point of view—he had not wronged this man. In the true crimp's scheme of things it is foreordained that sailors are born to be bought and sold; and that is all there is to it. "Come ahead, sailor," Bull went on, "an' I'll blow yuh th' drinks—only yih gotta wheel me inside."

While he had been talking the Square-head had been slowly, almost imperceptibly, drawing closer and closer to his enemy. Now he stood over him. He had but to open one of his clenched hands and close it again on the scrawny, dewlapped throst, and this thing in the chair would speak no more; and one of the big hands started up and opened—only to fall back inert. This man was broken, helpless. The Norseman could not touch him.

"Have anythin' yuh want, sailor," Wilson was saying. "Whisky, wine, beer. But push me gently through th' door—th' threshold's high. Gotta have it cut down. Doctors say I'll never get outer dis chair. Hall said in the side in the late in the late in the late in the late is in the late in the la

high. Gotta have it cut down. Doctors say I'll never get outer dis chair. Hell, ain't it'

Fell from a ship's side intuh a boat six months ago — both me legs paralyzed." The earth was slipping from under Old. He could not touch this man, and yet be could not leave him. His throat was clos-

ing, his gaze darting round seeking a means of escape. His impulse was to run, but he could not. Instinct called to action.

At this moment his roving eyes went over the Bowhead's swinging door, and at the end of the bar he saw Olga kissing the runner who had brought him from the Palerava. Crocky's a reme were round by Palgrave. Crocky's arms were round her.
"Ain't yuh goin' tuh roll me in, sailor?"

pleaded Bull.

"Jes," answered Olaf, but quite as unconscious that he answered the crimp as he was of taking hold of the wheel chair and pushing it through the doorway. As he sent t spinning across the bar floor a screech of helpless rage from Wilson broke Olga's lips from the man to whom she was rendering

Laughing loudly, like one in drink, Old Greig staggered out into the street. An eddy of a passing Salvation Army procession drew him into its wake, and he marched with it willynilly until a cornet player called him a drunken beast and pushed him aside.

And here the eddy of another procession, a benevolent society of some kind recrie-

a benevolent society of some kind, picnic-bound and marching like an army with banners, snatched him up and carried him along to the gates of a ferry, where he was hurled back because he had no ticket. Somebody seized him and pushed him inside

a railing, before an open window.
"Where to?" snapped the ticket seler

Olaf looked in at him dumbly, as one in a

trance.
"Where to?" repeated the "Where to?" repeated the "Where to? Where to?" repeated the ticket seller; and thereat the Squarehead plunged his hands into his pockets and brought forth a fistful of money—the money the Bear's sailors had contributed to Jimmy Larkin's White Hope. Among the coins was a discolored and tattered piece of paper. The man in the window snatched it and opened it. It was Hildigunn Svensen's letter.

"Coffee Creek, Trinity County, eh?" read the agent.
"Jes!" said Olaf eagerly.

"Well, why didn't you say so in the first place? Here! Hurry! Shake a leg! That's your train boat!"

A kindly policeman standing by caught the Squarehead by an arm and rushed him through the closing gates. A moment later the ticket seller was saying to the cop:

### MEN WHO LIVE ON NOTHING

"In that house," he replied; "and he went to school right in Plaster Rock. The went to school right in Plaster Rock. The truth is Rupert got his money too young. You see, his pa and ma both died when he was fifteen, and Rupert got his share of the mill profits from that time on. Kinder turned his head. Money's a bad thing for a boy—and Rupert has always had his five hundred a year. That's what give him the idee of goin' to college. That finished him for good!" for good!"
"Oh, come!" I protested. "There's no

use in talking about him like that. He's all

Rupert's uncle shook his head. Evi-dently he felt the lack of conviction in my

"I suspect Rupert's kind of petered out!" answered meditatively. "Still, you he answered meditatively. "Still, you know him better'n I do, I guess. Anyhow he went to Harvard, and when he came back he was no good, to my way of thinking. He hung round a while summers, but ing. He hung round a while summers, but he wasn't any use in the business, and he talked of nothing but books and the folks he knew; and so I told him he'd better try his luck where his talents would be more appreciated." He gave a dry laugh and looked at us quizzically.

"He's very much liked in New York," said Clare with a show of warmth. After all Rupert was her friend!

all, Rupert was her friend!
"Oh, I ain't got nuthin' agin Rupert!"
he repeated. "I guess it's in the blood
somewheres—this wanderin' streak. His mother's people was sort of unreliablelike. She was a De Grégoire from up the coast. They came over from France 'way back-God knows when! My wife was a MacMurtrie from Aberdeen. Most of the folks along the river are Scotch, with a few French. Rupert's more like a feller out of a book than the rest of us."

My wife looked at me quickly. That was it—Rupert was like a fellow out of a book. And yet what a riverman he would have made in a red shirt and bottes saurages! Strange are the usages of inheritance. Some infinitesimal admixture of Covenanter, and Rupert would have been a lumberjack; while a drop or two of the atavic De Grégoire strain made him, in fact, a modern chevalier loitering away his existence amid the fair women and luxuries of the metropolis—just as his ancestors had perhaps done under the old régime.

"Anyhow, I send him his share of the profits—two hundred and fifty dollars regular every six months to some club in New York; and I never git a word from him," finished Uncle Vallon. "But give him my regards when you see him. Yes; it's going to be clear weather tomorrow. Good-night!"

He turned and sauntered away through the lumberyard, leaving the sweet, harsh

odor of his pipe hanging on the chill air.
"Well!" I chuckled, gazing at my wife
sidewise. "How about Mr. Rupert Vallon

"Well!" she answered. "Didn't I tell you I'd solve the mystery? I have!"

We strolled back along the bank toward our campfire in the growing dusk of the early autumn evening, our minds full of strange thoughts.
"Whoever would have imagined ----"

began.

"But that's what makes it so interesting!" she interrupted eagerly. "Don't you see!—Rupert's nothing but a nobleman in fisguise. Can you reconcile the idea of one in whose veins flow the united streams of the blood of the Vallons and the De Grégoires spending his life working in a lumber mill? He could have conquered the wilderness—vee fought with Indians and wild ness-yes, fought with Indians and wild inimals, struggled against disease and lamine; but once the frontier had been teaten back, and the craving for adventure tould no longer be satisfied, then the love if ease and luxury, of gayety and amusement, became uppermost in his nature. "To hear that old man talk took me back

to the voyages of Champlain and De Guast. No doubt some of Rupert's ancestors sailed with them from France and helped swell the company of nobles, priests and idventurers who sought their future in the new world!"

"How romantic!" I retorted cruelly.
From what I have read they were more ikely a rare bunch of gamblers, cutthroats, isreputable young blades of the court of Henry IV and thieves fleeing from the gal-sys. In which class do you tuck Rupert?"

"Poor old Rupert!" she sighed. "And his uncle thinks that he's been ruined by five hundred a year!"

We were late in getting back that winter, and Thanksgiving was over before we moved in from our Long Island country place. Vallon usually kept the feast with us, but we heard nothing from him and assumed that he was away hunting or duck shooting. Even after our town house had been opened Rupert did not put in an appearance.

Inquiry at the Stuyvesant Club elicited no information; and old Peter, the door-man, assured us that Mr. Vallon had been seen there only a few days in October and had then gone off somewhere; that his mail had been accumulating ever since, and that he had left no instructions about having it forwarded. Peter was plausible and convincing. So Clare had to look round for other gentlemen to balance her single ladies, and even the despised Wiggin was requisitioned in Vallon's place on more than one occasion.

Gray November had stretched into a raw and blustering December when one eve-ning after dinner our butler came to the drawing room and announced a person to see me at the front door. The visitor had given no name, he said, but had stated that I would know him. A furious storm of sleet was drifting through the side streets, and the wind was shricking and rattling at the French windows.
"Goodness!" I exclaimed to Clare.

"Whoever it is must want to see me pretty badly! Even a beggar deserves something for coming out on a night like this."

So, cigar in mouth, I descended to the front hall. There, standing snow covered by the fireplace, holding a carriage umbrella nearly as big as himself, stood a little shriveled figure that I recognized with difficulty as Peter. difficulty as Peter.

"Bless my soul, Peter! What are you doing out in this storm?" I cried in amazement. "Won't you have a glass of something hot?"
"No; thank you, sir," replied the old servant, who had stood at the door of the

servant, who had stood at the door of the Stuyvesant Club ever since I was a boy, "I beg your pardon for disturbing you; but it's about Mr. Vallon—I think he's dying."
"Dying!" I felt a sudden remorse in which was mingled a certain incredulity.

One could not imagine Rupert as dying. "But I thought he had gone away!" I added in feeble protest.

Peter glanced significantly at my butler, who was lingering within earshot. "You may go, Merton!" said I, and he

"That's what Mr. Rupert told me to say, sir," answered Peter miserably. "You see, him and me's been such good friends, sir that is, as much as a servant can be to a gentleman. You didn't suspect he was poor, did you, sir? And he was too proud to let anybody know. Sometimes he hardly had enough to eat. And he wouldn't tell anybody where he lived. I was the only one who knew—just one little room in a furnished-room house, at four dollars a week. Why, I pay six for mine, sir! But he's a fine gentleman!

"Do you mind that three days of the state of did you, sir? And he was too proud to

"Do you mind that three days' storm we had? Mr. Rupert didn't have a proper coat. He spent all his money on tips in Newport. I offered him one of Mr. Grosvenor's, who's gone to California and left it in the coatroom; but he wouldn't take it—not him! So he caught a shockin' cold, sir. I went over to see him and fetched him a doctor. 'Don't tell anybody I'm sick, Peter!' he says. 'Tell 'em I'm gone away.' So I did as he bid me.

"Then he got worse and the cold moved down into his lungs. All his food had to be brought in from outside-from a cheap restaurant. The doctor said he must go to a hospital—a free one; but Mr. Rupert refused to go on any account. I think he was afraid people might find out if he went there. That was ten days ago. And his room was terrible cold, sir—only a wretched gas stove, sir; and it leaked at that. Two days ago he developed pneumonia. And

now he's dying!"

He wrung his wrinkled old hands, the tears trickling over his furrowed cheeks.

I rang the bell for Merton and directed

him to order a taxi in a hurry. Then I dashed up the stairs three at a time and

SECOND YEAR

## TIRE MILEAGE CONTEST

FOR EMPLOYED CHAUFFEURS

# \$5,000 IN PRIZES

SO great was the success of the first Ajax tire mileage contest, recently concluded, that we are moved to repeat it, and to offer again 208 cash prizes totaling \$5,000. Winners of the first thirty capital prizes in this initial contest averaged 10,323 miles, and the 208 prize-winning contestants averaged 6,906 miles. The higher in-built worth of "Ajax guaranteed in writing 5,000 miles" tires is thus demonstrated, and a full confidence is inspired.

### How to Enter the Contest

It costs nothing to enter the Ajax Tire Mileage Contest. The simple requirements are that your car be equipped with an Ajax tire, and a separate entry blank, signed by your employer, for each individual Ajax tire be filled out. Entry blanks and final report blanks are to be had of our branches and Ajax dealers, or are mailed on request. Enter NOW and take advantage of the full time allotted to the contest. The contest is open to employed chauffeurs, and prizes will be awarded to those who realize highest mileage by the contest's close, March 31st, 1915. In case of ties, a prize identical with that tied for will be given each tying contestant.

### To the Chauffeur

Ajax tires are guaranteed in writing for 5,000 miles. This should be the minimum mileage, providing you give your tires the same care and attention you give to the car. Guard against under inflation. Give immediate and prompt attention to small cuts and Avoid running in car tracks. Use the throttle more and the brakes less, and conserve the mileage of tires.

### To the Car Owner

The great proportion of tires which have short life come to their untimely end through lack of proper care. We are prompted to repeat our tire mileage contest, with \$5,000 in prizes, because of the success met in the first contest, recently closed. Our own compensa-tion comes in the satisfaction which every Ajax tire will give, and in the continued patronage of satisfied owners.

"While others are claiming Quality we are guaranteeing it."

### We will pay cash to school teachers

IN June school closes. Ahead are from two to three months the teacher can employ just as he or she chooses. If your profession is teaching and if you choose to do so, you can earn over One Hundred Dollars a month by representing the Curtis publications. About a hundred of our teacher-representatives earned over two hundred dollars a month last summer. We will work with you and advise you. You cannot help making money even if you work but a few hours a week and you can make the total as large as you wish. Write we deter of inquiry. We'll tell you about our plan.

PUBLISHING COMPANY PROLEDING PL.

told Clare to get into her wraps. Rupert dying! Good old Rupert! I might have known he would not have stayed away so

long unless something was wrong.

It was a strange ride—the strangest
Clare had ever had—that one to Rupert's
lodgings; for old Peter sat inside between us pouring out his wretched old soul and apologizing every few moments for presuming to have the feelings of a human being. Clare sobbed quietly all the way.

It seemed hours before the taxi stopped in the widdle of a shabby browstore block.

in the middle of a shabby brownstone block west of Eighth Avenue, and when we arrived there an ambulance was already waiting at the door. We stumbled hurriedly up the three flights to what Peter said was Rupert's room. But others were before us and they were carrying something

out—a man on a stretcher.

My heart failed me. A brisk, sharp-faced young man had hold of the front handles. He had the front handles of the whole

He had the front handles of the whole situation.

"Are you friends of this man?" be demanded. I nodded. "Time you came!" he snapped. "He's got double pneumonia—bare chance if I get him to the hospital alive; and I'm taking him by main force. Stubborn as a mule, he was! But he's out of his head now and doesn't know. Give us a hand, will you?"

I grasped one pole of the stretcher, and I was shocked to find it feather light. I

I grasped one pole of the stretcher, and I was shocked to find it feather light. I could not see Rupert's face, for the doctor had thrown his coat over the upper half of his body. God knows how we got him down the narrow stairs and down the steps. On the sidewalk I mustered courage to accost that steel trap of a doctor.

"Can't we take him to my house?" I saked. "We've only just found out. He was too proud to let us know. Why, we didn't even have his address!"

"You don't say!" answered the doctor more genially. "Queer case, all right. I never met such a man. Certainly the ambulance can take him there. And bless you!"

you!"

In the sunny hospital room at the top of our establishment Vallon lay for two days and nights struggling for life. Death came out of the closet and beckoned to him, but Rupert's vigorous constitution rallied to his defense and he fought the specter off.

The crisis came and passed. Weak, hol-low cheeked and wan, he lay helplessly in the sunlight while Clare and Myra hovered over him and fed him with beef tea and chicken broth. With two such nurses his convalescence was rapid and in a week he was sitting up by the fire, almost his old self

A strange and contradictory phase of the situation, however, was that while he had been utterly prostrated and confined to the bed be had seemed a different man from the Rupert we had known before. He had been grave, simple, direct—as though his true personality, long submerged in artificiality, had at last floated to the surface. But now that he was up again, in dressing gown and slippers, with his hair neatly parted, all the old mannerisms, the tricks of speech, the chronic smile had returned.

chronic smile had returned.

The man was slowly disappearing and the Pet Cat was coming back! And, delighted as I was that his life had been saved, I wondered—after I had gone downstairs into my library—whether in fact we had done Rupert Vallon a good turn or an ill in not letting him die as he had wished, with—as he supposed—his secret buried in his own breast, leaving behind only the reputation of a gallant gentleman.

of a gallant gentleman.

We had spoiled all that; had cheated him out of his ending; had ruined his little tragedy with an anticlimax.

It was a queer world! I pitied Rupert from the bottom of my heart. For one reason or another he had preferred to watch the game rather than to play in it. He had carried the ladies' wraps and sat on the side lines. Had be been a coward—afraid to take his chance in the rough-and-tumble of life? Or merely a lover of luxury who fancied that there was nothing in existence and yachts, da wine and cigars—who thought "the sovereign'st thing on earth was parmaceti for an inward bruise"? A little of both

He had tried to play safe-to have his cake and eat it too; to make sure of his fun while he had the chance, before he had earned it. But is anything fun unless it is earned?

Poor old Rupert! He had sacrificed everything that makes life really worth living in order to grasp those superficial and

EXTENDED AFOLDED

Acres Folding Canvas Boat Co., Miamisturg, Ohio,

momentary pleasures that are as unsatis-fying and ephemeral as smoke rings!

Rupert had no home except his club, nowhere to lay his head but a bedroom in a furnished-room house; he had no wife to share his pleasures or disappointments, no one to whom he could turn in hours of sadness or regret; no children to love or teach the lessons he had so hardly learned himself, to care for him in his old age or keep

that old age young.

He had no real friends, bound to him by ties of mutual endeavor toward right living; nothing to give an edge to the only life that he would ever lead; no aspirations toward anything higher than a visit to New-port or a trip to Havre-de-Grace after ducks; no dangers or chances save that he might lose a dinner at a millionaire's table, no ambition but to be invited again, and no

zest for the dinner itself.

The love of woman, the warmth of genuine friendship, the fierce thrill of competition and of struggle, the glow of achievement, the exultation of success, the satisfaction in work well done or of doing one's best even when one has failed, even the bitterness of sorrow—he had lost them all!

Did he know? Was he conscious that he had played too safe? Did he see himself as he really was a straw man?

as he really was—a straw man?—a human being with legs and arms and a stomach, but filled with sawdust instead of red blood? A "little brother to the rich" who paid for

life with a debased coinage supplied by others who held the purse-strings? A fool! Rupert continued to improve. His color returned; daily he put on more flesh. Soon he was the identical Rupert we had always known. And he also continued to remain our guest, sitting in the sun in my silk dressing gown and smoking my cigars, fussed over and read to by my wife and Myra.

Once he may have felt the undertone of disapproval in my conversation, for he cracked a feeble joke about soon being with Street & Walker—and being able to get a job. A job? Did he really mean it? Was it possible that his recent experience had given him a new vision of his responsi-bilities, of the meaning of life, of all that he

had lost? But my wife laughed when I repeated

this threat to her.

"Rupert get a job!" she said. "Why, what use would he be to anybody? He can't help being what he is. And why should he? After all, he's a dear, sweet fellow—just as I've always said. I wish there were a lot more men in the world like

there were a lot more men in the world like him!"

"I don't see anything to admire in a Pet Cat," I demurred, "a fellow who doesn't even dare to fall in love for fear he'll have to go to work and support a wife!"

"It takes a great many different sorts of people to make a world," answered Clare. "Perhaps we need a few cheery souls like Rupert who are only fitted for the task of telling you the sun is shining."

"That's a devil of a job for a grown man!" I grunted.

"Do you remember Emerson's Essay on Manners"? she asked. "I was reading it today. Hesays: 'It is easy to see that what is called by distinction society and fashion

is called by distinction society and fashion has good laws as well as bad; has much that is necessary and much that is absurd. Too good for banning, too bad for blessing, it reminds us of a tradition of the pagan mythology in any attempt to settle its character. "I overheard Jove, one day," said Silenus, "talking of destroying the earth. He said it had failed; they were all rogues and vixens, who went from bad to worse as fast as the days succeeded each other. Minerva said she hoped not; they were only ridiculous little creatures, with were only ridiculous little creatures, with this odd circumstance, that they had a blurred or indeterminate aspect, seen far or seen near; if you called them bad they would appear so; if you called them good they would appear so; and there was no one person or action among them which would not puzzle her owl—much more all Olympus—to know whether it was funda-mentally bad or good.""

I took a long pull on my cigar. I did not pretend to be any philosopher. I liked Rupert and I did not deny his attractions, but I did not understand the reason for my wife's defense. So I tried an argumentum

ad hominem.
"Anyhow, you wouldn't want him to marry Myra!" I announced conclusively.

A curious expression came over my wife's face-one that I had never seen there

before.
"He is going to marry Myra!" she said.

# Goodyear Prices What They Buy

At Goodyear prices, this is what you get today in an automobile tire:

The tire which—starting from a tiny factor—won against some scores of rivals the topmost place in Tiredom.

The tire of which more than three million have been put to the test of use. And which this year—after those millions of mileage comparisons—has jumped 55 per cent in sales over last year.

The tire which scores of experts—working in laboratories—have spent years and years in perfecting. They have built thousands of tires in thousands of ways to learn how to better this one. In these ways they have spent \$100,000 yearly to attain the farthest limit in low cost per mile. And all their achievements are embodied today in this Goodyear No-Rim-Cut tire.

You get the tires which once cost users one-fifth more than other standard tires. They retain the same costly features. And today—as then—No-Rim-Cut tires are the only tires which have them.

### Four Exclusive Features

Our No-Rim-Cut feature is found in these tires alone. That completely stopped rim-cutting, the major cause of tire ruin. And it brought you this saving in a feasible, faultless way.

Our "On-Air" cure is employed in no other tire. It adds \$1,500 per day to our tire cost. But it saves our users the countless blow-outs due to wrinkled fabric. We final-cure on air-filled tubes, under actual road conditions.

Our rubber rivets are created in these tires only. Hundreds are formed, during vulcanization, to combat loose treads. Thus we lessen this danger by 60 per cent.

All-Weather treads are exclusive to Goodyears. These are double-thick, tough anti-skids. They are flat so they run like a plain tread, yet they grasp wet roads with deep, sharp, resistless grips.

Note again those four exclusive features. Mark that

they cover the four greatest tire troubles. Together they have made No-Rim-Cut tires the most popular tires in the world. They've saved motorists millions of dollars. And no other tire, whatever its price, offers you one of them—or anything that fairly compares with them. You get them all in No-Rim-Cut tires, and you get them at Goodyear prices.

# Higher Prices How They Come

Now comes a condition where 16 makes are being sold above these Goodyear prices.

Some are nearly one-half higher. Numerous makers charge for three tires as much as four Goodyears cost. Tires which once undersold No-Rim-Cuts now cost you \$4 to \$15 more than these per tire.

It has come about in this way:

In the past few years No-Rim-Cut prices have been cut in two. Last year alone these prices dropped 28 per cent.

Other makers shared our lower cost for rubber. But we made other savings. We built new factories, modernly equipped. We invented and built money-saving machines. We employed efficiency experts.

Our output doubled over and over, until it lately exceeded 10,000 motor tires in a day. Our overhead cost dropped 30 per cent—labor cost 25 per cent. All because of this matchless output.

### Profit Down to 61/2 Per Cent

With multiplied output came the need for less profit. Last year we brought the average down to 6½ per cent.

The result of all is this year's Goodyear prices. They have come down so fast and far of late that most others have ceased to follow. And the paramount question in Tiredom today is this question of extra price.

The self-evident truth is this:

You get in Goodyears the utmost in a tire. Their place and prestige prove that. Their amazing sales, after years of comparison, show what men have proved about them.

You get in Goodyears four great features which no other maker offers. Each adds to our cost but reduces your upkeep. And no extra price can buy one of them.

> As for "quality" in a tire—that can mean only minimum cost per mile. And all our tests show that we have that. Any item of "quality" which means higher cost per mile is something no user wants.

> It is folly to add to your tire cost. Get Goodyear tires at Goodyear prices. Almost any dealer will supply them.

# Public Ownership of Railroads, Waterways and Water Power

Grand Central Terminal Yards of New York Central Lines, New York, in 1903

Present View of Terminal Yards, Looking North From Practically Jame Viewpoint

HE conclusions reached in this paper have been forced on me by the logic of events during the ten years last past, reënforced by practical knowledge ained in regard to the cost of building rail-

oads and to the method used in financing and operating them. My experience in railroad onstruction began with driving a mule team in a grading camp and ended more than a core of years later with the completion of certain railroad construction contracts, ggregating in value several million dollars.

If any one at that time had said that I should come to believe in government ownership frailroads the statement would have seemed preposterous; but my experience as a public ficial during six years of service in the state legislature and four years in the governor's fice caused me to make an exhaustive investigation of the whole transportation question,

nvolving rates, service, operation and apitalization, from a public-service riewpoint; and this investigation has given me an entirely new view of the elation of railroads to government in he nation and the several states.

As a member of the legislature of 903 I saw a big railroad system force he election of a United States senator vho, as a member of the lower house of Congress, had voted with that particuar railroad against a president of hiswn party in the settlement of obligaions involving millions of dollars due he Government for aid in construction. saw this senator fulfill a preëlection greement with another great railroad by recommending to the president of be United States the appointment of its general counsel as a judge of the United States Circuit Court, though the latter was not of his political faith. Fortunately President Roosevelt prevented the consummation of this agreement.

As speaker of the Kansas House of Representatives in 1905, I saw the same influence secure control of a majority of the Senate—a bipartisan majority, called the Senate lodge.

# By Walter Roscoe Stubbs

Crowd that opposed the two-cent fare fought
the introduction of a civil-service law into
state politics; the same roll call in the legisad lature that opposed the law reorganizing the railroad commission opposed the law taking

lature that opposed the law reorganizing the railroad commission opposed the law taking the state charitable institutions out of politics; the same group of men who begged the governor not to push the railroad freight bills importuned him to accept a weak primary law. Whenever the people of Kansas desired to effect a political or economic reform of any kind, whether or not the reform even remotely affected the railroads, the lobby organized by the railroads and directed by their attorneys always led the onslaught against that reform.

The state at that session witnessed a most shameful betrayal of the public trust, and after the legislature adjourned rewards began to follow. A leader of the Senate lodge

moved out of a small law office into the law headquarters of the Standard Oil Company of Kansas. Another member, who came to Topeka impecunious, blossomed out as a capitalist after the session and made a grand tour of Europe and the Orient.

It was not merely anti-railroad legislation

that this Senate lodge fought. The same

Whenever a Federal judge was to be appointed from the West I saw the railroad attorneys of Kansas flock to Washington to line up senators and representatives for their man. The value in cash to the railroads and corporations of a Federal judge for life, who has the corporation viewpoint, is well known. The railroads are in politics for business.

The Wall Street interests that finance the railroads and dominate their political policies have also financed the big business consolidations, combinations and trusts of the country. They are all so interwoven and interlocked that dissolution decrees of the Supreme Court of the United States now seem to help rather than hinder them, as witness the rapid rise in market value of the Standard Oil and Tobacco Trust stocks when the Supreme Court dissolved them.

Washout on the P. C. C. & St. L. Ry., Three Miles East of New Comerstown, Ohio

The Federal Government can never effectively control monopolies until it controls the source of the political influence that makes unlawful combines and trusts possible.

If the political power of the railroads in the several states does not now stand between the people of the United States and a responsive representative national government, it certainly is a menace to our form of government.

The Outlook of July 30, 1910, said editorially: "The railroad question is another form of the fundamental issue between oligarchy and democracy." Every passing year makes the absolute truth of this statement more apparent.

There was a period when it seemed to me that rigid control would be better than public ownership; and, though forced by the logic of events to see that the railroads were governing the country and that the little brigandage of our state capitals was duplicated in national affairs. I still hesitated before believing that government ownership was necessary to remove this evil and dangerous

It seemed that the achievements we had made in railroad building, the advance we had made in many matters of transportation over certain other countries, would warrant giving the old system further trial; but as one goes more deeply into the facts, under the surface of things, he is compelled to question the wisdom, justice and soundness of the policies and principles underlying private ownership of our railroads. Not only is the transportation question involved in this problem, but it is closely allied with many other great questions disturbing the country.

Therefore, having come through the long, slow way of circumstance and events to my present belief, it seems wise to justify that belief with such facts as investigations have disclosed and such arguments as the facts adduce. The fundamental idea of American government is that it should be conducted in such a manner as to benefit the largest possible number of people. It is a self-evident fact, and needs no proof, that anything which tends to carry out this idea is not in conflict with our institutions.

### The Question

GOVERNMENT ownership of railroads means simply vesting the title of our

railroad properties in the Government for the benefit of all the people alike. Private ownership of the great railroads of this country means the vesting of the title in a corporation and holding it in trust for the benefit of the few. Railroads are and always will be an actual public necessity and a natural monopoly. The question I propose to dis-cuss is, whether it is best for the American people to have the title to our railroads held in trust by the Government for the benefit of all the people, or whether it is better to have the title to all this vast property vested in corporations and held in trust for the benefit of private individuals.

In considering the general welfare, comfort and convenience of the people, we find that only the soil on which we live is more important than is the question of efficient, economical transportation service for all persons and property on equal terms and conditions. During the year 1913 the railroad companies of the United States received in revenue \$3,171,000,000. There are in this country approximately twenty million families of five persons each. The average cost of living for these families last year was approximately \$625 each. Railroad transportation cost each of these families an average of \$158.50, or a quarter of its total expense. President Waters, of the Kansas Agricultural College, recently said: "Last year one-fifth of the average cost of living in the United States was due to freight and expressage, or an average of \$125 for each family.

Our highways of transportation, of commerce and distribution are now in the hands of private interests whose selfish welfare is opposed to the common welfare. Under public ownership the Government of the United States, acting for and representing all the people, will condemn and purchase the railroads at their true value and operate them on the basis of equal service, without discrimination between persons, cities and communities,

All the railroads need not be purchased at once. They were not so acquired in Germany and France. It is quite

often assumed that all the railroads of the countryabout 250,000 miles of them-would be taken over at the same time. There is no reason for such an assumption. A dozen of the greatest railroad systems of the country have a valuation of not much more than three billion dollars. Control of these roads by the Government would mean virtual control of the railroad business of the entire country. If the railroad corporations, with their record of reckless financiering and stock juggling, can sell railroad bonds and stocks and provide money to build and equip the railroads of the country, certainly railroad bonds guaranteed by the Government would find a world market if they were not all sold quickly at home.

The Government need not bankrupt itself in borrowing money to buy the railroads. Four-per-cent nontaxable railroad bonds, in denominations of one hundred dollars and multiples thereof, the principal and interest guaranteed by the United States, can be issued under authority of Congress to pay their purchase price.

National ownership and control of the means of transportation, and the exercise of the nation's power over the distribution of its population and products, will accomplish the following results:

First-Furnish an absolutely safe investment, at a reasonable rate of interest, for millions of citizens with small capital. Under private ownership the stock gamblers and speculators monopolize railroad stock and bond markets to such an extent that conservative people cannot afford to risk their small savings, and the general public is therefore largely excluded from participating in

Mr. Huntington, of

View Showing the Present Line Through Bristol, After Straightening Curve

Which Has Been Eliminated

the ownership or control of the second largest and most important industry in the United States.

Second-Coordinate along natural lines a great national system of railways and waterways, and will make transportation the servant and handmaid of commerce. Instead of acting on the principle of charging all the traffic will bear, it will nourish and build up the agricultural, commercial and manufacturing industries of the country.

Third-End forever the war against water transportation that has been fought so effectively and bitterly by the railways. The proper and natural development of water transportation for heavy, slow-moving traffic-such as coal, lumber, iron, steel, and their kindred products, salt, cement, grain, and so on-will reduce the cost of transportation of such commodities to approximately one-third of the present railway rate, as has been thoroughly proved by the development of water transportation on a large scale in the German Empire. Extensive intelligent development of our inland water transportation is impossible so long as it interferes with the profits of privately owned

Of the need of harmony between rail and water transportation President Charles R. Van Hise, of Wisconsin University, has this significant statement in his book, The Conservation of Natural Resources of the United States: "The ideal system of transportation is that in which waterways and railways perfectly cooperate. It is comparatively easy to require such cooperation where the Government owns both systems; but in this country, where the ownership of the railways rests exclusively with private corporations, the securing of cooperation in place of illegitimate competition will be far more difficult, and laws must be enacted that will accomplish this."

Did space permit, quotations to the same general effect could be made from the preliminary report and recommendations of the Inland Waterways Commission, appointed by President Roosevelt and making its report in 1909.

Public ownership will make railway operation comparatively safe for railway workers. There are now every year more than one hundred and fifty thousand persons either killed or injured as a sacrifice to profits under private ownership. It will benefit labor further by the betterment of wages and greater steadiness of employment. It will make service the end and object of all railway operation, management and methods, while under private ownership it is not unusual that everything, including human life, is sacrificed for profit.

It required many years of public agitation, resulting in a national law, to secure the general use of automatic conplings, uniform steps, handholds, and other safety devices in railway equipment to protect the lives and limbs of employees; and every step in this humane program has been fought most bitterly by the financial interests that dominate absolutely railway political activities.

Public ownership will standardize the management of all railways and steamship lines on the basis of the most efficient. best-managed transportation lines of the country, not only eliminating bad and inefficient management, but also reducing overhead charges by consolidating many small railways into one big system under one directing head, thereby effecting enormous savings.

As long ago as 1891, Collis P. Huntington said: "I am satisfied that the best results will not be reached until substantially all the transportation business of this country is done by one company. . . . What is wanted is not more than two or three—one would be better—great carrying companies. . . . With the best talent in the country

to manage and control such an organization many millions could be saved to those who use the railroads of the country and millions to those who own them, over what is now being received by the fragmentary, badly equipped and ineffciently managed roads that, with few exceptions, now exist."

course, thought that one great management would be a private monopoly. We know bet-ter. If any economic principle is settled it is that private monopoly is intolerable; but the principle of unity is correct, and the ope masterful management should be vested in the people.

Public ownership will wipe out of existence preferential rates

on raw materials and manufactured products that now favor certain localities and cities. This favoritism-this inequality of rates and service-results in the longest possible haul for railways. It accelerates the crowding into cities and manufacturing districts of poorly housel ill-fed, ill-clothed workers; and these conditions are producing many of the perplexing evils of our time.

### Sources of Political Power

T INCREASES the cost of food and other living expense I to the wage-earners and lowers prices received by the farmers for their products; and all this is only for the popose of increasing the profits of the railways that arbitrarily fix the discriminating rates. Under government ownership all freight traffic between common points could be tranported over natural routes, using the shortest mileage and the lowest grades. To estimate accurately the saving the could be effected by routing freight in this way is imposble; but it is safe to say that it would be enormous.

Public ownership will tear up by the roots the most dangerous, corrupting and insidiously powerful political influence in the United States. It will remove the political machinery through which elections are influenced or or trolled in the interests of monopolies, trusts, combines, at every species of special privilege. It will take from the net and powerful the greatest source of their political power through which national, state and municipal legislation at Federal judicial appointments are influenced or controlled in the interests of corporations.

The most powerful political machinery in the world would be smashed if the political organizations of the railway were taken away from the brewery and liquor interests Standard Oil, the Steel Trust, the packing house, coalumber, salt, and other combines, trusts and monopoles For the railways furnish the only nation-wide practical political organization available for big business.

The taking over of the railways by the Government means precisely taking them out of politics. Our cities furnish excellent illustrations of the fact that the publicly owned utilities are not in politics, in the ordinary sense, while the privately owned utilities are nearly always most emphatically in politics. It will scarcely be claimed that the water system or the fire department of the average city under public ownership is in politics, though it is notorious that the street railways and the gas companies under private ownership have been exceedingly active politically.

It is almost invariably the rule in our American cities, as it has been in European cities, that when a public utility is taken over by the municipality it is by that very act taken permanently out of politics. According to Professor Ely: "Our terrible corruption in cities dates from the rise of private corporations in control of natural monopolies; and when we abolish them we do away with the chief cause of corruption."

#### Galling Abuse of Sovereign Power

PUBLIC ownership will take away from the railway corporations the most gigantic taxing power in the world, and will place that power in the hands of public officers who can be removed and replaced if power is abused. The railways themselves, finding the practice unprofitable, have recently discountenanced discrimination in rates as to persons, but they still maintain discrimination as to localities. Says Brooks Adams, in his Theory of Social Revolution:

Says Brooks Adams, in his Theory of Social Revolution:
"Now among abuses of sovereign power this is one of
the most galling, for of all taxes the transportation tax is
perhaps the most searching, most insidious and, when
misused, most destructive. The price paid for transportation is not so essential to the public welfare as its equality,

for neither persons nor localities can prosper when the necessaries of life cost them more than they cost their competitors. In towns no home can be built, no crust of bread eaten, no garment worn, which has not paid the transportation tax; and every manufacturing plant or distributing agency in every city of the country must stand still or close down if its competitor's rates are enough lower to exclude its products from the markets.

"Yet this formidable power to build up or destroy cities, communities and industries has been usurped by private individuals, who have used it selfishly, as no legitimate sovgreign could have used it, and by persons who have indignantly denounced as an infringement of their constitutional rights all attempts to

rold them accountable. High among sovereign powers have always ranked the ownership and administration of highvays. And it is evident why this should have been so: Movement is life and the stoppage of movement is death, and the movement of every people flows along its highways." This whole nation is now stirred to its very heart by the need of conservation of its resources. Conscience and intelligence are awake to this necessity. Conservation of human life as well as of national wealth is our pressing obligation in order to give to every man, woman and child in this land at least a fair chance at the things that make life dear.

Have we made even an appreciable start toward that condition when our cities show overcrowding and our country spaces have no considerable portion of the population they might support in happiness?

And can we start, or can we get anywhere when we do start, until we have put into a harmonious working system our means of transportation and distribution?

Mr. Franklin K. Lane, Secretary of the Interior, said in May, 1914: "Whoever owns the railways of a country

determines very largely the future of that country." The German, Bismarck, said, years earlier: "Either the government will own the railroads or the railroads will own the government." In Germany it has passed into a proverb that whoever owns and operates a country's transportation

General View of Main Walting Room, Pennsylvania Station, New York City

to your private railroad companies. I prophesy with certainty that if you do this they will be masters of the government before ten years."

The late Mr. Justice Harlan said: "Great and rapidly increasing corporate wealth is the supreme peril of the United

States." Of the total of one hundred and forty billion dollars of wealth of all kinds in this country, ninety-six billions have been capitalized by the corporations. On this the public is now paying interest and dividends through the use of commodities that are necessities of life, including transportation taxes levied by the railways in the shape of freight and passenger rates. The capitalization of the railways, including stock and bond issues, approximates nineteen billion dollars,

Has the time not arrived when we should heed the warning of Justice Harlan? And where could we so profitably begin as on the most vital of all phases of corporate capital control? The transportation tax collected by the railways during the year ending June 30, 1913, was \$3,171,000,000. The

total revenue receipts of all kinds by the United States Government for the year ending June 30, 1912, was less than one billion. The total revenue receipts of all kinds by all the states, all the counties, and all the towns and cities with a population of more than eight thousand people, were about eleven hundred millions. The national, state, county and municipal governments together collected one billion less than the single transportation tax taken by the railways.

rects, or this, incorpor, new york city

Twentieth Century Limited Drawn by Newest Type of Electric Locomotice

owns the country. This has been in brief the underlying

philosophy of state ownership in Germany.

I have seen in a recent book, Government Ownership of Railroads, by Mr. Anthony Van Wagenen, of Iowa, this remarkable warning and prophecy by the Frenchman, Lamartine, written as long

ago as 1838:

"What will be our condition when, according to your imprudent system, you shall have constituted into a unified interest with industrial and financial corporations the innumerable stockholders of the five or six billions of securities the organization of your railroads will place in the hands of these companies? You, the partisans of the liberty and he enfranchisement of the masses; you, who have overthrown feudalism and its tolls, its rights of the past and its boundaries; you, who are about to allow the railroads to fetter the people and divide up the country among a new feudality, a moneyed aristocracy! Never a government, never a nation, has constituted outside of itself a more oppressive money power, a more menacing and encroaching political power, than you are going to create in delivering up your soil, your administration, and

five or six billions of securities

TWO years ago Cleveland and Powell, in their book on Railroad Finance, said: "Within a century it is probable that the people of the United States had invested no less than twelve billion dollars in the improvement of the country roads and turnpikes; one billion dollars in river and harbor and canal improvements, state and national; and twelve billion dollars in the construction and equipment of tramlines and railroads."

The chief point of interest here is that the people have invested approximately the same amount of money in the common wagon roads that has been invested in the railways; but the railways are privately owned because there is a profit in them, while the wagon roads are publicly owned because there is only expense attached to them. I believe it was Mr. Francis J. Heney, of San Francisco, who said that the idea seemed to prevail that the public officials were intelligent enough and honest enough to run the public utilities, which cost them money, such as universities, schools, wagon roads, city parks, charitable institutions, jails, penitentiaries, sewers, and so on, but were not intelligent enough to run the utilities from which a revenue is derived, such as railways, canals, street railways, and the like,

Railway conditions in the United States and Europe are so entirely different in the average distance freight is

(Continued on Page 28)

# IN ACCOUNT OF A LAD

THEN great men fall out they send for Associated Press reporters and all the world knows about it the next morning; but when the little fellows quarrel the news travels slowly and arrives late, bringing with it unquestionable proof of the large percentage of liars in the average community.

For instance, if Fighting Sammy Dugan had been a champion of the world and Whitey Wilson a challenger for the title, sharp-nosed reporters would have had the

whole truth out of one of them at least; but Dugar, and Wilson were not great men. They were only preliminary boxers of the sort known as pork-and-beaners, and that they should quarrel at all was something of a joke. When reporters are not sufficiently interested to be curious, first explanations stand unchallenged, and because of this the theory of professional jealousy went unquestioned.

The report was correct as to the jealousy, but it was not of the professional variety. It was the real old green-eyed sort, which nothing but the Eternal Triangle has ever been known to produce. There was a lady mixed up in it—as there has been in nearly all the serious trouble since the apple and the snakeand in this particular case it was the brown-eyed one who presided over the cash register at the end of T-bone Riley's lunch counter.

T-hone, so called because he served the best T-bone steaks in the

world for thirty cents-this was before the increased cost of living became a burning issue; probably T-bone's steaks are thinner now-was a philanthropist in his own peculiar way. He fed all the preliminary fighters whether they had any money or not.

"And why shouldn't I?" asked Riley. "Where are these pork-and-beaners going to eat if they don't eat with me? If a fighter don't eat reg'lar he can't fight; and me, I like to see good fights. I'm what you call a patron of the arts, I am; and when these birds ain't got any dough I put 'em on the slate till they get some. They always settle. I haven't lost a nickel on 'em, because they ain't the kind of people that'll skin a friend."

There had always been a great deal of social freedom and personal liberty at Riley's. A man ordered his steak rare, medium or well done-and ate his cocoanut-custard pie with his knife, if such was his custom, and nobody said anything about it. If he had the price, he paid. If he did not have the price, he held up two fingers as he went out and Riley made another entry in the dog-eared memorandum book which he called his slate.

T-bone's place was headquarters for fighters, pool sharks, racetrack touts, tinhorn gamblers and pinfeather clerks with sporting tendencies. Sometimes a rank out-sider dropped in, but not often; for Riley had a way of discouraging the sort of trade he did not want. We will let the Dis-and-Dat Kid, the king of the pork-and-bean brigade, describe an instance:

"I'm in Riley's—see?—chuckin' a feed into meself. In comes a Clarence boy an' sets down beside me. He tipped his mitt de minute he took off his dicer. T-bone himself is behin' de counter because one of de regular waiters is out on a toot. T-bone gives dis Clarence party a setup an' asks him what will he have.

"'Name it, cully!' says T-bone.

"'Who do you t'ink you're talking to?' says Clarence, some peeved. 'Don't be so fresh!'

"Den he orders a steak, medium, hashed brown, an' Java. Right away he begins to holler. He holle

de paper napkins an' he hollers about some egg on his fork.
"'Dat's all right, cully,' says T-bone. 'We don't charge you for dat. We t'row in de egg wit' de steak-see?'

"Pretty soon de bread don't suit Clarence. He wants French bread, an' he wants it split open an' toasted. An' he don't t'ink de butter is on de level. T-bone is good an' sore by dis time.

"'You got de wrong number,' he says. 'De Astor Grill is furder up de street. Dis is Riley's joint."

"'Joint is right!' says Clarence.

-teak comes off de fire an' T-bone slides it larence takes one gash at it wit' his er.

says he. 'It's bleedin'!'

### By Charles E. Van Loan

"'So'll you be in a minute!' says T-bone; an' he grabs dat steak by de tail an' wallops Clarence on de jaw wit' it. Down he goes for de count, an' T-bone comes out from behin' and puts de boots to him proper.

"'Now,' says T-bone, jammin' de dicer on Clarence's head an' turnin' him round so's he could get one more good kick at him, 'don't you never let me ketch you in here no more! Out!!'

"Did he go? Oh, no; I guess not! He on'y jumped over t'ree guys because he couldn't spare de time to go round 'em. De gall of him-pullin' dat highbrow stuff on Riley!"

This was the atmosphere of T-bone's establishment in the old days before prosperity came. Riley did well in spite of his peculiar credit system-or because of it-and opened a bank account when his hip pocket could no longer accommodate his savings. He bought a diamond ringnot even an expert could have told there was anything the matter with the diamond unless he put it under a magnifying glass-and later he allowed a fluent salesman to sell him a cash register.

Riley did not need a cash register any more than he needed a diamond, but he had to spend the money on something. Then, of course, he had to have some one to manipulate the machine; so he hired a brown-eyed girl named Myrtle Schmidt.

Myrtle's presence at the end of the lunch counter shocked and amazed the regular patrons and for a time freedom of speech suffered greatly. The habitues became self-conscious, but gradually this feeling of restraint wore off and they voted Myrtle a "good feller." By this they meant that she laughed at their witticisms, listened sympathetically to their hard-luck stories and was not in the least stuck up or haughty.

Fighting Sammy Dugan and Whitey Wilson were two of T-bone's star boarders. Together they had risen from obscurity, making names for themselves by virtue of the talent that was in them. When Sammy fought, Whitey Sammy assisted with counsel and advice. They were bosom friends and had gone through many lean periods side by side.

Sammy could make the lightweight limit if pressed-Whitey scaled a few notches below him; but the exact poundage of a pork-and-beaner is never an important matter. Professionally speaking, they were very evenly matched, Sammy's slight pull in the weight being offset by a longer reach. Both were rushing, tearing battlers of the slambang school, and the Queensberry followers had long cherished the hope of seeing them matched in a ten-round encounter. The fight promoter had often broached the subject to the boys, always with the same result:

"Nix! Whadda we want to fight for? We're pals!"

Sammy was not at all a bad-looking boy. He had crisp curly hair, snapping dark eyes, a fair nose, a good chin, and he bore few scars of battle. Whitey was less fortunate. His hair was straw-colored; his eyes were a pale, faded blue; his complexion was heavily shot with freckles, and he had a tin ear that stood out from his head like a doorknob.

Sammy might have won his way into the second flight at a beauty contest; Whitey would have been disqualified at

sight. They were the David and Jonathan, the Damon and Pythias, of the pork-and-bean brigade, and their friendship was a sermon on brotherly love.

Then Myrtle came to T-bone Riley's to operate the cash register, and her flying fingers rang up trouble for the young gladiators.
"Oh, gee! A skirt!" said Sammy.

"Oh, gee: Assauth his mouth full of rice pudding. "A for Riley! Well, skirt working for Riley! 'whadda you think of that?"

"I think she's a queen!" said Whitey.

"I wonder if she knows who we are?"said Sammy. "I see her givin' me the once-over a while ago."

"Aw," said Whitey, "maybe she was lookin' at me."

"At you!" scoffed Sammy. "If she was she was wonderin' how a feller could have a face like yours an' keep his health!"

The rivalry began in fun, but the jest was short-lived. In fairness to Myrtle it must be set down here

that she was in no way to blame. She was the sort of girl who smiles easily because of good teeth and a dimple, and she did not realize that danger may attend the practice. She smiled on everybody, for she wished to be on good terms with everybody.

She was amused, though not impressed, when Whites brought her a remarkable document, which he called his record. It was laboriously penwritten, with many inky flourishes; and the knockouts Whitey had administered were heavily underscored in red. Candor compels the statement that no mention was made of the knockouts scored against Whitey, thus bearing out Mark Twain's contention that no man can write an autobiography without becoming a liar of the first magnitude.

"How int'resting!" said Myrtle. "What is it?"
"It's me record," explained Whitey. "It tells who I've fought and all about it. I wrote it out for you. Some day when I'm a champion, you might want to take a look at it."

"Oh, very well," said Myrtle, who had not the slightest idea as to what this amazing screed might be. In the same accommodating spirit she accepted a worn pair of boxing gloves from Sammy.

"I hung it on Battling Watlington with these," said the donor modestly. "They might come in handy to stick up in your room somewhere. Take it from me, this Watlington is one tough guy! He gimme a fierce battle; but in the sixth round I tore into his pantry, an' when he dropped his guard-bang! goes the big right hook on his chin-an' he was through for the night. Sure you can have 'em! Souvenirs, you know. This blue ribbon is to hang 'em up with.'

Myrtle thanked Sammy as prettily as she knew how, but in her heart she regarded the gloves as nasty things and dropped them into a convenient ashcan on the way home. The same ashcan, by the way, received Whitey's record.

Whitey witnessed the presentation of the gloves, and his heart burned under his ribs. Why had he not thought of that? There remained nothing but to belittle Sammy's gift, which he proceeded to do at the first opportunity.

some awful bad fighters round here," Whitey to Myrtle, apropos of nothing.

"Yes?" said Myrtle, seemingly much interested, but really not knowing what else to say.

"Ub-huh! This Battling Watlington, he's a terrible piece of cheese. Awful! Can't fight fast enough to get up a sweat; and they say he takes a shot in the arm once in a while. Sammy was all puffed up when he knocked him out; but if he'd a took my advice Watlington wouldn't have lasted two rounds. 'Tear into him, Sammy!' I says. 'He can't hit hard enough to break a promise. Root into him an' make him quit!"

"If it had been me an' that Watlington had lasted siz rounds I wouldn't have done no bragging—and I wouldn't have saved the gloves, neither. If I'm going to give

anybody a souvenir it's got to be gloves that was in a real ight. Now Kid Cassidy-you saw him in my record, jidn't you?—there was some fighting wolf; but I never did know what become of them gloves." And so on.

Mischief of this sort, once afoot, travels rapidly and inds advance couriers to clear the way. Split-tooth Durcee, retired bantamweight pork-and-beaner and all-night valter at Riley's, assisted matters materially when he epeated to Sammy a portion of the foregoing conversation with embellishments of his own.

"Whitey's doin' you dirt with the chicken at the cash

egister," said Split-tooth.

"How so?" demanded Sammy.

"Now listen! I ain't no trouble maker," said Splitooth virtuously; "and, anyway, you got to promise not o bring me into it. My fighting days are over-see?"

"You're declared out," said Sammy. "Tell me what he

"Well," said Split-tooth, "to begin with, he says you in't never licked no regular fighters like he has. He tells er you was all swole up over knocking out Battling Watington-a feller that couldn't fight himself out of a paper

"Did Whitey say that? What's he knocking me for?" "Oh, that ain't all. He says he made you win all your ghts by bein' in your corner an' tellin' you what to do. le says you'd have quit three or four times if he hadn't een behind you - Wait, now! Don't get excited. temember, I'm out of this. I'm only tellin' you as a friend,

Split-tooth was nothing if not impartial. The next day e had some interesting information for Whitey—as before, sisting on protection. There should be no closed season

or the man who says:

"I'm your friend and I think you ought to know this." "Sammy was pannin' you to Myrtle," said Split-tooth.
"He was!" ejaculated Whitey. "Why, the dawg! Vhat was he doing that for?"

"To put you in bad, o' course. You know what he told er? He said he hadn't never fought you because he was kind-hearted guy and he didn't want to show you up efore the public.

Here Whitey gurgled incoherently.

"Yes; he said you was only a harmless kind of nut that ad kidded yourself into thinkin' you could fight. He told er he could put you out cold in four rounds any day in the cek, and if he didn't do it he'd donate his share of the urse to charity. He said he could lick you and make you ke it-them's the words he used-make you like it! ice! You ain't sore, are you, Whitey? I told you because thought you ought to know what was coming off behind our back. I've always been your friend, ain't I? Well hen, keep me out of it."

THE secretary and matchmaker of the club which pro-I moted boxing contests looked up from his desk to greet Vhitey Wilson on the point of exploding with wrath and appressed emotion.

Aw, Whitey!" said he. "What's new?"

"I want you to get Sammy Dugan for me on the fifsenth of next month. I'm going to lick that fourflusher ntil he yells for the police. I'm going to hand him a triming that will -

"Hello!" said the matchmaker. "Have the Siamese wins had a falling out?"

"Worse than that!" said Whitey bitterly. "He's been oing round making cracks that he could put me out in four ands. Make it any distance you want-four, six or ten; I don't stop him I won't ask for a nickel! Not a nickel!"

"But suppose he doesn't want

to fight you?'

"He'll have to!" squealed Whitey. "He can't get away. I'll fight him in the street—anywhere! You can lock us in a cellar and drop the key down a well! I'll git him -

"Easy! Easy!" said the wise official. "Don't get excited. Never give away anything that you can sell, Whitey. If there's a real grudge fight in sight let us stage it, and we'll all make some money. What started the trouble between you?'

"He's been lying about me!" said Whitey. "He's been tellin' all over town that I only think I can fight -

"And you won't think so long!" a third voice cut into the discussion.

Fighting Sammy Dugan stood in the doorway. After the initial out-

matchmaker, speaking with labored politeness. "Greetings and salutations!" said he. "Sign up this

windbag for me. I'll fight him-winner take all; and if I don't make him jump out of the ring I won't ask for a cent."

"Me-jump out of the ring!" screamed Whitey. "He better look out I don't make him jump out of the ring!"

"Gentlemen! Gentlemen!" said the matchmaker. "Don't start anything here. Shake it up, boys; but don't spill it. Save it for the fifteenth. Now about the purse -

"Any old way suits me," said Sammy.

"Winner take all!" suggested Whitey.

"One hundred dollars-winner take all," said the matchmaker. "Is that satisfactory?"

"I'd fight him for nothing!" said Sammy.
"That's what you'll get!" said Whitey.

"This is the real thing," reflected the matchmaker. "What a pity the reporters aren't here! They could make quite a story out of this."

Later in the day they did make quité a story out of it under headlines proclaiming the sundering of friendship's bonds and the dissolution of a partnership. Professional jealousy was mentioned as the contributing cause, which explanation appealed to the sporting humorists and they made merry with the topic. Whitey was interviewed by a representative of a morning paper—a great honor, which almost overwhelmed him and made him nervous and voluble.

"Say, print this, will you?" said he. "Put it in the paper that I'm going to fight this Dugan just to show him up-see? Just to let the public know he never was any

good! Don't forget that.

"Here's another thing you can put in-better write it down so you won't forget it-I'm going to meet him coming out of his corner and if I ever take a backward step I hope I don't get out of the ring alive. Got that? I'm going to hit him so hard that it will make his grandfather's head ache. I'm going to -

"Yes, yes!" said the reporter soothingly. "I know you are; but what's it all about? What started the row? You

used to be pals, didn't you?"

"Sure!" said Whitey excitedly. "Sure, we did! That's what gets my goat. I've cut up my last dollar with Dugan

The reporter did not forget, and Split-tooth Durkee saw to it that a copy of the paper containing this remarkable interview was handed to Myrtle Schmidt, who read the article with wide eyes.

AND MARKETHER POR

"Mercy sakes!" said she. "They must have had a

quarrel!

as Main Street!

Don't forget that."

"Yeh," grinned the diminutive Durkee; "it does kind of look as if they've parted doll-rags." He stepped closer and lowered his voice insinuatingly. "And I'll bet you don't know what it was about or nothing. Oh, no! P'fessional jealousy! That's a hot one-that is! Say, you could tell these reporters a thing or two—couldn't you, kid?"

"Miss Schmidt to you if you please!" snapped Myrtle. "And I couldn't tell anybody anything, because I don't know anything. What's more, I don't want to know! If anybody mixes me up in a fuss like this they'll be sorry. I attend to my business, and I'll thank you to attend to yours!"

"Just as you say," leered Split-tooth wickedly. "Just as you say, girlie. You don't need to get sore about it. Nobody's trying to mix you up; but it's kind of queer when two old pals bust up like this and -

"The cook is calling you!" interrupted Myrtle. "And you keep away from this end of the counter-do you hear? Bother me once more and I'll speak to Mr. Riley!"

Split-tooth snarled as he moved toward the range. Goin' to holler to T-bone, eh?" he muttered to himself. "She ain't had no use for me since the night I ast her

to go to a movin'-pitcher show. Bawled me out good! I wonder who she thinks she is? Too stuck up for common people—yes, sir! Coming right up! German fried, wasn't it? There you are, sport!"

III

ON THE eve of battle, as the sporting writers so happily phrase it, the Wilson-Dugan match divided interest with the main event—an elimination contest in the White Hope division. All the world loves a grudge fight-sad commentary on our boasted civilization—and for days the reporters had bombarded their readers with articles on the approaching combat between the Siamese Twins of the pork-and-bean brigade—" but strangers now," as one sporting writer put it.

Professional jealousy was still the only explanation offered, and at T-bone's place there was but one topic of conversation. The White Hopes were forgotten-it transpired later that they deserved to be—in the discussion of the relative merits and abilities of Fighting Sammy Dugan and Whitey Wilson.

On the night before the fight there came to Riley's one Ed Faraday, a sporting writer who tossed a nimble quill for an afternoon paper. He was seeking a T-bone, rare, French fried potatoes, apple pie and coffee. The hour was late, patrons were infrequent, and Split-tooth Durkee, having delivered Faraday's order to Saginaw, the night cook, lingered to gossip.

# THE FLOATING LABORER

### Some Humble Biographies-By Will Irwin

ORMERLY we looked on the tramp with a sense of romance or of shame, according to our individual dispositions. The man who begged for a breakfast at the door of a farmhouse; the travel-stained individual we met trudging along the country roads; the soldier of misfortune we glimpsed swinging on or off a brake beam at the station, was the picturesque outcast.

The laborer digging trenches in our city streets, pitching hay on our farms and rolling logs in our sawmills was, on the other hand, the noble American workman, for whose greater prosperity the Republican party maintained the protective tariff and the Democratic party wanted to revise the coinage. We did not know that the two classes were loosely interchangeable—that the tramp of today is the common laborer of tomorrow, and the common laborer of today the tramp of tomorrow. Such observers of picturesque fact as Walter A. Wyckoff and Josiah Flynt hinted at the truth; but the whole truth is just beginning to dawn.

Those same tramps of the dusty roads—they understand. However, they had no power to force their understanding on the rest of us. In the nature of things they were inarticulate. They had no union to enforce their just or unjust demands. They had no organizers to put their case before our parliaments and our press.

Now and then, when hard times came, when the shoe of industry pinched too tight, they rose in such picturesque and futile movements as Coxey's Army, and attracted for a time the attention of a somewhat puzzled people. Then the return of prosperity, in which they never fully shared, would put such movements to sleep. The members of the army would drop back into the old routine of hard work varied by hard tramping and only too often by hard

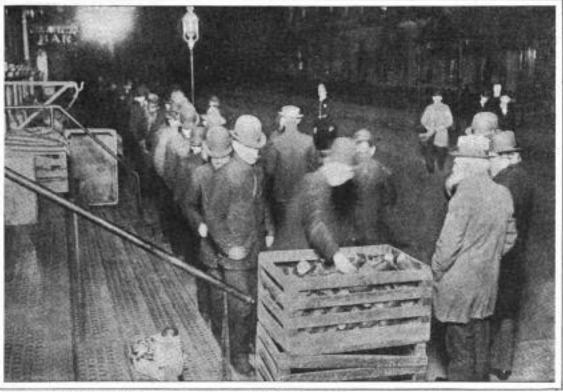

In a previous article I tried to sketch the history of one John Smith, a typical American laborer of this floating type. I have shown him beginning life as an average man, with the average amount of will power and ambition. I have shown how a life of short, broken spasms of unemployment broke his will power and made his ambition a mockery. I have shown him caught in a web of circumstance-drifting from one short job to another short job, with intervals of tramping, of living on organized charity, and of begging.

I have shown just where drink came into the scheme of his life; how this curse of the workingman was in his case an effect and not a cause. I have shown how life denied him marriage and children; I have shown him burned out in his middle thirties-half his actual working days so far, all his potential working days in the future, lost to industry. I have tried to show, also, that this same John Smith was not a defective, as the outworn sociology of twenty years ago would have called him, but a normal man in physique, in mentality and in will power.

### An Army of John Smiths

TT REMAINS for me to prove that John Smith's case is I not exceptional, but typical; and the proof, so far as it goes, comes mainly from the notes on American society by one Peter Alexander Speek, investigator for the Commission on Industrial Relations. This new government department was born of the agitation that followed the McNamara case and other like revolutionary movements in labor. It was begotten of a dim feeling in our legislators that there was some factor in American labor which no one understood. It started out to find what labor really wanted and needed - which of its demands, under the present organization of society, were just, and what society might do to relieve the pressure. It aimed to study the psychological factors in its problem-to put heart as well as head into

The members of the commission realize that these floating members of the industrial body most need their study and their help. For a year Speek has been living among

The Head of the Bread Line

laborers, noting the conditions under which they work and getting from them, as accurately as he can, the story of their individual lives.

He brings to this task a singular equipment. Speek is a Russian-to be exact, an Esthonian. A university graduate, he started a newspaper in his home city, took the liberal side in the abortive revolution of 1905, and left Russia, when the reactionary party snuffed out the revolution, with a life sentence to Siberia hanging over his head. In his early American wanderings he himself was a partner in human misery. His wanderings led him into Wisconsin. By this time he had found he could make a living by writing for the Russian magazines. He attended the University of Wisconsin, took a degree in sociology; and from the university he proceeded to this task of finding out for America what is wrong with her labor.

Speek has the art of gaining confidences; further, being a Russian, he uses five or six languages. In the course of his investigation he has gathered hundreds of life stories from American laborers. In substance they do not differ from the story of John Smith. This one factor is common to them all—among the laborers whom he has interviewed, in grading camps, employment offices, workingmen's lodging houses, and similar institutions, he has found scarcely one who ever held a steady job for a period of even two or three years. The tale is always the same-spurts of work lasting from three days to three months; the search for a job; more hunting, ending often in a period of half

The hundred or more biographies in Speek's collection should be read as a whole in order to get a picture of the casual American laborer. Their effect is cumulative. However, let us look at a few of the more typical histories.

Take the case of James Ryan—in this and all future instances I shall disguise the name-thirty-five years old, a native Irish-American from New England. His father had been alternately a sailor and a farmer. He himself began life as a sailor on the Great Lakes. The work was irregular. Of course there was little employment in winter and none whatever in midwinter. Being a union man he joined the seamen's strike on the Great Lakes. After living for many weeks on strike benefits he gave up sailoring as too irregular, and tried to get a land job at any kind of common labor. His biography proceeds as follows:

He found a job in a Chicago restaurant as a porter. He worked twelve hours a day for seven days a week at seven dollars a week, with meals, paying for his room. He worked on that job three months; quit because he found a better job with a telephone company. He was employed as a common laborer, putting wire pipes into the street. It was a non-union job. He worked nine hours a day for thirty-five cents an hour. . . . In six months the job was finished. The money he earned was paid to his sister. Three weeks out of work; his sister kept him. He was always watching for jobs in the Want Ads. He then found through a newspaper advertisement a hodcarrying jobeight hours a day, forty cents an hour. This was a union job.

Though he was not a union man, still the foreman took him, saying that the job was only for six webs and that a union delegate would come next day to collect three da-lars for a union card. The union

delegate never came.

After six days' work the for-man kept back from the pay of every non-union man one dolar and fifty cents, promising to my it to the union delegate; but at the beginning of the next week Ryan was unexpectedly dis-charged because a union man had taken his job. He thinks the foreman kept the money. Such a trick is often played by foremen. This happened in February. He was two weeks out of work. The next job he found with the Edison Electric Company, passing coul for the firemen. He worked ten hours a day seven days a week for fourteen dollars a week. The work was dirty, heavy and dusty He worked at this job two months; then the veins of his let became swollen and one ver broke. He was seven weeks in the city hospital. When he left the hospital he was still week and could not work for two months, and lived with his sister.

The next job he found through

an employment office. It was a odd job, cleaning floors, beating carpets, washing windows. and so on. He worked continuously two weeks; then the job played out. He was five weeks out of work. Every morning he was at the newspaper offices, watching the Help Wanted advertisements in the windows. When he saw a job advertised he either ran or took a car to the place. Very often a crowd was waiting. The stronger net pushed the weaker aside. He finally secured a job through an employers' employment office to pass coal in a big dry goods store at fourteen dollars a week for nine hours a dry. He worked at this job for seven weeks. He quit because of cramps in his feet. The next job he secured through a be-employment office—it lasted two and a half days—diging a basement for a contractor. a basement for a contractor.

And so on, down the line. Ryan, though he has contracted the drink habit and has occasional sprees when to is in funds, is still able to hold a steady job—if he could get it.

### The Hardships of Loafing

MARTIN CASEY is another, a little older, but of the same class. He did some sailoring in his youth, and might even now be an ironworker had it not been for an injury by received early in his service with that trade. He instituted suit for damages, which closed his connection with the conpany. He has never received any damages. Then he drifted into casual labor. Here is a passage from his biography

In September, 1910, he saw an advertisement is the paper for men in the woods. He got a job there clearst away logs for a road—nine hours a day at thirty dollars away logs for a road—nine hours a day at thirty dollars month. Meals were good . . . but the bedding ubad. No laundry or bathing accommodations. After the months and a half the job played out. He then went to farm to pick potatoes. . . He earned three dollars and fifty cents a day for a month, when the work was possible. He then jumped a freight train to a town in less than the potation of the potation of the potation. After four months the polayed out. He jumped a freight train to Milwalle. Here he got a job as helper with a construction compat-He did not like the job. The foreman was always species up and using profamity to his men. After two months quit. He got all sorts of jobs from the State Free Empley

Notice this: Several weeks of short-time jobs, lasting few weeks or at most a few months, and Casey quit the first really steady job he had had for some time. When it held a regular position in the iron trade he was probably capable of steady work for life; but desultory work with workless periods, had become a habit he could not break Casey, one would say, is on the downgrade. It is not in fault; but the fact remains.

Here is another man, slightly younger, who may or no not be far down the grade. His reasons for quitting it after job may be sound; perhaps he has had only an estractdinary run of bad luck. Heaven knows that condices in some construction and grading camps are bad court It may be, on the other hand, that he has reached the star where here is incapable of continuous employment and that his successaive quarrels with the conditions in the camps are but an excuse:

A year ago he was replacing rails on a railroad. He found the job himself. He worked nine hours a day at seventeen and a half cents an hour. The boss worked them overtime and also on Sundays. The company furnished camp and board for four dollars a week. The commissary store belonged to the same company. The prices were almost three times as high as in the city and the men had to buy from the company's store. He slept in a box car. Bedding was poor; no washing, laundry or toilet accommedations. The board was poor—frozen potatoes, cheap, half-spoiled neat, and canned stuffs. . . . After four months of work the foreman put the young immigrant men to work in the switches. They did not know how to handle heavy sieces; so the work became dangerous to life and limb. An accident happened. He quit and went to Chicago. There he was unemployed for a month. . . . During his time he looked for work, asking for it personally, watching newspaper advertisements, applying at employnent offices.

Finally he found ice work in a city near Chicago. He worked ten hours a day for one dollar and seventy-five ents a day, and paid four dollars and fifty cents for board and bed. The job lasted only eighteen days. He went tack to Chicago. After a week he was shipped to a railroad construction camp forty miles away—ten hours a day, one iollar and seventy-five cents a day, three dollars and fifty ents a week for board. Living conditions the same as in he camp on the other railroad. He quit at the end of a recek because of the board and because he thought the boss was speeding-up the men—he wanted more work than the say was worth. He beat his way to Minneapolis and got, hrough an employment agency, a job laying steel rails on new track. . . . After two months he injured a toe. It as ked for medical aid, but was refused; therefore he uit. After two weeks he was shipped out on another ailroad-construction job. . . . The men were forced o work late at night without lights. They demanded ghts and twenty cents an hour for night work; but the omp any refused and they struck. He rested two weeks in dinn eapolis. Then he worked two weeks at two dollars nd fifty cents a day, breaking old cement. He was disharged for reporting late one morning.

#### When Unemployed Spells Unemployable

WE COME finally to the habitual drifter, typically with the drink habit, who has been at desultory labor so long hat he finds himself incapable of sustained work. Here is short passage from the working life of such a man:

He was shipped free to Buffalo to work on a railroad in nextra gang. Hard work; ten hours a day, one dollar and kty-five cents a day. He refused to work because there ould be no money left and the work was horsework. He ent to the Seamen's Institute and applied for a job as reman on a ship, but did not get it. He then jumped freight train to a town in Ohio where he hired out to a armer to plant potatoes; got one dollar and fifty cents a ay and board. It was fine work and the farmer was a good ian. The work was finished in three days. In another hio town he got work on the streets laying blocks. . . . le worked one week and quit. He jumped a freight train is Cleveland. He found no work there. After wandering orn town to town in freight cars and on brake beams he at a job with a circus as tent man; pay, thirty dollars a south, with board. He got little sleep.

onth, with board. He got little sleep. . . . . After three weeks he quit. He took a freight train back Illinois, where he got work on the streets. . . .

After five days he quit again. . He then went to work on an ice wagon for two dollars and twenty-five cents a day. As he was on another man's job it lasted only three days. He got a job as deck hand on an excursion steamer. There was no sleeping place or other accommodation; pay, one dollar a day with board. After six days he became sick of this job and quit. The next place was on a freight steamer. He worked for three days at a dollar a day. This landed him in St. Paul. He then worked about a farm, picking potatoes. The machine broke down and the job was finished. He returned to town. A farmer

picked him up in front of a saloon and hired him as farm hand at a dollar a day. This was in August. It might have lasted until the end of the season, but the whisky fever got hold of him and he quit.

And so on, month after month, the same story. Yet, from the naïve account he gave to Speek, it would seem that in his youth this man was just as capable of holding a steady job as any other man.

To present any more extracts from Speek's collection of humble biographies would only be to repeat unnecessary details. The story is always the same; but please note the age of these men. The oldest is forty. The three others have not yet passed thirty-five.

All the men whose biographies I have quoted so far are Americans, save one of Irish parentage who came to this country so early that he may be considered an American. Twenty years ago the casual laborers of the United States were almost all native-born. Such foreign laborers as we had worked usually in gangs under padrones. Shallow social philosophers used to hold up their thrift, frugality and economy as examples for our own laborers.

Times have moved fast since then. The casual European laborer has appeared. The man trudging the dusty roads with a blanket on his back is just as likely to speak Lithuanian or Polish or Italian as English. These immigrants have their own problems, of which their ignorance of our language and institutions is the chief; and the same destructive forces are making them first casual laborers, then unemployed laborers, and finally unemployable laborers. Take the case of Ivan Witkowski, a Polish boy picked up among the applicants for work at the Milwaukee Free Employment Agency. He is strong and healthy, and only twenty years old. He left his native land, as so many other immigrants do, to escape military service.

Like the rest, he looked on America as the land of golden opportunity. He had mastered the elements of tailoring, but he found conditions and methods of work so different in America that he must learn his trade again. He had no money to support himself during apprenticeship; he became a common laborer. In a little more than a year his wanderings took him from New York to Milwaukee. This is the story of the last part of that year. It begins in a city west of New York:

He joined the crowd of men looking for work in front of a factory office. He and nine others were selected and put to work carrying boxes. The work was not heavy; ten hours a day, one dollar and seventy-five

cents a day. After thirteen and a half days of work he quit and went to tailoring. One of his friends had directed him to a shop where they made suits to order. He was employed as helper and worked thirteen hours a day. The tailor promised to teach him the trade and pay him five dollars a week; from that he must provide his own board and lodging. He worked two weeks and got his pay, but for the second two weeks they made him take in lieu of payment an old suit, which he believed was not worth more than four dollars. He could not live on such terms and quit. . . . He found his way to Milwaukee where he was four days without work. A countryman directed him to the employment office, where he got a job working on the roads; twelve hours a day, pay thirty dollars a month if he worked less than a month and thirty-five dollars if he worked a month or more. . . . The winter came on and work was stopped. In Milwaukee he was out of work for a week, when he secured a job for one day cleaning the surroundings of a house. Looked for work for a week. The State Free Employment Office got him a job loading and unloading fruit on ships. The work lasted two days; thirteen and a half hours a day, thirty-five cents an hour. He registered at the State Employment Bureau for another job.

When interviewed Ivan expressed the opinion that Russia is a better country than America, because in Russia you get steady work. Speek has gathered several other biographies of foreigners, which tell the same story with varying details.

EVEN making allowance for the fact that every unsuccessful man is a constitutional kicker, one cannot read these biographies without an indignant sense of the constant injustices imposed on such laborers. We read occasionally an exposé of peonage conditions in a lumber camp in the West or South. I should say now that these are only examples of a system that is pretty deep-seated. That this should be true squares with reason and with human nature,

The tendency of power is to tyranny. Any man less than a saint, appointed to govern other men without check or control, unconsciously takes more than his share, unconsciously becomes an oppressor. The government clerks who perpetrated the Congo atrocities were in the beginning nice little Belgian boys, with a good sense of morals and of honor. Unlimited and unchecked power made them what they were.

These casual common laborers, without organization, without any means of expressing their grievances, are apparently the prey of this tendency in human nature. Crooked employment agencies send them to nonexistent or impossible jobs, or ship them to the dangerous and often degrading job of strike breaking without informing them that there is a strike. Railroad companies and lumber companies feed them improperly at company boarding houses that are paying their toll of graft, mulct them at company stores, reduce their vitality in camps unfit to be occupied by human beings.

Some corporations wanting a new force of laborers circulate rumors that bring to their factory gates ten times as many men as they can possibly use. Trade-union men or even factory operatives, confronted with such conditions, would strike, and strike hard. They have unions; they have behind these unions the whole organization of regularly employed labor. These casuals are without organization. When conditions grow too hard they can only quit peaceably, which is a very different thing from striking.

Through all these biographies run such common experiences as these: "The bunks were not fit for a white man to

Men Waiting Call to Work on the Docks at Hoboken

The Head of the "Jhoe" Line

# ROOKS ALL By HARRY LEON WILSON

T WAS green May in Paris. The terrace of the Café de la Paix was crowded to its outmost table. Latins were sipping of France's milder distillations, mitigating even the slight alcoholic potency of these with floods of carbonated water. Only Anglo-Saxons took whisky and soda—the English and Americans, who by brute force must be raised from a native moodiness to the Latin's normal gayety.

As I scanned the ranks for a seat an alert waiter beckoned me to a chair just vacated. It was almost at that corner celebrated for its outlook on a shifting world. Sit there for so long as one hour and there will pass before you people you had thought were in Panama or Pittsfield, Ohio, or the Orient. Sit there for an afternoon and it is said you will see quite all the people in the world whom you may ever have spoken in passing.

Faces loom from the surge to take on familiar lines. There is the man with whom four years ago you traded tea for tobacco on the White Horse Trail; behind him is your next-door neighbor at home. There is the American couple of middle age who crossed with you, hotly disputing how the Louvre can be both an art gallery and a department store. Follows the saturnine Englishman who had the row with the customs man at Boulogne. Like all Englishmen here, his expression denotes: "Oh,

yes, fairish—but, of course, it's not London!" A tempered sun flooded the boulevard with gay flashes of color struck from the weaving throng. I settled in my chair and surrendered to the hypnosis of that human flow, to the rhythmic scuff of shoeleather on the pavement, the cool play of light and shade on Paris gowns, and always the faces of that endless film—the world-faces gathered

here to pique or mystify.

Absorbed in the human play, I had not observed my nearest neighbor, noting merely that his chair occupied that precise magic corner which is directly under the é in Café on the striped awning; but when I heard his voice, a hearty Middle-Western voice, I saw that my compatriot was an old acquaintance.

"Garsawng, porty moy ung fresh pot of tea!" com-

manded the voice.

I did not at once invite his attention. This might or might not be desirable. That is as happens. For one thing, Doc is not nice to look at. Herr Nordau, at sight of him, I dare say, would burst into tears of ecstasy. If Doc lacks any of the well-known criminal stigmata the omission has yet to be noted. His face simply shouts evil; a predatory cunning, boundless greed, ingenuous iniquity. His body is of a rounded stoutness, with short arms and huge, clumsy hands. A ten-year-old boy glancing once at his fattish face, with its keen little eyes and its vulture beak, would scorn to trust Doc with his cheapest marble.

Yet the shrewdest of adults come to tolerate him after a second or third glance, and for a very simple reason: It is too incredible that any man should be so evil of purpose as Doc frankly seems to be; impossible that Nature should have been so crudely obvious. Many of these students of human nature swiftly convince themselves, therefore, that he is a babe for guile and must carry a heart of gold. This reasoning flatters their perspicuity and they forthwith warm to the rugged cattleman from Oklahoma, which is often—oh, regularly often!—to their cost; for Doc is Denver Doc and has most amazingly the precise character his face says he has. You see the paradox and I have tried to expound it. I can imagine no other line of reasoning in his victims to explain Doc's very notable success as a buccaneer-one of the modern breed that go about the sea in ships for the sole purpose of playing at games of chance with their fellow passengers.

In common with those who now and again traverse the great white waterway I had often speculated as to the look and manner of these craftsmen, picturing them as plausible, tastefully garbed, insinuating villains, who would be thought anything but what they were. And Denver Doc drew another picture.

In crossing the year before I had encountered him and his two adjutants, encountering also my wise friend Ben, of the New York Central Office, retired. Ben promptly catalogued the three for me: Doc, in his slouch hat and

country-tailored suit, hung profusely with the insignia of all known fraternal orders, from scimitar to elk's teeth; old Sam Joyce, a shade less alarming than Doc, but still rather incredible for the president of the First National Bank of Kansas City, or Galveston, or Fort Worth, as might be; and Velvet Eddie, tall, decorous, subdued, with the chastened geniality of a funeral director. And Ben did more than catalogue the trio: he so dismayed them by the mere sarcastic overlooking of their first merry games that they surrendered more or less gracefully the second day out and thereafter made him a fourth in innocent games of casino, chatting amicably meantime of low finance.

And if I record that Ben relented, as to one passenger, it is written merely to show that Denver Doc was an executive of no mean order. On our printed list shone the line: "T. Walsingham Wadleigh and Valet." The mere words had incited Doc's evil fancies to their fullest play. With moist eyes he showed us the name in the smoking room one night and pleaded for the victim.

"Lamp it, Ben," he tearfully urged. "Do you get it?-

and Valet. Say, let me prong him, just for that!"
"Who is he?" demanded Ben, himself no more than human about names.

"Why, the Claude settin' right at your own table in the dining room-the one with the socks.

"Him? You sure?" asked Ben.

"I pledge you my word—and wears his handkerchief up his sleeve."

"Go to it!" said Ben grimly.

I gathered that the person in question had in some obscure fashion, perhaps by the possession of too much manner, affronted Ben. Anyway, it was delicately conveyed to me later that he had disembarked at Plymouth much lighter of purse after a coinmatching bout of heroic dimensions with the wealthy cattleman from Oklahoma and the president of the First National Bank of El Paso, which exposed T. Walsingham Wadleigh's need of more than a valet to travel with him, both men looking enough like prosperous burglars.

And here on this spring afternoon was Denver Doc, far from the raging main and gulping hastily of tea while the careless world paraded before him. As I studied his nefarious profile I saw that he reviewed the passing show with a weightier purpose than mere entertainment. His glance ever darted to question the faces of the oncoming throng. His sharp little eyes took toll not only from both sides of the boulevard but guarded the Rue Auber on his left and distantly scanned the frontiers of the Place de l'Opéra. Twice he half started from his chair as though one he sought had shown in the offing; but each time he fell back with muttered irritation. I touched his arm.

"Looking for some one?"

He turned on me the good-fellow smile of his calling.

"Well! Howdy? Howdy? It's certainly good for sore eyes to see you here." He paused and the smis-faded into a not-too-cordial look of recognition. "Oh! It's you, is at Wasn't you with Ben Lockwoof on the George Washington last year! Didn't get you at first."

His manner proclaimed that be would have been as well pleased not to get me at all. His eyes roved back to their quest. Plainly I suffered in his esteem for my former companionship with a man who had hurt business for him.

"Ben didn't come over this year," I ventured. "What sort of trip dd you have?"

He turned to me heavily.

"Say, on the level, I only wish Ben was here. Ben's a square guy. He'd help Eddie and me."

"Velvet Eddie?" I suggested. "Yes; him and me made it alone this time. Old Sam had to lay over a trip to get some pivot teeth put in. A hardware man from St. Loop done it. Say, you'd thought that eight hundred dollars of his was his right eye, and old Sam twice his age at that—the coward! But the dentist said he could give Sam a swell new front. Anyway, Eddie and me—say, I might as well tell you about it, long's you're a friend of Ben's." He seared his throat with the fresh tea and breathed had "Gee, but that guy's got me foany in the fighting-top!" he muttered

"You were going to tell me -

Doc's eyes continued to sound the human stream. He spoke adeptly from a mere corner of his roomy mouth. "Yes, sir; me and Eddie has been played about the

worst lowdown trick you ever heard of, and by a man or trusted right down to the ground. But that's the way in this world. And I kept saying to Eddie-if I said it once l said it a dozen times—'Eddie,' I says, 'that guy may be all right, but I think he's crooked. Mark my words! Yes give him a chance and he'll throw the spear into us.' But Eddie's right back with the Tut! Tut! stuff, telling me don't know a straight guy when I see one, and pulling a mess of words about this here physiology, or whatever you call it, that shows how a guy's wheels go round inside 🗀

"Eddie's the great boy for that. You might call it a hobby with him. 'I'm a student of physiology,' he says. 'and that guy's as straight as you or me.' So I had to M it go at that. But you can lay chips to coppers Eddie's talking nine different ways from that since last Wedneday. He's back in London doing 'Little Mabel, with he face against the pane'; and I'm waiting to see if the guy won't happen along here. If he does—say, they's liable to be a low, brutal murder right here on the sidewallthrowing down his only friends like that!

"Yes, sir; Eddie and me befriended him. We was real? to stick by him through thick and thin, understand what. mean? There wasn't nothing we wouldn't have done is him. And what gratitude does he show, what sense a decency? I ask you that! Well, this is what he shows He ducks out over in London last Wednesday with ffty thousand dollars hard cash money belonging to Eddie and me—about every cent we had, too—just took it was from us. That's what he done! You come right down to it, he ain't no better than a crook!"

I looked amazement and sympathy.

"Fifty thousand!"

"Not a cent less. And here I been three days drinks tea till I'm tanned inside like a leather trunk. Sometimes I think he won't show up. Maybe he beat it for Egypt # Buenos Aires. A guy as low as him is liable to fool yet from soda to hock.

Doc quaffed of tea once more. Even over the raised and his eyes kept to the crowd.

"How did you happen to trust him with so much? Exe

a psychologist -

We was on that new boat, understand. Everything looks fine; a full passenger list and a bunch that looked 15 if money bores them stiff. You'd have said yourself belatwe got past the Hook that a good time was going to be had by all present. Me and Eddie would have giggled at you if you'd offered us two thousand for our takings. We didn't even bother to be strangers to each other. It was I

one of them leery crowds that begins to get about half wise in a game, so that me and Eddie has to act nervous and call attention to the little card about gamblers and denounce somebody as a card sharp. They all look easy and liberal, and anxious to start something, so we waited or it, playing casino at two bits a side, getting all excited about it and asking people to look at our hands when they

oafed up-you know!

"And then the whole thing went blah. Yes, sir; I'm a illas with neck whiskers if one o' that bunch would touch card the whole way over! I tell you they ain't been nothing like it since Hall was hanged in Troy. Seemed like some of them ever saw the ocean before. They'd hang ound out on deck playing silly games, or they'd lean over he rail and count the water as it went by; or if they set lown they'd wrap up in horse blankets and read these sere trashy novels with a girl on the cover. You bet, if I vas running one o' them big rafts you wouldn't catch me etting one o' them books be fetched on board. And me and Eddie dealing our lonely casino and listening to the toarse growls of the smoking-room stewards, who wasn't naking a cent either, understand. It was against Nature, hat's what it was. Of course I don't believe in superstiions, but you can't tell me they wasn't something queer bout our having to walk under that ladder with the two minters on when we got to the dock.

"The second day out we give up. We'd been done. That steamship company had took our good money and i we us nothing for it. We copped three, four pools; but wen that was like ditchdigging and didn't run to carfare, hat with the rake-off that had to go belowstairs. Nothmg went right. We run into a storm and it done us no ood on earth. What couldn't stay on deck went to bed. and, just to show you, when we bought the low field in he pool that night, having got the office that we'd lay up bout three hours for repairs to the shaft or something ext morning, the most we can win, side bets and all, is ixty-two dollars-and two thousand would have been u.st fair. Parties taking their own autos across would bet s much as two whole dollars. Well, it was enough to make toad sore; you know how you'd feel -

I nodded discreetly.

"And I worried about Eddie too. He gets low in his n ind when they don't come right. Take him when the tting is good and Eddie is as nice people as you'd care - meet, bar none; other times you'd think the world was e n feet under snow and the shovels had give out. Well, I

not me talk to me for hours at a time, thinking it will beer him. He's always after me to wear sidewhiskers and e more quiet and refined, but I tell him 'Handsome is as andsome does'; and them that I do are plenty. Only his time I promise to do everything he says and quit rearing striped vests-kidding him along, you understand. even got one o' them disgusting novels for him to read shile I played Canfield-and I lose eight thousand to ayself at that; so you can see the gypsy's curse was sure

"If You Have Any Heart in You, Jhow a Little Mercy!"

on us. Say, it was about as funny as a sidetracked freight car on a rainy day!

Then one afternoon in the smoking room Eddie looks up from his book and comes to life. I seen the same look in his eyes one time on the Mauretania when a pat straight flush was dealt him—dealt by a perfect stranger, understand Well, I look round to see what has shined up his lamps. They was a fat old couple, man and wife, that played dominoes every day till they broke up in a row; and a bridal pair drinking ginger ale, sneaking sips out of each other's glass just to be vicious; and a grouchy-looking hick that always kept his gloves on and read magazines—say, he kept up that reading day in and day out till I could have choked him; and then they was an oldish kind of guy that I hadn't noticed before. I seen it must be this one had brought Eddie to life; so naturally I give him the once-over.

"He was little and skinny and stoop-shouldered, and had sandy-gray sidewhiskers, close trimmed, with a kind of a thinnish little mouth that looked like a buttonhole in one of these here yellow overcoats. His clothes was like they keep to wear to church and them places: black cutaway coat and vest, and gray pants that bagged some, and Congress gaiters-yes, sir, the kind with elastic in the sides that you pull on and shine them yourself out in the woodshed Sunday morning; and a black felt hat with a crease in the top; a stiff white shirt with little gold studs; a black satin bowtie; a gold watch-chain and mother-ofpearl cuff-buttons. I was looking how none of his clothes was new and how he seemed sickish. Then he took out his watch, and that give me his number; he kept it in one o' these shammy-skin bags-a watch he had to pop open to see what time it was.

"'Now it's the hour for the dyspepsy dope,' I says to myself. And over he toddles to the little bar-place and asks for a glass of plain water. He shook a powder in and drunk it, while three German stewards looked at him-say, if looks could kill!

He wasn't taking a chance on having to let go a tip. "'Do you get him?' says Eddie, kind of eager, and putting the velvet in his voice.
"'Sure!' I says. 'Who wouldn't? But why the heaving

chest and flashing eye? They's no bug under that chip,'

I says.
"'I admit he puzzled me momentarily,' says Eddie; but then, of course, I'm only a novice in them realms where you pervade. I can't be expected to penetrate those denser obscurities whence you boast the blinding glare of a searchlight,' he says, or something like that; 'so suppose you enlighten me as to why and how and when is you gentle stranger who has taken his meddy and is now about to settle down for a hot old time with the Christian Bulletin.'

"'Why sure!' I says, coming right back at him. 'You do well, little one, to come to me in your trouble. First, you

know, you are on a great big choo-choo boat sailing across the bright blue sea, and if you was to go out and walk off you'd get as wet as anything, and like as not a shiny black fish would swim up -

"'Go on, tell me!' he says, and I seen he was getting more excited every minute, watching this old gink with his paper. So I says: 'Very well; but don't you ever dare to breathe a word of it to a single soul or I'll never tell you another thing so long as I live. His name is Jasper Q. Hemingway, and he lives in Cleveland or Buffalo, or one of them jaytowns. He's secretary of the Y. M. C. A., superintendent of the Methodist Episcopal Sunday School, president of the North Side Building and Loan Association, and vice-president of the Farmers' Mutual Trust and Highly Cooperative Insurance Company, with offices in the Empire Building, where he gets most of it. Counting the ten-thousand life he carries and his salary, the house and lot on North Elm and the street-car shares he grabbed just before they put through that deal for the franchise, his heirs will be fighting over about two hundred thousand dollars tomorrow if that boy up in the wheelhouse gets careless.

"'And it might be a little more,' I went on; 'for I see by his heart line that last October he lets loose of six hundred dollars to a cousin of his wife's that invented a patent churn; Cousin Jas, here, taking fifty-one per cent of the stock for his. This is the first vacation he ever had and he's sorry he took it. He wishes the boat would turn round. He knows things are going wrong in the office and him away only four days. The doctors there can't tell him what's the matter with him; so

his wife buffaloed him into trying Carlsbad. And he's mad because he's on to himself. He knows they ain't a thing on earth the matter with him but meanness. He is a snappy little companion. He knows what year everything happened, who invented electricity, what rubber is made of, and how to act in case of drowning. On his person this minute is cash and paper for about one thousand dollars. The cash is ninety dollars in his inside vest pocket and the pocket is pinned with two safety-

"'I could tell you a lot more about him, Eddie, but some way,' I says, 'I don't feel it's quite nice of me to set here talking so free about a perfect stranger. I will only add that he would skin prettyvery pretty, indeed-but it can't be done. No one has ever took a nickel off him since he started with his tin bank at the age of three. Now let's watch some one else,' I says. Looking at this one thoroughly, I ain't had such ugly thoughts since the wet winter in Pioche."

"Well, all this time I'd been guffing to Eddie, trying to get him cheerful in adversity—understand what I mean? he wasn't doing a thing but keep his eyes on the old boy, freezing to him like one o' these here spotty bird dogs

that's got hep to a flock of patridges.

"'You ain't bad on the rough work, Doc,' he says. 'I give you good for the obvious generalities. With a few trifling exceptions, such as that he's New England instead of Cleveland or Buffalo, and that his main graft is banking stead of insurance, you get him good as far as you go; but you ain't went far. You pulled up just before the waterjump. Now I'll show you,' he says, 'the advantages of studying physiology'-or whatever that there word iswhich enables the patient student to tunnel under his victim and ground-sluice him while he slumbers in fancied security. Watch me shake the tree of intuition,' he says; and when the ripe fruit drops into our hats you'll have something to meditate profoundly about during the long winter evenings that will soon be on us.'

"'Shake on, perfessor,' I says; 'and I got another hat

besides this one.

"'Already I touch the bough gently,' he murmurs; and, sure enough, I see the old party is getting the fidgets under Eddie's gaze. He'll uncross his legs and flap his paper about and pull off his hat to look inside, and finger his necktie and twist on his seat; and then he'll settle again to reading, but only for a minute. And he never looked straight at us, but you knew he was wise to Eddie's eye. Pretty soon he can't bluff it out another minute; so he gets up and stumbles round, pertending to be delighted with the nice new furniture. He works kind of aimless over toward the door and when he gets near it he's outside in one second.

"It was kind of funny; still, any man's liable to get all nervoused up if you give him the eye steady like Eddie

"'Now I guess you're wise,' says Eddie.

"'Oh, in a way,' I says. 'I been told so once or twice by people I could trust.'

"'It just goes to show,' he says, 'if I hadn't got powers to look below the surface I wouldn't be any wiser than what you be. My mind works strange,' he says. 'It registers people whether I want to or not. Now I caught this boy the morning we come aboard and paid no attention to him; but here my mind's been working on him ever since and just now it tells me all about him like I'd been through him with a dark lantern. It's great to have a mind like that,' he says. 'Sometimes it scares me.'

"'Does this conclude your part of the evening's entertainment, perfessor?' I asks, seeing him light a cigar like he had finished.

"'It does, my good man,' he says; 'but yours is only just beginning. I hate to trust you with it, Doc. Honestly, I've often thought the only job you're qualified for is night watchman in a department store, where you could get a nice long sleep in the made-up bed they keep in their Bijou Flat Furnished Complete for \$89.99. But I suppose I got to rely on you; so do what I tell you-no more, no less.'

"'It must be terrible to know as much as some folks,' I says, 'especially if you got to tell it all every time you think of it. I must see if I can't get you some throat

lozengers; your voice is roughing up.

"Go on out now," he says, paying no attention, 'and walk about on the plazza till you come up with this lad. When you do-now listen!-just stall round like you hadn't a thing above that eighteen-inch collar of yours. That won't be hard for you. Do whatever he does. If he walks you walk-about six feet back of him. If he sets down cop a chair-not too near him. If he leans over the rail you do the same. Don't look much at him, but about every ten minutes give him the cold once-over till he gets it; then look away quick and hum something kind of soft, as if you hadn't wanted him to catch you. The general idea,' he says, 'that I'm trying to smuggle into that sacredly guarded ivory temple of yours is that you're watching him close, but you don't want him to know itonly you're so much of a dub you give the snap away. And don't speak to him whatever he does. If you say a single word to him I'll have you put in irons. Now beat

it, while I do something else."
"Yes; and I know what it is you're going to do, too," I says. 'You're going up on the roof and show the captain how to run the ship. I understand he was scared stiff till

he found out you was along.'

"'Go on,' he says, 'and remember every word I told you. If I find out you've bungled it they's likely to be a

"Well, out I go feeling like a fool, because I know this old guy wouldn't play any game on earth for fun, money or marbles. You can tell the kind-never touched a card in his life. You knew he wouldn't bet apples was red, not if you was to give him 'way above track odds on it. But I was willing to humor Eddie, you understand.

"And maybe that little dried apricot didn't give me some walk! First I went all round two decks-say, it's like walking twice round the fairgrounds at home—and no sign of his nibs. Then I climb up to the boatdeck and there he is, hid up back of a ventilator, his hat down and his collar up. I stop about six feet off and let on to be looking out over the wet. Pretty soon I give him the eye, like Eddie says to, then look away quick when he gets me. That happens twice and he moves off, trying to go careless. I move careless too, understand. When he stops I stop. I had to admit it was kind of funny. He stood the eye three or four times, then down he toddles to the next deck

'After he tries me out that way some few times he just settles down to walk, and some walker he was, believe me and me having to kind of favor my feet. I says to myself: 'Look here, it's all right to humor a friend, but I want a sweater and some spiked shoes if this Jasper is going to

and walks that, me trailing him like he had me on a string.

pace me. What I really had ought to have,' I says, 'is a taxi.' Still, it was kind of interesting, understand, to see the way he'd shiver and squirm every time he catches me lamp him. His eyes never hit mine; they'd touch me about the hat or the necktie. And all at once it come over me like a flash that this old boy is afraid of me. But why? That's what causes me to meditate profoundly, as Eddie says.

If he stops to let me go by I stop too.

"Well, anyhow, he walks and walks till I'm ready to shove him off if I get a chance. Then all at once he switches inside and tries to lose me dodging up and down them narrow ballways between staterooms. And, of course, me close up. Then he makes down a side passage and stops at a stateroom door to unlock it. At that I wasn't knowing what to do; but the opposite door opens and out pops Eddie, not looking at the old boy, but giving me the high sign and saying, all velvety:

"Oh, there you are, Doctor! I've had the steward change us to this stateroom; I fancy we can do our work better here, he savs.

"'Certainly, Colonel, Isays. 'I think you made a wise move; we seem to belong right here."

"By this time the old boy had got inside and shut his door; but we could hear him breathing hard, Eddie and me walk off a little ways.

"'Look here,' I says, 'if they's to be much of this gumshoe stuff I simply got to have roller-skates. My left tire is

s me one bright look and stiful case; he's coming

o?' I says. 'All I can d of me.'

"'You ought to go to a good oculist,' says Eddie, 'the minute you land if that's all you can see. But just now you fly up and get into dinner soon's they open. I'll stay on watch. Remember, from now on this lad can't poke his head out that door without one of us being here and sticking to him like wallpaper.'

""Well,' I says, 'if the little rascal starts walking again you want to get a dogteam and about a thousand dollars' worth of pemmican. As a walker, that boy has got old man Weston looking like Baby's First Step.

"'Save your monologue,' says Eddie, 'till you can get

the big time for it, and hurry up and eat."

"So up I go, stopping first to get into a pair of easier shoes, and leaving Eddie to loaf round by the door. And I'm in to the table as soon as they let me. I get through soup and fish all right, and I'm mushing round in a dish of this here German goo, and looking merrily forward to some roast goose and a few other things on the bill, when in comes the old boy, followed by Eddie.

"Eddie goes right to his table 'stead of coming to ours; but the old boy don't seem hungry. He orders a little and watches Eddie sideways when he orders for himself, and I can see Eddie paying no attention to him while they wait. They no more than get their dinner when the old joker shoves his plate back and beats it, like he couldn't bear the sight of food. Friend Eddie makes horrible signs to me; so I follow, with a low cry of despair, because the

rest of my dinner has just come.

"I catch up with the lad at the top of the stairs and, say, he looks sick-understand what I mean? He ducks out on deck and in a minute there I am, humming lightly under my breath, though God knows I didn't feel like singing. I was afraid the old devil was going to walk from the Battery to High Bridge again. He did start, but I give him such an awful glare he heads into the smoking room and just stood there in the middle of the floor. All right, I thinks, and I sunk into a chair where I could regard him in an evil manner. Then he tetered over to the far side and set down. I take another seat near him and he makes the bluff with his newspaper again; but his face is yellow.

"After a while Eddie comes in and sets down by me, and the lad gives in again and wanders about the room, trying to make out we wasn't there at all. Eddie and I stand up and he can see we're discussing him in low tones. At least that's what it looked like. What it sounded like was me telling Eddie I'd had about enough of the old farm and was going up to the big city where the squirrels didn't bite people, and a man could finish his dinner and get a chance to set down in the plush rocker once in a while now and then from time to time.

"After a minute or two of this out the old dodger goes again and Eddie after him.

"'I'll take him now for a spell,' he says. 'It's good to change on him, and he's coming awful pretty,'

"'All right,' I says; 'and when they get you where you belong I'll come see you every week; bring you marmalade and take you out to see the goldfish in the fountain, and let you tell me how you're Roosevelt or the King of Europe. I don't think you'll be violent,' I says.

"So I get my feet up and settle down to a good smoke and try to figure out what hand Eddie's holding so clos to his chest; but all the further I can get is that the guy'

afraid.

In about an hour Eddie shows up alone.

"'Our little playmate has gone night-night,' he says so come on—we got to go too.

"'We got to tuck him in and sing Hushaby!' I says Of course I understand that; but you got a sweet teno voice yourself and likely it would fuss him to have the tw

"'We got to retire to our stateroom,' says Eddie firmly 'so's he can hear us conversing in low, eager tones, an planning to keep watch on his door all night.

"'If he listens good he'll hear me tell you some lov eager things about yourself that may puzzle him-bu they'll be plain enough to you,' I says.
"Eddie just give me one look and says:

"'I never believed it until this minute, what the explore tell, about there being a tribe in the interior of Africa : debased that they can't count beyond three. Now seems God's 'ruth to me.'

"I saw it wasn't any good reasoning with him, so dow we go and prop our door open and con verse quite a lot, wit Eddie saying loud after a while: 'He must be asleep by th time. I'll take the first watch till two-thirty, then call you And finally we did get to sleep, me being pretty sore, accoun of Eddie's not tipping his hand to me.

'You can believe it or not, but I pledge you my won understand, that Eddie makes us keep that same thing t all next day; has me ready and dressed in the morning so I am right there when the old boy comes out. And one us was glued to him every minute after that.

"Finally I begin to get excited myself because of the wi our actions is telling on this party. By three o'clock th afternoon he's a pale, sickly green, and he don't dare wa any more. He sets in the smoking room and counts h fingers, giving us a quick look about every thirty minute He was certainly coming swift, like Eddie said; but whe was he coming to?

"'Tell me this much, anyway,' I begs Eddie that nig after dinner: 'Do we do it here or after we land?'-becau this was our last night out.

And Eddie just says:

"'That's up to our anxious little friend. We do it wh he asks for it and not a minute before; but I don't min telling you I apprehend his speedy request for a consult tion. That's the superb delicacy of my method. I making him do all the fighting and he's licking himself."

"Of course that mess of words left ! knowing a lot more than I had before with a copper on the chips; so I shut and worked the eye harder on the boy. It was about nine o'clock and was setting across the room from kicking the table legs and gnawing fingernails.

"'It's all over!' says Eddie in a minu

'What did I tell you?'

"The old guy gets up and does one his nervous runabouts. When he's m the door he turns and gives us a sw look over his shoulder and motions w his head just before he goes out. Say was silly for a minute; but Eddie gra me and out we go. He pulls me up the deck and says:

"'Now you remember you're ju nobody but old Doctor Mum, of Mu burg. All you got to do is to keep ? and look mean. Part of that will be a

for you.' "The next minute he rushes me ins and down that gangway to the door this party's room. He didn't knock; just grabbed the knob and pushed in l a farmer opening a barndoor in a hur And there stood our lad, shaking so had to grab the bunkrail. Eddie s the door and just stood a minute lo ing down at the little old lollop. The he turns to me.

"'Search him for weapons, Docto he orders. So I frisk the old boy : make sure he ain't got a gun.

"'All right, Colonel,' I says to Edd and at that the guy sort of sloshes do on the couch like he didn't have a bi left in him and begins making who gurgles in his throat.

"'Our chase is over, Doctor,' s Eddie, 'We have our man. Ine (Continued on Page 57)

# AN AMERICAN VANDAL

## Being Guyed and Guided-By Irvin S. Cobb

ILLUSTRATED BY JOHN T. MCCUTCHEON

DURING our recent scientific explorations in the Eastern Hemisphere we met two guides who had served the late Samuel L. Clemens, one who had served the ste J. Pierpont Morgan, and one who had acted as courier oex-President Theodore Roosevelt. After inquiry among ersons who were also lately abroad I have come to the contusion that my experience in this regard was remarkable, to because I met so many as four of the guides who had trended these distinguished Americans, but because I met of was four of them.

One man with whom I discussed the matter told of havng encountered, in the course of a brief scurry across burpe, five members in good standing of the International association of Former Guides to Mark Twain. All of them ad their union cards to prove it too.

Others said that in practically every city of any size isited by them there was a guide who told of his deep stachment to the memory of Mr. Morgan, and described ow Mr. Morgan had hired him without inquiring in dvance what his rate for professional services a day would e; and how—lingering with wistful emphasis on the words long here and looking meaningly the while at the present atron—how very, very generous Mr. Morgan had been in estowing gratuities on parting.

Our first experience with guides was at Westminster ibbey. As it happened, this guide was one of the Mark wain survivors. I think, though, he was genuine; he had

ossession to help him in proving up his title.
hybow, he knew his trade. He led us up
ad down those parts of the Abbey which are
ree to the general public and brought us
inally to a wicket gate, opening on the royal
hapels, which was as far as he could go.

ocuments of apparent authenticity in his

### Royalties on Royalty

THERE he turned us over to a severelooking dignitary in robes—an archishop, I judged, or possibly a canon—who,
in payment by us of a shilling a head,
scotted our party through the remaining inlosures, showing us the tombs of England's
juceus and kings, or a good many of them
myway; the Black Prince's helmet and
reastplate; the exquisite chapel of Henry
he Seventh, and the ancient chair on which
ill the kings sit for their coronations, with
he famous Scotch Stone of Scone under it.

The chair itself was not particularly impressive. It was not nearly so rickety and iscrepit as the chairs one sees in almost any london barber shop. Nor was my emotion particularly excited by the stone. I would engage to get a better-looking one out of the landiest rock quarry inside of twenty minutes. This stone should not be confused with

the ordinary scones, which also come from Scotland and which are by some people regarded as edible.

What did seem to us rather a queer thing was that the authorities of Westminster should make capital of the dead rulers of the realm and, except on certain days of the week, should charge an admission fee to their sepulchers. Later, on the Continent, we sustained an even more severe shock when we saw royal palaces—palaces that on occasion are used by the royal proprietors—with the quarters of the monarchs upstairs, and downstairs novelty shops and tourist agencies and restaurants, and the like of that.

I jotted down a few crisp notes concerning these matters, my intention being to comment on them as evidence of an incomprehensible thrift on the part of our European kinspeople; but on second thought I decided to refrain from so doing. I recalled the fact that we ourselves are not entirely free from certain petty national economies. Abroad we house our embassies up back streets, next door to bird and animal stores; and at home there is many a public institution where the doormat says Welcome! but the soap is chained and the roller towel is padlocked to its little roller.

Guides are not particularly numerous in England. Even in the places most frequented by the sight-seer they do not abound in any profusion. At Madame Tussaud's, for example, we found only one guide. We encountered him just after we had spent a mournful five minutes in contemplation of ex-President Taft. Friends and acquaintances of

Mr. Taft will be shocked to note the great change in him when they see him here in wax. He does not weigh so much as he used to weigh by at least one hundred and fifty pounds; he has lost considerable height too; his hair has turned another color; his mustache is not a close fit any more, either; and he is wearing a suit of English-made clothes.

### The Land of Pet Murderers

ON LEAVING the sadly altered form of our former Chief Executive we descended a flight of stone steps leading to the Chamber of Horrors. This department was quite crowded with parents escorting their children about. Like America, England appears to be well stocked with parents who make a custom of taking their young and susceptible offspring to places where the young ones stand a good chance of being scared into conniption fits. The official guide was in the Chamber of Horrors. He was piloting a group of visitors about, but as soon as he saw our smaller party he left them and came directly to us; for they were Scotch and we were Americans, citizens of the happy land where tips come from. Undoubtedly the guide knew best.

With pride and pleasure he showed us a representative assortment of England's most popular and prominent murderers. The English dearly love a murderer. Perhaps that is because they have fewer murderers than we have, and have less luck than we do in keeping them alive and in

good spirits to a ripe old age. Almost any American community of fair size can afford at least two murderers—one in jail, under sentence, receiving gifts of flowers and angel cake from kind ladies, and waiting for the court above to reverse the verdict in his case because the indictment was shy a comma; and the other out on bail, awaiting his time for going through the same procedure. But with the English it is different.

We rarely hang anybody who is anybody, and only occasionally make an issue of stretching the neck of the veriest nobody. They will hang almost anybody Hamanhigh, or even higher than that. They do not exactly hang their murderer before they catch him, but the two events occur in such close succession that one can readily understand why a confusion should have arisen in the public mind on these points. First, of all, though, they catch him; and then some morning between ten and twelve they try him. This is a brief and businesslike formality. While the judge is looking in a drawer of his desk to see whether the black cap is handy the bailiffs shoo twelve tradesmen into the jury box. A tradesman is generally chosen for jury service because he is naturally anxious to get the thing over and hurry back to his shop before his helper goes to lunch.

The judge tells the jurors to look on the prisoner, because he is going away shortly and is not expected back; so they take full advantage of the opportunity, realizing it to be their last chance. Then, in order to comply with the forms, the judge asks the accused whether he is guilty or not guilty, and the jurors promptly say he is. His Worship, concurring heartily, fixes the date of execution for the first Friday morning when the hangman has no other engagements. It is never necessary to postpone this event through failure of the condemned to be present. He is always there; there is no record of his having disappointed an audience. So, on the date named he is hanged rather extensively; but after the hanging is over they write songs and books about him and revere his memory.

Our guide was pleased to introduce us to the late Mr. Charles Pease, as done in paraffin, with crêped hair and bright, shiny glass eyes. Mr. Pease was undoubtedly England's most fashionable murderer of the past century and his name is imperishably enshrined in the British affections. The guide spoke of his life and works with deep and sincere feeling. He also appeared to derive unfeigned pleasure from describing the accomplishments of another murderer, only slightly less famous than the late Mr. Pease. It seemed that this murderer, after slaying his victim, set to dismembering the body and boiling it. They boil nearly everything in England. But the police broke in and interrupted the job.

Our attention was directed to a large chart showing the form of the victim, the boiled portions being outlined in red and the unboiled portions in black. Considered as a murderer solely this particular murderer may have been

deserving of his fame; but when it came to boiling, that was another matter. He showed poor judgment here. It all goes to show that a man should stick to his own trade and not try to follow two or more widely dissimilar callings at the same time. Sooner or later he is bound to slip up.

We found Stratford-upon-Avon to be the one town in England where guides are really abundant. There are as many guides in Stratford as there are historic spots. I started to say that there is at least one guide in Stratford for every American who goes there; but that would be stretching the real facts, hecause nearly every American who goes to England manages to spend at least a day in Stratford, it being a spot very dear to his heart. The very name of it is associated with two of the most conspicuous figures in our literature. I refer first to Andrew Carnegie; second to William Shakspere. Shakspere, who wrote the books, was born here; but Carnegie, who built the libraries in which to keep the books, and who has done some writing himself, provided money for preserving and perpetuating the relics.

### Speaking Polar and Schweitzer

WE FOUND a guide in the ancient schoolhouse where the Bard-I am speaking now of William, not of Andrew-acquired the rudiments of his education; and on duty at the old

village church was another guide, who for a price showed us the identical gravestone bearing the identical inscription which, reproduced in a design of burnt wood, is today to be found on the walls of every American household, however humble, whose members are wishful of imparting an artistic and literary atmosphere to their home. A third guide greeted us warmly when we drove to the cottage, a mile or two from the town, where the Hathaway family lived.

Here we saw the high-backed settle on which Shakspere sat, night after night, wooing Anne Hathaway. I myself sat on it to test it. I should say that the wooing could not have been particularly good there, especially for a thin man. That settle has a very hard seat and history does not record that there was a cushion. Shakspere's affections for the lady must indeed have been steadfast. Or perhaps he was of stouter build than his pictures show him to have been.

Guides were scattered all over the birthplace house in Stratford in the ratio of one or more to each room. Downstairs a woman guide presided over a battery of glass cases containing personal belongings of Shakspere's and documents written by him and signed by him. It is conceded that he could write, but he certainly was a mighty poor speller. This has been a failing of many well-known writers. Chaucer was deficient in this regard; and if it were not for a feeling of personal modesty I could apply the illustration nearer home.

Two guides accompanied us as we climbed the stairs to the low-roofed room on the second floor where the creator of Shylock and Juliet was born—or was not born, if you believe what Ignatius Donnelly had to say on the subject. But would it not be interesting and valued information if we could only get the evidence on this point of old Mrs. Shakspere who was undoubtedly present on the occasion? A member of our party, an American, ventured to remark as much to one of the guides; but the latter did not seem to understand him. So the American told him just to keep thinking it over at odd moments, and that he would be back again in a couple of years, if nothing happened, and possibly by that time the guide would have caught the drift of his observation. On second thought, later on, he decided to make it three years—he did not want to crowd the guide, he said, or put too great a burden on his mentality in a limited space of time.

If England harbors few guides the Continent is fairly glutted with them. After nightfall the boulevards of Paris are so choked with them that in places there is standing room only. In Rome the congestion is even greater. In Rome every other person is a guide—sometimes twins. I do not know why, in thinking of Europe, I invariably associate the subject of guides with the the subject of tips. The guides were no greedier for tips than the cabmen, or the hotel helpers, or the railroad hands, or the populace at large. Nevertheless this is true. In my mind I am sure guides and tips will always be coupled, as surely as any of those standard team-word combinations of our language that are familiar to all; as firmly paired off as, for example, Castor and Pollux, or Damon and Pythias, or Fair and Warmer, or Hay and Feed. In the future when I think of one I know I shall think of the other. Also I shall think of languages; but for that there is a reason.

large. Nevertheless this is true. In my mind I am sure guides and tips will always be coupled, as surely as any of those standard team-word combinations of our language patch the job. Castor and Pollux, or Damon and Pythias, or Fair and warmer, or Hay and Feed. In the future when I think of one I know I shall think of the other. Also I shall think of languages; but for that there is a reason.

VENETIAN GLASS FACTORY

Tipping—the giving of tips and the occasional avoidance of giving them—takes up a good deal of the tourist's time in Europe. At first reading, the arrangement advised by the guidebooks, of setting aside ten per cent of one's bill for tipping purposes, seems a better plan and a less costly one than the indiscriminate American system of tipping for each small service at the time of its performance. The trouble is that this arrangement does not work out so well in actual practice as it sounds in theory.

In Venice Even the Simple

Gondoller Has a Secret Under-

standing With All Branches of the Retail Trade

On the day of your departure you send for your hotel bill. You do not go to the desk and settle up there after the American fashion. If you have learned the ropes you order your room waiter to fetch your bill to you, and in the privacy of your apartment you pore over the formidable document wherein every small charge is fully specified, the whole concluding with an impressive array of items regarding which you have no prior recollection whatsoever. Considering the total, you put aside an additional ten per cent, calculated for division on the basis of so much for the waiter, so much for the boots, so much for the maid and the porter, and the cashier, and the rest of them. It is not necessary that you send for these persons in order to confer your farewell remembrances on them; they will be waiting for you in the hallways. No matter how early or late the hour of your leaving may be, you find them there in a long and serried rank.

You distribute bills and coins until your ten per cent is exhausted and then you are pained to note that several servitors yet remain, lined up and all expectant, owners of strange faces that you do not recall ever having seen before. but who are now on hand with claims, real or imaginary, at your purse. Inasmuch as you have a deadly fear of being remembered afterward in this hotel as a piker, you continuto dip down and to fork over, and so by the time you read the tail end of the procession your ten per cent has great to twelve or fifteen per cent, or even more.

As regards the tipping of guides for their services, I in on a fairly satisfactory plan, which I gladly reveal here in the benefit of my fellow man. I think it is a good idea to offer the guide, on parting, about twice as much as just think he is entitled to, which will be about half as much as he expects. From this starting point you then work toward each other, you conceding a little from time to time, he abating a trifle here and there, until you have reached a happy compromise on a basis of fifty-fifty; and so you part in mutual good will.

The average American, on the eve of going to Europe, thinks of the European as speaking each his own language. He conceives of the Poles speaking Polar; of the Hellandr talking Hollandaise; of the Swiss as employing Schwitzer for ordinary conversations and yodeling when addressing friends at a distance—and so on. Such, however, is rarely the case. Nearly every person with whom one come in contact in Europe appears to have fluent command of exercise the case of the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command of exercise the contact in Europe appears to have fluent command the contact in Europe appears to

Our train, going from Florence to Rome, stopped at a small way station in the mountains. As soon as the little locomotive had panted itself to a standstill the train

hands, following their habit, pilet of the cars and engaged in a trementus confab with the assembled officials at the platform. Immediately all the loafers in sight joined in. A drossy hillsman, muffled to his back hair in a long brown cloak, and with buskins on his legs such as a stage bandit wear, was dozing against the wall. He looked as though he had stepped right out of a comic opera to add picturesquenes to the scene.

#### Acrobatic Tongues

HE ROUSED himself and joined in so did a bearded party who. to judge by his uniform, was either a Knight of Pythias or a general in the army; so did all the rest of the cowl. In ten seconds they were jammed to gether in a hard knot, and going it on the high speed with the muffler of . inwhite teeth shining, arms flying. shoulders shrugging, spinal column writhing, mustaches rising and falling legs wriggling, scalps and ears following suit. Feeding hour in the parrot agat the Zoo never produced anything its so noisy and animated a scene. In these parts acute hysteria is not a symptom-it is merely a state of mind

A waiter in soiled habiliments buried up, abandoning chances of trade at the prospect of something infinitely mate exciting. He wanted to stick his out into the argument. He had a fer pregnant thoughts of his own crysis.

utterance—you could tell that; but he was handicapped into a state of dumbness by the fact that he needed bet arms to balance a tray of wine and sandwiches on his heat Merely using his voice in that company would not list counted. He stood it as long as he could, which was not very long, let me tell you. Then he slammed his tray down on the platform and, with one quick movement, jerked he coat sleeves back to his elbows, and inside thirty second he had the floor in both hands, as it were. He converse mainly with the Australian crawl stroke, but once is a while switched to the Spencerian free-arm movement and occasionally introduced the Chautauqua salute with telling effect.

On the Continent guides, as a class, excel in the gift is tongues—guides and hotel concierges. The concierge at all hotel in Berlin was a big, upstanding chap, half Russia and half Swiss, and therefore qualified by his breeding is speak many languages; for the Russians are born with set tongues and can give cards and spades to any talking continuate that ever lived; while the Swiss lag but little behind their in linguistic aptitude. It seemed such a pity that this not was not alive when the hands knocked off work on the Tower of Babel; he could have put the job through without extending himself.

No matter what the nationality of a guest might be and the guests were of many nationalities—he could tak with that guest in his own language or in any other language the guest might fancy. I myself was sorely tensed to try him on Coptic and early Aztec; but I held off. Mr. Coptic is not what it once was; and, partly through disset and partly through carelessness, I have allowed my command of early Aztec to fall off pretty badly these last few months.

All linguistic freakishness is not confined to the Continent. The English, who are popularly supposed to use the same language we ourselves use, sometimes speak with a mighty strange tongue. A great many of them do not speak English; they speak British, a very different thing. An Englishwoman of breeding has a wonderful speaking voice—as pure as a Boston woman's and more liquid; as soft as a Southern woman's and with more attention paid to the r's. But the Cockney type-Wowie! During a carriage ride in Florence with a mixed company of tourists I chanced to say something of a complimentary nature about something English, and a little London-bred woman spoke up and said: "Thenks! It's vurry naice of you to sezzo 'm sure." Some of them talk like that-honestly they do!

Though Americo-English may not be an especially musical speech, it certainly does lend itself most admirably to slang purposes. Here again the Britishers show their inability to utilize the vehicle to the full of its possibilities. England never produced a Billy Baxter or a George Ade, and I am afraid she never will. Most of our slang means something; you hear a newslang phrase and instantly you realize that the genius who coined it has hit on a

tappy and a graphic and an illuminating expression; that at me bound he rose triumphant above the limitations of the anguage and tremendously enriched the working vocabulary of the man in the street. Whereas an Englishman's idea of tinging slang is to scoop up at random some inoffensive and well-meaning word that never did him any harm and apply tin the place of some other word, to which the first word snotrelated, even by marriage. And look how they deliberately mispronounce proper names! Everybody knows thout Cholmondeley and St. John. But take the Scandinvian word fjord. Why, I ask you, should the English asist on pronouncing it Ferguson?

### American Slang From British Pens

AT OXFORD, the seat of learning, Magdalen is pronounced Maudlin, probably in subtle tribute to the ondition of the person who first pronounced it so. Generalsimission day is not the day you enter, but the day you eave. Full term means three quarters of a term. An orlinary degree is a degree obtained by a special examination. An inspector of arts does not mean an inspector of arts, out a student; and from this point they go right ahead, getting worse all the time.

When an Englishman undertakes to wrestle with Amercan slang he makes a fearful hash of it. In an English magazine I read a short story, written by an Englishman who is regarded by a good many persons, competent to udge, as being the cleverest writer of English alive today. The story was beautifully done from the standpoint of omposition; it bristled with flashing metaphors and whimical phrasing. The scene of the yarn was supposed to be Thicago and naturally the principal figure in it was a milionaire. In one place the author has this person saying, "I reckon you'll feel pretty mean," and in another place, "I reckon I'm not a man with no pull."

Another character in the story says, "I know you don't cotton to the march of science in these matters," and speaks of something that is unusual as being "a rum affair." A walled state prison, presumably in Illinois, is referred to as a "convict camp"; and its warden is called a "governor" and an assistant keeper is called a "warder"; while a Chicago daily paper is quoted as saying that "larrikins" directed the attention of a policeman to a person who was doing thus and so.

The writer describes a "mysterious mere" known as Pilgrim's Pond, "in which they say"—a prison official is supposed to be talking now—"our fathers made witches walk until they sank." Descendants of the original Puritans who went from Plymouth Rock, in the summer of 1621, and founded Chicago, will recall this pond distinctly. Cotton Mather is buried on its far bank, and from there it is just twelve miles to Salem, Massachusetts. It is stated also in this story that the prairies begin a matter of thirty-odd miles from Chicago, and that to reach them one must first traverse a "perfect no man's land." Englewood and South Chicago papers please copy.

Getting back again to guides, I am reminded that our acquaintanceship with the second member of the Mark Twain brotherhood was staged in Paris. This gentleman wished himself on us one afternoon at the Hôtel des Invalides. We did not engage him; he engaged us, doing the trick with such finesse and skill that before we realized it we had been retained to accompany him to various points of interest in and round Paris. However, we remained under his control one day only. At nightfall we wrested ourselves free and fled under cover of darkness to German soil, where we were comparatively safe.

I never knew a man who advanced so rapidly in a military way as he did during the course of that one day. Our own national guard could not hold a candle to him. He started out at ten A. M. by being an officer of volunteers in the Franco-Prussian War; but every time he slipped away and took a nip out of his private bottle, which was often, he advanced in rank automatically. Before the dusk of evening came he was a corps commander, who had been ennobled on the field of battle by the hand of Napoleon the Third.

He took us to Versailles. We did not particularly care to go to Versailles that day, because it was raining; but he insisted and we went. In spite of the drizzle we might have enjoyed that wonderful place had he not been constantly at our elbows, gabbling away steadily, except when he excused himself for a moment and stepped behind a tree, to emerge a moment later wiping his mouth on his sleeve. Then he would return to us, with an added gimpiness in his elderly legs, an increased expansion of the chest inside his tight and shiny frock coat, and a fresh freight of richness on his breath, to report another deserved promotion.

#### The Brigadier's Boast

AFTER he had eaten luncheon—all except such portions of it as he spilled on himself—the colonel grew confidential and chummy. He tried to tell me an off-color story and forgot the point of it, if indeed it had any point. He began humming the Marseillaise Hymn, but broke

off to say he expected to live to see the day when a column of French troops, singing that air, would march up Unter den Linden to stack their arms in the halls of the Kaiser's palace. I did not take issue with him. Every man is entitled to his own wishes in those matters; but later on, when I had seen something of the Kaiser's standing army, I thought to myself that when the French troops did march up Unter den Linden they would find it a tolerably hard trip, and if there was any singing done a good many of them probably would not be able to join in the last verse.

Immediately following this our conductor confided to me that he had once had the honor of serving Mr. Clemens, whom he referred to as Mick Twine. He told me things about Mr. Clemens of which I had never heard. I do not think Mr. Clemens ever heard of them either. Then the brigadier—it was now after three o'clock, and between three and three-thirty he was a brigadier—drew my arm within his.

"I, too, am an author," he stated. "It is not generally known, but I have written much. I wrote a book of which you may have heard—The Wandering Jew." And he tapped himself on the bosom proudly.

I said I had somehow contracted a notion that a party named Sue—Eugène Sue—had something to do with writing the work of that name.

"Ah, but you are right there, my friend," he said. "Sue wrote The Wandering Jew the first time—as a novel, merely; but I wrote him much better—as a satire on the anti-Semitic movement."

I surrendered without offering to strike another blow and from that time on he had his own way with us. The day, as I was pleased to note at the time, had begun mercifully to draw to a close; we were driving back to Paris, and he, sitting on the front seat, had just attained the highest post in the army under the régime of the last Empire, when he said: (Continued on Page 65)

# THE LANTESCANE ROSES

PERSIS pushed her coffee cup away and leaned back in her chair with a little frown. She was distinctly though vaguely unhappy, as no one has right to be on a terrace, with the Mediterranean spread out below, a blue tent of air above, blossoming oleanders nearby, and a viny pergola in the distance. Let us add, also, a well-spread breakfast table before one.

A well-spread breakfast consists precisely of a pot of coffee, another of hot milk, a tiny one of cream, a pat or a square of butter, and two crisp brown rolls. The remains of exactly this ideal breakfast, multiplied by two, which is the only known means to improve it, stood at this very moment on the table between Persis and her husband.

I have forgotten to mention the husband before. Yet he was very much there; and really there seemed to be no reason, at first blush, why he should not be included in the list of causes why Persis ought not to have been even vaguely unhappy. Yet Tom More, innocent as he both looked and was of the fact, was the very essence of his wife's discontent.

For Persis had hoped for a thing that had not come to pass, a thing almost as vague as her unhappiness because it had not come to pass. She had fondly fancied that when Tom and she were once in Italy together something would happen to their lives. Just what, she herself hardly knew, but something—a something that would render existence quite different from existence as it had been in their fairly expensive apartment in New York.

For one thing, there would be less business about it; it would be that much farther from Tom's office and Wall Street. As a matter of fact, Tom had nothing at all to do with Wall Street, except to bank there; but to Persis that served as a convenient synonym for all Business, with a big B, which devoured her husband's days—not that she had anything to

complain of specially or was of a complaining disposition; she had been very reasonably happy during all the years of her married life, but she wanted more—to be unreasonably happy. And it is to her credit, or to that of those who reared her, that she preferred to be so with her own husband. She nursed no secret flames; she had really never seen anybody she liked better than her husband.

Tom More was essentially a good fellow—even his wife thought so; but she had expected her husband to be something more than a good fellow, at least as regarded herself. She did not for a moment question his loyalty or devotion; it was patent that he loved her—in his own way—only sometimes she would have liked to be loved in another way. And latterly it had struck her that she detected in him the faint first beginnings of a certain matter-of-courseness which she justly resented, seeing there is nothing less a matter of course than marriage,

For his part Tom seemed satisfied enough. He was busy; that was the real difference in their case. There was between them that great and growing gulf which America makes between the keen man of business and the cultured woman he marries, who goes on culturing on his money. Tom's days were spent chiefly at his office, making money, and Persis' days were spent in spending. With the money Tom made she attended functions, clubs, lectures, theaters, operas; taking in with an admirable catholicity of spirit whatever came her way—Grierson, Ibsen, Bergson, the Academy Show, the Futurists and the Russian dancers.

Tom was pleased that she was amusing herself, and proud of her culture, even when that a little amused him. He had conscientiously tried to fulfill the American man's ideal of giving his wife everything she wanted, never doubting that what she wanted must be good for her to have; and, therefore, when she wanted a European trip he immediately offered to send her over with anybody she would name. Persis, however, wanted a European trip precisely with him. There were in her, unsuspected by her husband, certain loyalties of sentiment.

It had not been an easy thing for Tom to get away, even for two months; but Persis' augmenting unrest, culminating finally in a visit to an eminent physician, who had addressed a few cryptic sentences to Tom in private, had led Tom to see new light on his duty as an American husband. The trip, the doctor had said with a shrug, might save a nervous breakdown.

"Take All the Time You Want,

Tom had been horrified at the very notion of Persis' having nerves. He remembered hastily all the nervous invalids in their circle, and that Persis had indeed been what Tom charitably called almost irritable more than once of late; and he instantly subordinated business to Persis. Between the two there could not be a moment's question. Business, after all, existed mainly in order that Persis might be suitably supported. He spoke cheerfully to Persis of the European trip.

"Anything to make you happy, Persis!"

And they had a really good time planning it. They had had a good time carrying it out as well, as two well-bred and well-meaning persons are likely to do in traveling through interesting places. Once having come, Tom had thrown himself into the trip with the same energy he would have devoted to Construction—which was his branch of Big Business—at home; his thorough and tenacious grasp of Baedeker at times almost got on those nerves that Persis was supposed to have left behind. On the whole, however, they had had a very good time indeed. Persis had no just cause for grievance or discontent; merely she had made the disconcerting discovery that they remained substantially the same persons in Italy they had been in New York.

Up to now nothing had happened materially to alter their relations to life or to each other, and now they were on their lingering way up to Genoa, to take their steamer back—back to the same colorless life as Persis saw it; back to the same gorgeous and varied world where things were done according to her husband's vision of it.

And all the time Italy was getting more colorful every hour, with an ardor of conscious life to come that made all Persis' untried capacities for living cry out for satisfaction, for something to happen to her too.

With the vague hope of making it happen, she opened the one note that was her meager portion of their mail, glanced through it and laid it down

"We are just going to miss Jane. Seabury," she observed languidly.

Her husband, from the midst of his letters, without looking up, murmured an absent "That so?" They had just made connection with their mail, and his was, speaking continentally, of a largeness. Persiglanced at it with resentment. By the printed letterheads she knew they were business—that business she hoped they had left behind a America.

Persis frowned once more; and her discontented eyes, wandering across the terrace background of ilex and oleanders, were suddenly caught and arrested by another pair of eyes, belonging to the only other occupant of the terrace.

They were dark eyes—naturally, Persis would have told you, since they belonged to an Italian; actually there are plenty of blue-eyed Italian, beginning with His Majesty, the king—but these were the perfect dark Italian eyes of fiction, of the opera, of one's dreams in one's early Italian period. They were set in a very handsome face to match and were fixed on Persis without any effort on the part of their owner to disguise his interest in her.

It was quite a moment before Persis, absorbed in her train of thought, woke to their import; then she turned her own deliberately away, drawing herself up, at the same time, very slightly in a way that carried reproof. Not for nothing had Persis been well brought up.

The owner of the eyes smiled, ever so slightly too, beckoned to a waite, paid his score, rose, bowed like a wellbred foreigner to their table impersonally in passing, and went on his way. Now that he was not looking.

Persis' eyes followed him thoughtfully. He was undeniably suited to the landscape—she could not say why.

She fell to studying her husband. He was a fine, dear and lean American, as typical of one type as the Italian was of another. One felt that Tom More's cleanness raplike the scarlet thread of the British navy, all through His hair was brown; his color fresh, but not ruddy, because he was American, not English; his teeth were white, and his blue eyes held ever imminent the glint of their radial and inimitable humor, unmistakable as the Celt's, but usually were serious and determined as a man's must be who wars daily for his own bread and his wife's diamond and automobiles.

Really there seemed to be no reason why he, too, might not have fitted into the landscape, thought Persis, a only —— She sighed ever so little. Immediately her husband looked up.

"Tired?" he asked with concern. "Didn't you slee? last night?"

Persis shook her head, which might be an answer to either question, and returned one of her own:

"What are we going to do to-day?"

"Whatever you like," replied her husband promptly
qualifying with—"just as soon as I've dashed off a fee
notes. These"—he indicated some of the obnoxious letter-

heads—"have been twice forwarded. Burton must be dancing in the air by now."

"Oh, take all the time you want," said Persis politely. She took up her parasol. "I'll stroll toward the Pinzza, I think; it looks like a pretty place."

"All right; I'll overtake you somewhere. Can't lost oneself in a place the size of a pocket handkerchief."

Persis made no reply; she did not even turn her head.

It was the only sign she gave of her annoyance, but his bands acquire a sixth sense; and, by the pricking of his sixth sense, Tom was led to look after his wife, vaguely questioning. He even hesitated a moment, but those letters were quite too important—they meant more means

cars and things for Persis in the future; so he compromised by rushing up the hotel steps to dash them off at top speed, as the best concession to a divided duty. Persis was just

disappearing down the winding Way.

She dawdled on, twirling her parasol handle impatiently as she went. She was as nearly annoyed as she ever allowed herself to be. A Way barren of all happenings stretched before her mental eyes, sheer up to that steamer plank in Genoa and down on the other side to Broadway. Nothing would ever happen, she knew now.

That section of it immediately under her vision was, however, a very pretty Way indeed, consolingly so. It ran in curves above the cliff, bordered on one side by highwalled villas and on the other by a line of oleanders and tamarisks, through which the blue, marvelously modified by the rose and green and smoky mauves, played an astounding color scale.

Persis was no student of color, for all the Academy shows and the Futurists; so she merely felt the charm-but she did feel it. Over the villa's walls roses smiled and the tops of promising trees beckoned, and every now and then she came to an iron gateway which, closed or open, equally promised mysterious things within. To stroll down such a Way on such a day might, thought Persis, under certain circumstances mean a great many things, and she sighed.

The air streamed its filtered sunshine down; there were sounds within the sounds, odors within the fragrancesand all this was thrown away. Here she was, sauntering alone, and Tom fathoms deep in business, for all the world as though she had been-as she usually was-alone in New York and Tom in his office! Tom responded to none of these influences. Just what effect she expected them to have on him she hardly knew; but some effect. And already she perceived this was a delusion.

She had come in her wandering to another iron gateway between two posts, through which great masses of roses waved jubilantly to her. She drew nearer to read the name on the enameled plate.

" She tried the syllables aloud. "Villa Lant-Lantes -"Lantescane," pronounced a voice for her.

She looked up. It was her neighbor of the breakfast table, who smilingly corrected her pronunciation, his eyes on her face. And now he removed his hat politely.

"It is my villa," he said with a strong accent, adding quietly: "I am Count Lantescane, at the signora's service." Persis blushed crimson.

" she began stupidly. "I was only looking -

"At the roses?" he politely interrupted her. "Every one does. But will you not enter? The grounds are open to the public." Persis hesitated, looked once up the road, saw no signs of Tom, felt what is commonly called a just resentment and entered.

"It is no longer what it was," said the count with a slight sigh; "but the park is pretty. We have a rather good fountain and in the house a few really good pictures!"

He walked beside her with a simplicity that put Persis instantly at ease. After all, it was a very simple

thing. The grounds were open to the public, for presently they encountered other strollers, and the count's manner was irreproachable in its courtesy. If his eyes dwelt on her as the eyes of an American man never do, it was with a perfectly respectful homage. He might have, and as a matter of fact he would have, looked at her exactly the same if Tom had been there.

Now the peril as well as the charm of such looking—to the looked-at—is that the more one looks at you thus, the better worth looking at you become. The eye of the beholder does in such a case bring beauty with it, and to both the bringer and the

brought there is a pleasantness in the result calculated to lead to and even to justify courting the means.

In her own country Persis was a pretty, graceful woman, who passed unnoted among a million more; but by the time she had made the tour of the little park—she refused to enter the house-and was coming out of the gate again with her arms full of deep-red roses, she was a raving beauty—or, at any rate, near enough it for Tom, hastening with long and conscience-stricken strides along the road, to halt with extreme abruptness at the sight, and pull off his hat with another odd pricking of that acquired sixth sense of his. The count raised his hat and Persis briefly presented the two men to each other.

"I have been giving myself the honor of showing madame my little place," said the count.

"Giving her your garden, too, I see," remarked Tom. "Thanks, very much; flowers are a passion with my wife."

"Ah, indeed!" murmured the count, as though he heard it for the first time, letting his eyes stray meditatively from one to the other of them. "She must not lack them, then, in San Carlo. You are staying some days?"

"More or less," answered Tom, raising his hat.

"In that case we shall meet again."

The count bowed courteously, bringing his heels together, allowed his eyes to rest for a discreet moment on Persis, and turned away. "Seems a

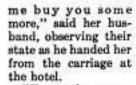

> observed Tom cheerfully, possessing himself of Persis' parasol and holding it dutifully over her head. Persis did not immediately reply. She was still experiencing the exhilaration that comes of seeing oneself in a flattering mirror, and felt subtly young and ex-

> cited. As it was not an emotion she could share with her husband, she sought and found an outlet for it in an artistically worked-up enthusiasm for a necklace of beryl and amethyst scarabs, strung on a wire of gold, in a curio-shop win-

> > dow to which they presently came, and beneath the awning of which they halted for protection from the blazing sun. She expressed so much admiration for it that Tom went in and priced it, returning with a fabulously named price, which Persis, ashamed at the success of her insincerity, vetoed.

> > Tom himself pronounced it rather a faded show for the money, and suggested a cab back to the hotel, mopping his brow the while. He was amazed to have his suggestion gracefully accepted-not that Persis was tired. It was a long time since she had felt so untired, so gayly alive; but she sat back against the carriage seat and let her gaze follow the dreaming sea below, while the red roses in her lap wilted apace.

"You'd better throw those things away and let

"Funny these roses can't stand their own climate better! I don't blame them, though; they look just as I feel."

"It is the Lantescane rose; it has been in the count's family for generations," said Persis, a trifle piqued. She did not add, as the count had done, that he did not give it to everybody.

"A family rose, really!" said Tom with a grin. "They

run that family racket harder than a Bostonian, don't they? Family trees I know; but a family rose tree

Persis did not reply; but she took the roses up to her room and put them in water, and when she dressed for dinner that night she fastened one to her gown. Then she stepped out on the tiny balcony, throwing the casements wide to the evening breeze. After all, it had been rather a nice day-almost as if something had happened. Below them the gulf of blue water, now opalescent, was studded with the looped-up sails of boats drifting home. And the boatmen were singing; somebody was playing a mandolin.

"Oh!" exclaimed Persis, flinging out her arms. "Isn't it wonderful!"

Tom, standing beside her, gave the scenery an honest and appraising look.

"It is certainly mighty pretty," he conceded. Persis turned on him.

"Confess! This is better than Broadway?"

No Doubt He Flirted With Every American

Who Came Along

The hint of a smile parted her husband's lips.

"They're rather different, aren't they? I admit this is prettier; but if you want me to say I honestly prefer it-I can't.'

"Well, I do!" flashed his wife with emphasis. "I could live here forever!"

Tom looked apologetic and slightly troubled; he did not want Persis to live here forever. When he spoke it was diffidently.

"Well, I dare say if I had been caught young-young enough—I should feel that way too; but as it is, honestly I think a little of it goes quite a long way. I'm used to being busy, you see," he explained apologetically. "It's different with you." To make a complete job of it he added: "And, after all, I don't see that it's so awfully much better than the Hudson."

The Hudson! And being busy! For a moment Persis wished they had never come. Her silence was eloquent and affected her husband as eloquence is meant to do. He followed her humbly down the stairs. Persis was all at once wondering whether the count dined in the hotel.

He not only dined there, but was their opposite at the table d'hôte; and, though he addressed himself almost exclusively to Tom, he made Persis aware, by forestalling all her little wants, that he lost no movement of hers; and his eyes told her that his Lantescane roses became her.

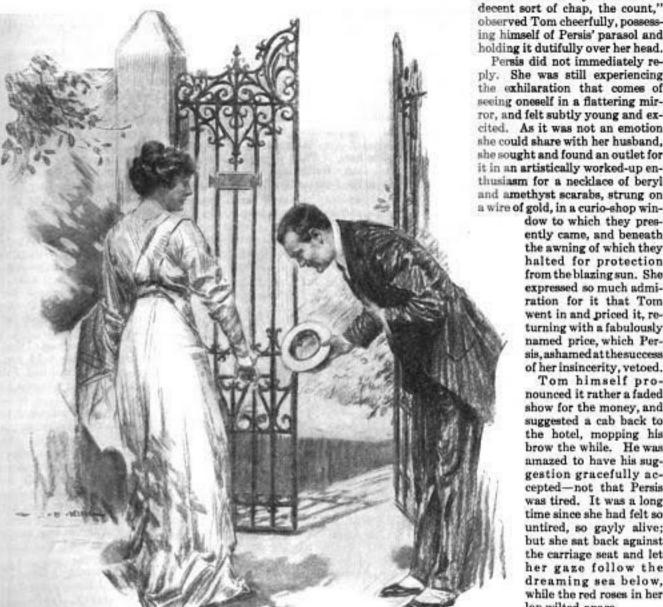

After dinner the two men smoked cigarettes in the garden and struck up a kind of acquaintance. Persis did not smoke-she severely disapproved of it for women; but to-night, following from her terrace the moving lights of the cigarettes, she half regretted her piety. Men were such companionable creatures! They seemed to find plenty to talk about. The count was a very intelligent man and a gentleman; Tom, by that birthright of the American man of affairs, was eminently a good mixer. Persis sighed and went to bed.

The next morning she woke with the sense of a little new interest in life, though it was some moments before she could remember what it was. She looked out a fresh waist from her store, fluffed her pretty hair with unusual care, and stepped out on the terrace to order coffee, while Tom stopped to get the mail.

She did not know what she expected, yet there was expectancy in the glance that swept the terrace. Nothing was there save an orderly array of tables, chairs and waiters; but on one of these, precisely that set apart for Tom and herself, flamed a great torch of crimson roses. Then at once Persis knew what it was she had expected, and her cheeks sent forth a tiny answering flame. She asked a quick question of the waiter who respectfully drew forth her chair.

"Da dove?" It was almost all her Italian, but she supplemented with it a gesture even more Italian.

"From the garden of the signore conte," replied the waiter respectfully, accurately shoving the chair under her with an adroitness born of a lifetime of chair shoving. And at

"I Am Count Lantescane, at the Signora's Jervice"

that moment the noise of another chair being shoved caused Persis to glance up, to meet the eyes of the Count of Lantescane, with a little smile in them, as he glanced from her to the roses and bowed. She asked no more questions, except of herself. Ought she to tell Tom? She decided that she ought—at least if he showed the least symptom of noticing, and she waited for his approach with indecision.

He came with downbent head, reading his letters as he came, and handing hers silently sat down, without observation or comment, and fell to an intent perusal of business. Persis watched him with mingled exasperation and relief. After all, it would be time enough if it happened again, she reflected. Meantime she kept her own gaze discreetly on her plate; and it was only when he paused for a brief morning salutation on his way out that the count's eyes found an opportunity to tell her she was even more charming this morning than she had been yesterday. Persis ostentatiously left the roses on the table.

The next morning there were fresh ones, and a fresh smile from the count as he openly regarded them and her in turn. Persis decided she would speak seriously to Tom if he betrayed even the smallest sign of intelligence in the matter; but he betrayed none. Apparently he supposed roses grew glued to their breakfast table or else that a benevolent Italian landlord furnished them free and fresh; or, more likely, thought Persis, he never even saw them at all. Something was happening to steel and iron just then, and Tom read his way unseeing through most of his meals. Persis decided to wait.

Every day thereafter fresh Lantescane roses appeared at Persis' plate, and each morning the dark eyes of the count saluted her with their little secret smile of deepening understanding. That was all, but it was enough. It was, indeed, abominably too much! To have an understanding, a continued understanding, with a man about which your husband knew nothing! The count, however, contrived to throw about it an amazing glamour of naturalness. His manner to Tom caused Persis alternately to shrink from his duplicity and to admire his command of the situation. And Tom went on reading his letters and Baedeker.

At first Persis told herself that to mention the matter was to make too much of it; later she came to feel there was quite too much of the matter to make it mentionable. She had tacitly accepted the roses by the mere fact of not rejecting them; she had also tacitly accepted the count's smiles by the mere fact of not rejecting those. Tom would wonder why; he might even resent it.

Well, Persis resented the presence of the big B, which prevented him from seeing what she had certainly taken no particular pains to hide. She carefully cultivated this resentment—she had to; it was her only justification—until with this simple and slender implement of wrath she had accomplished marvels. Not only did it enable her to go on accepting the roses, but it eventually permitted her to return smile for smile as she exchanged bow for bow, while Tom was unfolding his everlasting paper.

And here is the curious point: to have accepted smilingly the count's bows, smiles and roses would have been as nothing, the mere commonplace of polite intercourse, if Tom had been a party to the transaction; the whole quality of the adventure lay in Tom's ignorance, his willful ignorance, thought Persis severely.

The count was the great man of San Carlo, she had discovered. The last of his ruined family, he retained the

almost feudal prestige of a time when the little village had been an appanage of the Lantescane lordship. His acquaintance with them, distant though it was, gave them increased importance with the people of the hotel. And he was more than discreet. If he looked at Persis he talked with Tom-when he talked at all-only now and then addressing a few phrases to Persis; but those few phrases were spoken in another tone of voice and with another manner, which subtly conveyed that the rest had been but chatter and it was these few words with her that counted. It was impossible not to watch for that little change of voice.

Altogether and in spite of a guilty conscience, or perhaps because of it, Persis was enjoying herself, enjoying herself almost indecently. She grew prettier and younger every day. Tomsaid the climate agreed with her, and Persis had hopes that he would propose staying on longer therefore; but he did not, and she herself could think of no tolerable reason to produce looking to a change in the sacred schedule by which her husband inexorably moved. They had laid out the route beforehand; it was the only way, Tom said, to get the whole out of anything—just make up your mind and stick to it.

So Persis saw, with an unprotesting sigh, the approaching end of her little idyl on that day when Tom reminded her it was time to pack her trunks. Of course she had expected it to end; and they had certainly exhausted San Carlo. It was impossible to explain to Tom that she would like to stay and hear a man's eyes tell her daily that she was more charming every day, especially when she was not the very least in the world! Though why it would have been any easier to tell Tom if she had been is no plainer to me than it was to Persis herself, except that she may rightly have felt it would have been more respectable. She packed the trunks, only leaving out her very prettiest dinner dress, which she presently donned for their last dinner.

ner dress, which she presently donned for their last dinner.
"I shall miss my roses," she thought with a sigh, as she
fastened one for the last time on her gown.

She was all in white, having indeed made a quite unwarranted toilet for the occasion; but she would have been shocked to death if told that she was dressing for any man except her husband.

What she told herself was, she was dressing for the weather, which was certainly very warm—even Tom had remarked it; perhaps she was not to blame for not being able to distinguish it from the count's eyes, which were also warm. Warmest of all were her own cheeks when she joined her husband in the dining room.

"Aren't you unusually gorgeous to-night?" he commented gayly; and she murmured that the dress was cool.

The count's eyes at once told her she had not dressed in vain. No one ever does dress in vain for a foreigner. Had he had the opportunity he would have told her in conventional terms that her gown became her, taking as much conscientious pains to do so as an American would have taken to appear oblivious. As it was, his eyes told her respectfully—and it became more becoming on the spot. Decidedly she was going to miss those roses!

She had already begun to do so the next morning when she came down ready for departure. The count was there. She saw him give one quick inquiring glance from her hat and veil to the baggage, and then saunter slowly up to the desk, where Tom was paying the bill and leaving a forwarding address for Janet Seabury. The count said a few words to Tom; and then, when Tom went out to see the baggage stowed in the motor car, she saw the count stoop and copy something from the hotel register.

Persis pulled down her veil and decided to pass down the hall without stopping; but the count, hat in hand, was waiting deliberately to salute her, and before she knew it she was standing before him, with her veil thrown back. For a moment she looked straight into those somber wells of light that were the count's eyes. The next she was giving him her hand and saying under her breath:

"I shall miss the roses."

The count, who had bent in European fashion to kiss her gloved fingers, straightened himself and looked back into her eyes. "Chi sa?" he said with an enigmatic smile. "Perhaps not. Chi sa?" he repeated before he released her hand and turned, smiling, as Tom drew near.

"All ready, Persis!" announced Tom.

The two men exchanged a handshake, and the count's good wishes and the count followed them to the door, where the entire population of San Carlo apparently had gathered, nominally to wish them a "buon riaggio!"—in reality to reap an impatiently expected harvest. While Tom was engaged in scattering this, Persis from the depths of the car looked up once more to the top of the steps, where the count was standing bareheaded, but no longer smiling. He was still there when the car bore them away.

"Really, he's a very decent chap," Tom declared. "I gave him my card—told him if he ever came over to look us up." Here he extracted a Baedeker from his pocks. "I hope our rooms will be all right in Genoa; had to wire for them ahead." Receiving no response from Persis he subsided into what is known to good tourists as the Book.

There was nothing the matter with their rooms at Genea, and no regrets kept Persis from healthy sleep that night; only the next morning the image in her glass did not flatter her quite so much, and she was aware of a certain flatness about the going down to a hotel breakfast, as of already tasted food. One hotel breakfast is exactly like another hotel breakfast.

It was not until she was fairly in sight of the table reserved for them by a beckoning waiter that she regained her animation and color with a rush. There on the table was a flaming torch of roses—red roses—Lantescane roses; and when Persis raised half-frightened eyes she knew fatally what they must encounter before they actually met Count Lantescane's smiling at her across the room. He must have seen her come in and he bowed with a perfect self-possession; but Persis turned suddenly from hot to cold.

After all she was from New England, and this—nobody would call it at all nice! She resolved to speak to Tom at once, and the only reason she did not was that he caught sight of the count as he entered the room and stopped to shake hands with him cordially before he came over to her. After that, to say anything seemed absurd. She remembered, too, and for the first time gladly, that they were sailing at noon; the count would certainly not follow them across the ocean.

"Quite funny—meeting the count again!" vouchsafed Tom genially. "Came up on the midnight train, he says, to look at a little vigna he has up here; but it's odd we struck the same hotel."

And Persis answered weakly:

"Oh, I dare say every one comes here."

"Baedeker gives it a star," said Tom in explanation. He made no observation concerning the red roses, probably being convinced by now that they formed an integral part of an Italian breakfast, and Persis hurried through her coffee and did not encourage conversation. As soon as possible she went off to put on her hat.

But she was not to escape the count; the two men were talking together when she presently returned.

"And you are sailing, then, at noon?" she heard the count ask, and Tom's reply, with an ill-feigned attempt to conceal his joy:

"At noon, by the Savoia."

Then they caught sight of her, and two hats automatically removed themselves while the count's heels as automatically clicked together. "It is a fortunate destiny that

enables me to salute you once more, signora," he said, with his gentle and melancholy gravity of tone, "and to wish you farewell." His eyes said all the rest. They said it so well that against her every resolution Persis once more held out her hand to be kissed.

"That is the last of that nonsense!" she told herself severely behind her veil on the way down to the boat.

And while Tom went to look after table stewards and deck stewards she hunted up the room steward and went to her cabin prudently to forestall the future. On its threshold a whiff of fragrance met her and she stopped appalled. There on the stand was a superb mass of the Lantescane roses.

"Who brought these!" she asked the steward.

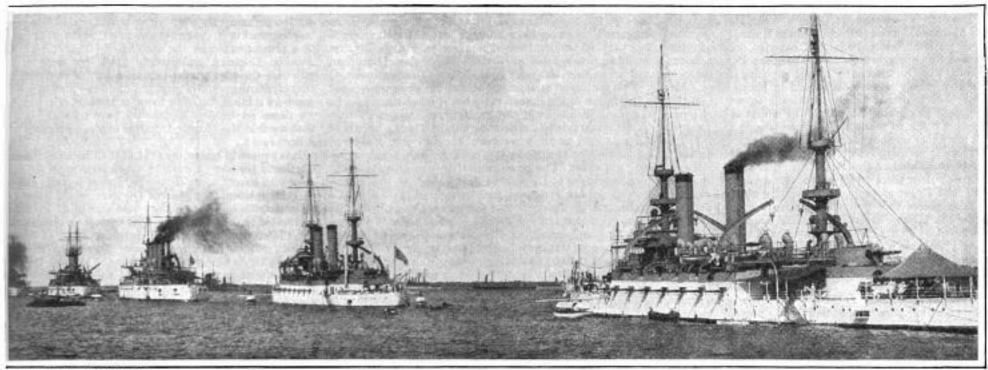

"A signor Italiano; doubtless a friend of madame."

# OUR CONTINENTAL POLICY

PACTO, BY PINA, THOMPSON, NEW YORK OF

A Fleet of American Warships

HE situation in Mexico brings the Monroe Doctrine forward out of the region of academic speculation. We have had

such discussion of the Doctrine and its application to the arious courses the United States was advised to follow efore our decisive step at Vera Cruz; but the air has not een cleared. Confusion, for the most part, results from alure to recognize the precise limitations of this policy—differentiate what President Monroe defined it to be from sevague notion of a continental protectorate so insistently the public mind.

There can be no greater hardship than to live under definite laws. The greatest safeguard of the citizen is at the laws shall be so certainly defined that no question in arise about their meaning. There is a like peril when it is a policies are not certain. If we are to consider the rm Monroe Doctrine to be synonymous with the terms ational Honor and General Welfare, or the like, then it simply out of the question to undertake to say how any alicy may affect it. These latter are terms that change ith education, ideals and public sentiment. No man can be what our conception of national honor or public welfare ay be; therefore no man can say what acts of foreign itions may be taken to contravene these vague ideals. If, however, we define the Monroe Doctrine to mean that

If, however, we define the Monroe Doctrine to mean that a land on this continent shall be considered as subject to reign colonization, and that no foreign nation is to be smitted to impose its system on any American state—at is to say, no land of any American state shall be taken any European Power, and every American state shall permitted to work out its own governmental policy, dependent of European intervention—then we have tablished a measure we may apply accurately to any roposed national act.

### The Army of the Allies at Peking

THE United States was urged in the beginning to regard Mexico as in a condition similar to that of China during to Boxer Rebellion—a country in a condition of internal taos, with no responsible government, and with the lives ad property of foreigners at the mercy of flying squadrons bandits. The President was advised to call a conference the Powers of Europe and march on the city of Mexico we marched on Peking.

It was pointed out that this armed intervention in him was accomplished as a concerted action and without by grave clash between the different authorities. In the arch on Peking there were Japanese, Russians, British, mericans, Germans and French. This force was, without ifficulty, put under the general command of the highest reign officer in China, who at that time happened to be ield Marshal Count von Waldersee.

The legations besieged in Peking were relieved; order as restored and maintained until China was able to guartee the general safety; and then the troops were withrawn. China was impressed by the fact that the nations the earth were determined to put down anarchy wherever might appear, and to insist on some form of orderly overnment everywhere in the world.

In the beginning certain authorities urged the United tates to take precisely this course with Mexico. There were

By Melville Davisson Post

n to the subjects of all the great Powers in Mexico; their lives and ing of troo

property were in jeopardy. And it was pointed out that these nations should be as willing to care for their unofficial subjects as they would be for the personnel of official legations; and consequently the same duty devolved on them to restore order in Mexico as to restore it in China. It was further indicated that if one nation should act alone—for instance, the United States—all patriotic Mexicans might resent it; but they could not resent allied intervention.

If Mexico were a country unaffected by the Monroe Doctrine, or what it is imagined to be, this course might have been undertaken long ago; but the Monroe Doctrine was generally considered to stand in the way of such a plan. It is interesting to consider just how far this position is tenable.

Mr. Roosevelt said to Congress, in discussing the Monroe Doctrine:

"We do not guarantee any state against punishment if it misconducts itself, provided that punishment does not take the form of an acquisition of territory by any non-American power."

And, again, he said to the Fifty-ninth Congress:

"Moreover, we must make it evident that we do not intend to permit the Monroe Doctrine to be used by any nation on this continent as a shield to protect it from the consequences of its misdeeds against foreign nations. If a republic to the south of us commits a tort against a foreign nation, such as an outrage against a citizen of that nation, then the Monroe Doctrine does not force us to interfere to prevent punishment of the tort—save to see that the punishment does not assume the form of territorial occupation in any shape."

And Mr. Olney said, during the Venezuelan controversy: "It [the Monroe Doctrine] does not relieve any American state from its obligations as fixed by international law, or prevent any European Power directly interested from enforcing such obligations and from inflicting a merited punishment for the breach of them."

Mr. Roosevelt was clearly of the opinion that Southern states could not use our policy to protect them from European Powers if they flagrantly outraged the rights of any foreign nation. It therefore happened that he did not consider the Monroe Doctrine to be involved when the ports of Venezuela were bombarded by German, English and Italian warships.

He took the position that if any Southern states refused to follow the usual customs of civilization, in their foreign relations, they must suffer for that defiance; and that, so long as territory of the state was not actually taken, our policy was not involved, no matter how severely the offending American state was punished for its misdeeds.

It is therefore certain that, so far as the Monroe Doctrine is concerned, European nations have the right to punish Southern states for gross violation of the ordinary humane customs of civilization, and they have the right to protect their citizens and their property. The main point is that European nations shall not occupy the territory of those states. We seem to have made a distinction: their ports may be bombarded, but marines ought not to be landed—the idea being that the Monroe Doctrine would not be violated by the land-

ing of troops in Southern states, but that European nations, having once occupied territory of an American state for a rightful purpose, might remain for a wrongful purpose. And to continue to occupy territory would be a violation of the Monroe Doctrine.

Some years ago European nations were about to seize the customhouse of the Dominican Republic. The United States undertook to act for them and took charge of the customhouse of that government, on the theory that if Santo Domingo were once occupied by European Powers it might continue to be occupied by them. A permanent occupation of the territory of any Southern state would be a violation of the Monroe Doctrine and would call for our interference.

The landing of European troops on the soil of a Southern state is not regarded by us as a violation of the Doctrine, but as a thing that may lead to a violation of it. It is not the act that contravenes our policy, but the probable result that may contravene it.

### Intervention Under American Leadership

IT SEEMS, therefore, clear that if foreign powers, independent of the United States, were to undertake to make a concerted march into the interior of a South American state, we might be forced to protest against it on the precedent of Santo Domingo—that is to say, on account of the fear that the Monroe Doctrine might be involved by the refusal of some one of the Powers to withdraw its troops. If the United States, however, were assured that these forces would be withdrawn and that no permanent occupation of the territory of the Southern state could result, then the Monroe Doctrine would not be drawn into the question. It would be no more involved than it was involved by the bombardment of Venezuela.

How could the United States be certain that the Powers would withdraw their troops? It would seem that if the United States should lead in any required intervention, and the whole expedition should be under the leadership of a superior American officer, as the Chinese expedition was under the leadership of Field Marshal Count von Waldersee, the difficulty would be removed.

It appears practically certain that the Powers could make no valid objection to a plan of this character if they should ever find it necessary to enter a Southern state. Small forces of Great Britain, France, Germany, and of other nations, associated with a larger American force and under unquestioned American leadership, might make such a joint intervention without infringing the Monroe Doctrine.

If it does not violate the Monroe Doctrine for European powers to protect their rights by bombarding Southern ports from warships, it is difficult to see how the policy is violated when foreign nations protect their rights by landing troops, if it is certain that the troops are to be removed after the wrongs have been corrected. If a concerted action by warships, in which we do not join and over which we have no control, is no violation of the Doctrine, how can it be a violation of it to have a concerted action of troops in which the United States takes the leading part?

Digitized by Google

If the whole expedition were under the command of an American general, as the whole Chinese expedition was under that of Field Marshal Count von Waldersee, it seems exceedingly unlikely that any portion of this command would be able to remain on Southern territory if the American officer commanding the expedition deemed it advisable to withdraw.

The current idea that Mr. Olney and Mr. Hay expanded the Monroe Doctrine to mean that the United States must alone settle all internal affairs of America, without interference by or suggestions from European Powers, is not sound. The Doctrine never meant anything like that. It meant precisely what Monroe said in his message. Mr. Olney's dictum that we are practically sovereign on this continent was gratuitous, as are the efforts of later secretaries of state to make the Doctrine vague and general. We are under no obligations to accept them.

There is no more reason why the United States should accept these modern theories as definitions of the Monroe Doctrine than there is reason for our accepting those of Polk and Grant as properly illustrative of it. President Polk suggested that we ought to seize Yucatan, because, under the Monroe Doctrine, we were bound to take over any territory that a European Power might be tempted to annex; and that was the theory adopted by Grant when he wished to seize the eastern end of the Island of Santo Domingo. It was a novel and ingenious conception of the Monroe Doctrine, but not one likely to appeal to us; as though one should say to his neighbor: "A highwayman may take your purse; and therefore, to prevent that misfortune, I shall take it myself." A piece of irresistible logic!

There can be no doubt that a concert of the Powers to police all disorderly places of the world is an advance. It shows that the human race is beginning to move vaguely as a unit and to consider the welfare of all. That it may lead to universal peace, to a sort of federation of all peoples, is a hope not entirely of the fancy. Every concerted move, then, looking to the welfare of all is to be encouraged. The joint action of civilized nations carries more weight and incurs less antagonism than that of a single Power. It is the force of united national opinion. As a man is more influenced by the concerted act of his neighbors than by the act of one, so a nation must be more impressed by the joint act of all the great Powers about her.

#### The Nation Not Bound by Heresies

If THE United States should be of the opinion, then, that it would be wise for all the Powers interested to intervene at any time in Southern affairs, for the purpose of establishing order and protecting the lives and property of foreigners, it can be done under the dominating leadership of this country without affecting the Monroe Doctrine.

The fact cannot be overlooked, however, that this policy is not accurately understood by the people. Unfortunately the conception of it is uncertain. The general impression is that we have forbidden any armed European foot to touch, under any pretext, the soil of a South American state. This is a foolish, dangerous and profoundly erroneous idea. That is not the Monroe Doctrine—it is a heresy superimposed on it; but it is widely believed and is the current opinion of the average citizen.

Therefore it must be recognized that if, in the beginning, the Administration had undertaken to negotiate joint inter-

vention of all the Powers in Mexico it would have been subjected to the gravest criticism. Those opposed would have marshaled a vast patriotic sentiment. A popular appeal would have been made to patriotic motives. The Administration would have been charged with the abandenment of American ideals and a surrender to European domination.

All this criticism might have had no base in reality, but it may very well be doubted whether any A d ministration would dare to undertake the experiment of stemming such a current of misunderstanding. It might be that a great executive, sufficiently in the confidence of the whole people,

would have been able to go forward with it, and so to clearly define the limitations of the Monroe Doctrine that the people would have been able to see that no national policy of this country would be violated by such a course.

Looking at the situation from all quarters, however, one must admit that the undertaking would have been extremely doubtful. Old wars, especially with Great Britain, have left their heritage of bitterness. Emigrants from oppressed countries have brought with them their sentiment against the dominion of monarchies. Any policy that would seem to conciliate or invite a joint action of European nations on this continent would inflame this sentiment.

This sentiment is anachronistic and a pressure against a federation of the human race, but it exists and must be reckoned with. Even the great peace movement that Count Mouravieff inaugurated on the twenty-fourth of August, 1898, at the direction of the Emperor of Russia, has, from time to time in this country, been opposed by this sentiment. The pressure of it was so great that the representatives of the United States declined to sign the twenty-seventh article of the Convention for the Pacific Settlement of International Disputes, except with the reservation that nothing therein contained should be construed to imply a relinquishment by the United States of America of our traditional attitude toward purely American questions-thereby excluding the United States from the obligation of submitting any American question concerning this continent to The Hague Court.

If the Chinese and Japanese had excluded any Asiatic question, and European Powers any Continental question, international questions to be settled by arbitration would have been difficult to find.

However, if any Administration were powerful enough to substitute in the public mind the actual Monroe Doctrine for the current Monroe heresy, the joint intervention of all Powers, when such a course might become necessary in South American affairs, could be had without violation of any American ideal.

We have seen that the United States could hardly permit foreign Powers to intervene in Southern states exclusive of ourselves—not because the Monroe Doctrine would be thereby violated, but because it might be violated by the refusal of some one of the Powers to withdraw its forces after the necessity for them has passed. And we have seen that the United States, dominating a concerted movement of the Powers, could intervene in Southern states without violating the Monroe Doctrine, but at the peril of rousing a great sentiment that might destroy the Administration which undertook it.

A measure to avoid the pressure of this false sentiment lies in the plan of settling disputes on this continent through the mediation of American governments only, and the recent efforts along that line are a decided advance. Such stable governments as Argentina, Brazil and Chile could very well join with the United States in maintaining order where it is necessary, and to protect the lives and property of foreigners. Such a cooperation of American Powers with the United States could, of course, in no way affect the Monroe Doctrine or any American tradition. It is probable, also, that it would provoke less resentment on the part of the American state so entered than if the invasion were by European troops.

It is by no means a mere fancy that we shall be able in time to effect a confederation of Southern states, which, with the cooperation of the United States, shall underage to settle all American disputes without the intervention of any European Power. This would be an ideal solution of the difficulties on this hemisphere. A good deal has been done toward such cooperation, and it may be accomplished. It is an end well worth every reasonable effort.

It must be admitted, however, that to make such coloreration permanently effective we must get rid of the sendent against us in the South; we must get rid of the heap of a protectorate and the unsolicited elaborations of the Monroe Doctrine gratuitously made by some of our officials—the idea that we sit as a sort of overloot, and that all Southern states must maintain the kind of government we think is suited to them, or the sort of civilization we deem advisable. We should have to make it does that we take the Monroe Doctrine to mean precisely size it does mean.

It is proper to remember that, if the United States were to effect a permanent working cooperation with the South American governments for the purpose of settling dispute on this continent, the Monroe Doctrine would in newselve to the purpose of it, usually attributed to Olney and Hay, that there is an obligation of the United States to settle the internal affairs of America herself, without interference and suggestions from my other Power, is hereby. It never was the Monroe Doctrine to day except by the use of that elastic construction for which are courts are famous.

### The Egotism of Mr. Seward

THIS brings us to the inquiry as to whether the United States is, in fact, under any obligation to take any attrecourse toward a Southern government unless our national honor is involved or our citizens are in peril. The fetage notion that because the United States declines to peralla European Power to colonize any part of America or toler troops for the purpose of oppressing any South America state, or impose its system on it, we are thereby united obligation to police Southern countries, is error.

By the maintenance of the Monroe Doctrine this county does not undertake to establish order in any South Ansican country, or to collect the debts of any foreign Powe, or to force any Administration to meet its obligation.

Our traditions do not obligate us to send an involute army into any South American state unless our our national honor demands it. We have not undertake a Mr. Roosevelt has pointed out, to protect any Southern state from the result of its wrongdoing. We undertake a protect it only from foreign colonization and from being forced to adopt a form of government suggested or imposed on it by a European Power.

Thus we stood calmly aside and allowed England, Germany and Italy to bombard the ports of Venezuel; and before that, in 1861, outrages on foreigners became a flagrant in Mexico that they led to a treaty of joint intevention. Great Britain, Spain and France felt it necessary to intervene. Later Great Britain and Spain withdraw their troops; but Louis Napoleon remained. Afterward the United States pressed France to withdraw her troop, which was finally done.

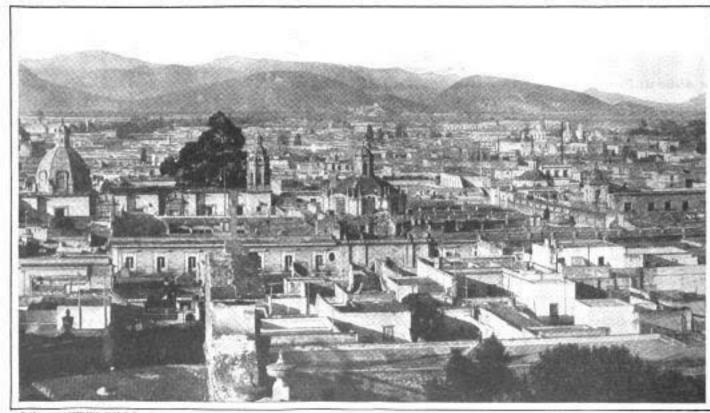

It seems strange that Mr. Seward, in presenting the request of the United States, made no mention of the

Monroe Dectrine it has been explained that this arose from the egotism of the official, who too himself to be as atthority as great a Monroe and lie Cabinet.

At any rate, san the Monroe Doctris was announced at accepted, Europea nations have nich fered in Souther states for the purpor of protecting the rights of ther zens and their proerty; and we have felt it our daty a object only six there was danger that these foreign Prope American soil.

would remin a American soil.

Our only regard for putting the retombouse of Sub Domingo unit. American control was the fear that a Concluded at Page 77.

View Over Mexico City From the Tower of the Cathedral in the Central Square

### THE FAKERS By Samuel G. Blythe

TICKS remained in Mrs. Lake's boarding house, but he expanded a bit. He took a larger room on the second floor, and fitted this up as he thought a room should look. He had a banjo on the wall, though he couldn't play a note on it. He had a guitar standng in a corner, and so far as he was concerned it might as well have been in Senegambia for all the music he could nake on it. He had Indian clubs over he mantel, and couldn't swing them to ave his life. A pair of foils hung under a picture of No Cross No Crown that went with the room, and Tommie didn't know which end he would grasp if he had to use

He had picked up a snowshoe and it vas displayed conspicuously near the door, and he had no idea whether snowshoers sed one or two shoes in their progress.

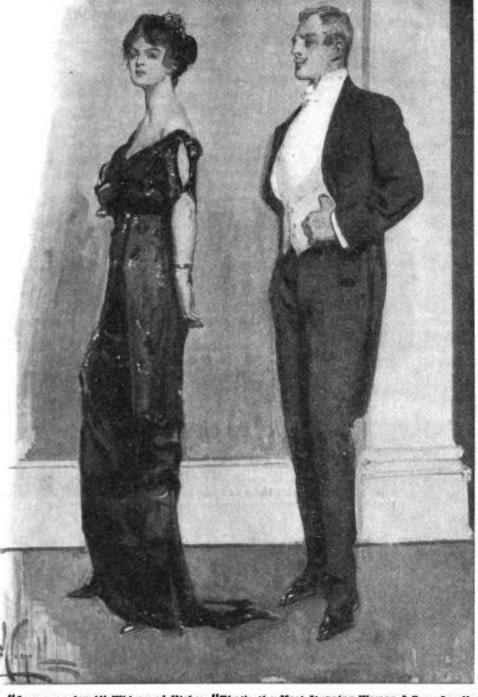

A pair of Harvard pennants had the slace of honor opposite the entrance. licks always considered himself a sort of Harvard man, for he would have been me if his father had not died, and he peke of "Dear old Harvard" whenever ie was sure no one was present who had een to Cambridge. Once, while looking n the window of a pawnbroker's shop, he ad been sorely tempted to go in and buy a ireek-letter fraternity pin displayed there, at he refrained. He knew he might one lay run across a member of the fraternity ntitled to wear that pin, and he felt he vasn't quite up to negotiating a grip and assword and all that.

One day, while browsing in a secondand store, he came across a framed photoraph of President McKinley, which was igned "Yours truly, William McKinley, uly 16, 1897." It was one of the hunreds of such photographs signed by every resident, and it had fallen into the hands the junkman. Hicks bought it, had it eframed and hung it in his room. He poke of the picture frequently and told ow President McKinley gave it to him then he visited him at the White House. 'An old friend of mine from boyhood up," e would say, as if he were on the closest erms of intimacy with the president. rom time to time he added other phoographs to his collection, but put up one but pictures of prominent men. As oon as a picture was hung, the pictured one became the

ong-time friend of T. Marmaduke Hicks. He was popular in the boarding house. In addition to eing good looking and lively he had an emphatic way of peaking, using many gestures to make his point, which almost every instance concerned himself, and never esitating to exaggerate to make himself heroic. He was killful at this, and usually managed to have an element f truth in what he said in case any one disputed him too arshly. He was an adroit flatterer and paid particular ttention to the ladies, talking to them and fussing over hem; and they to the last one pronounced him a most harming young man and sang his praises wherever they ent. He would let an old lady bore him for an hour with quavering story of her troubles and pains and aches, if he bought she would say a good word about him sometime. and she always did. When he was talking, and saw an xpression on the face of one of his listeners that betokened oubt or even incredulity, he immediately shaped his conersation to convince that doubter and directed the force f his argument or narrative to him.

It was customary at Mrs. Lake's for the boarders to ather round the piano at night for a little close harmony. licks had a voice with two or three good notes in it, but e could not carry a tune or sing anything alone. He knew 18t when these notes would carry, and he used them every ime he had a chance. He never knew the words of a song, ut faked them, humming along until he could throw in ne of his good notes. When he was asked to sing a solo he sughed and protested he couldn't think of it. Modesty orbade!

The custom of dressing for dinner on Friday nights he crupulously observed, and, discarding his ready-to-wear inner jacket, he had secured a full-dress regalia and wore with much effectiveness. He was tall and of good figre, and attracted attention at any outside functions he ttended. These were not many, for Hicks did not seek

"Jee-ru-sa-lem!" Whispered Hicks. "That's the Most Stunning Woman I Ever Jaw"

much after society. He was busy studying politics and law, besides doing his work for Paxton. He had been to a White House reception or two and went occasionally to the theater, taking, in regular succession, the various unattached ladies who lived with Mrs. Lake.

One Tuesday night, after all the regular guests were seated in the dining room and Hicks had begun to explain learnedly to his table companions what was the exact political significance of a measure pending in the Senate, Mrs. Marnie, a business woman who was one of the regular boarders, interrupted him with a long-drawn: "Oh-h-h!" Tommie looked at her. She was staring at a man and a woman who stood in the doorway. Tommie turned and stared also, as did everybody in the room. The soup was

The woman entered, followed by the man. They walked down the center of the room, apparently unconscious of the presence of any persons there save themselves.

"Gee!" said Hicks half aloud. "A corker!"

The woman was tall and dark. She wore with much effectiveness a black spangled gown cut in a low "V" both front and back. The trail was long, and the spangles, which shimmered softly in the shaded light of the dining room, were so closely set together that they gave out a little soothing, rustling sound as she moved. Her arms were bare and white and round. Her gown was molded so closely to her figure that every curve was accentuated, and she carried herself with grace, advancing with a glide rather than a walk. Her neck and shoulders were creamy white, her black eyes flashed brilliantly, and she exhaled a slight perfume that seemed to be the combined odors of many flowers. Her purplish-black hair was arranged in an elaborate coiffure which held a rhinestone ornament that glistened and sparkled. She wore no color of any kind save one red rose at her waist, a little on her cheeks and plenty on her lips, which were vividly crimson and contrasted sharply with the healthy pallor of her cheeks.

"Jee-ru-sa-lem!" whispered Hicks to Mrs. Marnie. "That's the most stunning woman I ever saw."

"Sh-h-h!" Mrs. Marnie whispered back. "Don't talk-look."

The man was big and blond. He wore evening clothes correct to the smallest detail. When they reached their table, which evidently Mrs. Lake had allotted to them previously, he pulled back the chair for her with elaborate courtesy," bowed to her after she was seated and helped her arrange her draperies.

"Merci!" she said to him prettily, looking up and smiling.

Lucky dog!" thought Tommie.

The man bowed to Mrs. Lake, made another bow that included the rest of the room, sat down and began a conversation in French with the woman. He talked in a low voice, but all those in the room heard him, for no other person said a word and all were staring. The woman replied vivaciously in the same language, using her hands in pretty gestures and shrugging her bare shoulders expressively and frequently. Apparently the man's conversation was interesting, for she punctuated what he said with frequent tinkling laughs and often turned to him in smiling enjoyment of some particularly entertaining remark.
"They've just come back from abroad,"

Mrs. Marnie whispered to Hicks, for Mrs. Marnie went to Paris frequently in the course of her business and knew French. "They are talking about some of the places they have been to and the big people they have visited. He has been recalling a time when they were at a villa at Deauville staying with some French fashionables, and they've said some things about

being in Russia too."

"Not Americans, then?" asked Tommie. "Oh, yes, I guess they are," Mrs. Marnie replied, "but they have been abroad for a long time."

The man and the woman paid no attention to the others in the room, although it was apparent that the woman was acting a little to make an impression, and she was successful. Some of Mrs. Lake's dinner was uneaten that night. The waitresses came and went, removing halfconsumed food, for the other women in

the room were too engrossed in assaying the newcomer and commenting on her among themselves to have much time left for eating.

"Looks like a regular Frenchwoman to me," said Tommie.

"You never can tell," the wise Mrs. Marnie replied; "but that's a French rig she has on, you may be sure of that."

After they had finished their meal the man rose, helped the woman with her chair, waited deferentially until she had preceded him, and, bowing again to those in the room, followed her as she swept out, her spangles rustling in cadence to her graceful movements.

As soon as they had passed through the door the room buzzed with comment. "Who are they?" chorused the boarders at Mrs. Lake.

"Mr. and Mrs. Hugo de Mountfort Lester," Mrs. Lake replied. "They are here for a short stay and are foreigners, I think, for they talk mostly in French."

The boarders gathered in the big hall round the fireplace and discussed the Lesters. The women took acute stock of her costume, her figure, her hair, her general appearance, her reddened lips, her gestures and her shrugs; the men contented themselves with the general statement that Mrs. Lester certainly was a peach. The Lesters did not come down again, and at ten o'clock Hicks went up to his room. He repeated the name over many times-"Hugo de Mountfort Lester."

"By George!" he said as he turned out his light; "I'd like to know that woman. She's a corker-a regular stunner. I wonder who they are.'

Hicks dallied over his breakfast, hoping the Lesters would come down, but they did not. Mrs. Lake explained, after he had made a casual inquiry about the new guests, that they had arranged to take their breakfasts in their room, saying they had lived in France so long that they preferred the continental meal of coffee and rolls. They were discussed again at the tables. The women generally concluded that Mrs. Lester was French, although one or two thought she must be a Russian, as she had used a few phrases of that language, or of what they took to be that language, the night before. Theman undeniably was an Englishman. All were agreed upon that.

Tommie usually ate his luncheon at the Capitol, but he made an excuse to Madden about some papers left in his room, and came to the boarding house in the hope of having another look at Mrs. Lester. As he turned in at the house Mrs. Lester came out on the porch. She was dressed in a blue tailored suit which displayed the numerous perfections of her figure to the best possible advantage. She wore a chic little French hat and she was altogether the best-dressed and most charming woman Hicks had ever seen. She had a big, squat, ugly bulldog on a leash tugging along ahead of her, and she was saying pretty, endearing things to him in French, calling him her baby and her darling, and otherwise lavishing affection on him that was not appreciated, for the dog tried valiantly to get away from his mistress to proceed on adventures of his own up the street.

Mrs. Lester's eyes sparkled, her cheeks showed just a touch of red, her manner was vivacious and her one-sided conversation with the bull-dog animated. Tommie racked his brain for something in French to say to her. All he could think of was d la carte, and he knew that wouldn't do. Mrs. Lester apparently did not look at him. She leaned gracefully back against the tugging of the dog on the leash, a fascinating picture.

Just as she started down the short flight of steps leading from the porch to the ground Tommie had a thought.

"Bongjoor," he said, lifting his hat.

She turned her head and smiled a bright little smile. "Good morning," in musical English she saluted cheerily and ran along with the dog. Tommie was quite pleased with himself. He didn't know exactly what his bongjoor meant, but he thought it had answered the purpose. That night he sought an opportunity to talk to the Lesters, but they went immediately to their

room after dinner and next day they left. Mrs. Lake said they had been called out of town. The picture of Mrs. Lester and her dog remained long with Tommie. He often thought about her and wondered if he ever would see her again. So far as the boarding house was concerned the Lesters vanished completely. They did not tell the land-lady where they were going, and presently everybody forgot them—everybody but T. Marmaduke Hicks.

### VII

THE Spanish war came with its exciting days. Hicks was kept at the Capitol with Senator Paxton almost continuously. He thought of enlisting in order to gain a war record to aid in his future political adventures, but was deterred by stories of long waits for ambitious and embryo heroes at camps where the principal fighting seemed to be with typhoid fever, and by the assurances of Senator Paxton that the war wouldn't last long enough to enable anybody to get any glory out of it. Besides, Tommie was intrinsically no hero. His conception of the situation was that he could be of greater service to his country—and himself—by confining his fighting to the bloodless arena of politics rather than by going to the jungles of Cuba for that futile purpose.

Peace was concluded. The Cuban and the Philippine problems obtruded, and then came the morning when Senator Paxton made his rescue of the child on the avenue. A few days after Hicks' presentation of the episode through the columns of the Evening Dispatch, Paxton called Madden into his office.

Madden was on the most confidential terms with Paxton. He had been with him for fifteen years, and had come to be the senator's political executive as well as his intimate adviser. Paxton had given him every test for loyalty, and Madden never failed to prove true blue. His principal interest in life was to be of service to Paxton, and his chief ambition to do as Paxton would have it done each task Paxton put upon him. He had much of political shrewdness and, though he lacked initiative, once instructed, he was a marvel at performance.

"Bert," said the senator, "have you sounded out young Hicks lately?"

"What do you mean?"

"Have you had any conversations with him about his future? What has he in mind?"

"I think he intends to pick out some place in our state or another, take up the practice of law and go into politics."

"Has he selected a city?"

"Not yet, so far as I know. He is saving his money and plugging at the law, but I suppose he wants to stay here for a while yet."

"Oh, I don't want to get rid of him. He interests me and he's useful too. It isn't often that an old, track-sore, tired politician like myself finds both amusement and aid in an assistant—not thinking of you, Madden, not at all: I like him."

"So do I," said Madden. "And, take my word for it, he'll glad-hand and talk himself into something good one of these days."

"That's my idea. He's fresh, of course, and a bit blatant, but potentially he's the ideal fake friend-of-thepeople politician. He's smart and adaptable—I might say ductile—and I never knew a young man who so continuously kept his eye on the main chance."

"Nor I. What he wants is to get along, and he'll get along too if he has half a show. He's the brightest kid we've had in this place since I've been here, and he does his work well. And when it comes to getting publicity the climbing mother of a fashionable débutante is a mere amateur compared with Hicks. He took part in a moot court the other night, and you'd think, to see the accounts of it, it was the president himself instead of Hicks who was there!"

"I have observed that phase of his activities, and I've half a mind to trust an experiment with him.

"What sort of an experiment?" asked Madden, wondering what whimsical idea his chief was harboring. "The experiment of proving that a man of his peculiar

abilities can make a great success in politics by following a certain course of action in a certain way. It has been proved often enough, but not scientifically, Bert, not scientifically. Hundreds of men have done what I have in mind for him to do, but their actions and the results therefrom have been sort of haphazard except in a few instances. They just happened on the scheme that gave them success. What I want is to prove my theory that the greatest popular success of a certain kind in politics can be attained by entirely superficial methods. Do you follow me?"

"Not exactly."

"Well, take a look round the Senate. There's Jaxon, who is nothing but a noise which is always noisiest when the dear people are concerned. And Bogardus, as arrant a demagogue as ever came to this capital, and he is returned times without number because he is continually blatting about what he is doing for the general uplift. Watch McPhyle for a little. Totally without ability except for stringing words together, he has talked himself to the top by the simple expedient of proclaiming himself the only honest man. What do you think of Somerset, who is tied up with a dozen corporations, and who gets away with it by constantly braying his antagonism to all trusts not specifically on his list of retainers? And Anstrutter, who

secures his by his reputation of rugged, sterling honesty and his assumption of the plain-as-anold-shoe pose, when he is luxurious as a sybarite and crooked as a dog's hindleg?

"There are dozens, scores, hundreds more of them in politics—four-flushers, trimmers, hypocrites, humbugs-playing both ends against the middle; posing as religious and pious, when in reality they are foul and vicious; howling for restriction of the liquor traffic because restriction is indorsed by the good people at home. and doing their best to restrict it here and elsewhere by drinking all they can buy or can get others to buy for them; espousing every measure favored by church people, yet living up to none of them in their daily walk and conversation; grafters, who yammer of their purity and pester to death for money some of us who are not so virtuous and are willing to sell the votes for it; men who roar from every stump about their labors for the people and rur behind the closed doors of every committee room and their own offices for their share of the graft; men who are so cheap they can be bought by special favors and by a few filthy dollars: men who haven't an honest conviction on any subject and who are willing to resort to almost any expedient to hold themselves in office; But why go on?"

"What have these to do with Hicks?" asked

Madden as the senator paused.

"This: There are certain processes by which
these men retain themselves in politics. Most
of them are crude workers. They all begin with
about the same raw materials Hicks has, and
have developed them each along his own lines.
Each has his good points as a political fake
and each has his weaknesses. Now here is what
I have in mind: Why not, knowing these met
and many others like them as we do—why not
make a scientific, exact compilation of all their
excellences as fakers, discarding their weak
points, and then combine all those good points
in the practices and purposes of one man?"
"Do you mean in Hicks?"

"Hicks is exactly the person I do mean. He is the biggest potential political faker I ever

saw. He has it in him. He can get about anything he wants if he will play the game as I shall outline it to him."

"I am afraid I don't understand."

"Well, let me make it specific: Suppose I say to Hide that I'm interested in him and will finance him to a reasonable extent and send him out to some good town, to live there and practice law. Suppose I get some fun out of it by coaching him, and as the result of my coaching—and yours, Madden, for you know this game—and his natural abilities, we make a foray into politics, Hicks to get the rewards and Paxton to have the fun. Don't you think we could put something over?"

"It might be done," answered the conservative Madden.

"Might?" exclaimed Paxton. "Where's your imagination, Madden. Might? Why, man, it's being done every day of every year by men who are working by impulse instead of being scientifically directed and managed. Men are getting to Washington who are mere clumsy amateurs at this friend-of-the-people game. With Hicks properly located and properly instructed, there would inevitably result a triumph of political fakery that would amaze, even us, accustomed as we are to the outcome of such propeganda. I tell you, Madden, we can erect, direct, own and operate a first-class tribune of the 'pee-pul'."

"By George!" said Madden. "We could, and have a heap of fun out of it too. But what do you want Hicks to do!"

"Nothing, nothing on God's green earth he wouldn't do himself, with this difference: What he does he will do accurately; those he does he will do scientifically, without lost motion or scattered effort and in full accord with the latest standards. He will have the expert instruction of William H. Paxton, who knows a few things about this great, bogus game of politics and is pretty thoroughly disgusted with it; more so, Madden, than you imagine." Oh, I don't know about that," said Madden. "I see

"Oh, I don't know about that," said Madden. "I = pretty well aware of that phase of it."

"Well, then, why hesitate to give your approval to the socio-politico-Hicksico experiment? Come on, well organize a corporation and I'll be the board of directors and take my dividends in amusement. Hicks can be the promoter and reap his reward in promotion profits, and you can be the advisory committee and get the subsidiary increment. What do you say?"

"All right!" Madden was enthusiastic—for him. "It has possibilities. But—" and his natural caution el-truded—"do you think Hicks will stay put?"

"Oh, I guess so, but even if he doesn't, that is one of the phases of the game. You must take a chance. I think he will, for he knows where his interests are better than up other young person of my acquaintance."

"Have you talked to Hicks?"

"Not yet, but send him in when he has some leisure." Madden went to the outer office. Hicks was filing letters. "Tommie," Madden said, "the senator wants to see you." "Do you want me, senator?" asked Hicks soon after-

"Yes. Sit down."

Hicks took a chair, wondering what the senator had in his mind. He hoped he was to get an increase in salary. He was fearful he was to be disciplined for the rescue incident.

The senator looked at his assistant secretary for half a minute. He noted the long hair, brushed back from the forehead; the flowing tie; the general air of a modified political make-up. Then he took an inventory of Hicks' face. He saw a broad, low forehead, a fair nose, a clean complexion. The lips were large and full and the lower one slightly pendulous. The chin was just a chin with no strong characteristic. Paxton dwelt longest on the eyes. They were small eyes, set close together, hard eyes with greenish glints in them. Hicks smiled. He had a pleasant smile, that lighted up his face and made him appear affable and good natured. But there was no smile in the eyes. With a better mouth the face would have been a fairly strong one, but with those eyes and that mouth it was the face of a youth willing to do whatever was necessary, and to consider necessary whatever there was to do.

"Tommie," Paxton asked finally, "what are your plans?" "Nothing new, senator. I am studying law nights and

trying to fit myself for practice."

"Where?"

"I haven't decided. I am considering several places."

"Probably you have an idea of entering politics also?" "Why, yes, I have thought of that." Hicks wondered what the senator was leading to, for he knew Paxton never asked such questions to gratify a casual curiosity.

"Have you looked over Rextown?"

"Rextown? Why, Rextown isn't in our state!"

"I know, but it may be that opportunities exist elsewhere in this great republic than in our imperial commonwealth?"

"Possibly," Hicks replied, at a loss to understand the drift of the conversation.

"Probably," continued Paxton. "Now I happen to know some things about Rextown, and it seems to me an ideal place for a young and aspiring lawyer to make the scene of his operations."

"Is it?"

"Yes, it's just the place for you, particularly if you desire to go into politics, as you say you do and as I think you should do. Let mesuggest that you go to Rextown and join the Democratic party.'

Hicks jumped from his chair. "Join the Democratic party!" he exclaimed. "Why, senator, I am a Republican, my father was a Republican and helped organize the party, and you are a Republican. What do you mean?"

"I mean exactly what I say. Go to Rextown and join the Democratic party."

"But I am a Republican and so

are you," protested Hicks.
"I know; I know. I am too old to reform, but you are not. You are young and facing the future. I am elderly and principally concerned with trying to forget the past. I have been attracted by your good mind and general adaptability to your environment. I have thought a good deal about you. I suggest Rextown entirely in the capacity of an old and mayhan astute observer, who takes you up on a mountain and shows you things below that you may obtain. You have ambitions. I have nothing better to do at the moment than to make a few suggestions in an entirely friendly manner that may help you to realize those ambitions. Do you know anything at all about Rextown?"

"Not much."

"Well, it is a fine, thriving city of about forty-five thousand people, and so strongly Republican that no Democrat has been elected to anything there since the war."

"Then what's the use of being a Democrat?"

"I expected you to ask that. As I say, Rextown gives an overwhelming Republican majority and the outlying towns in Corliss County are practically unanimous for the Grand Old Party. The result is that every young man who goes there and all those who have grown up there are Republicans, either from conviction or for the sake of policy. This is especially true of the young men and the older ones who have office in mind. There's no sense in being a Democrat there, looking at it in the light of getting an immediate or a possible something out of politics for oneself, for a Democrat hasn't a chance. Of course I assume you think you would take a nomination in the fullness of time?"

"Yes."

"No doubt of it, not a doubt. However, there is a phase of that situation that may not have occurred to you. In addition to yourself there will always be scores of other Republicans who think the same—who are, in their own minds at least, entitled to office. Now you can see what that means. There will be vast competition for the nominations, much work and worry, and, taking previous services and claims of natives and older men than you into consideration, it is likely to be a long time before you can make enough of an impression to get a chance. It will be years before it is your turn."

Hicks looked incredulous. "Why," he said, "I think

"I know you think you can, but you can't. Party service and party obligation go a long way in determining selection for the prizes of politics. Also consider the fierce competition from these hordes of other Republicans, all of them as eager for political increment as you will be. My way is surer than that."

"But you are a Republican," protested Hicks again.

"I know I am, and I suppose I have no right to be advising a young man to desert my party." "I'm afraid I don't follow you," said the amazed Hicks.

"It's simple enough. Here is a city largely Republican and a county almost unanimously so. There are hardly any Democrats. Still there are enough to keep up a semblance of an organization and to nominate men for the principal offices. These men are named time after time, and time after time go down to defeat."

"And you think I should join that party? What for?

can't win anything."

"That's where you make your mistake. Inasmuch as you already hold certain practical ideas about politics I am showing you the way to get results. Be a Democrat, I tell you. There are only a few of them. They will welcome a recruit, especially an alert young chap like you. It will be the easiest thing in the world, after you get some acquaintance, to secure any of those worthless nominations you may choose, to become a local Democratic leader, to be prominent in the party there and in the county."

"But what good will it do me?"

"None for a time probably. But, my son, sooner or later in every community like this there comes a turnover. Always there is a shift. The people become disgusted with the party in power. They get sore on the leaders. They rise, blindly, but effectively, and turn out those leaders and that party. That is where you would come in.'

Hicks was leaning eagerly forward in his chair.

"Do you mean," he asked, "that if I join the Democrats and stick it out I can win quicker that way than if I stand by the Republican party."

"Exactly. The law of political averages proves it. It is as certain as sunrise. All you have to do is to hang on, take such nominations as you can get, and then, when the auspicious moment arrives, you can point to yourself as the patriotic person who has made all these sacrifices in the past, you can demand your reward when there is a reward in sight, and you can land topside up."

"Do you think so, senator? Do you really think so?"

T. Marmaduke Hicks was excitedly interested.

"I know it. It is politics. It is history. You can do it, provid-

'Providing what?" "Providing you can bring yourself to abandon the principles of the Republican party, which you revere, the party your father helped organize, and become a

Democrat." "Well -

"It's not so difficult," Paxton continued. "Haven't you often, as a result of your observations here, considered the step of joining the opposition in order to relieve the country of this saturnalia of profligate extravagance and criminal disregard of the fundamental rights of the people displayed by the plutocratic Republicans? Haven't you about made up your mind that, in basic principles of government, the Democrats have the more patriotic and the more logical foundation for their political beliefs and practices?

"Haven't you always considered Thomas Jefferson as one of the greatest of Americans?'

Yes, to tell the truth, I have given the matter consideration from that angle," Hicks answered, without a flicker of a smile.

HICKS thought much over what the senator had said, and every hour of thought he gave to the proposition added to his eagerness to make a trial of the senator's theory. Backed by Paxton, as he reasoned he wor be, he felt he could not lose.

When the senator came into his office next day he stopped for a moment by Hicks' desk.

"Disciple of T. Jefferson, I salute you!" he said cheerily. Then, more seriously: "I am quite sure you have arrived at the very wise conclusion that a man is entitled to change his political principles when he is convinced of the greater patriotism, the greater statesmanship, the greater regard for the plain people shown by the other party. It would be mere blind partisanship, which is

PHILADELPHIA, JUNE 6, 1914

### The People Want to Know

CONGRESS appropriates thirty-five or forty million dollars a year for improvement of rivers and harbors. The bills are passed on the time-honored pork-barrel plan. That the expenditures involve huge waste of public funds, and that a considerable part of them is nothing better than graft in an especially obnoxious form, is commonly believed.

If it were generally accepted that such misuse of money derived from the general public obtained in any other field-say, in the railroad field-Congress would immediately order an investigation. Congressman Frear proposes in a concurrent resolution that the House shall order a thorough investigation by the Interstate Commerce Commission of river and harbor expenditures. An investigation by a body independent of Congress would be better, but the Interstate Commerce Commission is acceptable.

We feel warranted in assuring Congress that the public would like to know approximately how much of the hundred and fifty millions or upward that has been spent on river and harbor improvement in the last five years has resulted in any tangible public benefit, approximately how much has been wasted, and about how much represents a form of political graft.

We say this without prejudice. A great part of the expenditure may have been quite justified by tangible public benefits resulting from it. The waste may be inconsiderable. But people generally believe that an important portion of the hundred and fifty millions or upward is just a tapping of the public till for the political benefit of individual Congressmen.

Surely that circumstance requires an authoritative investigation. Congress commands extensive resources for investigating. Let it employ them in this case at home.

### The Independent Banks

WE WISH nobody would ever again repeat the foolish statement that country banks are dependent on Wall Street and subject to dictation by the financial institutions of that sinful center. The fact is, Wall Street banks are dependent on those in the country. Their relations to the country banks are precisely those of a wholesale merchant to his retail patrons. Many of them employ drummers to invite the trade of country banks. At every bankers' convention you see representatives of the city banks, hat in hand and wreathed in seductive smiles, wooing the favor of country banks.

Last fall the borrowings of country banks were extraordinarily large. At the time of the August report those in the national system owed eighty million dollars-mostly to central reserve banks in New York, Chicago and St. Louis; but, at the same time, these country banks had on deposit with city banks-mainly in New York, Chicago and St. Louis-six hundred million dollars. In short, for every dollar the country bank owed the city bank, the latter owed the former seven dollars and a half.

Nor does borrowing from a city bank establish any dependent relationship. City banks make their profit by lending money. When a country bank borrows from

a city bank it owes the lender nothing but the money. If any institutions in the world are free from Wall Street domination and dictation-as to which some statesmen in Washington evidently entertain grave doubts-the country banks are in that position.

### Unlocked Directors

ONE section of the new antitrust bill provides: After two years no one may be a director of a railroad to which he or his firm, or a corporation in which he is a director, sells equipment or supplies. No banker or director or officer of a bank may be a director of a railroad whose securities the bank underwrites or sells as agent of the road; or if the bank purchases from the road issues or parts of issues of securities. No private banker or director of any state or national bank having more than two and a half million dollars capital and deposits shall be a director of any other national bank having more than two and a half million dollars capital and deposits. No private banker shall be a director of a national bank in any city having more than a hundred thousand inhabitants; nor shall any person be a director in two banks in such city, one of the two being a national bank, except in cases where the entire capital stock of a state bank is owned by stockholders of a national bank. No person shall be a director of any two or more corporations engaged in interstate commerce, and having more than a million dollars capital, when the businesses of the corporations are so nearly alike that an agreement between them to eliminate competition would be a violation of the Sherman Law.

Such is the substance of the proposed law to abolish interlocking directors. No doubt, if enacted, it will prove essentially harmless and futile; but the remarkable point is the limitation as to size that runs all through it.

What is the difference in principle between a man's acting as director of two banks with assets of two and a half million dollars and of two banks with only one and a half million dollars' assets? Why should two industrial companies with a million dollars capital be forbidden to have a common director, but not two with only eight hundred thousand dollars capital? Do not the baneful effects of monopoly operate in places of less than a hundred thousand inhabitants as well as in places with a larger population?

This section of the bill dealing with interlocking directors illustrates the old point that in antitrust legislation sin and size are taken as synonymous.

### Taxes That Bite

THE outstanding facts in the new British budget are the increased taxes on large incomes and large estates. The new inheritance tax, if it had been in force in this country, would have taken thirty million dollars from the estates of John Jacob Astor and E. H. Harriman.

In dealing with swollen fortunes England bites, while we only growl. The present political complexion of both countries is much the same. In both the dominant political fact is a fight by little capital—more or less allied with the better-paid labor-on big capital. We wage the war by attempting to upset the machinery through which big capital mostly operates and by which it is partly produced. England wages it by direct taxation. Their unearnedincrement and inheritance taxes show a deliberate purpose to break up the big family fortune in land which dominated the country for centuries.

The heavy inheritance tax will reduce any other inactive large fortune to moderate proportions by the time it passes to the third heir. The English concern themselves hardly at all with the mechanism of business; but when the product reaches a certain size they appropriate a generous slice of it. The chief fault in our method is that upsetting the machinery of big capital throws little capital's works out of gear, while big capital is by no means restricted to the particular set of operations we attack. The chief fault with the English method is that it may involve a considerable destruction of capital.

For example, taking thirty million dollars from the Astor and Harriman fortunes, to be spent by the Empire State in public buildings that fall apart in the course of construction, or by the Federal Government in pork-barrel appropriations, involves a net loss to the country. On the other hand, the English method does get tangible results.

### The Protected Defendant

THE indictment charged two defendants with murder by "choking, strangling, and by beating and striking." The judge's instructions to the jury said that if the defendants acted in concert it would make no difference which "actually struck the blow or choked or smothered" the victim. On appeal the higher court held this to be a fatal error, entitling the convicted murderer to a new trial, because strangling, as charged in the indictment, was a different thing from smothering.

Such instances occur frequently; but the fine technical points on which murderers are liberated or granted new trials were not invented in a lunatic asylum. Strange as it

may seem to a layman, there was once a reason for then, In most jurisdictions the defense can appeal on any technical point, but the prosecution cannot appeal at all; a defendant convicted of manslaughter, say, may demand a new trial, and on the new trial he cannot be convicted of murder, no matter what the evidence shows.

The maze of technical advantages to the defendant that survive in our criminal law is a product of past centuris. when stealing a sheep or a piece of cloth was punishable by death and when criminal courts were used by sait tyrants as James II for the purpose of political venguant or private malice.

Almost any device that sheltered the accused from the rigors of the law was then justified—and we retain all the devices, though the reasons for them vanished long ago.

Our criminal jurisprudence operates on the theory that the governor of a state may at any time attempt to put a score or so of citizens to death because they led the opposition to him in the last campaign.

### Declining Prices

OUR old enemy, the high cost of living, is on the retrest. It is no unseemly rout; nothing in the enemy's necements suggests panic-stricken flight. However, those persons who make it a business to dog his footsteps with tapeline and microscope are able to announce that every month since last October his toe has receded a little, und at this writing the distance by which he has gone back is fairly perceptible to the naked eye. To express the fistance mathematically, put down a decimal point followed by four, six, nine and a cipher.

We should like to claim this wavering of the for a: tangible result of tariff reform; but in England, where do they follow cost of living with tapeline and microscope, and where there has been no change in tariff, the inin number, which is a complex of the prices of leading outmodities, has declined, in the same period, just short a much as in this country. It is easy enough to trace the course of prices. To say what any given factor counts for in the price movement is decidedly more difficult.

### A College in Politics

FROM Wisconsin comes a piercing cry to rise and regal political liberties that have been lost. Shackled with of that state are told:

"Under the old caucus rule, with all its faults, you could come together in district and county convention and voice your opinions. Under the primary you are # silent as the dead. Then, when it came to making a platform your delegates set forth what you stood for. Nov you have not a word to say. Formerly every legislature was master of itself. Now we have forty-six rings called commissions, in which is concentrated control over every

And, to remedy this appalling political serfdom: "If a Progressive shows his head for office anywhere

spot him! Vote out the Progressives in either party. Put up conservative men. Then, whether Democrats of Republicans win, you will have a safe, reliable lot of hind men in the legislature."

This is only one among many passionate demands for a revival of the precious caucus, convention and boss regard under which Wisconsin's legislature did indeed compile a safe, reliable lot of hired men. No doubt the demant are very comforting to gentlemen who did the hiring.

For the ruthless destruction of their former liberties the bosses very properly lay much responsibility on the State University. In the campaign that seems to be shaping a return to the old régime, Progressives and university professors are coupled in denunciation.

"The university," says one spokesman for the safe and sane, "should devote its entire time to education." But education is exactly what killed his crowd.

### Paying for War

To FINANCE our war with Spain the Government borrowed two hundred million dollars, increased in taxes on spirits, beer and tobacco, and levied stamp tass. Revenue from spirits rose from ninety-two million dains in 1898 to ninety-nine millions in 1899 and one hundred and sixteen millions in 1901. Revenue from beer rose iron thirty-nine millions in 1898 to sixty-nine millions in 189 and seventy-five millions in 1901.

Revenue from tobacco rose from thirty-six millions in 1898 to fifty-two millions in 1899 and sixty-two millions 1901. Stamp taxes produced forty millions a year.

Since 1898, however, consumption of spirits has increased from eighty-one million gallons to a hundred and for millions; and of beer, from eleven hundred million gales; to two thousand millions. War taxes on those articles would be correspondingly more productive.

Judging from the experience of France, where tobard is a state monopoly, that commodity alone could be readto yield a revenue of one hundred and fifty million dollars a year in this country.

# WHO'S WHO-AND WHY

### Serious and Frivolous Facts About the Great

You may say what you like about William Jennings Bryan—and many persons are availing themselves of the privilege—but he surely does remember the boys who stood by, and particularly the boys who stood by oratorically.

oratorically.

Those, as Mr. Bryan puts it, who live by the spoken word shall be exalted thereby, naturally provided said spoken word or words shall have concerned and consecrated the person who has the exalting privileges—who in a certain department of our Government is none other than Mr. Bryan himself.

Nor is this to be wondered at, for Mr. Bryan is by way of being aword purveyor himself, and it need occasion neither remark nor rejoinder if he shall judge qualification on the output of words to the minute as a basis—of course,

s a basis—other merits being considered in subsequent proession. Let me have wordy men about me—as the Secreary of State said, or might have—and I care not who restles with international law.

Appreciation, to be sure, is valued of all men and has its efinite worth, which is evolved on a sliding scale that

egins with opportuneness nd ends with appositeess. A fitting thing said t a fitting moment has a virtue; but if it is said the right spirit and at the exact moment, then hat thing stands preminent as a matter enitled to reward.

The New Legal Talent in the

State Department

Therefore, allow me to ecall to your memory the remocratic National Conention at Baltimore in 912, and the first sesion thereof, when the emocratic National ommittee proposed for emporary chairman of hat gathering Mr. Alton 3. Parker, sometime deeated for the presidency in n almost unanimous maner, but a leading Demorat none the less, and not verly radical in his views, ot overly; in fact a man rhose habit of mind might e said to veer toward onservatism.

Mr. Bryan, after the preiding officer, Mr. Norman

3. Mack, who presided
with great dignity and in
whisper had put forward
Mr. Parker as the choice
of the committee, leaped
coldly to the platform, exiding language of protest
it every pore, and began
o say Judge Parker nay.
Indeed he began to say
nay not only to Judge
Parker, but to Judge
Parker's sponsors, to Wall

Street, to the vested interests, and to va-

rious other persons, things and considerations he held to be good nay-saying objects. He said them nay for quite a spell and offered John W. Kern, of Indiana, as his idea of a nifty and noble temporary chairman. Immediately John W. Kern, his chin whiskers waving like a gonfalon in the breeze created by the impassioned nay-nays of Mr. Bryan, passed the buck right back to Mr. Bryan and nominated Mr. Bryan himself.

Whereupon much oratory ensued and it was clearly apparent that Mr. Bryan did not have the votes. However, there came a moment when a tall Texan scrambled to the lee of Norman Mack and whooped a series of resounding whoops. Inquiry brought forth the information that this tall Texan was none other than Cone Johnson, and Cone certainly gave Mr. Bryan a fine recommendation.

Cone began with an allusion to a few natural phenomena, not perhaps considered in their true significance at the time, owing to the excitement that prevailed. "The tides yonder," he said, "rise and fall; night follows day and men sleep to wake again." Having made this clear, he said a few kind words for T. Jefferson, A. Jackson and A. Lincoln, and then hopped right into his reason for being present, which was: "You cannot do this thing to W. J. Bryan."

### High Tide in Nebraska

OF COURSE they did do that thing to W. J. Bryan; but, just the same, Mr. Johnson told them they could not, and he referred to Mr. Bryan in these burning words: "The rising tide"—a great man for tides—"of trust creations, strangling the freedom of trade, and the riot of ill-gotten wealth roused a giant from Nebraska's plains"—the inference being, of course, that Mr. Bryan was the giant the tides awakened from his nap.

There was some more to it. C. Johnson assured the delegates, who were waiting to do what C. Johnson said they could not to Mr. Bryan, that the Democracy must not loiter on the shore. Contrariwise, the Demmies were exhorted boldly to put their barks to sea, "and the Republican ship will go down in the gale of November, lost in the weltering tempest of a nation's just rebuke."

That was not all. Mr. Johnson informed those delegates further: "The fight is on, and Bryan is on one side and Wall Street is on the other." And he concluded in one grand, gorgeous whoop to this general effect: "For this convention to put Bryan to the knife of defeat will send a chill to the hearts of six million and a half Democrats in the United States."

Sad to say, they sent the chill at the moment; but nothing serious came of it and something pleasant resulted to Cone Johnson, for when that other eminent orator, Mr. Joseph W. Folk, transferred his services from the State Department to the Interstate Commerce Commission, instantly Mr. Bryan telegraphed to Cone Johnson to come up and take the place of Solicitor for the State Department. He was solicitous about Cone and he solicited him to be solicitor. Cone came. He was just as solicitous about it as Mr. Bryan was, if you must know. And thus do we rediscover that verbalism is its own reward.

Aside from all that, however, Cone Johnson, of Texas, and now official custodian of the legal machinery of our State Department, is not entirely voice and vocabulary. Indeed, he is a capable lawyer and a rather distinguished Texan.

Mr. Johnson comes from Tyler, which they used to call the Athens of Texas, on the one hand, and the abiding place of the Tyler Gang, on the derisive other. At one time the Tylerites held about all the worth-while political offices in the state. Johnson was of the younger generation, but he learned his politics from the astute Tyler persons who accomplished all this.

He was active for a time, dropped out and hunted foxes and practiced law, and then, about ten years ago, he was changed, through attending a revival, from a passive Methodist to an intense and active one. He preached a sermon that attracted wide attention, and traveled up and down delivering other lay sermons. He changed his view on the liquor question, always the most political of the issues in Texas, and became a fighter for prohibition.

He had been against prohibition earlier in life; and once he had a notable debate with Representative Joseph W. Bailey, who was at the moment in favor of prohibition. Politics changed Bailey's view and religion changed Johnson's; but there were no more debates between himself and Johnson on that issue, the reason being that Johnson rather put a muffler on Bailey in the previous encounter.

Later, however, Johnson went after Bailey again. This was on the issue of whether Bailey should go to Denver as

a delegate to the national convention in 1904. Johnson, as leader of the Progressive Democrats in the state, opposed Bailey, and Bailey went home from Washington and fought for himself. Both Johnson and Bailey are great campaign speakers, and it was a ding-dong for some weeks. Bailey won by seventeen thousand votes in a total of three hundred and sixty thousand, but he has never been the same since; and he is now in private life.

Johnson was for Bryan. The Bailey followers opposed Bryan, and that led Johnson to Baltimore at the head of a delegation that gave Wilson forty votes on the first ballotall they had-and on each ensuing ballot until he was nominated. Also, as I have shown, it led Johnson to make the speech to which some fleeting reference has been made herewith, and, furthermore, it led to the presence at this moment of Cone Johnson in the State Department as the solicitor thereof.

It is quite impossible to print here what Mr. Bailey thinks of Mr. Johnson; but there is no doubt Mr. Bryan thinks he is a fine man which he is, physically and mentally; and, as it happened, Mr. Bryan had the appointing power.

Getting Back to a Competitive Basis

# The Natural Question Not to Ask

THE man who writes special articles is a sort of war correspondent in time of peace. This was especially true, of course, during the muckraking days when all writers had to be fighters or cuttlefish and discharged oceans of ink at the

public enemies.

The life had its compensations: it was exciting, it was always changing, and it paid. It had its disadvantages, chief among them being the syncopated friendships—the affections that never grew to full size—the delightful though transitory intimacy with acquaintances who would have become bosom friends with two more weeks, but who stayed acquaintances and were forgotten. And then there were first chapters of romances that never got so far as a second, and tantalizing experiences of all sorts which left an unsatisfied curiosity in

I recall many such. Once, on my way to the City of Mexico, I met a Frenchman who had found treasure on an island in the Gulf of California. He was an archæ-

ologist of vast erudition and the most amazing memory I have ever known. He had a keen analytical mind and knew all about inscriptions and secret ciphers and codes. He told me, by the way, that the best cipher code in existence was that used by members of the Rothschild family for personal matters-not their commercial code, which is composed exclusively of words of four letters.

The codes of the various foreign offices, he said, would not require two minutes to find the key. I amused myself telling him some of the Sherlock Holmes stories and he always guessed right-except in two instances in which, by reason of my not having given all the clews, he evolved explanations infinitely superior to Conan Doyle's.

He had raised two hundred and fifty thousand francs among his professional colleagues and was going to bring back the treasure. He promised to write me on his return.

Never heard of him again!

I ran across a slender little Englishman, with a hyphenated name, whose life was one of those Kiplingesque affairs so many of his countrymen can show. He was starting on a rubber-hunting expedition to Bolivia. After that, he said, he was going home for good. There was but one life between him and a historic earldom-and that life was lost later and-I read in the Graphic-the heir was not found. Never heard of him again!

I met one of those seedhunters of the United States Agricultural Department, who was a great folklorist on the side. He was going after a specimen of the legendary Mictlan corn. Mictlan, in Aztec, means the Place of the Dead. The corn was said to be very white, the ears large and weirdly regular; and each plant was supposed to bear four perfect ears and each ear fourteen rows. The ear did not taper.

He was inclined to believe the legend and thought he might be able to prove that the Aztec priests had gone in for seed selection for generations. He was going to a wild region in Mexico. Never heard of him again! The Department, when I inquired in Washington, had lost track of

I met a Belgian baron on the train from Chicago to Salt Lake City. We became pretty good friends and took our dining-car meals together. He owned some mines in Utah. We went to the same hotel together. A cablegram was waiting for him at the hotel office. He opened it, read it, got red, and began to swear in French. I asked him what was the matter and he told me:

"I must kill him. This man, he has gone with my wifemy brother writes. I must return!"

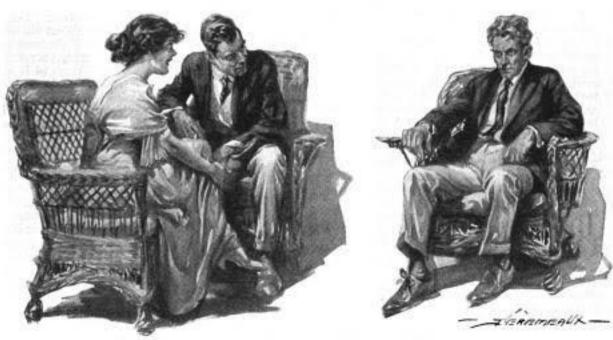

A duel?" I asked.

"Oh, no. One does not fight dogs! One kills them!" He had grown calm. "Oh, yes!" he told me quietly. "It is the end for him!"

He was a well-known Belgian nobleman and very wealthy. I watched the papers. Nothing!

In San Antonio, Texas, I once made the acquaintance of a Mr. Metzger, whose daughter Nettie took a particular liking to me. She was sixteen, and very pretty, with big black eyes and black hair, said to be inherited from her grandmother, who was a highborn Mexican. All Mexicans that marry into your family are highborn. All others are greasers or yaller-bellies.

In the Two Hours I Spent With the Metagers, Waite Did Not Say Two Words

Nettie was a nice girl, very romantic at the most romantic of all the ages of a girl, and very talkative. When I say very of a talkative woman I mean exactly that.

When I had finished my work I left San Antonio. I sent the Metzgers Christmas cards in the following December, and later-in April-made another trip to the Southwest to do an irrigation story. I stopped at San Antonio on my way back, to get a line on a certain phase of a petroleum muckraking special, and I looked up my old friends, the

They were very glad to see me. Old man Metzger, with a sort of proud affection that later made me feel like a silly ass, took me to Nettie's room and showed me, on the girl's bureau, an oval silver frame, inside of which was a half-tone reproduction of a photograph of myself.

He had cut it out of the advertising pages of a magazine I had honored with a series of articles, and she had begged for it. He had given it to her; but it was really the family's, he assured me. They were very proud of me for being so famous and of themselves for knowing me.

Nettie was still talking. She told me about her fellow-Whitey Waite-a quiet young chap, with curious, disconcerting eyes. They always looked as though they were staring at you and yet they were not wide open enough for that. They were pale blue in color and so very clear they reminded you of turquoise beads. They had a tinge of that gray which you see in some Persian cats.

They called him Whitey because he was so blond—almost

In the two hours I spent with the Metzgers, Waite did not say two words; but often I caught him looking at me with those unblinking pale-blue eyes of his, with a sort of meditative expression, as though he had not made up his mind what to do to me. They suggested, also, an absence of eyelids and incessant thinking going on behind the sockets-thinking to which you got absolutely no clew, though you felt the thinking concerned you.

The eyes did not seem to be a part of his body, but a part of his mind; and they baffled you as a snake's eyes baffle you, because you always think a snake is looking straight at you and is prepared or preparing to do something to you. Look out for a man with those eyes. He either is loyal to the death, or else he does not think your death of any more consequence than eating an apple.

I congratulated Nettie on picking out a man who hated to talk and did not seem to object to listening by the hour. Bottling up a woman's speech is fatal to happiness.

"I suit him, all right," she told me defiantly.
"How do you know?" I teased her.

"I know!"

"He never told you!" I asserted.
"No," she admitted reluctantly, "he never told me; but I know it, just as well as though he had told me for breakfast, dinner and supper ten years running."

"Nettie," I said to her paternally, "next to your reticence and your taciturnity, what I most admire in you is your penetration and your modesty.'

"I do!" she averred stoutly. "He just looked at me and I knew he knew I-I was crazy about him. And I knew he cared for me; so it was all settled."

"But didn't he say anything!" I asked her.

"Yes, indeed!" She spose indignantly. "Do you think he is a mute? He can talk!"

'Can he?"

"Yes, he can; and he does too."

She happened to see me gripning and she laughed indecisively, as women do when they wish you to know that they see the joke and enjoy it-only the really do not see and do not enjoy.

"Ah!" I exclaimed very sen-ously. "He talks! And prowhat does he talk?"

"I think you are mean," she said, with hurt dignity.

She was so serious about it that I saw she thought the one man she knew who came from the great outside world of book and romantic people and marvelous magazine makers was not nice to her-or to the one man in all the world for her. So I said contritely:

"My dear child, I was jesting:

but really your romance is not extraordinary - and very besutiful. So it is all settled?"

"Oh, yes!" She smiled happily at me and looked a though she could talk about it for fifty years steadily. "Then he must have said something to your folks."

"Oh, no! He said it to me."

"Nettie, just what did he say?"

"He said: 'I reckon when I get that Panama job well get married and go down there together."

"He said all that?"

"Yes, he did!" "And that settled it, of course?"

"Of course!"

I looked at her and clearly perceived that, so far as she was concerned, it was settled indeed. I spoke to her father a little later.

"Nettie tells me she and young Waite are going to get married."

"Yes." He did not seem exactly tickled to death over it.

"Don't you like the idea?" I asked.

"I don't like the idea of her going to Panama."

"Then why do you let her go?"
"Well," he said dubiously, "well, I ——" I could see he had never before thought about his reasons. "Well," he finished, "Whitey said he was going to take her down then after they got married." He had not the faintest notion of dreaming to think of daring to oppose Whitey. It was very remarkable.

I more or less desultorily asked for information about young Waite and heard nothing against him. I learned that he was a quiet, honest, industrious sort of chap, neither very popular with anybody nor especially disliked anywhere. He had always lived with his mother, except when he was working on a ranch in the Panhandle county-I forget just where.

I left the next day and the Metzgers became one of the hundreds of nice, friendly families I had met in my travelno more, no less.

Some years later a magazine wished to find out how Under Sam had become Papa Sam to a lot of ditchdiggers. At experiment in government control of everything, including the cost of food and wages, had created a demand is character sketches of men who were handling millions by the hundred, tackling problems by the thousand, taking chances with life like intelligent heroes, living like decormen and guessing like geniuses.

I therefore went to Panama. I was watching the reiscating of the railroad—this was before the Gatun Dam was much more than begun-and as I walked along the track! heard a calm voice say:

"I reckon you had better get a rustle on."

It was a drawling voice-almost purring; but for some reason it reminded me of the soft velvet sheath of a partic ularly sharp knife. It was a voice that greatly interested me. Everything is interesting to a man who makes is

living by writing about anything.
"Who is he?" I asked my cicerone.

"That's the roadmaster. Did you notice how these Jamaican coons hustled?"

"Did I? I consider it the most remarkable thing on the Isthmus, bar none. Why, that man has just got 'em scarel to death! Oblige me by looking at them.'

The negro tracklayers were indeed working like madmen. One of them, a tall, sculpturesque husky, was positively maniscal in his activity.

"That big buck yonder," I observed, "probably could

tear the roadmaster in two. It shows

"Hold on, before you make a break! I'll tell you what it shows: it shows love! That big Jamaican swears by Whitey. Come with me. I'll show you. Hello, Roberts!' He spoke to the lunatic. "What's your work today?"

"I don' know. Arsk Mars Wee-yet!" he replied in the queer jargon of the British West Indian.

Mars Wee-yet approached us.

"How do you do?" he said to me, as though I were an inspector on one of his regular daily routine trips. "Nettie will be glad to see you."

I shook hands non-committally and presently recalled Texas, the Metzgers, Nettie, whose father had cut my portrait out of a magazine, and Whitey Waite.

I hung round a bit longer, but he had nothing more to may to me, his remarks-few and gently spoken-being uddressed to the gang.
"I'll see you again!" I called to him.

"Dinwiddie knows the house. Nettie is there. I'll be

nome at eleven," he answered.

Dinwiddie, my guide, one of the engineers of the division, took me to the Waite cottage. I found Nettie at home. She seemed glad to see me in a subdued sort of way. She told me the latest news of her father and mother; but I noticed she only did so in answer to questions. She volunteered nothing. There was nothing to hide, but her girlish loquacity was gone. This made her a new Nettie.

At first I thought her taciturnity might come from living n the tropics; but I recalled other American women I had net in the Zone and they had not been made reticent by the climate - quite the contrary. Therefore I concluded that

Whitey had something to do with it.

"Nettie," I said, "you were an awful chatterbox as a dd. Now you are what novelists would call a saturnine roung woman. Why?"

"Most people talk too much," she answered.

"And say too little?"

She nodded. "You are happy, of course."

"Yes." "Does Mars Wee-yet talk to you evenings?"

She smiled—and nodded! She had not lost her sense of sumor-only her penchant for talking. A woman does not ay silly things when she does not talk at all. Nettie had equired much wisdom.

We conversed—or, rather, I talked in a more or less lesultory fashion; told her about some of the things I had lone and places I had visited since our last meeting in San intonio. She listened with interest and, I like to think, ith intelligence.

In one of the pauses she rose and went into the houseve had been talking, American fashion, in rocking-chairs n the mosquito-screened porch. She returned with a

undle of old magazines and weeklies. "He saves everything of yours he comes across," she said roudly-like a mother trying to speak dispassionately bout her prodigy. "I read them aloud to him evenings."
"That doubtless gives your vocal cords all the exercise

hey require," I said.

She nodded-twice! Then she shamefacedly took the recious literature back—possibly she felt she had been too alkative with her nods.

Shortly after eleven Waite came in. He was tanned a rick-red and his eyebrows and hair showed sunbleach.

His curious pale-blue eyes showed the same disconcerting immobility of the eyelids, but were less staring.

I decided that this came from the effort to keep himself from blinking in the awful glare of the tropic sun. You saw the infinitude of little wrinkles, such as you see about the eyes of old sea-captains-and also the inscrutability you see in the eyes of people who do their talking in silence, as it were.

He washed leisurely and then came out and shook hands with me-in silence. Somehow I did not feel that I had to supply any conversation, and yet I could swear I was among friends intimate enough to be silent with for months at a stretch. We do not have many such friends-have we now?

After breakfast, which they called lunch, he said to

"I had to see the colonel." It was so plain he was apolorizing for being late that when she nodded understandingly did so too. He went on: "I've asked for three months' leave of absence."

She opened her eyes wide and stared at him. He was looking at the floor, so her eyes could not ask his eyes anything. She fell back on her tongue:

"I thought vacation didn't come until February."

He took a letter from his pocket. The envelope was edged with black. She turned very pale when she saw the mourning stationery and her lips moved silently, but I easily read: Mother! Her hands trembled as she took over

She read with unpleasantly wide-open eyes and quivering lips; then she began to weep softly. Whitey had pushed his chair back from the table and was staring at the tips of his boots.

I looked inquiringly at Nettie, my features composed as well as I could manage it-to what you might call a general funereal expression. I did not know who had died or when. She understood and for all answer said:

"George-his brother!" She nodded toward Whitey. Whenever she said he or him she meant her husband.

Childless women always talk that way—God bless 'em!and girls in their first love affair.

I shook my head sadly. I had never heard of George Waite; but he was the brother of a man I had met once, for an hour or two, six years before. Whitey looked up at his wife and said calmly: "I gotter get 'im!"

She drew in her breath sharply, with a frightened little gasp. Then she stared unblinkingly at him, dumb with terror, fascinated into utter petrification by what she saw in her husband's eyes. Then she nodded-exactly as if a powerful hand had grasped her head and made it bow!

He looked at me. I looked at him. I got no definite message—only an unpleasant goosefleshing along the spine; but because this always was a house of silence and now also was a house of death I bravely raised my eyebrows and whispered:

"What?"

"Man got George. Gotter get him!"

The gooseflesh left me and before I knew it I asked:

"When do you sail?"

MEMERLY

"Tomorrow! New Orleans!" he vouchsafed.

He rose from his chair and beckoned me with a motion of his hand to follow him. I immediately did so-and felt glad to do it. I do not know why. Really I do not! As he passed his wife he stopped, patted her head and said quietly:

"You can't come with me. I'll cable when."

"I could stay with father and -

"No! Here!" he said emotionlessly and walked on.

Ifollowed, still vaguely glad to follow. He took me into his garden. It was his hobby. There were no vegetables-all flowers.

"Most of them from Texas seed," he told me. "Getting 'em acclimated."

He motioned to me to remain where I was, and I did-without the slightest impatience. He went back into the house and

"Net!"

"What?"

"The automatic!"

Presently Nettie came out with an automatic pistol in her hand. He took it, nodded his thanks and walked to the rear of the little garden. I saw a target of heavy plank, faced with boiler plate, leaning against banked earth. He painted the target rings afresh with

That Stare Made Me Think of Ice Cold Thoughts

a brush he took from a can he kept behind the target, and then began to practice both drawing and firing quickly from the hip, and deliberately as at a French duel. He was a very good shot-not the best I have ever seen, but very good indeed.

"I've learned to shoot with the sun in my eyes," he explained. Then I understood why he practiced.

"Look here, Waite, do you really mean to say you're going North to kill -

He interrupted me and, with a complete absence of heat, said:

"I gotter get the man that got my brother!"

"Yes," I agreed, "you've got to!"

I could not help it-and I could not ask any more questions. A man told me that the only pale-blue-eyed Mexican he ever saw was by profession a bandit and never had the slightest trouble with his followers. They always obeyed him-no mutiny.

I left the Waites feeling that our friendship had never been interrupted. Nettie had begun to pack up his things. She did not stop packing long enough even to shake hands; but she said apologetically:

"I'm sorry I couldn't show you any more attention;

but, you see, it was -

"Nonsense!" I said. "I didn't come to be entertained, but to see you. I'm very glad I came."

"Me too," she said. "Good-by."

"Remember me to your father and mother when you write," I called from the front steps.

She came to the door, smiled at me amicably, nodded and went back into the house.

Dinwiddie, the young man who had been detailed to act as my cicerone, was waiting for me at headquarters. He told me that Whitey Waite had received a letter, read it, and instantly went to the superintendent and said he had to have three months' leave of absence.

The superintendent began to explain that such a thing was utterly unthinkable—because it was absolutely impossible. Nobody could get the work out of the Jamaican gangs that Whitey could, and -

"I'll speak to them," said Whitey. It settled it in his mind.

"Nobody can-and you know it," protested the superintendent.

Then, according to Dinwiddie, Whitey just went up to his chief and said a few words in a low tone of voice. The superintendent jumped back and yelled:

"But you can't, cold-blooded -

And Whitey cut in, saying:

"I just gotter!"
"And," finished Dinwiddie, "I'm a goat if the super didn't say:

"'All right-damn it! All right-hell! All right-blankblank! But you tell the colonel. You know how anxious he is to finish that relocating work.'

"And then Whitey said:

"'No need—I'll just tell my gang what they gotter do." "And then Whitey just goes to the gang of Jamaican niggers and says:

"I'm goin' No'th to-morrow. I reckon you'd better rustle some while I'm gone.' "The gang began to shake. I swear it. Then Whitey

"'You heard me?'

### Public Ownership of Railroads, Waterways and Water Power

(Continued from Page 5

moved, the capacity of cars and locomotives, the cost of rights of way, the classification of traffic, and the general customs, habits and methods of the people engaged in manufacturing, commercial and agricultural pursuits, that comparisons between privately owned railways in this country and publicly owned railways in Europe are of small value; but Germany, with publicly owned railways, and Great Britain, with private ownership, furnish an excellent demonstration of the comparative value of the

The total capitalization of the railways in Germany is \$109,000 a mile, as compared with \$265,000 a mile in Great Britain. The actual average passenger rate paid a mile is ninety-five hundredths of one cent in Germany and one and a half cents in Great Britain. The average freight rate a ton-mile is 1.41 cents in Germany under public ownership and 2.33 cents in Great Britain under private ownership.

Mr. Anthony Van Wagenen's book on Government Ownership of Railroads says:

"It costs \$5.72 to transport a ton of hardware from Birmingham to London, while the cost for the same class of goods over the

Mr. Anthony Van Wagenen's book on Government Ownership of Railroads says: "It costs \$5.72 to transport a ton of hardware from Birmingham to London, while the cost for the same class of goods over the same distance in Germany is about \$2.25. Cotton goods from Manchester to London cost \$8.76 a ton; in Germany, over the same distance, the cost is from \$4.86 to \$5.60. General machinery from Leeds to Hull costs \$6.09 a ton; in Germany, over precisely the same distance, \$1.09."

Referring to other conditions, the same authority says: "It may be said that these are not important differences; but what is important is that the German railroads must carry these goods over two hundred miles for about \$1.22 a ton, whereas in England it costs from twice to four or five times that to carry it one hundred miles."

No people less abundantly endowed with natural resources than ours could ever have

No people less abundantly endowed with natural resources than ours could ever have withstood the enormous waste, plunder and larceny involved in the methods employed in financing the railways of the United States. If this reads like the emphasis of overstatement, let it be boldly declared that statistical and court records prove more against private ownership of the railways of this country than any mere list of nouns and adjectives can imply or set down.

nouns and adjectives can imply or set down.

An empire of 247,093 square miles—over 158,000,000 acres—of the public lands of the United States has been given to the railways to aid in their construction and maintenance. This is a domain more than equal to the German Empire in extent. In the words of Secretary Lane, who furnished the figures as lately as January, 1914, to the Congress of the United States: "These land grants equal in area a territory as large as the combined areas of the New England States and New York, New Jersey, Pennsylvania, Maryland, Virginia and West Virginia." And Secretary Lane continued: "How much other public aid has been given to private railroad building, in the form of cash bounties or subsidies or guaranteed interest and principal on bond issues, cannot even be approximated with any degree of certainty."

### Railroads Under Receiverships

In this connection Douglas County, Kansas, my home county, with twenty-five thousand population, has contributed more than half a million dollars in bonds and cash to aid the construction of railways in that county. Missouri contributed thirty-eight million dollars and received six millions from the railways, making the net loss to the state thirty-two millions.

In spite of these enormous public subsidies, in spite of high rates, in spite of the frequent control by the railway politicians of Congress and legislatures and courts, 735 railway companies, operating 136,156 miles of road and involving nearly eight billion dollars of stock and bonds, have gone into the hands of receivers. In other words, until agencies of the Government took hold of more than half of the roads, squeezed a part of the water out of them and compelled them to be temporarily honest, they could not run successfully. The operation of railways under government receiverships has been surprisingly successful and furnishes an argument of no small value for government ownership. The actual general manager of some of these railways under receiverships has been a Federal judge, not a trained railroad man. Efficiency? Has not Mr. Louis Brandeis, in his brief to the Interstate Commerce

Efficiency? Has not Mr. Louis Brandels, in his brief to the Interstate Commerce Commission, pointed out leaks of many million dollars, not to mention the assertion of experts he examined, who declared that three hundred million dollars a year could be saved to the railways by more efficient management?

Efficiency? Is it efficient management to kill or injure every year one trainman for every nine trainmen employed? Think of it! In nine years every trainman employed in the operation of railway trains in the United States would be killed or injured if there were no new men to fill in the gaps and share the burden of killings and injuries. And inefficiency is only one indictment of the American people against the

railways.

Waste goes along as one factor of inefficiency. Waste is inherent in the system itself, waste that would be almost entirely eliminated by the mere fact of changing from private ownership to the unity of national public operation. For their legal departments alone the railways expended last year about twelve million dollars; and that sum did not include the salaries of many highly paid general solicitors and counselors. A large share of this expense would be unnecessary if a bureau of the Government, with its corps of assistants from the Department of Justice, had the management of the rail highways of the country.

### The Cost of Getting Business

The Interstate Commerce Commission asserted recently that the railways lose annually at least fifteen million dollars by giving free service to industrial companies. This is not only waste, it is also a fraud on the shippers who are competing with such industrials.

Simply for getting the business by their traffic departments, the railways are spending fifty-six million dollars annually. The soliciting that makes up the bulk of this expense simply enables one railway to take business away from another. For the most part it is pure waste. For the year ending June 30, 1911, the people, through the United States Government, paid the railways fifty million dollars for transporting the mails. In the same year the people, through the express companies, paid the railways seventy million dollars for transporting packages. The railways' middlemen profits in those transactions amounted to many million dollars.

The enormous profits made by the Pull-

The enormous profits made by the Pullman Car Company, enabling it to swell its capitalization from one million dollars in 1867 to one hundred twenty million dollars in 1910, are waste, chargeable to private ownership of the railways. In this country the railways pay the Pullman Company for routing sleeping cars over their tracks. In some European countries the sleeping-car owners pay the railways. So, also, are the great profits taken by private refrigerator car companies and express companies chargeable to waste. If the railway had owned and operated the Pullman, express and refrigerator-car companies, the enormous profits that these companies have absorbed could have been used to lower freight rates for the benefit of the public.

The total of these wastes runs between two and three hundred million dollars an-

The total of these wastes runs between two and three hundred million dollars annually. Some of them cannot be stated in exact figures, because of the juggled accounts and the varying contracts the railways have with the allied companies.

I have mentioned larceny as one count in the indictment of the methods that have been so generally used in financing our railway properties. Is that too harsh a word for the almost countless repetitions of acts infinitely worse in their effects on general property rights and more criminal in their intent than most of the acts for which common criminals fill our jails and penitentiaries?

"Reliable authorities have stated," said Secretary Lane in his letter to a congressman, already referred to, "that the actual cost of construction of the Union Pacific Railroad was approximately fifty million dollars. The cost to the railroad company

of this construction was ninety-three and a half million dollars, nearly forty-three million dollars being taken in profit by the contractors and the Crédit Mobilier." A long time ago that, some one may say. Yes, it was; and railway high finance has not improved since then. Instead of the Union Pacific's beggarly plunder and swag of forty-three million dollars, the swag and plunder that wrecked the New Haven road in this present period has been estimated at two hundred million dollars. The Frisco's wreckage was brought about in the same time by the grafting of still unenumerated but certainly many millions. If such things be not larceny they are as flat burglary as was ever committed.

Through all the railway years the way is marked by such deals as these and by such so-called legitimate deals as Jay Gould's watering of the Erie to half a million dollars a mile; by E. H. Harriman's waterlogging of the Chicago and Alton, and by his use of the credit of the Oregon Short Line to traffic in stocks and bonds of other lines, and pile new millions on millions of fictitiously created wealth, on which the public pays interest. The space of a magazine article can scarcely enumerate the deals by which the railways of the country have been used to pile up ill-gotten fortunes instead of to develop the land for the people.

Even waiving every other advantage and need of government ownership and opera-

Even waiving every other advantage and need of government ownership and operation, I believe firmly that private ownership and operation cannot much longer perform the necessary function. I mean that the present system will break down if it has not already broken down. I mean that the Government itself is the only organization strong enough to perform the transportation service adequately—as adequately as it will have to be performed to meet the demands of our commerce.

### Mr. Hill's Prediction

Consider the statement made by Mr. James J. Hill, of the Great Northern and Northern Pacific and Burlington Railroads. It was made in an open letter to the late Governor Johnson, of Minnesota, in 1906, the year of a memorably disastrous car shortage. It was repeated in November, 1907, in an address by Mr. Hill to the Commercial Club of Kansas City. In that speech he said: "A year ago I said it would require five and a half billion dollars, or one billion one hundred million dollars, or one billion one hundred million dollars a year for five years, to make our railroad facilities equal to the demands on them. The figures are staggering, but twelve months have confirmed them and enhanced the difficulty of securing such investment. In the last year the railroads have raised in one way and another in the neighborhood of a billion dollars. Much of this has been obtained on short-time notes at a high rate of interest. Most of it has gone into terminals, renewal of old equipment and purchase of new, and other necessary improvements. It was a forced investment, the funds for which were raised not to make our railroads adequate to their task but simply to keep them at their present working level.

nals, renewal of old equipment and purchase of new, and other necessary improvements. It was a forced investment, the funds for which were raised not to make our railroads adequate to their task but simply to keep them at their present working level.

"It has been used to keep the wheels of industry from slipping backward, but there has been very little new construction. The needs of the moment were too severe for that; and, though substantially the amount of money suggested by me as indispensable has been collected and spent, the railroads have barely held their own and the future remains to be provided for. Not less, but in the opinion of competent judges perhaps fifty per cent more, should be spent annually

fifty per cent more, should be spent annually for the five years to come."

That was more than six years ago, and the indispensable demands on traffic facilities have necessarily increased. On their own showing the private railroad companies are utterly unable to perform the functions that must be performed. If that is not true then they and their spokesmen must stand convicted of the grossest misrepresentation in order to force increasing rates

to support new stock and bond deals.

The railways themselves fear their own deficiencies and the consequences of their own wrongdoing. They fought the Alaska Railroad Bill as they fought the Panama Canal, for they do not wish the proof given of what the Government can do in the way of railway construction and railway management, even under the most unfavorable conditions. The railways themselves have brought the government ownership issue to the front in seeking to head off that step by a persistent campaign of misrepresentation and one-sided discussion of it.

In these days of rising business costs, when stock must be moved more quickly than ever before to maintain your profit, when costs must be known and distributed more completely to insure operating economy, you must have some way to get the vital facts about your business quickly and surely when you want them. Details heretofore neglected must be studied, analyzed and turned to account.

The Wales provides an easy and simple way to do this.

By enabling your bookkeeper to get and give you information otherwise unobtainable or hard to get, it protects your interest and saves your own time and energy.

At the same time it saves money in your bookkeeping department by preventing mistakes and by doing away with bookkeeping drudgery. And it is so versatile—useful in so many ways—that it soon pays for itself in any business.

Some of the ways in which a Wales will pay for itself in your business

MOTOR TRUCKS

# PACKING HOUSES

find in Federals their cheapest, most efficient delivery system

Probably in no business are delivery problems more difficult than in the packing of meat products. Deliveries must be prompt, efficient and regular; the loads, as a rule, are heavy; and the location of customers necessitates driving under all sorts of road conditions.

It is also true that hardly any other business has such a thorough accounting system, such a complete knowledge of delivery costs.

When, therefore, packing-houses in all parts of the country are discarding all other forms of delivery in favor of Federal trucks, it speaks volumes for the efficiency and economy of Federalized transportation.

Federal trucks, to any packer, will mean not only a considerably smaller investment in delivery equipment, but a very much smaller operating cost,

We are prepared to prove this to your satisfaction by the experience of many other concerns in your line; and shall be very glad to go into your own delivery problems in detail.

Write for interesting booklet applying especially to packing-house delivery.

# Federal Motor Truck Company

104 Leavitt Avenue

Detroit, Michigan

The experience of other countries—those having government ownership—has borne out the teachings of our own opposite experience. "The rapid extension of industry in Germany has called for a parallel development in the facilities for transportation, Consul Norton, writing from Chemnitz in 1907, reported. "In most respects," he continued, "this growth has been more harmonious and better adapted to meet the natural economic needs than has been the case in the United States under corresponding conditions. This is due in large measure to the fact that most of the railroad lines are under government control and to the

are under government control and to the consequent uniformity in management and avoidance of unhealthy rivalry."

The square-deal effect on all railway labor, and incidentally on all labor, with one central management of the whole transportation system in government hands, would be a prodigious benefit of government ownership.

United States statistics show, as Professor Scott Nearing has set out in his Wages in the United States, that twenty-two per cent of the nearly one and three-quarter mil-

cent of the nearly one and three-quarter million railway workers in the United States receive a wage of less than eight dollars a week. The figures are for 1909, but they have not changed sufficiently since more than to make up for the increase in the cost of living.

Fifty-one per cent of the railway employees of the entire country receive less than six hundred twenty-five dollars a year. Only seven per cent receive more than a thousand dollars; and of the few high-priced railway men or operatives none receives more than all in that limited class would receive under government owner-ship, and probably none of them receives as

It is a real menace to the country that more than half of the workers in one of the most useful occupations in the world should receive less than a living wage.

### Saving on Bond Interest

If it owned the railways, the United States Government could guarantee to every rail-way worker a wage that would at least support him and his family up to the standard of the average American home. It would not get the money for this by leveling down the wages of the high-priced, better-skilled operatives. It would get it from the savings represented by the lower rate of interest that the railways would have to pay or railway bonds principal. rate of interest that the railways would have to pay on railway bonds, principal and interest guaranteed by the United States, as compared with the sum total of interest, dividends and surplus earnings the railways now pay to their stock and bond holders; and from the savings of the vast waste that has been partly enumerated earlier in this article, resulting from inefficiency, the duplications of expenses, the traffic departments, the virtual rebates to industrials, the profits over the actual cost taken for mail transportation, express carriage, Pullman and refrigerator car servriage, Pullman and refrigerator car service, and so on. Who shall state with complete accuracy just the number of hundreds of millions of dollars these possible present savings would represent?

Of the first item alone, consider that the railway interests, dividends and surplus railway interests, dividends and surplus earnings for private benefit amounted to \$833,734,571 for the year ending June 30, 1911, as shown by the last published report of the Interstate Commerce Commission. Now in a letter read to the United States Senate by Senator Kenyon, of Iowa, on January twenty-first of this year, Mr. Clifford Thorne, of the Iowa Railroad Commission, states that the United States Government would have to pay in yearly interest on bonds representing the full present market value of all the railway securities, including stocks and bonds, \$419,curities, including stocks and bonds, \$419,-075,201. The difference between this latter sum and the \$833,734,571 now paid to private beneficiaries is \$414,659,370. Mr. Thorne's figures are based on a government rate of interest of three per cent; but, using a four-per-cent basis for railway bonds guaranteed by the Government, the saving would amount to approximately three hundred million dollars annually.

The saving, regardless of interest rates in that one item would be vast, nor does all this offered present saving take into account the future saving. Here and now I can only indicate these. The "unearned increment" of land values in city terminals, country right of way, and so forth, are piling up hundreds of millions of "capital values" that the railroad rates under private ownership must also return interest upon. The other

# The Smuggled Calabash

# A Tale of Crime and Reparation

Jones of Philadelphia (not the Jones you know) had business in Detroit. Before to turning he crossed over to Windsor with the fell notion of buying a swell calabash and bringing it back without paying duty.

He got away with it, with much less trouble than he expected. But Jones was afflicted with a conscience. He was sorry before he got to Mansfield and it was a contrite loss who left the train at Broad Street Station

At home his wife made it worse. She said it sounded downright dishonest, and even time the postman rang she jumped with terror at the idea of Custom men, U.S. marshals, Federal prisons and things.

Poor Jones couldn't make that pipe taste right. He never enjoyed smoking it-got m pleasure out of it. He almost gave it away once, but instead he stuck a \$5 bill in at envelope and sent it to the Detroit Custom House, hoping that would ease his conscience.

He had no sooner mailed his letter than he found that he wanted to smoke. He felt for his tobacco but he had none, so he walked

> over to Harrison's desk and asked for a pipelif and got it from Harrion's tin.

He lighted up with trembling fingers. Would his conscience money spent make thz. beautiful pipe taste 25 it should-as he had longed for it to taste!

Oh, Joy! Oh, Bliss Oh, Rapture! Thepipe tasted glorious, the smoke was incompar-

able. He leaned back in his chair and said into a reverie of pure pipe pleasure. Suddenly he roused himself.

"Harrison," he burst out, "would you be lieve it? Now that I have repented and paid Government the duty I cheated it out of a this pipe, it gives me the sweetest, nicot, slickest smoke I ever experienced."

And Harrison said, "Oh, forget it! The

pipe got good because I gave you some Edgworth—if you had started in smoking Edgeworth you would be ahead the \$5 bil you just dropped down the mail chute."

Now the question is, Was it conscience of Edgeworth that made Jones begin to enjoy his pipe?

We'll let you decide this by testing Edgeworth yourself, and we'll furnish free the tobacco for a thorough test.

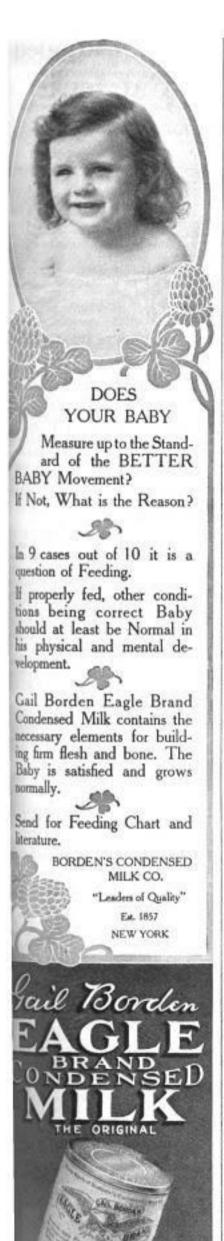

If you will send us your address and you dealer's name on a post card we will postpay a sample package for you to try. We was you to try Edgeworth for the same reason that you would want people to try any prouct that you had spent years in perfecting and that you made as well as you knew his So send and get your sample.

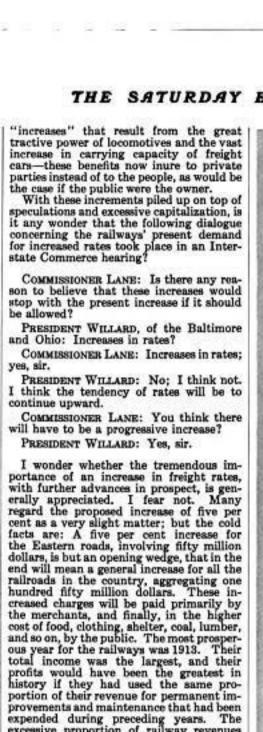

Edgeworth is made from the finest Burley that grows on the ground and comes in two forms-Sliced Plug and Ready-Rubbed.

The retail price of Edgeworth Ready-Rubbed is 10c for pocket size tin, 50c far large tin, \$1.00 for humidor tin. Edgeworth Sliced Plug is 15c, 25c, 50c and \$1.00. It: on sale practically everywhere. Mailed propaid where no dealer can supply.

If you want the free package, write !! Larus & Brother Co., 1 South 21st Street. Richmond, Va. This firm was established 1877, and besides Edgeworth makes several other brands of smoking tobacco, include the well known Qboid-granulated plug-s great favorite with smokers for many years

To Retail Tobacco Merchants: If you jobber cannot supply Edgeworth, Larus & Bro. Co, will gladly send you a one or two dozen (10 cent size) carton by prepaid paroi post at same price you would pay jobber.

expended during preceding years. The excessive proportion of railway revenues invested in cars, engines, terminals, tracks and improvements during 1913 represents profits, but in the form of property instead of cash. There was not the slightest justification for the advance in freight rates demanded by the railways and refused by the manded by the railways and refused by the commission in 1910 and there is now no justification for an increase. The facts sub-mitted by the railway officials themselves condemn the whole scheme.

# The Public Suspicious

There has been an immeasurable increase in the wealth of the world and we are en-joying comforts and luxuries undreamed of by our ancestors, chiefly on account of useful inventions and the advance from the cruder methods of transportation to the present system. These are the factors which have contributed most largely to the marvelous advance in our material civiliza tion during the past hundred years. But are we come to an end of this advance so far as aid from cheaper transportation is concerned? After the age-long forward march, are we now to face the other way and retrace our steps? If the cost of everything we buy, including transportation, is to advance, it cannot mean anything else but that we are nearing the end of the increase in the comforts and luxuries of civilization. And I for one refuse to believe that transportation cannot be made very much cheaper and very much better than it now is. I believe it can be made so under government ownership and control. I see no such hopeful prospect otherwise. Even if an increase in freight rates were

as imperatively required as the railway ople claim, it would be exceedingly diffi cult to secure the higher rates sought. The people are justly suspicious of the correctness of the arguments advanced for the proposed increase. They do not believe all the facts are in their possession. They think it is likely that the New Haven and the Frisco, and possibly other roads, need more money right now, but they are ex-ceedingly reluctant to furnish the added money in the shape of higher freight rates. Under government ownership the people would know or could learn all the facts at any time. If an advance or reduction in rates were needed it could be easily made. In Belgium and Germany the fullest publicity is given regarding railroad rates and

# The lovely lady of the little village

will win one of the 50 cash prizes Ansco Company offers-\$5,000 in all—for photographs of "America's 50 Loveliest Women." You know the lovely lady of the little village or the lovely lady of the big city. It is your duty to photograph her, or have her photograph taken and enter it for a prize in this nation-wide competition.

Every corner of the United States and Canada will send its loveliest women's photographs. Interest is tremendous. Bear in mind that the portraits chosen will be shown at Ansco Company's exhibit at the Panama-Pacific Exposition, which opens at San Francisco, February 20, 1915.

Producers of Ansco, the amateur camera of professtonal quality; Ansco color-value film; Cyko, the paper that gives prints of rich, soft quality that never fade, and Ansco photo chemicals. Their value in producing superior results has been proven many years.

finances. Is it any wonder that Mr. Bran-deis, in his brief for the shippers and con-sumers against the increase, said: "Let the consumer beware of the vicious circle of ever-increasing freight rates and ever-increasing cost of living."
All this illustrates, too, the deceitful

character of the arguments of private rail-way advocates. In one breath, when talk-ing to those out of sympathy with the rights of labor, they say government ownership would make railway employees politically arrogant and economically overpaid and lazy. In another breath, when talking to the railway workers, they say the employees under government ownership would be underpald, servile and afraid to unite and strike for their rights.

The courtesy, efficiency and manliness of the employees of the Post-Office Depart-ment is a sufficient reply to such charges. Would there not be a much greater in-centive to diligent work in all departments

of railway employment when the men were given a square deal than now when a preponderant proportion of the men do not earn a fair wage, and when most of the real benefits go to those who are not workers at all? Would there not also be a greater incentive in the increased safety to life under government operation?

It is said that railway service would not be developed to its full capacity without the incentive of private profits. The truth, proved over and over again, is that the governments of the world have to do those things they dare not intrust to the incentive of private profits. They have to chart the seas and light the shores to keep the ships operated by private owners for profit from being wrecked.

Block signals were opposed, and now steel cars are being opposed, because they interfere with profits. The Government of the United States built the Panama Canal under the direction of a man who was paid fifteen thousand dollars a year, and it will be operated for the world's benefit and convenience, regardless of profit. In Alaska, private railway building failed and the Gov-ernment had to go into that pioneer field. What public convenience or service that is in private hands has been run as efficiently and with such wide-awake enterprise as has

the postal service, without regard to profit?
And so one might go on.
Mr. Andrew Carnegie said to the Ways
and Means Committee of the House of Representatives in the tariff hearing of 1908: "Gentlemen of the Committee, allow me to address you in one word: Figures will do nothing but mislead you if you do not apply nothing but missed you if you do not apply your brains to such questions as these on which I address you." He said also: "There are more ways of figuring cost than there are ways of killing a cat. It is a simple matter of bookkeeping." And he added: "Well, gentlemen, I have told you over and over again that I do not judge by figures given by interested parties."

# Capitalization Per Mile

And so, in keeping with that advice, I have laid the emphasis in this paper on the broader facts and principles involved—facts and principles that no clever book-keeping can get round. I have used figures only as they have told their own unevadable story. And it is on the broad physical facts that the American people are going to solve this issue between transportation for service and transportation as only an for service and transportation as only an incident to profit. And let me say that the figures, too, yield to analysis and tell the same story as do the broad physical facts. They tell that the railways' capitalization in Europe is larger than the average capitalization here because not only do the rail. talization here, because, not only do the rail-ways there have to buy expensive rights of way through thickly populated regions, but the roads there have been brought to a far greater standard of efficiency and equipment

than have the roads here.

The official report of President Arthur wining Hadley and others of Mr. Taft's Railroad Securities Commission furnishes ample evidence of this.

"The average capitalization of the rail-roads of the United States is about ninety thousand dollars a mile," said Secretary Lane, of the Department of the Interior, in a letter, dated January 19, 1914, to Congressman Houston.

The 2042 miles of government owned and operated railroads in Canada show a capital cost to the Government of an average of \$47,237 a mile.

Wisconsin made a physical valuation of all the railways in that state and found the

present valuation per mile to be \$35,490 on June 30, 1911. The railways of Wistonsa represent more than an average in cost of construction and equipment to the mile as compared with the average cost per mis-of all the railways in the country. In making their valuation the engineers in the employ of that state included within that valuation Wisconsin's proportionate share of the cost of the terminals in Chicago, St. Paul and Minneapolis, and also of all the rain and armneapons, and also of all the terminals in the cities within Wisconsin. They also made an estimate of the cost of reproducing all the railway lines in Wiscon-sin from absolutely new material, paying the present price for materials and rights of way, and found that cost to be \$44,897

The Union Pacific Railroad in Kansas is a high-grade property. The State Railroad Commission, under state laws, placed the physical value of this railway at less than forty thousand dollars a mile. The total control is a state of the Union Pacific System. capitalization of the Union Pacific System per mile is \$146,012.60.

# Increases in Dividends

There are very few railways in the United States that are so well built equipped and managed as the Santa Fe. It has extensive and expensive terminals a Chicago, Kansas City, Los Angeles, Sar Francisco, Denver, Fort Worth, Dallas Houston and Galveston. It traverses the mountain ranges west of the Mississippi, are its cost per mile of construction and equipment is certainly higher than the average cost of all the railways of the country. The total capitalization of the Santa Fe amount to only \$58,346 a mile and its stock sells of the country. total capitalization of the Santa Fe amount to only \$58,346 a mile and its stock sells of the market at about par. It is well know that a large amount of the common stock issues of the Santa Fe was used for promition purposes and does not represent cas paid into the treasury of the railway or an

paid into the treasury of the railway of an physical property value.

After making fair allowance for depreciation in the value of cars, engines, track bridges, buildings, and so on, on accountage, service and wear and tear, fifty thousand dollars a mile would be an extravagate estimate of the reproduction value of a the railroads in the United States.

Statistics show that the amount of ra road stocks yielding dividends increase from \$2,668,969,895 in 1900 to \$5,730 250,326 in 1911, how the average rate ( 250,325 in 1911, now the average rate of dividend-yielding stock has increased fro 5.23 per cent in 1900 to 8.03 per cent 1911, and how the average rate of return all stock has increased from 2.39 per ce in 1900 to 5.43 per cent in 1911.

The figures on all the hodgepodge of rate will show the most classics in interest.

will show the most glaring injustices, a surdities and wrongs that most communit

know of and fight against.

If it be said that all these evils will y

to regulation, the fact remains that th have not yielded to regulation. Taxation? The railroads merely char it as one of their expenses that freight a

passenger rates must pay.

Franchise taxation? The courts he held, notably in the Consolidated Gas cathat if the people tax a corporation frachise they have admitted its value rate-making purposes

Court review of railway charges? W. that is one of the chief weapons of the rway against the public. Mr. Justice Brew in deciding the case of Smith versus An said: "If it be said that the rates must such as to secure to the owners a reaso ble percentage on the money invested, it be remembered that many things have he pened to make investment far in excess of actual value of the property—injudici contracts, poor engineering, unusually he cost of materials, rascality on the parthose engaged in the construction or magement of the property. These and mother things, as is well known, are fact that have largely entered into the invented with which railroad properties st charged." Contrast that record with clean, honest, efficient government const such as to secure to the owners a reaso clean, honest, efficient government const tion of the Panama Canal.

Regulation? Right now the railways trying to have the Interstate Commo Commission empowered to pass on all t stock and bond issues, in order that, as Railroad Securities Commission warned as others have warned, their securities a have a practical guaranty of face value

the United States Government.

Regulation? No; it does not regulation in spite of the splendid service of the la state Commerce Commission and thele though able service of the several s

mmmissions. A few years ago, as some one has pointed out, everything was going to be made all right by allowing the railways to cooperate, pool or unite with the interlocking directorates, under government supervision and regulation; but now everything is going to be made all right by breaking up railway cooperation and pooling and unity of interests through interlocking director-

ates. And so it has gone!

President Ripley, of the Santa Fe, and
many lesser lights in the railway world are stating without reservation that government ownership of railways is coming, and

they are predicting that all kinds of disasters will happen when it does come. If private ownership is a success, if regulation is effective and satisfactory, why s there such a widespread demand for government ownership of railways and no demand at all for private ownership of parcel post? Universally, railway systems have been founded by private capital; but today practically every country in the world, except the United States and Great Britain, have entered on the project of public ownership.

No railway system once taken by the Government has been permanently returned

to private ownership.

According to Professor Richard T. Ely: "Our American railroads are incomparably more in politics than the German railroads."

President Hadley, who is opposed to pub-lic ownership, says: "In judging the rail-road policy of Belgium by its results, all must unite in admitting that they are in many respects extraordinarily good."

Travel in Germany is six times safer than in the United States, and it is fifteen times

safer in Belgium.

Mr. Acworth, the leading English author-ity, admits, as do other English authorities, that, in spite of over three thousand regulative enactments by Parliament in a country where laws are made to be enforced regulation does not regulate. Private ownership in England emphasizes the tendency every where under such ownership and control toward concentration of wealth; while pub-ic ownership and control, as in Belgium, Germany, Denmark and New Zealand, tend

toward diffusion of wealth. If the question were submitted to the voters of the United States, how many men and women would vote to turn over our postal service and parcel post to the express companies or to the railways, or to Mr. Rockefeller or to Mr. Hill? A fair comparion of the Post-Office Department, where service is the end and aim of its methods, managements and operation, with the railway companies and their parasitical parlor or and express companies, where profits are of first and service of secondary importance, will be valuable to those who are unprejudied and interested only in the greatest good to the greatest number. Is there anything so blind and stupid as the familiar but unthinking statement made by defenders of rivate privilege in this country that the inture of public ownership and operation is proved by the postal service?

# If Rockefeller Carried the Mails

Where did these critics of the postal service get the idea that this service compares unfavorably with railway service or with big business of any kind in private minagement?

In what respect does it compare unfav-erably? Not in price; if anything is self-evident it is the statement that if Wall Street financiers were running the postal business of the world today the cost of postage for a letter from Chicago to Liverpool

or London would not be two cents, but

nearer ten cents. Nothing in the world is more certain than that if John D. Rockefeller or J. J. Hill were running the postal business, and if anybody were daring enough to suggest that they extend free daily delivery to the farms, Mr. Rockefeller and Mr. Hill would TENY that the suggestion is ridiculous on its have that any one should know that free rural delivery every morning could not pos-sibly pay; that it must result in a constant deficit and therefore is not even to be considered by a sane business manager. Free dailyrural mail delivery under private postal management would not be introduced in this country before the year 2000, if it were ever introduced.

The best proof, however, that the postal business is well managed lies not alone in the fact of constantly declining charges at a time when the price of everything else has advanced; it is not in the fact that the

postal service is a real service and considers the convenience and the interest of the whole public first and profit afterward; it is not in the fact that, though constantly reducing charges for postage, the service is constantly broadening, as in the case of free rural delivery. It is rather in the decisive fact that the postal service is the only big business that touches everybody in the United States against which is no general

Consider these remarkable facts a moment: Your mail does not go astray. It is not unduly delayed. It is brought directly and promptly to the very door of your

It is, considered as a system, satisfactory service. The American people are not slow to complain when things do not go right and they would raise loud complaint if the postal service were unsatisfactory.

To many government ownership seems new and strange. Even if it were new, that would not necessarily be a presumption against it; but, as a principle, it is not new. The Government that may regulate railway rates and service may own and operate railways if such ownership and operation be in the public interest. It is a principle always recognized by our courts that the railway right of way is a public highway, to be used not primarily for the benefit of the owners of the railway but primarily in the interest of the people.

### The Paramount Question

A railway company may get its property by condemnation proceedings. The property it gets and properly gets for its own use in this way was evidently not the property of the previous private owners in such a sense that they could do with it what they hose; in fact, no such property rights exist. Much less is railway-owned property the property of the railway to do with as they choose. Property acquired by the railways by condemnation proceedings may surely be taken over by the people collectively under similar proceedings. The public interests— the general welfare of the preamble to our Constitution—is really the only question

The implication of the words general welfare is pretty wide. It is becoming increasingly clear to all our people that there is nothing that makes for the general welfare which the people may not do. We are hearing less often than formerly that the people the Government—may not do this or that which it is desirable in the public interest

Occasionally some belated person is heard to say regarding some proposed measure that it doubtless would bring benefit to the public, but that it cannot be put in force pecause it is against our form of government.

What is our form of government for? Do we exist for the sake of a form of government or is our Government in all its forms simply an instrument by which we may

serve the best public interest?

In considering this question of government ownership of railways and of the municipal ownership of local public utilities, t should be remembered that the only really important question is the people's rights

and interests.

We shall do well to keep steadily in mind the famous saying of Lincoln that "There are no rights against the rights of the people." Of course it must be understood all the time in this discussion that there is no intention of doing any injury to any one. It has always been recognized by our courts that to take over any property for a public or a quasi-public purpose, at a fair rate of compensation, works no injury—no legal

injury—to the dispossessed owner.

There are two main functions of government—one is restraint, the other service.

Doubtless there should be as little restraint on individuals as possible, and none at all, except in the public interest; but who shall set limits on the service the Government may render the people? Certainly no one except the people themselves. The limit cannot be set by any philosophical theory

of government.

There are numberless sound and valid reasons not referred to in this paper why the public should own and operate railways, waterways and water power; but it must always be remembered in discussing this subject that the only way success can be assured is to keep these utilities absolutely free from politics, and apply the same business principles to their management which were used in the construction of the Panama Canal.

# Two Great Efficiency Features make the PARKER JACK KNIFE SAFETY PEN Leak-Proof

You can handle a Parker Jack Knife Safety as carclessly as you like—the ink cannot ooze out. It can be carried upside down, right side up, or flat—in a man's trousers', vest or coat pocket lady's purse, hand bag or work bag—or tossed care-

lessly into a trunk tray. It is ready for use the instant you want it and positively will not leak. The Lucky Curve Ink Feed and Patented Ink Lock are the two great efficiency features that make the Jack Knife Safety Pen leak-proof. You will find it a wonderfully handy and loyal companion on your travels or summer outing. Geo. S. Parker.

# Jack Knife Safety FOUNTAIN PEN

The Lucky Curve Ink Feed, borrowing nature's wonderful law of capillary attraction, draws the ink back into the barrel after you have finished writing, instead of allowing it to be pushed out by expanding air caused by the heat of your body when returned to your pocket, as with ordinary

fountain pens. Only Parker Pens have the Curved Ink Feed, which is the clever idea that prevents the leak and ink-stained fingers and linen.

The Patented Ink Lock shuts in the ink tight and fast so that even when the pen is carried bottom side up ink cannot get out.

# The new Parker Press-the-Button Pen extends the usefulness of the Self-Filler

This new self-filling pen has a perfectly smooth bar-rel—no outside projections of any kind—nothing to interfere with your grip or impede writing. It fits

# OUT-OF-DOORS

# In the Junk Closet

THE most wholly delectable place in the house, as any outdoor man knows very well, is that certain apartment, room or receptacle usually by the real head of the house called the junk closet. There is where your true outer stores much wealth of cloth-ing, guns, rifles, rods, fishing tackle, foot-wear, cooking utensils, and the general gear he classifies among his chiefest treasures. You have such a place yourself without doubt. It is full of interest, instruction and history.

For instance when, just the other day, while tugging at a bootlace on the top shelf,

you pulled down on your head a blackened and battered kettle—the stewpot that ac-companied you on many tours—it might to another have seemed empty at the time. Not so to you! On the contrary it held many things. There is much that a well-

educated stewpot can teach any man, savage or civilized, outdoors or indoors. Not long ago, for want of anything bet-ter, I went rabbit hunting with a man who had a sort of shack out in the country, where sometimes he did a little trapping or shooting or fishing at this or that time of the year. We had walked hard and were hungry; so presently we repaired to the shack aforesaid to make us up a meal. No

one had been there for some days.

We found a loaf of bread, very dry, and some coffee berries. Besides, we had some rabbits. It does not sound like much of a meal. Perhaps our banquet did not cost us over six cents a plate; but, quite outside the outdoor appetite, the point to be made is that it really was good to eat, and, with no better equipment, you also, in a like case, may knock together something good to eat. We did not have time in our hunting to

stop to make a stew; so for the time we fell back on that American stand-by, the fryingpan—American and wasteful, just as the stewpot is European and economical. Our rabbit was rather freshly killed, to be sure, but fresh cornfed rabbit, when young, is good to eat. The proprietor of the shack, one of those outdoor men who just natu-rally take to doing things right, proved this to our mutual satisfaction.

# One Way to Cook Rabbits

He built a fire in the cookstove and heated up abundance of hot lard in his frying-pan. Into this he put sections of the choicer cuts of a couple of rabbits, which in a few moments were sizzling hot and dis-posed to be golden brown in color. The point is that he did not simply fry his rab-bit and then take it off, more or less tough and stringy. On the contrary, after it was well cooked he poured some water in, with the fried rabbit, put on the cover of the pan, and allowed it to steam for a few moments. This is a trick worth remembering. It made the rabbit very tender and sweet-much better than it would have been if simply fried and left more or less greasy.

Our cook had poured off some of the grease before putting in the water, and now he proceeded to add flour and a trifle of salt, with the result that be fabricated a very excellent gravy for the tender rabbit. Meantime he had cut some slices off the dry loaf and placed them in a dripping-pan, which he shut up in the oven. To my own intelli-gence this did not seem indicative of bread, zwieback or toast.

Our cook presently opened the oven door and sprinkled his slowly browning slices of bread with water. "That'll make her ten-derer," said he; and so it did. The bread was very palatable and sweet, as was the The point is that water and steam are of use in handling fresh rabbit or dry bread-something which perhaps you have not yet discovered. What with these two items and a good pot of coffee, we would not have surrendered our banquet plates

for six dollars each—that is sure!

We fell to talking of stews, regretting that we had not time to use the five-gallon oilcan, which offered so inviting an oppor-

oncan, which offered so fiviling an oppor-tunity to build a real stew,
"We'll come down here and have a big coonhunt next week," said the owner of the shack; "and we'll just about set that can on carly in the evening, and when we come in at midnight it'll be just about ready to be good."

Since we could not have our stew at the time, it was agreed between us that we should devise meantime a formula for a real stew, to be executed in town the following day. It was so devised, formulated and executed.

And here we come to direct proof of the

wirtues of the stewpot proper.

We called our stew a Brunswick stew, using the name of a compound as famous as it is various, which seems to have come down from the past to the great good of those who hunt or those who like game. Properly speaking, it is a game stew. As to its dimensions, ours filled perhaps two-thirds of a three-gallon stew kettle. The compounding and cooking created great excitement in a certain household for the better past of a day. better part of a day.

We had, as it chanced, a squirrel, besides abundant rabbits. More squirrels would have been better; but in a hunter's stew of this sort you are to use what you have ducks, rabbits, qualls, grouse, or whatever the fallen to your how and speed. has fallen to your bow and spear. Mest such as venison you can stew, but perhaps in that case you will not get so delicate and tasteful a compound as we certainly discovered ourselves to own.

### What Went Into the Stew

We put in our solitary squirrel, as well as the hind legs and saddles of about three rabbits, more or less, carefully cutting out the bloodshot portions and throwing away the flanks and most of the forelegs. The remainder of the meat was washed clean while we took up the vegetable side of the problem.

Into our kettle we poured the contents of one can of mock-turtle soup-real green turtle would have done quite as well—a can of tomatoes, one of corn, one of red kidney

of tomatoes, one of corn, one of red kidney beans and one of green peas. We poured off most of the liquor from the peas, but added a quart of water to the contents of the kettle and then put in the meat.

Meantime other departments of the enterprise were active. We had about a pound and a half of bacon—salt pork would have been as good or better—and this was cut crisscross with a hunting knife, clean through to the rind, so that it fell apart in tiny cubes not over an eighth of an inch

through to the rind, so that it fell apart in tiny cubes not over an eighth of an inch across. Notice we did not dump these indiscriminately into the stewpot.

On the contrary we fried them thoroughly in the frying-pan and poured off most of the grease, leaving only sufficient grease thoroughly to fry three large and succulent onions, which gave off fragrance of exceeding excellence. The contents of the frying-pan next went into the stewpot. Some one thought it would be fine to put in plenty of salt; we so put in about three tablespoonfuls. It was not too much. A stew needs plenty of salt. We also tossed in a teaspoonful, I should say, of pepper. Nor was this all. The stew needed some thickening and richening. All the ingredients we had used—meat, bacon, vegetable and all—were first class of their kind Fresh vegetables would have done as well, no doubt but we did not the stew needed some.

and all—were first class of their kind Fresh vegetables would have done as well no doubt, but we did not have them. Now we took about half or three-quarters of a pound of fine butter, and about a teacupfu of flour, and mixed these thoroughly on a plate. The compound resultant, whateve it may be called, also went into the stewpot. There seemed to be nothing else we could put in at the time; but a glance happening to fall on a bottle of table sauce, which stood near by, we put in a tablespoonful of that for luck—and it was an inspiration Added to the abundantly spiced nature of our can of mock-turtle soup, we now had it

our can of mock-turtle soup, we now had : compound, the proc

of which was in the eating.

It was now one-thirty by the clock. Reverently we placed our stew kettle on top of the stove, with a good steady fire beneath it, of heat just sufficient to keep it simmering steadily. Then most of us went about other business. The pot was watched from time to time during the afternoon. Some times it was stirred to keep the flour from sticking to the bottom. It was only with the utmost difficulty that the assistant who did the stirring could refrain from falling at once on the contents of the kettle, so appeals once on the contents of the kettle, so appeal ing had its fragrance become within the

space of two hours. At seven-thirty that ame night we ate about a gallon of it. It

was delicious! Take our word for it, if you make a stew on precisely the foregoing lines it will be a success. Also, it will be a square meal. It vill be first aid to the injured and a balnced ration all in one. Fed on this manner f manna-or manna of manner, as they rould say in New York—you shall go forth nd prevail mightily in the land. As to that such a stew as this would mean to party of tired coonhunters at midnight's oly hour — Hush, man! Let us not peak of sacred matters!

Our camp cook, the hunter and trapper, eclares himself of the intention to set up he Brunswick stew as one of the instituons of his shack, winter or summer. He iys that in the summertime they often atch a good many mud turtles in their nets, and he is of the belief, in which I concur, that artle flesh will be excellent in one of these nt; and in camp one could add beans or

ce, or such vegetables as offered. Perhaps the tin of commercial mockremaps the throf commercial mocarile soup is not ethical; yet, like other
nethical things, it is mighty practical.
here is something in the high flavoring of
ne tinned soup that makes the whole comound tasteful. Perhaps even half a tin of e soup would be sufficient. For most stes, however, the seasoning mentioned

bove will prove very alluring. All of which matters very naturally come your mind when your pet stewpot falls If the top shelf in the junk closet and lands

n your head. What is the best stewpot for camp use? bviously the one you happen to have. ou may use an iron kettle or a Dutch oven r a powder keg, or a square oilcan or lard-use. Or, if you are lucky, you may have n aluminum kettle. Do not get a stewpan ith the long handle on the side, for you in neither cook so well with it nor handle so well. Only, remember that your fire hould never be extreme and that your cookg of the stew must extend over several ours' time. Indeed, a good hunter's stew an imperishable and perennial thing. ou may put fresh stuff into it every day and keep it going throughout the season if ou like. Do not burn the stew. Take your me about it.

For the eating of a stew a large tin cup is n excellent receptacle, or a deep tin plate. to not try to make your own dishes out of ark and such stuff in camp. You might do but it is not necessary. Also, you can make fire by twirling a hard stick on a piece of oard; but it is much simpler to strike a atch on your pants. This is a practical age.

# A Thousand-Dollar Secret

As to that large wooden-handled fork and that long-handled spoon so often rought to mind, see that they rest by your reside; and when you are moved to fabriate a stew take the aforesaid long-handled soon and bend the top of the handle into hook. Then it will not slip down into hook. This idea is known to but for ne kettle. This idea is known to but few nd is worth at least a thousand dollars to ny man. Do you remember the time in the moun-

ins when you killed your first elk, the one ou had longed for those many years? And hen you came into camp long after dark, red and happy, leading your own saddle-orse with the elkhead lashed on it, do you ot recall the fragrance which rose to your ostrils where the camp fire was making tadows all over the trees, and where the ook was going about getting things ready, nce he had heard you coming?

And do you remember that in the kettle e had a stew of meat and vegetables hich he had put on that morning when ou started out? This perhaps was the roma that greeted you when you leaned our rifle against the spruce tree and loos-ned your belt at the close of the day. The tew and the coffee, and the grilled elk-ribs ver done in the frying-pan—something of memory—eh? What?

And it all came back when the stewettle dropped and smote you on the occipal portion of your cranium, nut or coco. Nor was that all that happened. When ou were putting the kettle back on the top helf whence it had fallen you knocked from ne of the hooks another precious possesion. It was fragrant alike in memory and fact, fragrant with the smoke of the camp nd the memories of the open-your uckskin shirt.

It all depends on what you want to do. In church or at a directors' meeting or at grand opera a buckskin shirt is not particularly appropriate. The hunters' clubs of the great cities sometimes give buckskin dinners for the lark of it. These big gameclubs are now active and growing institutions in some of the larger cities—bodies such as the Hunters' Fraternity, or the Campfire Club, or the Boone and Crockett Club, of New York; the Lewis and Clark Club, of Pittsburgh; the Hunters' Fra-

ternity, of Chicago—and so on.

Most or many of the members of these
clubs will sneakingly admit the ownership of a buckskin shirt and confess inability to name a proper place to wear it in these modern days. It is the most impossible and yet the most impeccable garment of the

sportsman's trousseau.

For the Simon-pure incorrigible there is no smell in the world quite so fine as that of smoke-tanned buckskin. It is as imperishable as attar of roses and far more sweetthe smell of the smoke that lingers with it. When the stew-kettle fell on your head, and you stooped to hang up your wholly absurd, wholly useless buckskin shirt, you could hardly keep from pressing the shirt to your face and taking a deep, strong inhalation, if only for the sake of the pictures in it. In the old days of the weekly funny papers of America one of the erstwhile

famous humorists wrote a story about the man with the velvet coat. It was his allegation that every man, no matter what his station in life, had at one stage or other of his career either owned or yearned to own a velvet coat. Now that I recall it, I wore one myself when I was very young. Did not you? Therefore, as to a buckskin shirt, of course you have one, or want one, or are going to have one.

# The Wonders of Buckskin

What a map of the outdoor world hangs in the little junk closet! Here are rolls of buckskin from almost everywhere—Kootenai buck, white and fine; and Blackfoot bighorn, soft tanned; and Crow-tanned elk; and Micmac moose; and caribou from above the Arctic Circle; and other moose from the Peace River country—what a waste of time there has been for some of us, to be sure! But who would part with any one of these useless rolls of buckskin, whether soft and white and odorous, or yellow-brown and rich in smoke? After a while-sometimeone is going to make something out of one or other of these skins. Is it not true?

However, take buckskin just as an article, as a fabric, as a product—an industrial product. It has not only history but exeedingly interesting history. Moreover, it has utility, even where it does not own the stamp of fashion. So far as I knew at the time, I was the first man of my acquaint-ance to have my shoemaker make me up over a regular last a pair of shoes built of moosehide, smoke tanned by the Cree Indians.

There was never a better pair of walking shoes made than those. Of course they would not turn water; but, made as they were with a flexible sole, they were the softest, coolest, warmest, dandlest boots I ever wore! I made a present of a similar pair to a friend in Winnipeg. They laughed at him—until winter came. He did not need overshoes.

Then again, perhaps you have noticed madame, with her fine white boots to go with her piqué costume in the summertime—boots made by her own bootmaker over a private last. Being white, perhaps they make madame's feet look a little bit large; but even feminine vanity will condone that in view of the extreme ease of wear. Her bootmaker has sold her buckskin, white buckskin, made by a white man, not worth the tenth of Indian-tanned buck, yet excel-

You can make your own buckskin if you are a regular woods rat. I cannot think of any accomplishment more utterly useless than an ability to make buckskin; but it is the utterly useless things of life that give us nearly all the fun we get. The best teacher you can have is an Indian woman. Indeed it is much better to let the Indian woman aforesaid do all the work of making the buckskin. No white man can really pitch a lodge so it will not smoke, or make buckskin of an even and permanent softness and color. It takes an Indian woman to do

Your Indian has no conscience and he knows the best buckskin is summer-killed doe. Buck leather from elk is not so good.

CAR with every refinement, ample in power, exquisite in line, and with the same relative proportions, on a smaller scale, as the famous Oldsmobile Six.

It is a car to delight the eye, for it has the same general appearance and body lines, and the same faultless finish as the larger car that has during the past season brought added prestige to the Oldsmobile name.

There is a carefully developed idea behind the production of this smaller Oldsmobile. We know there are thousands and thousands of customers waiting to buy this car,-customers who have long been looking for a light high grade, quality automobile, a car that promises all the distinction, beauty of design, refinement of detail, abundance of power, and general mechanical excellence heretofore characteristic of only high-priced cars.

Power in abundance. The motor is a unit power plant, three-point suspension, overhead valve type, all valves enclosed in Oldsmobile aluminum silencer. There can be no doubt that this car develops as much power in proportion to weight as any other four on the market.

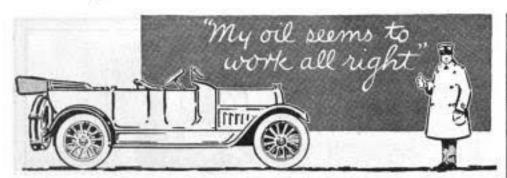

Equipment complete, including Delco electric starting, lighting and ignition systems.

Ask for Catalog B, describing the Oldsmobile Four. There are many who prefer a six-cylinder car to a four.

We have been supplying the demand for sixes in increa ing number every year, and will continue to do so-with what we believe to be "The Greatest Six-Cylinder Motor Car Ever Produced."

Combination 4 or 5-passenger Phaeton, touring body type, \$2975; 7-passenger touring body \$175 extra. Limousine \$4300. Catalog A, describing the Oldsmobile Six, sent on request.

> OLDS MOTOR WORKS Lansing, Michigan

This haphazard expression is common among inexperienced motorists. It often brings costly penalties.

The motorist should never rest satisfied simply because he sees no

You cannot spare time to frequently examine your wrist-pins and bearings. Nor can you, after each run, inspect your cylinder walls and piston rings for signs of faulty

Every good automobile motor is built to stand abuse-for a time.

No matter how inefficient your oil is, your motor for a while will "seem to work all right."

But high fuel bills often point to power-waste-sometimes directly due to incorrect oil.

And the poorly-lubricated motor which "seemed to work all right' too commonly is headed for the repair

Lubricating oil, to prevent powerwaste and premature motor wear, must have two qualities.

- Its body must be suited to your feed system, piston-clearance, bearing design and many other important factors which differ with different
- (2) Its quality must give full protection to the moving parts under the heat of service.

How can you make sure that your lubricant is correct in body and high in quality?

A safe, scientific guide will be found in the carefully-studied recommendations listed in the Lubricating Chart, printed in part at the right. Each recommendation in this Chart was made after a careful engineering analysis of the car's motor.

For a number of years this Chart has been the standard scientific guide to correct lubrication.

A copy of our complete Chart will be sent you on request.

On request we will also mail a pamphlet on the Construction, Operation and Lubrica-tion of Automobile Engines. It describes in detail common engine troubles and gives their causes and remedies,

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

Gargoyle Mobiloil "A" Gargoyle Mobiloil "B" Gargoyle Mobiloil "E" Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses nardware stores, and others who supply lubricants.

It is safest to buy in original barrels, halfbarrels and sealed five and one-gallon cans, See that the red Gargoyle, our mark of manufacture, is on the container.

For information, kindly address any in-quiry to our nearest office. The city address will be sufficient.

Correct Lubrication

Explanation: In the schedule, the letter opposite the car
indicates the grade of Gargovic Moddiol that should be used. For example: "A" means "Gargovic Moddiol A." "Am."
means "Gargovic Moddiol "A." The recommendations cover all models of both pleasant and commental vehicles unless otherwise noted.

Boston

New York Minneapolis

Moose makes far better leather, especially for moccasins. If there were any antelopes left you could even use their hides. The whitest and softest buckskin, for so we still must call the native product, was made from the skin of the mountain bighorn. That was the skin of which the Indian women fifty years or more ago made their finest dresses, genuine works of art of much value today—the sort that once were covered with the now priceless teeth of

It was marvelous how white the leather was often made by these Indian artisans. Today in the Far North, north of fifty-five, you may go into an Indian's dirty tent and, by proper inducements, find at length, hid under the ragged blankets or odds and ends scattered on the floor, a bag inside of which is a snow-white skin of caribou leather.

That is the sort the Indian women use
for the tops of their fancy moccasins. They
smoke it then; but if they are using it for
an ornamental band or flap they leave it snow-white, embroidered with fine silks or ornamented with beads.

I do not know how they make this white tan; but very probably they do it by repeated washings and wringings and rubbings. Perhaps they use a little soap. I do not think they use any alum.

In general, Indian-tanned buckskin means the vellow-known smoked article.

means the yellow-brown smoked article. Perhaps you remember grandpa's buffalo robe. It was sort of dark colored on the inside and it was split up the middle and sewed together. That meant it was a gention Indian tenned when the best over uine Indian-tanned robe, the best ever made. A large buffalo skin was too big for the Indian woman to handle well in tanning; so she split it, tanned the two halves, and then sewed them together with sinew thread, the same sort of thread that Lizette, a woman of the Loucheux, on the Mackenzie, has used to sew her white caribou these

Laughing Water tanned her buffalo hides by the same process she used on elk or sheep. The only ingredients she used were brains, muscle and patience; beyond a little smoke, that was all. And the greatest of these was patience. Of course the buffalo robe retained the hair. It was stretched flat on the ground, flesh side up, and then scraped, pared and chipped thin by the Indian woman with her little bone or irondred her argument a tool you could recome edged hoe or scraper, a tool you could never learn to use, but which in her hands did magic. She did not salt her buffalo hides and she never had seen alum, that bane of good fur often used as a ready aid in ama-teur tanning. She simply used patience and muscle, and maybe smoke.

# The Indian Woman's Art

In buckskin proper the hair must be re-moved, of course. If the Northern Indian is making a caribou coat for warmth the

is making a caribou coat for warmth the hair is left on and the hide is tanned as the old buffalo hides once were. For moccasin or shirt leather, used for tobacco pouches and the like, buckskin proper had to be made. The first thing in the making was to get the hair off.

The savage tanner had no vats. She knew, however, some running stream or muddy pond. Her first step in getting the hair off a hide was to bury it in the water or in the mud for from three days to a week. Usually in four or five days the hair would slip off readily. Then Laughing Water would take her buck hide and throw it over a log or pole, and working from the neck a log or pole, and working from the neck down, with the grain of the hair, either with her little iron hoe or with the back of her butcher knife, which she used as a graining tool, would remove every trace of hair literally with neatness and dispatch. Sometimes round Chippewa camps I

have found great heaps of deer hair, and it felt coarse and gritty, as though it had ashes in it. I suspect that ashes were added to the water to effect the slipping of the This was not necessary or typical in the Indian camp. Usually the process was to bury the hide in clean water.

From this time on, savage and civilized tanning lose all likeness to each other. The white man uses tanning liquids and produces leather. Laughing Water uses nothing of the sort and she produces buckskin, which is not leather at all. There is no romance about leather; you cannot grow enthusiastic over it. It is something dead. Buckskin, however, is not something dead but something alive. All its original chemis-try is still there. All the fibers are there, only they are broken, so that they are permanently softened.

Laughing Water takes her buck hide now and reverses it on the beam. Now she begins to scrape on the flesh side. This is a work of art and may be a work of genius, for some Indian women are noted above others for their skill in dressing hides. Here is the operation essential to the success of is the operation essential to the success of the Indian tan—all the integument must be removed, all the horny spots taken out, all the flesh removed. Working over the beam or perhaps more often flat on the ground, and quite often with the hide laced in a frame, Laughing Water keeps on patiently, skillfully, with her scraping tool of this or that shape, until the flesh surface of the hide is even and soft. She may do this is hide is even and soft. She may do this in one day or in several.

Perhaps the hide now has been a week in the tanning. Laughing Water is in ne hurry about it. If she were tanning a bear hide in all likelihood she would lace the hide in a pole frame and use it as she would a buffalo hide. Sometimes Laughing Water spreads the buck hide across her knees and at risk of limb or finger, trims at this or that spot which does not suit her. The Gros Ventre squaws were said to be the most particular hide-dressers of the Rocky Mour-

particular hide-dressers of the Rocky Mour-tains. Be sure the essential application of their art was in this part of the tanning or that immediately following.

The hide is now a rather ragged-looking article, but it is not parchment or rawhide. It is becoming soft. Laughing Water now calls in the neighbors. They twist and pull the hide every way, drag it round a lodge-pole, throw it over a thick sinew rope and saw it up and down, and do all sorts of things to break the fiber of the hide—that things to break the fiber of the hide-that is to say, give it its imperishable quality. It takes muscle and patience to do this Perhaps in the Far North you may have seen small spruce trees with their trunks peculiarly hewn into triangles, sharp-edged Here was where the women dragged mosshides back and forth to make them soft.

### Tanning With Brains

The last stage but one of the Indian tanning operation had to do with the permanent softening of the hide. Laughing Water took the skull of the deer or other water took the skull of the deer of other animal whose hide she was tanning, split it open with her little hatchet, and took out the brains. She now rubbed a thick coating of the crushed brains not on the flesh side but the hair side of the hide, where the grain was most open. If she were tanning a large bear or buffalo hide she might have a pot of mingled brains, liver, scrapings and grease; but the real secret of the Indian tar s animal brains and nothing else. Laughing Water allows the brains to dry into the hide slowly in a cool place; she never leaves it in the sun or near the fire.

After the brains have dried in the hide's again rubbed, twisted, stretched and draws until it is thoroughly soft. The brains do not leave it greasy, but pliable. They have some peculiar property all their own. This property was discovered by the American aborigine long ago, no one knows how.

Laughing Water accepts no substitute. There is nothing else just as good.

At any stage up to this time it has been quite possible to wash the hide clean with soap and water or with water alone, then wringing it and stretching it and rubbing it quite dry. There cannot be too much rubbing and twisting and stretching. No white man will take the pains to do it right but Laughing Water has done it correct. but Laughing Water has done it correctly and she knows that nothing now remains but to smoke the hide.

There were different ways used in smoking buckskin. Sometimes a heavy hide would simply be thrown on top of a flatroofed frame of poles, six or eight feet above the fire. The best buckskin was not made in this way, however. Probably Laughing Water would make a little pole tepee and stretch two or three hides round the little fire in the middle of it, reversing the hides as they colored. She used whatever fuel she could get for this, but soft or punky wood made the best smoke.

Of late years it is to be confessed the Indian women of the reservation very often use a barrel as a smokehouse-that is to say, they knock out both ends of a barrel and stretch the hide over the top end, over a little fire built on the ground. This smol-ing is kept up carefully and evenly, and much of the beauty of the buckskin dependent on the thoroughness of this part of the tanning.

At last Laughing Water looks on the work of her hands and pronounces it good Then, some day, she sits down to make a

buckskin shirt. No white man or woman can make a buckskin shirt—yet the Indian woman is imitative of the whites these days; so very likely she cuts out her buckskin shirt on the pattern of an old flannel shirt she has ripped open. It opens part way down the front and is fastened with buttons very likely, the sort Laughing Water can find at the trader's store. She will also execute a little collar for the shirt. Perhaps she will make it double-breasted, like a fireman's flannel shirt; in which case, if Laughing Water is a Chippewa squaw living near civilization, she will execute on the bosom the head of a large buck with flashing eyes. Then she will sell it to you for twenty-five dollars. twenty-five dollars.

The buckskin shirt proper of the old days was simply a tunic, collarless, and not opening in front more than just enough to allow the head to pass through. Sometimes there was a little flap, which buttoned across the neck. Of course no buckskin shirt is entitled to be called such unless it has fringed seams. When the Indian woman, having rolled over her knee the threads perhaps made of the back sinews of the buck himself, began to do her wonderfully neat and accurate seamwork, she let into the seam the edge of a strip of fine leather, which was cut into

narrow fringes.
You would not love your shirt so much if it were not for these fringes across the shoulder seams and down the arm seams. Why did the savage artist put them there? It was to protect the seams against wear and the weather. Perhaps some heartless civilized squaw has sold you a shirt sewed with thread. It is bogus. The fringed shirt with sinew thread is the only real article. How much is a good buckskin shirt worth? Perhaps five hundred dollars. My favorite is a Crow shirt for which I paid wight dollars treatty was a second or the same and the same and the same and the same and the same are the same and the same and the same are the same and the same are the same and the same are the

eight dollars twenty years ago. In muse-ums you will see Blackfoot or Cheyenne warshirts of the old days which would be cheap at one hundred or two hundred or three hundred dollars. It was by no means the case in aboriginal life that all garments were worked down to one utilitarian pattern. There were artists, designers, persons of style, persons of quality, dandies and

Perhaps the native woman who made one of these valuable old warshirts for her lord and master would be engaged on it many weeks. The strips of twisted ermine had to be made and let in. The little brass cylinders and pieces of shining metal had to be affixed. Broad bands of colored porcupine quills must be executed to adorn the front, where was to lie the phylactery of eagle bones or the like.

# Styles in the Yukon Country

Perhaps you may read about how to tan buckskin or how to make a buckskin shirt; but the white tailor does not live who could take two thousand dollars and make one of those old warshirts to save his life or his

So, you see, buckskin may have considerable history and considerable romance hidden in its smoky folds. If you can get a genuine Indian-tanned and Indian-made buckskin shirt today, made on honor by an artist, do not begrudge your twenty or twenty-five dollars.

Buckskin has more warmth for its bulk and weight than any cloth in the world. An old plainsman will tell you the warmest way to wear your buckskin skirt is inside your trousers. The Indian did not wear his so because he had no trousers, only leggings. His shirt was the tunic proper, and this is the type of the plains and the Rockies. In the extreme Northern country, among the Chippewaians or the Loucheux, the coat shirt seems to be more popular, a garment open all the way down the front. This type revails in the Yukon country cannot say whether it was the ancient fashion of the garment in those latitudes; but probably it was not.

There was no native product of more harbaric and interesting splendor than the oldtime warshirt of the buffalo tribes of the West. Today their glory has departed. They wear flannel shirts, and if they sell

you moccasins those are made of beef hide. The moccasins you buy in Eastern Canada of the trade as moose, and which are sold in most of our American sporting-goods stores as moose, are in nine cases out of ten made of beef hide. They are smoked and look Indiany; but they are spurious. They do

not rub soft after wetting.

A piece of genuine buckskin, whether in shirt or moccasin, will wet through like paper, stretch like rubber when wet, shrink like flint when left to dry, and yet rub soft as a glove if you take care of it when drying. My own favorite buckskin shirt has been drenched in many a snowstorm, but it is as

soft today as ever.

The best buckskin shirt for a white man has no ornamentation whatever beyond the fringed seams. As to museum value, bones, quills and beads come first, and then the more modern silk embroidery of the mis-sion girls. You can see these at all the Northern fur posts, clear to the Arctic Ocean. The beadwork on the Yukon side of the Rockies is more profuse and rather handsomer than that on the Mackenzie side. Considered as a work of art and beauty, however, the finest buckskin shirts obtainable today come from Fort Nelson, on the Liard River.

# Buckskins Too Good to Wear

These artistic garments-and they are indeed things of beauty and not merely examples of barbaric ingenuity—are made coat or jacket shaped, edged with fur down the front and at the wrists, and with one or two bands of fur, usually beaver, round the wrists or arms.

Across the shoulder-yoke, down the edges of the front, and round the wrists are broad bands of stained porcupine quills. This is the most expensive of all the Indian ornamentation and the most beautiful as

There are still a few women at Fort Nelson who can do this quillwork handsomely. There was one family at Fort Wrigley, on the Mackenzie, related to the Fort Nelson workers, I think, who also could do it beautifully; for we must see that this is the work of artists not many in number. I have seen such shirts sell at from thirty-five to fifty dollars. The women who made them would not get five cents an hour for the time they put on them. They are beau-tiful garments, but rather too fine and good for human nature's daily use on the trail. They are to be put on when the priest comes, or when there is a grand baptizing, or when one is a-courting. The post trader may have one, but he will not be apt to wear it very

This porcupine-quill work was used by some of the plains tribes, but they did it coarsely as compared with the Liard prod-uct. Apparently only the small, fine quills are used. The best dyes are the native vegetable ones.

All this fancy work, however, is part of such history of the savage races as now has to do with contact of white and red life. Perhaps in your junk closet you have more

than one buckskin shirt.

The older they are, the better. And it is your oldest one, the one with little ornamentation, the actual hunting tunic made perhaps twenty or thirty years ago—the one with the imperishably fragrant smell of the smoke still lingering in it—over which you hesitate as you hang it up once more in the junk closet.

If you are a very sloppy man, and a lot of us are a heap sloppier than we admit, perhaps you linger over it just a moment or so and look at it thoughtfully. Like many another thing near it connected with the life of the open, it was a product of evolution, the work of an artist. It has thought in it, and history, and romance, and sugn, and e

In short, of the entire household this is the very one apartment, room or receptacle where precisely the best things may be found. And they are classified as junk! Ah, well—and very well! Let it be so. All art is junk, in the same fashion of speech. You cannot really use a picture, but you can enjoy it.

# Why it is so rare

A skin you love to touch is rarely found because so few people really understand the skin and its needs.

Begin now to take your skin seriously.

You can make it what you would love to have it because, like the rest of your body, your skin is continually changing.

As the old skin dies and new forms, you have an opportunity to make the new skin what you want it to be.

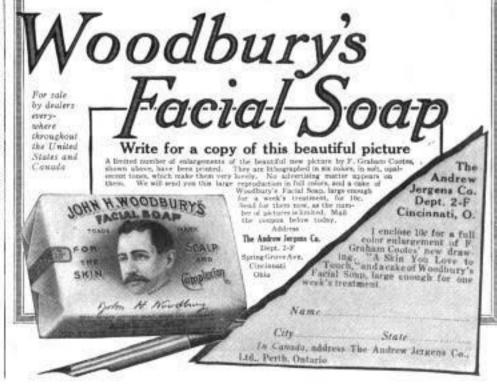

# Make this treatment a daily habit

Just before retiring, work up a warm water lather of Woodbury's Facial Soap and rub it into the skin gently until the skin is softened, the pores opened and the face feels fresh and clean. Rinse in cooler water, then apply cold water—the colder the better—for a full minute. Whenever possible, rub your face for a few minutes with a piece of ice. Always dry the skin thoroughly.

Use this treatment persistently for ten days or two weeks and your skin will show a marked improvement. Use Woodbury's regularly there-after, and before long your skin will take on that finer texture, that greater freshness and clearness of "a skin you love to touch."

Woodbury's Facial Soap is the work of a skin specialist. It costs 25c a cake. No one hesitates at the price after their first cake. As a matter of fact, it is not expensive, for it wears from two to three times as long as the ordinary soap. Tear off the illustration of the cake below and put it in your purse as a reminder to get Woodbury's today.

In Canada. The Woodbury preparations are now manufactured also in Canada, and are on sale by all Canadian druggists from coast to coast in-cluding Newfoundland. If you live in Canada, when answering our offer below address The Andrew Jergens Co., Ltd., Dept. 2-F, Perth, Ontario.

# Mechanically—No Car Made is the Superior of the Overland

modern methods, expensive scientific instruments and costly automatic machinery can make and produce it. Parts are manufactured, tested and inspected to one two-thousandths of an inch. Nothing but the very finest steels are used.

AFTER all is said and done, the supreme test of any car's value is the kind of mechanical performance

it gives in the hands of tens of thousands of owners. The car that requires practically no attention, after this most convincing of all tests, is the kind of a car you want to buy. For the car that

takes you any place, any time, under any condition, at the lowest cost, gives

that which every buyer is after-

unfailing and consistent service.

Up to date, we have delivered 42,000 cars of this year's allotment. Previous

So right now there are

# THE LETTERS OF WILLIAM GREEN

# Of the Return of the Prodigals

DEAR AUNT: Hennry Begg and me are back again from spenden a week in camp verry brown and sunburnt and a grate apetight from outdores life witch is mostly eaten and sleepen and playen round in the woods with nuthen to wurry about eckscept the bishup's butter witch has faded away as a hov's wurries convelly do.

a boy's wurries genrelly do. Hennry's muther was offle glad to see him again and could hardly reckonize him becaws he was grone so mutch in a week and

Hennry and me went to camp the day nifer we got your swete letter full of sim-pathy with a little scoalden and five dollers

witch about eavend it up Hennry said.

The five dollers fickst it so we did not haffto walk the ateen miles home for witch we were verry grateful and we had a little munney left over but we could have walked

if it was nessary. We spent a doller extra besides our bored for gelly and pickles witch made us verry poplar in camp and a high standen among the boys who eleckted Hennry capten of the Wood Rangers for too glasses of currant gelly and fore pickles.

It was a grate onner to be capten of the Wood Rangers with a star on your cote made out of haffa tomatto can flattend out and easy wurth that mutch gelly and pickles Hennry said and I could ware it sumtimes in the afternoons when Hennry wassleepen it off in the tent frum too mutch dinner as boys sumtimes do.

One reesen our muthers were glad to see us back was becaws Hennry and me did not tell them about goen to the camp for a week and there was no way to rite frum the camp and so it was too days before ennybuddy found it out ware we were after looken in all the dry wells and emty barns for us but we were not in enny of them witch wurried our parunts quite a little and thay forgot all about spoylen the butter witch was a little

about spoyien the butter witch was a little
thing beside of not knowen ware two boys
went for a cupple days and nites.

Spoylen a cupple pounds of butter is not
so verry importunt beside of probily losen
two boys don't you think so?

Hennry's and my father was quite eckscited by our not commen home all nite and

the neckst day and not finden us in enny of the dry wells or emty barns and no cricks to be drounded in so it was a grate misstery to them.

Hennry ment to leeve a note in the coffy pot so his muther would find it in the mornpot so his muther would find it in the morn-en tellen them not to wurry becaws we would be back in a few days but he forgot it on account of the hurry getten started and it was too days before they found the trale of us witch was quite a releef to them when Hennry's father came to the camp and found us all rite eccepts for cleen shurts witch was esay to ficks by senden sum frum home but we did not need meany close becaus of beein in swimmen a grate deel of the time and not waren mutch but pance the rest. pance the rest.

But a boy's muther thinks if he has clean shurts he is all rite but it does not wurry him as mutch as it does her. It was a fine week in camp and sleepen on a mattruss full of corn husks but now and then a corncob in your back onley maken you roll over a little and not enny dammidge.

Becaws of not haven cleen sheets it was not nessary to wash our feet every nite after.

goen barefoot all day witch was a grate re-leef to us and did not seem to be enny harm to us frum not washen.

Hennry's stummick trubble witch he had the last time he ett onley haffa wotter-mellun and sum grene pares was all gone the furst day and he would not know he had enny stummick at all eckscept for ware it all went at meeltime

Hennry said it would take a pretty good size wottermellun to scare him now even if it mite be a little grene witch thay sumtimes are but a boy will tackle one ennyway. Hennry said it must be a grate thing to be ritch and have a bad stummick and go

country every summer for pleshure boy liven in a town of too or three erd peeple is appto miss a grate deel of country for witch we ofto be verry teful to you for senden us the munney Hennry and me got home all rite eckscept for pance a good deel worn out frum onley one pare in the woods a week sumtimes swimmen in them and sumtimes climben a swimmen in them and sumtimes climben a tree and sumtimes goen through the black-bury bushes and uther things witch are more than one pare of pance will stand but by walken in the house the back way and beein careful we mannidged to make them hold together till we got home but it was a tits sweet. tite squeaze.

Hennry and me went in the back dore and gave the Wood Rangers' warhoop; to supprize them witch we did and our muthers came out and hugd us tore pance and all and cride and never throo up the bishup's butter witch was a grate releef to Hennry

It was quite a long time getten us cleen becaws of goen barefoot so mutch and needen quite a lot of scouren after the wurst of our feet was scraped off and then soked for a cupple hours in hot wotter sopesuds to

get the rest of it off witch it finaly did but did not look like the same fete afterwurd. Hennry and me also brought home quite a lot of woodtly witch we did not know about till afterwurd and were a little sore but nuther access.

but nuthen seryus.

Hennry's and my muther burnt our pance
in the kitchen fire for supper and a cupple
of our shurts for dinner neckst day witch would hardly hold together to wash after looken them over.

Hennry's nose was quite badly pealed off frum the hot sun on it and his lip crackt open a little and one ear blissterd and his uther thum cut on a tin can not the one partly blone off and black and bloo in sevel places from small surjecture and his back rel places frum small axsidunts and his back quite sunburnt down to ware the top of his pance would be and one of his big tose smasht a little frům a rock fallen on it on the bank out fishen.

But he had nuthen the matter with him

eckscept those.

After his muther put sum cold creme on his nose and sum vassylene on his ear and sum on his lip and rubbed sum on his back and tide up his thum and put a politice on his toe he was reddy to eat his supper and go to bed as well as he could from so menny things rubbed and tide on but it onley takes a little wile for a boy to heel up and he is all

I was so ankshus to tell you all about Hennry I forgot almost to tell you about Hennry and me finden a wosps' nest in a tree out campen.

It was a verry strange thing and Hennry and me did not know what it was when we found it furst but afterward we found out.

Hennry let me carry it furst and it was verry old and dead looken but afterwurd it came to life in a grate menny difrunt places when Hennry and me opend it to see if it was ennything inside of it witch it was a grate menny of them all of witch hurried out as quick as we opend it.

Hennry and me had been in swimmen with onley our pance on witch was mutch wurse for us becaws it was more room on us for them to lite.

A wosp is a grate deel like a bee onley he does not make hunney but uther things he seems to do about as well. When thay lite on you it is a verry hot and sharp pane and a hunderd of them tryen to lite on you at the same time is verry ecksciten for a boy who is just out of swimmen with onley short

pance on and not verry mutch of them.

It was a grate supprize to Hennry and me and one wosps' nest will last you for a long time if you see the neckst one furst.

We slapt them on the frunt pretty well but we could not slap them on the back and after runnen quite fast for a ways we came back to the crick again and dived in head furst and stade under as long as we could

commen up verry slow and careful.

None of them seemd to be able to dive witch was luckey for us but a good menny were buzzen over the wotter and daren us to come out on the bank witch we did not.

After a wile they got tired of waten and Hennry and me came out and lade in the mud all cuvered up witch was the furst cumfurt we had since we met them.

Hennry and me did not tell ennything about finden the wosps' nest to the uther

# Preserving Time

Be prepared this year. Use strong, convenient, sanitary enamel ware utensils. They are the proper vessels for fruit and vegetable preserving.

toys becaws we were tired when we got tark and did not feel mutch like talken but it was a grate day for Hennry and me and probly we will not forget it as long as we live and all the places were thay lit on us are not quite gone down yet. I gest the wosps is about all the campen

I gest the wosps is about all the campen you would be interusted in and Hennry and me are both grateful for haven on as mutch pance as we had.

Henny and me are pretty bizzey since we came back organizen the ball nine for sin games this summer.

Hennry and me know a place ware we can get good ball soots for boys for atey sense speace with shurt pance stockens and caps not the best made but plenty good enough for us. We can eather ware our own shoes or play barefoot witch would not be so much expense.

Henry and me are goen out collecten this week and see how mutch we can raze anusg our parunts and other peeple Henry and me know.

A good menny peeple would be glad to give a kworter apeace and be invited to the furst cupple games free. Hennry said whoever gave us the most munney the nine would be named after them this year witch is a fine chance for sumbuddy don't you think so?

Sumbuddy could have a grate onner for maybe a doller and probily a grate menny people will be ankshus to get it when thay find out about it.

find out about it.

Hennry said Uncle William's Winners
would be a grate name but you never can
tell.

If the boys should feel like callen it after Uncle William ast him if he would ackscept. The name would last all the yeer.

Hennry and me send mutch love and are verry happy over the way everything came out and the butter appears to be all blone over witch we owe all to you.

Your affeckshunate nephew,

WILLIAM GREEN.

P. S.—Maybe a haffa doller would get the name of the ball nine but a doller would be almost shure.—W. G.

J. W. Foley.

# WHAT NEXT?

### **Promotion Scouts**

THE promotion scout is a very recent I development in the management of a large corporation, the business of the scout being to find among the employees those who are best fitted for promotion. A Canadian railroad is among the first to attempt this experiment. None of the employees other than the high officials know who the scout is or just what methods he filless to get in touch with the men; so any employee may have company business with him any day without suspecting his identity.

Though it is the duty of the scout to be in the watch at all times for efficient employees, and also, in a lesser degree, to with for causes of complaint, the greater part of his work is not at all haphazard. Records of availability for promotion are made up for every employee by his superior, and these records give the tip to the scout for further investigation.

If any statement is made in the record that an employee is not available for promotion for some reason or other, the employee is notified of the fact and is permitted to file with the report any comment he may wish to make; and the comment may attract the attention of the scout to his case.

# Smelling Balt

THE old belief of fishermen that some fish can smell bait further than they can see it has recently been proved positively true in the case of dogfish, and a smelling bait for fish has now been invented. The proof of a dogfish's ability to detect the proof of dinner was given recently before a meeting of the American Society of Loslogists.

An investigator reported that when the testrils of the fish were plugged up it could not detect the presence of food. When food was placed near and the right nostril of the fish plugged, it swam to the left looking for lood, obviously because the smell of food was stronger to the left.

This evidence, however, was not needed by the inventor of the smelling bait, for he wied on the old belief to this same effect. It is bait is simply a soft-rubber imitation ist made hollow so that it may be filled with fish oil. The oil is allowed to leak out lovely and so notify the fish that an attractive dinner is at hand.

# The Sixth Sense

THE belief of some people that they can always detect the presence of a spider a the same room with them, and of other copie that they can tell when a cat is near, a rousing a lively controversy abroad; and scientific study of the supposed ability as been undertaken by psychologists.

One scientist has advertised for persons the believe they have the second or persons.

One scientist has advertised for persons to believe they have the strange power and are willing to be tested. The existence lany such sense is denied by many scientist, who ascribe it to the habit of noticing very time a guess is correct and taking very size and taking the suggested that it may be true and due the detection of a faint odor.

### Paint Alarms

FIRE-ALARM paint is coming into use abroad. At ordinary temperatures the paint is light red, but when heated it becomes darker. Long before it reaches the temperature of boiling water it becomes black. On cooling it returns to its original shade.

The principal use found for it is in painting machinery parts that are liable to overheating. An attendant needs only to glance at the machinery occasionally to know whether it is excessively hot. It has, however, another application—to give warning of threatened fire.

### Smoke Monitors

THE smoke monitor is an ingenious new device to serve notice in the manager's office of a factory or office building that the smokestack of his plant is pouring out black smoke. In many cities the smokenuisance laws make the owner liable to a fine if his smokestack gives out heavy smoke, which is enough to make the manager interested in the performances of the chimney. Within certain limits the production of heavy smoke means a waste of money by improper firing under the boilers; so in many plants the shade of the smoke interests the main office.

The device is simple enough, being based on the fact that a spark of electricity cannot jump so far through heavy smoke as it can through clean gases from a coal fire. A small current of electricity is kept constantly jumping across a gap in the chimney, the jump being one that the spark can make in clean gas. When the smoke becomes black, however, the spark cannot make the jump and the electricity takes another path. When it takes this other path it will ring a bell in the manager's office or light a red lamp there, as well as one in the fireroom to warn the fireman.

# Testing Fatigue

A MACHINE to show just how tired a man is after a light or a heavy day's work is now proposed by a noted French scientist as the best means for deciding what hours of labor should be fixed for each trade. Many tests on postmen, printers, typewriters and men following other lines of work that require moderate muscular effort have shown that the machine he uses can detect fatigue with much accuracy.

The apparatus is one common enough now to physicians—a device to record blood pressure. His experiments show an increase of blood pressure with increasing fatigue, an additional check on the results being furnished by another blood test.

Having demonstrated that fatigue can be detected with fair accuracy in this way his next step is to find a standard of fatigue that would constitute a fair day's work—in other words, to find the number of units of increased blood pressure that would result from a normal working day.

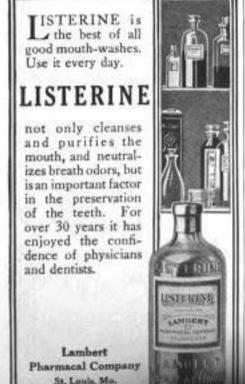

from a normal working day.

His preliminary results showed that the amount of fatigue for an eight or ten hour working day varies considerably in different

SAFETY FIRST! Don't Go Speed Crazy In Your Business The fellow who has his feet on the accelerator all the time generally has the largest repair bills. Sometimes he takes a trip to the hospital. You might say there can't be too much haste in business methods. Experience proves there can be. Advertising is like eating peanuts. There's a fascination to it that keeps you at it. # Sense and Nonsense

### His Son's Father

GENE BULGER and Ruth Grute, the little daughters of two New York newspaper men, print a paper of their own. It is called The Bugle-Star and it appears weekly

called The Bugle-Star and it appears weekly and, in the form of manifolded typewritten copies, has a growing circulation in the Washington Heights district of Manhattan. William Collier was playing at the Criterion Theater. In the supporting cast were his wife and his twelve-year-old son. During the engagement the younger Collier gave a box party at a Saturday matinée for Miss Bulger and Miss Grute and some of their small friends. After the performance the little fellow served tea upon the stage for his guests and altogether it was a gala occasion.

Occasion.

In the following week's issue of The Bugle-Star the following note appeared under the head of Dramatics:

"William Collier, Junior, the greatest boy actor on the American stage, is starring at The Criterion in a new play which was written especially for him by one of our best-known authors. His work is wonderful from start to finish. His father, whose name is also William Collier, is in the troupe too."

# Erin Go Higher

CHAUNCEY OLCOTT, the Irish actor, was to play at the Tabor Grand Theater, in Denver, and in view of the popularity of the coming star the management advanced the price of parquet seats from a dollar to a dollar and a half.

The first man in line when the box office opened for the advance sale was an elderly

Hibernian. He laid down two silver dollars

on the shelf.

"Give me a couple of good seats for Chauncey," he said.

"One dollar more, please," said the boxoffice man.

One dotter more, please, said the boxoffice man.

"Why so?" demanded the patron suspiciously. "I never paid more'n a dollar to
see Chauncey before."

"Yes, I know," said the ticket man, "but
you see Dave Warfield, who is a Hebrew
actor, is playing up the street next week at
two dollars. We thought if a Jewish comedian was worth two dollars, an Irish comedian ought to be worth a dollar and a half."

"Is that so!" snorted the customer. He
snatched his silver back and slammed a
wrinkled five-dollar bill down instead.

"I want two tickets," he roared; "and
don't you give me no change back out of
that five-spot neither, young man. If a
Jew is worth two dollars Chauncey is worth
two and a half, and not a cint less."

# No Such Name

PAUL ARMSTRONG tells of a friend of his, an exceedingly deaf man, who was being introduced to a young woman. The young woman was pretty, but she had a strange name. Her name was Dinglefugle. "Mr. Smith," said the mutual acquaint-ance, "this is Miss Dinglefugle."

The deaf man cupped his hand behind

his ear.

"Please pardon me," he said, "but I'm hard of hearing. What did you say the name was?"

Miss Dinglefugle."

"Miss Dinglefugle."

"I'm awfully sorry," murmured the afflicted one with a strained and puzzled look in his eye; "but I haven't caught it yet."

The other man raised his voice to a shout.

"Miss Dinglefugle!" he blared.

Resignedly, hopelessly the deaf man shook his head.

"It's no use," be said; "sounds like Dinglefugle to me,"

# Open or Closed?

TUST as a large Irish stevedore walked into a water-front saloon in San Francisco trouble broke out in the back room. There were sounds of oaths, of blows, of chairs being overturned and of crockery smashing.

The newcomer's eye brightened. He moistened the palms of his hands after the approved stevedore's fashion, hitched up his sleeves and started for the rear. Then, remembering the proprieties, he halted. "Mister Barkeeper," he inquired softly, "tell me, is that a private fight or kin any-"ke a hand?"

### White Elephants

ALITTLE girl walked into a grocer's store at Bayside, Long Island, and ordered a nickel's worth of animal crackers.

The clerk was in the act of putting the purchase in a paper sack when the small patron halted him.

patron halted him.

"Are there any elephants in those animal crackers?" she inquired.

"Oh, yes," said the clerk; "lots of elephants."

"Then please pick them all out and put 'em back in the box again," ordered the customer. "My little brother is afraid of elephants." customer. elephants."

### The Value of Illiteracy

A NEWLY landed German immigrant who A could speak broken English applied for the job of janitor of a flat-house in New York. The owner of the building was impressed with the candidate's earnestness and appear-ance, but when he found the German could him down. Nevertheless, he liked the young foreigner's looks so much that he helped him to get work in a construction crew and took pains to keep in touch with him for a

At the end of four years the German walked in on his former benefactor. He was well dressed and cleanly shaven. He explained that he had been so busy he had not had time to acquire even the rudiments of an education, but he now owned a thriving grocery business and had saved some

money.
"How much money?" inquired the

American.

The German drew out a bankbook and showed that he had upward of ten thousand

showed that he had upward of ten thousand dollars on deposit, drawing interest.

"Good heavens!" said the American.

"Fritz, I congratulate you. You're a wonder! You can't write your own name, and yet in four years you've made this much money all clear. I wonder what you would have made if you could read and write?"

The Gorman thought a moment

The German thought a moment.
"A janitor," he said.
The chief merit of this story is that it is uaranteed as true by the man who saw the bankbook.

# The Canny Andy

AS HERBERT COREY tells it, he went to a dinner once where Andrew Car-negie was a guest.

"After the eating was over and the speech-making had started," said Corey, "Mr. Car-negie reached in his pocket for something and pulled out a handful of small change. A dime got away from him and fell on the floor, and at the first chance Mr. Car-negie got down under the table and looked negie got down under the table and looked

for it."
"Did he find it?" asked one of the audience to whom Corey was narrating the incident.

"Did he find it?" echoed Corey. "He found fifteen cents!"

# The Daly Drive

THE late Pete Daly, whose memory is still green wherever theatrical people gather, was a great hand for staying up late. He never went to bed as long as there was anywhere else to go.

In the soft dawn of a June morning he emerged from an all-night café on Lower Broadway and climbed into a hansom, fill-ing it to overflowing, for he was a very

large man.

"Where do you want to go, Mr. Daly?"
inquired the cabby. All Broadway cabbies
knew the big comedian.

"Anywhere," murmured Daly drowsily.
Then an idea struck him. "Drive me to the

Polo Grounds," he said.

The cab jogged north, bound for the ball park, six miles away. An hour later the driver halted his horse outside a high board fence, climbed down from his perch and shook his slumbering fare by the elbow.

"Here we are," he said.
"Where?" inquired Daly, half opening

one eye.
"At the Polo Grounds. Where'll I drive "Drive me round the bases," said Daly, and went back to sleep.

Carafes 'HE busy man of toup Carafe filled with his favorite bottled water, chilled to his taste and placed upon his desk every morning. Thermos keeps it cold until the last drop is consumed. Serves You Right-Food or Drink-Hot or Cold - When -Where-and As you like

# ON ACCOUNT OF A LADY

(Continued from Page 7)

"Some fight tomorrow night," said

"Some fight tomorrow night," said Split-tooth tentatively.

"Those big hams?" said Faraday. "No chance—I could lick 'em myself."

"Naw—not them. Whitey and Sammy."

"Oh!" said the sporting authority.

"Yes; if this grudge-fight talk is on the level it ought to be a hummer."

Split-tooth grinned knowingly.

"Don't worry," said he. "It's on the level all right."

"How do you know?"

"Never you mind how I know," said Durkee mysteriously. "P'fessional jealousy! Where do you get that stuff? You're supposed to be wise. You've been round and seen a lot of things come off. What is it that makes most of the trouble between pals, eh? What is it that makes a man want to lick his best friend? P'fessional jealousy? Bah! Ain't there no other kind of jealousy?"

"You don't mean to tell me there's a kind of jealousy?"

"You don't mean to tell me there's a skirt in this!" said Faraday, pausing in the

act of spearing a pickle.

"You've been asleep at the switch a long time, but you're waking up now," said Split-tooth. "A skirt! You've said it all. Pity you didn't know about it before you wrote that bunk about p'fessional jealousy. Gee! That handed me a laugh!" Durkee

Gee! That handed me a laugh!" Durkee moved away from the counter.

"Say, come back here!" Durkee paused uncertainly. "Come here!" repeated Faraday. "You don't mean to tell me that Whitey and Sammy busted up over a girl?"

"I don't meant to tell you nothing," said Split-tooth. "Do you think I want to get in bad with a couple of lowbrows that have got me shaded on the weight?"

"Oh, come on!" pleaded Faraday. "I'd treat it as confidential—honest, I would. I wouldn't tell a soul where I got it."

"Nothing doing!" said Split-tooth firmly.

"Why, you got a nerve to ask me! You eat

"Why, you got a nerve to ask me! You eat here a good deal—you could 'a' seen it with your own eyes."

Faraday struck the lunch counter with his open hand.
"The girl at the cash register!" said he.

"Go to the head of the class!"

"What's her name?"
"Myrtle Schmidt." "How old is she?"

"Nineteen—say, what are you trying to do? Interview me? Nix! You've seen her, ain't you? Brown eyes, kind of dark complected, weighs about the feather-weight limit, been working here about two months — You ain't going to write anything about this, are you?"

"No—of course not!" said Faraday with sarcasm. "I'm just gathering this information for the census bureau!"

"Well" said Splittooth with a sigh "if

"Well," said Split-tooth with a sigh, "if you're going to spill it in the paper it ain't my fault. I can't stop you. All I ask is that you leave me out of it—see? I don't mind tellin' you a few things you ought to know— out of friendship—but I don't want no comeback. I can't go on the floor and mix

with these rough-and-tumblers, and I ain't going out of my class to oblige anybody." "Mum's the word!" promised Mr. Fara-day. "Now then, how did it start?"

FIGHTING Sammy Dugan sat on a rub-bing table in one of the tiny dressing rooms underneath the bleachers of the boxing pavilion, swinging his heels and lis-tening to the roar of the multitude. From time to time he inclined an ear to the earnest words of the Dis-and-Dat Kid, his chief second and adviser.

second and adviser.

"Now remember, Sammy, don't git mad!
Never mind standin' toe to toe an' sluggin'
until somebody drops. Let Whitey fight
dat way if he wants to. Wear him down
wit' dat left an' den wham him wit' de right.

Remember your reppitation, an The door banged open and T-bone Riley entered, a thundercloud on his brow. He held a pink sporting extra in his hand, which he thrust under Sammy's nose.

"You're a fine pair of mutts—you and Whitey!" said he. "Look what you done!" Sammy glanced at the paper and his jaw fell. A double row of black type three columns wide smote him with all the force of a blow between the eyes.

DUGAN AND WILSON TO BATTLE FOR LOVE OF BEAUTIFUL GIRL!

"Wha-what's this?" stammered Sammy,

"Mighty innocent, ain't you?" sneered T-bone. "I'll tell you what it is! It's my notion of a dirty trick! Here's a girl that's all right in every way—behaves herself like a lady, never mixes up in nothing and ain't looking for publicity. A couple of bum fighters get to quarreling over her and between 'em they cook her up a press notice like this. Listen while I read you a sample."

T-bone cleared his throat and read as follows:

follows:
"'The little god of love will referee
tonight's battle between Fighting Sammy
Dugan and Whitey Wilson, erstwhile friends, but now bitter enemies and rivals for the hand of Miss Myrtle Schmidt, a petite bru-nette beauty of this city.' Wha' d'ye think of that—eh? 'Rivals for the hand!' Say, do you think she'd marry either one of you

"Marry!" gasped Sammy. "Nothing like that. And they've even got her name! Oh, if I can get the fellow who spilled this, "Marry!"

Riley, I'll murder him!"
"You're sure you didn't?" questioned

"You're sure you didn't?" questioned T-bone.

"I've never mentioned her to a soul!" cried Sammy. "What do you take me for?"

"Well, somebody spilled it," said T-bone, "and now it's all over town. Whitey says he didn't do it."

"I wouldn't put it past him to do anything," said Sammy.

"That's what he says about you."

"He does? Oh, wait till I get him in the ring! Say, Riley, do you think she'll be sore?"

"Sore!" T-bone laughed unpleasantly.

"Sore!" T-bone laughed unpleasantly.
"No; she'll be tickled to death to have her name mixed up with a couple of cheap fighters! A nice girl wouldn't mind a little thing like that at all! I haven't seen her. She's on the late shift tonight; but I'd ad-

vise you to keep away from the joint until she cools out."

Half an hour later Sammy Dugan and Whitey Wilson stood in the center of the ring, blinking in the glare of the arclights, ostensibly listening to the referee—an honest, conscientious soul—who droned monotonously about many things, none of which was new.

Said Sammy, glowering at Whitey: "What did you get that put in the paper

Said Whitey to Sammy:
"I didn't. You did it yourself—nobody
else knew."
"You did!"

"I didn't!" "You're a liar!"

"You're another!"

Said the referee, extending his arms and diving between the combatants:

"Here! None of that! Can't you wait till the bell rings?"

Thus, with an added cause for grievance, they waited for the clang of the gong.

The honest and conscientious referee said it was a draw, and three thousand lay brethren applauded that just decision wildly. Then they fell back in their seats, hoarse, hysterical and happy. For once a grudge fight had justified its press notices. As a matter of fact, there was nothing else for the referee to do. With both men on their feet at the end of the battle—dazed, battered and staggering, but still on their

feet-he had no choice. He could not have awarded a decision on scientific points. There were no scientific points. He could not have declared either man a winner on aggressiveness. Both had been as aggressive as wildcats. In the matter of knockdowns honors were fairly even. Whitey had taken the count six times and Sammy five. As to punishments inflicted, there was little to choose. Sammy had a broken nose, but Whitey had lost a tooth. Sammy's mouth resembled a badly bitten damson plum, Whitey had a mouse under his left eye. Sammy had a lump on his jaw,

but Whitey had a split lip.

"And as for blood," said the referee, ruefully regarding his soft white shirt, "between 'em they shed enough of it to free Ireland!"

No sooner had the two soggy gloves been hoisted in the air than Sænmy dashed out at one angle of the ring and Whitey hopped through the ropes at the other, thus violating all tradition. After a drawn battle it is customary for the gladiators to linger as long as possible, leaving the ring separately in order that the applause may be sustained.

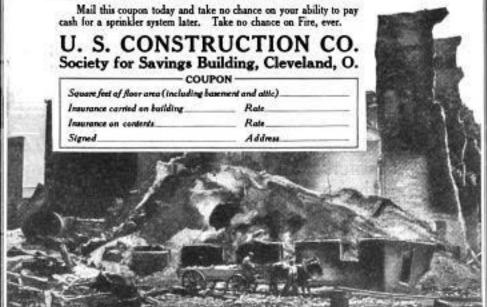

# The "Ash Wagon Argument"

# Free Sprinkler Systems

WE INSTALL automatic sprinkler systems free, usually taking as our compensation your insurance savings of a few years. After these savings have paid for the sprinklers and paid us our profit, we give the system to you.

And we will further give you the option of purchasing the equipment at any time during the life of the contract, at a reduced price.

Sometimes the merchant or manufacturer argues that he prefers to wait until he can put his own working capital into a sprinkler system. This is called the "Ash Wagon Argument." For, almost invariably, he lets one year after another slip by. He goes on paying the insurance companies for a sprinkler system without getting one. He goes on without protection. Almost every week some man who is procrastinating, is caught by a fire and his going business is demoralized.

# Economizing

# with the Comptometer

The Comptometer represents the truest kind of efficient economy-the kind that actually saves time and labor and prevents mistakes. The saving of time and labor due to the phenomenal speed of the Comptometer can be readily measured, but the value of its accuracy is simply incalculable.

It was a revelation to the executives as well as to the office force of a large beet sugar factory, to find that all the additions, extensions, divisions and deductions of the annual audit, were easily made in 17 hours on the Comptometer. It had taken them 112 hours with other equipment.

It was a further revelation when the Comptometer disclosed figure errors which had resulted in overpayment on purchase invoices amounting to over \$500.00-invoices which had been gone over and checked by three capable mental extenders,

Then came another revelation when they were shown by the Comptometer test that in 25 pages of mentally figured statistical work requiring divisions accurate to 5 places, only one item out of the lot was correct to 5th place,

These are real experiences—not imaginary cases. They can be multiplied by the thousands to prove beyond the shadow of a doubt that the Comptometer is one of the most notable factors for efficiency and economy in accounting that is known to the business world today.

THE SATURDAY EL

PHILADELPHIA, PENNA.

Two such precipitous exits were never before witnessed in that arena.

"Say, you gotta have dat nose fixed up," said the Dis-and-Dat Kid to Sammy in the

dressing room.
"Plenty of time," mumbled the dis-figured gladiator. "I shaded him in every round, didn't I?"

On the other side of the partition Whitey's handlers besought him to allow them to reduce the mouse by the simple and expedi-ent method of lancing it with the blade of a penknife.

"Tomorrow!" said Whitey impatiently.

"Where's my pants?"

It was a great race and Sammy Dugan won it by half a block. He burst into Riley's place out of breath, disheveled and perspiring freely. Split-tooth Durkee grinned behind the coffee boiler, and Myrtle stared stonily over the cash register. She had put on her hat and coat, and her bag dangled from her wrist. Her nose and ever were suspiciously wrist. Her nose and eyes were suspiciously

wrist. Her nose and eyes were suspiciously red.

"They give it a draw," panted Sammy, "but I win a mile! Say, I want—to tell you—I didn't put that piece in the paper. It was Whitey did that—and——"

This declaration was interrupted by the accused, who hurled himself into the room, also breathless and perspiring.

"Don't you believe him!" he cried.

"S a lie!"

"Oh, you're both here, are you?" said Miss Schmidt coldly. "Well, I just want to tell you one thing: I wouldn't waste my time on hoodlums like you. I wouldn't look at you outside of this place. I wouldn't speak to you! You're trash, that's what you are—trash!" Her voice grew suddenly shrill. "The idea of you dragging me into the newspapers like this—a couple of lowdown hoodlums like you! My fiancé is going to be in town tomorrow. He's a going to be in town tomorrow. He's a brakeman on the railroad, and he's bigger than both of you put together. Just wait till he catches you—that's all!" She had stepped round the end of the

counter and now swept out into the street, banging the door behind her. The battle-scarred gladiators looked at each other blankly. After a time they became aware of Split-tooth Durkee, who was grinning at

them from a safe distance.

"She's quit her job," said Split-tooth cheerfully—"Says she couldn't hold up her head in this joint again. And say, if what she tells me about this brakeman is right you better leave town now. He's bigger'n a house!

Sammy and Whitey exchanged glances

of deep concern.
"If that's the way it is ——" said Sammy

tentatively.

'We better stick together," said Whitey.

"We better stick together," said Whitey. They shook hands.
"We can lick him if he's as big as Jim Jeffries!" said Sammy.
"You're whistling!" said Whitey.
They shook hands again.
"You're a tough bird, Whitey, old boy!" said Sammy. "I'd rather fight a champion than take you on again."
"I never got such a lacing in my life as I got from you," said Whitey, thoughtfully stroking the mouse under his left eye.
"Say, what started it anyway?" asked Sammy.

"Why," said Whitey, "Split-tooth, over there, he said that you was knocking me to

her."
"He told me the same about you," said

Sammy.

They considered the situation gravely, over and over in turning this information over and over in their minds. Then they looked at Split-tooth, who squeaked and backed suddenly into a pile of plates, sending them crashing to the floor.

"Nix! Nix!" he begged. "Ain't we always been friends?"

"You go round one end of the counter and I'll go round the other," said Sammy. "He can't get away," said Whitey.

When T-bone Riley dropped in he found Saginaw in sole possession of the premises,

Saginaw in sole possession of the premises, which bore every appearance of having been visited by a cyclone.

"What's happened here?" asked T-bone, estimating the damage with a practiced eye.

"A whole lot of things," said the night cook: "Your cashier has quit. Sammy and Whitey are friends again. It was Splittooth that got that piece put in the paper. He's in the Receiving Hospital."

"Outside of that every little thing is all right?" asked T-bone.

"So far as I know," said Saginaw.

"Fair enough!" said T-bone Riley.

Where Safety Is First

Lysol is almost invariably chosen by doctors and nurses in critical cases, such as childbirth, where only the safest and most effective antiseptic can be used.

It is infinitely safer than carbolic acid or bichloride of mercury. It is also more effective, for it destroys the germ and then washes it away by its peculiar soapy character. These qualities make

the ideal antiseptic, germicide and dis-infectant for all personal and household uses, as, for instance, washing sores and cuts, disinfecting bathrooms, closets, carpets, sinks, garbage cans, etc. Disease can scarcely enter a house that is guarded by Lysol.

Important — He sure you get Lysol itself. It is not up in round bottles with the signiture of Lehn & Fink on the label.

# THE FAKERS

(Continued from Page 23)

the carse of this country, if he were to act otherwise. Am I right?"
"You are right, senator," Hicks answered. "I am for the people, and I believe I can serve them best as a Democrat."
"Good!" exclaimed Paxton, slapping Hicks on the shoulder. "Now come in and take a little dictation."

take a little dictation.

Hicks went in with his notebook and pendis, pulled out the shelf on one side of the senator's desk and waited.

Paxton lighted a cigar, fussed over some papers and, leaning back, looked up at the

"Politics," he began presently, "may be separated into two grand divisions: Practical politics and impractical politics. Fractical politics is the kind that wins. Inpractical politics is all other kinds. Paragraph.

"Politics has many aliases. It is rarely practiced under its own name, except by those who are designated as the unscrupusus bosses and their henchmen and heelers. All others who engage in politics so engage because some unendurable condition of national or local affairs demands their prompt placing on the payroll in order that

these abuses may be corrected. Paragraph.
"Next to getting on the payroll the important object of politics is power. Power simportant object of politics is power. Power important, because if you have power you can get the money. At any rate you can put others in the way of getting the money, and no politics is a success unless senebody gets it. Paragraph.

"Politics makes strange bedfellows. All combinations and associations you perseally make are excessable because you

smally make are excusable, because you invariably make them for the good of the people. Paragraph.

"Always be unselfish in politics. For example, if called to choose between two

offices, always take the office to which you an be elected, even if it be the lesser one, for any salary at all you can get is better than any salary, however great, that you cannot get. Paragraph."

Paxton stopped, puffed a little at his cigar and then began again:

"The greatest asset of the politician is the people. Paragraph.

"It is well to remember that though the

"It is well to remember that though the jeople may not always be right, they are sweedingly numerous. Paragraph.

"Every politician should observe carefully what the people think they demand, and demand that thing instantly, stridently and continuously. As the people pay attention to politics for only a few weeks each the real the political pears attention to year, and the politician pays attention to politics all the time, it will soon fall out that the people will come to think the re-forms they demanded and you took up are really reforms that you demanded and they

resty reforms that you demanded and they took up. Paragraph.

"Never refer to the people as the people. Always call them the plain people. The great bulk of the people are so plain they like to be told of that characteristic constantly. Likewise, they dote on being held up as the bone and sinew of the nation.

Paragraph

"Always be in sympathy with the wrongs of the people. Never make a speech without referring to the great toiling masses. The great toiling masses like publicity for their greatness and sympathy for their toil.

Faragraph.

"The great toiling masses would be mighty uncomfortable and unhappy if they had nothing to kick about; so if there are no outrages on the body politic think up a feet. Personnel.

few. Paragraph. The secret of successful political oratory is to tell the people what they already know.
If you thunder at them for two hours that honesty is the best policy and virtue is its own reward they will consider you a patriot and vote accordingly; but if you elucidate a new political or economic theory they will say you are trying to sell them out and probably will think you are a crook.

Paragraph.

"Money has no place in politics except to defray legitimate expenses. Money is expended illegitimately in politics when you are caught expending it. Wise politicians have expend money in politics themselves. detection comes, their hands are unsullied and their motives cannot be impugned."

The senator stopped again and relighted his rigar. "That's all for now," he said. "What is it?" asked Hicks—"a speech or an article or what?"

"Neither," replied Paxton. "It is merely an epistle for the aid and guidance of any aspiring young man who desires to become a successful politician."
"What shall I do with it?"

"Oh, make a few copies and keep one for yourself. It might be of use to you some day, for it contains the condensed wisdom of thirty years of dealing with the people in public life."

Hicks looked in the Congressional Directory, and found that the representative from the Rextown district lived in Rextown. He went over to that statesman's committee room and introduced himself to the secre-

tary of the representative.
"I'm T. Marmaduke Hicks," he said,

"assistant secretary to Senator Paxton."

"Glad to meet you, Mr. Hicks," the secretary responded. "My name is Duffield, James R. Duffield. What can I do for you?"

for you?"

"It's a good town," Duffield replied, as-suming the tone of a booster. "It's the best town in the Middle West and it is

growing by leaps and bounds. It has the best water, the best climate, the biggest buildings, the most complete street-car system, the finest park system, the greatest hustlers among the business men, the most expensive homes, the greatest bank clearings of any town of its size in that section.

It also has the biggest jobbing houses, and it's one of the largest mill and factory towns anywhere in the Middle West."

"What's that?" asked Hicks—"a big

mill and factory town?"
"One of the biggest," boasted Duffield.

"Why, our factories —"
"How do the men in the factories vote?"

asked Hicks, interrupting.

"Oh, they vote the Republican ticket.
Paddy Ross, the boss out there, sees to
that. Talk about Republican towns and
counties! Why, Mr. Hicks, there hasn't been a Democrat elected out there since Hector was a pup, and Corliss County is unanimous for the G. O. P. every crack out of the box." of the box.

"What is the factory vote—how much of the total vote, I mean?" Hicks asked. "About half, I guess," Duffield replied; "maybe a little more." "How many Democrats are there in Rextown?"

'A thousand in round numbers perhaps. Old Perk Rollins sort of hangs on to them

Old Perk Rollins sort of hangs on to them and herds them up at election times; but, pshaw, they haven't got a chance!"

"Still," continued Hicks, who saw possibilities, "if that labor vote should get away from you and go with the Democrats once, they would be able to clean you up, wouldn't they?"

"Sure!" assented Duffield; "but there isn't a chance—not a chance. Paddy Ross holds that vote for us, and Paddy will hang on to it too, you can bet on that."

holds that vote for us, and Paddy will hang on to it too, you can bet on that."

Hicks asked a few more questions, listened impatiently to another panegyric about Rextown, thanked Duffield, and hurried back to Senator Paxton's office.

"Senator," he said, "that town of Rextown looks pretty good to me. I was talking to a young fellow from there, Malcolm's secretary, and he tells me it is a big mill and factory town and that the labor vote is about half of the total."

"Well?" interjected Paxton.

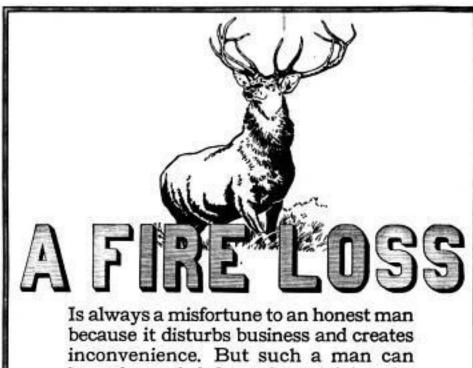

"He says there are about a thousand

"He says there are about a thousand dyed-in-the-wool Democrats too, and there might come a chance, on some local or national issue, to shift that labor vote. Then I'd win."
"Such things have been known," com-

mented Paxton, to whom this situation was no news. "How are you getting on with no news.

"I'll have my degree in February. The examiners will allow me credit for the time I studied back home with Judge Smith, and then I can take the examination."

"Can you pass it?"
"Pass it?" and Hicks laughed. "Why, senator, all my studies have been directed to that end. I have inquired carefully into such principles of the law as will come up in that examination.

WANTED -AN IDEA! Who can think of Protect your ideas, they may bring you wealth. Write for "Needed Inventions" and "How to Get Your Patent and Your Moore," RANDOLFI & CO., Dept. 137, Patent Autorneys, Washington, D.C.

"I see, and such real knowledge of the law as you will eventually have you will obtain after you are out of law school and a member of the bar?"
"That's the idea," Hicks replied.

Hicks applied himself for several weeks, secured his degree and took the examina-tion. He passed by a narrow margin. Senator Paxton told him he would fix it so he would be admitted on motion to the Rextown bar, on the strength of his District of Columbia certificate, and Hicks swaggered about the boarding house be-cause of his new distinction. Also he let it be known generally that, notwithstanding his association with Senator Paxton, he had concluded that the Democratic party more closely approached his ideals as the party that had the interests of the plain people at heart, and that he had decided to cast his political fortunes with the Democracy for that reason. Paxton and Madden chuckled and everybody else predicted Hicks would

soon lose his job.

Hicks sent for the Rextown papers and read them carefully, familiarizing himself with the names of the people most mentioned in their columns. He gained a smattering of the local politics of the place and informed himself, as well as he was able, concerning the characteristics of the surrounding country and the intrinsicies of surrounding country and the intricacies of

the city government.

Paxton talked with Hicks frequently about the plan, never going so far with him as he had with Madden, but, by skillful reference to the manners and methods of men in Congress, impressing on Hicks the basic political fact that the general political gullibility of the people as a mass is a natural and legitimate political asset. Hicks, on the other hand, though fully convinced of the truth of this, both from what the senator told him and from his own what the senator told him and from his own observations, sought to maintain, and did maintain—to his own satisfaction at least—the pose that he sincerely believed that the people needed his services, and that he could work for them better as a member of the Democratic party. He sometimes combatted Paxton when Paxton was especially bitter and cynical, protesting that the people were not so easily fooled as Paxton thought. thought.

Paxton enjoyed this hugely, for it was evidence to him that he had not misread Hicks, and Hicks thought he was making the impression that what he had in mind was a means to gain a most desirable end, which, as he stoutly asserted to Paxton, was the general good of the people, but which in reality was the immediate and continued. in reality was the immediate and continued good of Hicks. As time went on Hicks be-came enthusiastic over the idea, and Paxton had much amusement in planning the

details.
"How's the Paxton-Hicks coalition com-

ing along?" asked Madden one day.
"Fine!" Paxton replied. "Tommie has swallowed the bait and is trying to make me think he's only nibbling at it."
"He talks to me about it by the hour." said Madden. "I think he's beginning to believe he has a mission to go out and reference.

believe he has a mission to go out and reform things. He's getting a lot of the genuine reformer's earmarks."

"Don't make the mistake of classing all reformers as bogus, Madden," and Paxton was very serious. "There are plenty of men who are earnest and sincere and honest and helpful in their efforts to eliminate a lot of abuses that have grown into our political and economic system. Not all of them are

fakers by a long shot.

"I personally have the greatest respect for a man who believes what he says, and who acts on his own honest convictions. The chaps I detest are these canting, hypocritical, faking humbugs we see round us in such numbers. The great fault of our politics isn't graft or dishonesty, Madden, it's hypocrisy."

He walked back and forth across his

"Good heavens!" he exclaimed. "Look round you. Put any one of nine-tenths of these hand-shakers and four-flushers under the acid test, and that one and all the rest will turn green in a second. Don't spare me.
I am as bogus as the rest of them, only I admit it privately, of course, and they don't. I have been thirty years in public life, and I've made a fortune out of politics and secured a reputation, and am counted as one of the leaders of the Senate. Yet I'd be back home running a grocery store if the people hadn't made it so easy for me. They allowed me to bunko them, and I utilized my opportunities. Some day these people

ril wake up, but until they do they themelvs will be the instruments of their own undoing.

Suppose some one tried to wake them

suggested Madden.

"Some one will some day," Paxton re-ied "but not yet and not Hicks. When hat time comes we'll all scuttle for the high green. Until it does come the game ail go on in the same old way, for there's to use trying to get the yolk out of a china ag, or any profit either. So far as Tommie a concerned, he won't try to awaken them. His idea is to keep them fast asleep.

WAS arranged that Hicks should start for Rextown in April. Paxton told him he as wasting time in the office, inasmuch as a had his future plans so carefully con-idered, and urged an early beginning. The easter was much pleased with the eager tanter in which Hicks had undertaken this yucal enterprise of his, and was anxious or the actual test of it. He felt sure he had n able and amenable subject for his minis-mions, and told Hicks not to let lack of noney bother him, as he would assist him inscally at the start.

Il Paxton had not been frank with Hicks ether had Hicks been frank with Paxton. licks was without a scruple and was willof to take any step that would advance in along the line of his ambitions; but he at he should not disclose these inner attiades of mind and conscience to the senator. Is considered the senator's interest in him. wa friendly attempt to aid a young man the had attracted the notice of that statescan by his eminent abilities. Paxton read liks like a book, but Hicks did not get unter than the preface to Paxton. Paxton ad made just the sort of an arrangement of Hicks he had in mind to make, and his reliminary negotiations with Hicks and her working out had given him so much nusement he was sure the processes of insignment would be even more entershing. Hicks felt he had concealed his ul character from Paxton, and had listened b Paston's satirical lectures on the abuses the body politic, which abuses Paxton as daily engaged in making greater, with a air of belief in their literalness that Hicks d vas most skillful dissimulation. Paxton iscussed the attitude of Hicks with Madden ad laughed over it.

"Be's a convert and a crusader, Madden," ad Paxton. "I am constrained to think to the T. Marmaduke Hicks will add to the porty of the nation as time goes on.

'atten drove him to the train.
"Good-by, Tommie," the senator said at before the train pulled out; "good-by ad good luck. Remember that from this ine forward you are a tribune of the peo-a a lifelong Democrat since day before interday and a foe to the corrupt forces of ealth and plutocracy. Above all, be seri-The people must think you are in arrest, else you are lost. Here are a few other thoughts I have jotted down for you. usp me informed of your progress.

He handed Hicks an envelope, waved his and and walked away. Hicks found his ent, arranged his baggage and opened be envelope. It contained a check for a housand dollars and this letter:

WASHINGTON, D. C., April 17, 1899.

"Dear Hicks: Let me call your attention othefact that certain traditions and proceents in politics have been in vogue so long hat they have the force of rules. Occasionly a politician arises who does not play the ame according to the rules, but he can be endemned unsparingly as an upstart and demagogue and the traditions and prece-

ents thereby preserved.
"Dress is an important thing, and deends somewhat on the section from which ou come. Do not in any circumstances low yourself to overdress, especially as au are to make your appeal to the plain eople to whom plain living and plain dress-it are marks of virtue. Wear clothes milar in kind to those your constituents ear, or the bulk of them, but do not understimate the value of a plug hat and a tock coat on occasions. Be dignified, but of too dignified. Be familiar, but not too

"Gauge your public carefully and be all bings to all men, but be careful to be the and of thing to each man that appeals to hat particular man.

"For example, never take a drink with a clergyman and never fail to buy one for a ward boss. You are as good as the greatest citizen of your community and no better than the humblest one. Always remember that—when canvassing the district. "There is ample precedent for the state-

ment that no frivolous person ever got anywhere permanently in American politics. It is well to be borne down by the seriousness of the situation and to assume an impressive manner of speaking. Do not allow yourself to be led into any public display of wit, and never by any chance make a public demonstration of a sense of humor. When stating your conclusions, state them with an air of finality that is observed when a justice of the United States Supreme Court hands down a decision.

"Never fail to take active commissions of

Never fail to take active cognizance of any movement or issue or policy that is favored by the religious bodies. Align yourself-publicly-with the better ele-ments, and go to church regularly. This will enable you to carry on, with much less danger of detection, the necessary negotiations with certain politically important

elements of your community.

"Always keep your promises. That is to say, always claim to keep your promises and always assert vigorously that you do keep them to the letter. An expert politician can find many ways for breaking prom-ises—after he is elected; and after you are elected you have secured your reward and do not need votes for the time being. "If you have an obvious thing to do, do

it in a highly complicated manner. Befog every action. Never make a direct statement on a matter of policy and never do a direct thing until you have carefully calcu-lated the consequences. Many a political career has been ruined by haste in such matters. You may have observed that the

trimmer usually lands.
"Do not be led at any time into telling the truth about any political proposition. Truthtelling in politics is the mark of the inexperienced politician, but be careful to lie skillfully and always remember just how

you lied.
"If you want a political place, induce several people to run for the same place. Do not select men strong enough to get the place—that would mess things up fright--but get aspirants who can control a few votes in the convention. This multipli-cation of candidates will help you amazingly. Conversely, it will aid you to beat

some man whom you desire to beat.

"Never talk; always confer. That impresses the people and looks fine in the

newspapers.

"I leave these few final political principles in your hands, confident that you will discover their worth. These and the others I have given you have stood the test of time. They can be relied upon to be most useful. Keep me posted.

Draw reasonably if you need money. Good luck, and don't forget you are a lifelong Democrat. Also, most important of all, be serious-take yourself seriously and the people likewise. "Hopefully,

"WILLIAM H. PAXTON."

Hicks had saved fifteen hundred dollars, and this, added to the Paxton thousand, gave him a working capital of twenty-five hundred dollars. Paxton had secured for him a letter of introduction from a Democratic friend who knew Perkins G. Rollins, the Rextown Democratic leader, and he had a letter to the First National Bank. He had written to his mother to have his father's law books shipped to him, and he had in his trunk his certificate of admission to the District of Columbia bar, neatly framed, also his law-school diploma and his

picture of President McKinley.

He arrived in Rextown on the morning of the second day, went to the Hotel Metropolis, which was the biggest hotel in the place, and registered: T. Marmaduke Hicks, Washington, D. C.

Hicks knew enough about the ways of small-town newspapers to understand that a man who registers in a small town from Washington, District of Columbia, is always considered as a potential newsgiver, and always is approached by the local reporters. Fifteen minutes after he was in his room a bellboy brought up the card of Charles

Bignall, reporter for the Rextown Globe.

"Ask him to come up," Hicks said to the

hellboy, and Bignall came.

"Mr. Hicks?" he inquired as he entered.

"Yes; Mr. T. Marmaduke Hicks."

"I noticed on the register you are from Washington. Is there any news in your

# Ford Owners Ride With Velvety Ease Save Your Tires, Your Engine, Your Car With a Full Set of Double Spiral Springs FEMCOShock Absorbers

EST ses designed specially and only far Furd Cars. Thou-sands of sets in daily use. 0

RIGHT NOW-make sure of the luxury of riding—anywhere, all the time, with Temco
Shock Absorbers, designed and built specially
for Ford cars only. Only \$3.75 each—\$15 for the
full set of four—and you have tire protection, engine protection,

car protection, that actually save the cost in cash many times over. And all the comfort and luxury besides.

The old pitching and side jerking is a thing of the past. Car holds the road. Temco Shock Absorbers give a gentle up and down swing on the roughest going—take up all the sharp jars of paved streets—make your car ride with the buoyant sensation of a large launch. You rest in your car.

# Stiffness Vanishes

Temon Shock Absorbers give your car great flexibility—actually help the steering mechanism—reduce friction between the motor and the running gear—preserve the alignment—save repair and upkeep expense—keep your car in better condition, thus giving you the most use and the most pleasure—add to the sales value of your car.

All the claims we here make for Temco Shock Absorbers are actual— proved by daily service upon thousands of Ford cars. We will refer you to these owners in all parts of the country. We back every set with our absolute guarantee of complete satisfaction—or your money immediately refunded without question or argument.

# Double Spiral Vanadium Steel Springs

The known quality of high-grade springs proves the standard efficiency of the Temco—long double coil sensitive to the least jar—tough and tested quality to outlast any car. This is a new element in shock absorber construction—based upon scientific mechanical principles—not the product of a "cold blacksmith" or experimenter. The special creation of a muster designer whose work has won bim great reputation. No friction whatever. Design and construction covered by our original patents (Sept. 9, 1913) and patents now pending, covering double spiral spring and other improvements as here illustrated in sectional cut. All infringements will be vigorously prosecuted.

Observe the simplicity of mechanical construction—load is entirely suspended from warranted hanger bolts, yet neither bolts nor springs touch surfaces of polished steel—mud proof—ice proof—dirt proof case.

# Sold Upon 30 Days' Free Trial **Fully Guaranteed**

Equip your Ford with Tenco Shock Absurbers, and learn the possibilities of your car for service and huxary of motion. You can apply them yourself. No changes. No holes to defil. If you cannot get them of your dealer, order direct from us. \$15 perpuid to any address in the U.S. Write today for complete information, with illustrated circular—free.

visit—anything official, I mean? I thought possibly you might be in the government service.

service."
"No," Hicks replied, "I am not a government official, although I have been more or less in touch with the workings of the Senate for some time. However, I shall be glad to answer any questions you may care to put to me on Washington topics."
Bignall asked him about a pending measure and Hicks aypertly analyzed it. Fur-

ure and Hicks expertly analyzed it. Fur-thermore he discussed several other live

topics understandingly and with a Demo-cratic angle and gave Bignall a good story. "Thank you, Mr. Hicks," Bignall said, after Hicks had finished. "That'll make a corking interview. Give me a scoop on it,

will you?"
"What do you mean?" Hicks asked.
"Why, don't talk to the other afternoon

"Why, don't talk to the other afternoon paper."

"All right," Hicks agreed amiably. "By the way," he added, as though the idea had just come to him, "you might mention that I have decided to enter on the practice of the law here and hope to take an active part in Democratic politics."

Bignall laughed. "You've got courage," he said, "to come here if you're a Democrat. Why, this town is so Republican the Democrats can't get trusted at the stores. Old Perk Rollins is about all there is to the Democratic party here."

Democratic party here."

"Well, you might add then that the Democratic party in Rextown has been doubled in size and is now composed of Mr. Rollins and T. Marmaduke Hicks."

"All right," assented Bignall. "I've got to jump back and get this in the home edition. I'll take care of you."

Hicks kept his promise to the reporter by going out on the street and inspecting Rex-

going out on the street and inspecting Rextown. He found it a clean, lively city with good stores, good buildings, good pavements and a prosperous-looking people. He walked about until the Globe came out. His interview was prominently displayed on the first page. The opening paragraph read:

"Mr. T. Marmaduke Hicks, who has been identified with Washington affairs in an official capacity in the United States Senate, arrived in Rextown this morning to take up his residence here and enter on the practice of the law. Mr. Hicks is a well-known Democrat, and in discussing affairs at the Capital made the following comments to a reporter for the Globe.

Bignall had written a very good report of his interview and Hicks was much gratified. As he entered the Hotel Metropolis the clerk, somewhat impressed, said: "Say, Mr. Hicks, there's been a reporter for the Leader round here all the afternoon looking

for you."
"Is that so?" asked Hicks easily. "I am sorry I missed him. If he returns I shall be

in my room."

Then he went upstairs, after buying several copies of the Globe, cut out his interview and mailed one of the clippings to Senator Paxton with no comment. Two days later he received a telegram from the senator which said: "Congratulations. Apparently your face is turned toward the morning." (TO BE CONTINUED)

# Outshining the Sun

IGHTS that will outshine sunlight are I now being tried for daylight signals on railroads and elevated roads in the belief that they can be made to give a clearer sig-nal than semaphores, which give their orders by the raising or lowering of oscillating arms. A gaslight or an electric lamp does not make much of a showing in the sun-light. When street lights of a thousand candle power each are tested in the daytime a passer-by would never know it unless he watched for it carefully.

Glass lenses, however, have been so developed in the last few years that for signal purposes lamps can be made to defeat daylight. Daylight varies greatly, from bright sunlight to smoky murkiness, and it is this variation of daylight that gives the most trouble; yet daylight lamp signals are now being used on the new lines of one elevated railroad, and they are being tested

for railroad use.

made a mistake in matters like this. Just be good enough to bring me the nippers from my bag in there; then you will take my card up to the captain and say that I desire his presence here at once."
"Well, sir, at that the old boy shoves up

both hands and says:

"I beg you, gentlemen, let me have one word with you—just a word!"

"'One moment, Doctor!' says Eddie.
'But it's no good, my man—you'd better

'But it's no good, my man—you'd better take it gracefully; and remember anything you say will be used against you.'
"The little guy puts his head down in his hands and begins to cry—he just cries. Say, it darn near made me sick.
"'I might have known!' he says. 'Oh, I might have known! But, officer,' he says, looking up to Eddie, 'you'll listen to reason, won't you? Oh, surely you'll listen to reason—I'll make it well worth your while.'
"'Where is it?' says Eddie quick.
"'It's in my trunk in the hold,' he says,

"'It's in my trunk in the hold,' he says, 'every cent; and to-morrow in London you'll have half of it if you'll just listen to

reason.'
"'Doctor,' says Eddie to me, 'I ask you
that this unspeakable to make a note that this unspeakable scoundrel tried to bribe us. Are you aware,

scoundrel tried to bribe us. Are you aware, my man, that this infamy will only make it worse for you in the end? And besides,' he goes on, 'it may be in your trunk in the hold, and then again it may not be.'
"'Oh, it is! I swear it is!' he says; and in a second he's down on his knees, with both his arms wrapped round Eddie's legs, begging and screeching for us to be reasonable. 'If you have any heart in you,' he says, 'I'll divide it fair and square. Show a little 'I'll divide it fair and square. Show a little mercy when you see a man in the gates of hell!' he says.
"Well, at that it flashed over me what

"Well, at that it flashed over me what Eddie's whole play had been; I don't have to have an office building fall on me.
"'Get up!' says Eddie, and lifted him by the collar back on to the seat. 'Doctor,' he says to me, 'I confess that in all my twenty-years career I have never come so near to sympathizing with a wrongdoer. Something in this man has touched me to the quick. I am sorry we ever took the the quick. I am sorry we ever took the case. I tell you frankly that if I saw any honorable way to manage it I should return and report failure to our employers and leave this poor wretch to enjoy his ill-gotten

gains."

"'Half his ill-gotten gains,' I put in quick; and I was going on to say some more, but Eddie kicks me on the ankle.

"'The other half,' he goes on, 'we could make restitution of to the rightful owners, and leave this poor creature to his torment when repentance comes, as I am confident it will come. His own conscience will punish him more effectively than man-made laws.

"At this the old boy goes dippy again, telling Eddie Heaven will repay him for his tender-hearted mercy, and a lot of stuff like that, Eddie being greatly touched by it.
But someway I have a hunch we ought to
get action right there. I says, 'What's the
matter with having the trunk up now and
saving time?' But the old boy won't have it. He says he's in a nervous collapse, and though he feels moved to trust us, still we might play him false and arrest him anyway after we'd got the half that belonged to us. He wants it done on land, where he'll have a fair show. He's trusting us, he says, and why shouldn't we trust him?
"And Eddie's feeling so good over his work that he sides in with him and says it

will be all right to-morrow. But that hunch of mine keeps working. They was some-thing about this lad's eyes I didn't like from the start. So I comes back and says he must have some of it there in the room, and what's the matter with kicking in

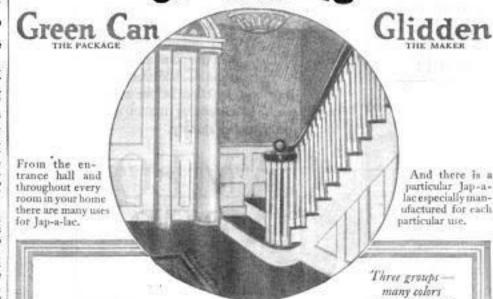

with a little of it right now?
"'That's true,' he says, 'I have some of it here; and to show you gentlemen that I trust you I'll make a partial payment at

"So he unbuttons his vest and throws it open, and there across the top was the two safety-pins like I'd said. Then he takes out some bills, and what do you think he done?

Well, sir, he hands us each a twenty.
"Say, you could have knocked Eddie
over with a match! He even lost his voice for a minute. How would you have felt? How would any man have felt? I says:

"'Say, you must have us sized up for a couple of cheap crooks! What do you mean by it? This ain't no time to kid!'

# Three Things to Remember JAP-A-LAC

And there is a particular Jap-alac especially manufactured for each particular use.

DERHAPS you have not yet begun to realize the broad scope of Jap-a-lac. Possibly you've only used it for renewing old or scarred furniture. Do the big things with Jap-a-lac, too-floors, woodwork, radiators, pic-ture moldings. It's just as much pleasure and satisfaction-the results are just as marvelous.

But for true Jap-a-lac results be sure to get Jap-a-lac in a Green Can and made by Glidden.

That sort of thing's not good for the average lawn hose. But that's the very kind of treat-ment Goodyear Lawn Hose is made to stand—year in and year out. There are many Goodyear reasons for it. Read them -

# See the Ribs

then buy your lawn hose knowingly.

Goodyear Lawn Hose is more than mere corrugated hose. It has six heavy rubber rils that run its full length. These prevent all "kinking"—give a moother and greater wearing surface as the hose glides over the ground or is pulled around trees, posts and corners. They reduce the friction immensely.

# The Construction

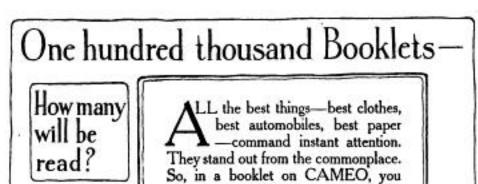

Goodyear Lawn Hose has five distinct layers. The inner rubber tube, then a jacket of braided cotton, then another rubber layer, still another braided jacket, then the outer rubber cover—all absolutely seamless—all "cured" to one solid, weather-

proof, knock-proof, water-proof, wear-proof unit that will give years of service. Every foot bears the Goodyear "Wing-foot" brand — every foot is "Goodyear." You know how seach you're getting as will as who! you're getting.

# Buy This Way

Buy lawn hose wisely. Say "Goodyear."
That insures years of service—and better service. If your dealer happens to be out of Goodyear Lawn Hose, just send us his name. We will see that you are supplied immediately, by express, prepaid. Price in 50-foot lengths: ½-inch, 20c a foot; ½-inch, 19c a foot; ½-inch, 19c a foot; ½-inch, 18c a foot.
We recommend the ½-inch. You will find its size and weight best for average use,

"And he just says: 'Why it's part of the money; I'm relying on your honor and giv-

ing it to you now, and I trust you to deduct it from your half in the morning."

"Well, I was going up in the air at that, but Eddie just grabs me and says: 'Come on!'

"I took the two twenties just the same, and I says to him: 'You do any of this four-flushing with us townstress and you'll have

flushing with us tomorrow and you'll have your name in the papers!'

"Back to the smoking room for me and Eddie, him looking foolish and me feeling pretty hot to think all our work was going for little or nothing.

"'You can kink me Doe' Eddie sow

"'You can kick me, Doc,' Eddie says,
'only you got to give me good on my system. I shot straight enough, but I got
a mudhen 'stead of a canvasback. That old yap had all the earmarks of making a big getaway. I doped his physiology right, but not his caliber. I sized him for a cashier at the lowest, and here he's some cheap bookkeeper who's likely grabbed off three thousand dollars at the most! I never saw such a blow-up.' Of course I had to give Eddie good for working it up like he done, and I said so. 'And it'll serve the thief right,' I adds, 'if we take the whole three thousand for ours.'

"'Oh, I'm too disgusted!' says Eddie.' We'll be straight with him as long as he's been straight with us. It probably ain't his fault he didn't grab off more.' And right then I feel my hunch again. 'He may be square,' I says,' but I don't like his looks a little hit.'

"It took me the longest time to get old yap had all the earmarks of making a

"It took me the longest time to get to sleep, account of this hunch of mine. 'Maybe it's only three or four thousand,' I says to myself; 'but, at that, he'd do us out of our half of it if he had the chance.' I ain't pertending to be any physiologist, understand, but he looks crooked to me. The last thing Eddie says is that he couldn't ask the guy how much he'd took, because we was supposed to know all about it; and that it couldn't be anything decent or he wouldn't have offered us only two twenties, which was the straight physiology of it and can't be wrong if you've studied it much, like Eddie had.

"Well, we're up bright and early to land at Plymouth, and soon's we get dressed we're in to help our man. He only had half his clothes on and was all gone flooey. His empty suitcase was lying on the bench, his clothes and things all over the place; and he was blubbering round that he had ought to shave off his whiskers. But Eddie says: 'Wait till you get to London; they might notice it on the boat.' So he says he will; but won't we help him pack his

bag—him being so nervous and helpless.

Eddie soothes him down and we both wedge the stuff into his bag while he dresses. And you can bet I saw they wasn't anything in that suitcase he could hold out the property of the stuff on us, either, nor in his clothes, which I takes pains to hand to him. We got all his shirts and things in and put his shaving things on top, like he asked us. Eddie was just fastening the bag when he looks up to the top shelf of the little cupboard and

to the top shelf of the little cupboard and sees a bundle.

"'What's that?' says Eddie.

"'Oh, that,' says the lad, 'that's just some old worn-out underwear I won't need any more; so I thought I'd leave it. But my initials is on it—will that do any harm?'

"'Sure!' says Eddie. 'They might trace you by it. You better let us pack it,' he says. So we squeeze this bundle of flannels into the bag, too, which shows you how we was befriending the little dub.

"Then we went down and had some coffee, and was out on the tender. We made

fee, and was out on the tender. We made the old boy pick out his trunk when it come down over the side and we stayed right by it, you bet!

'It's in a secret bottom I had made,' he says; 'and, dear me, I'll have to shave off my whiskers the minute we get in.' He kind of chirked up, thinking about that, 'It'll make a different man of me,' he says; and we told him it would sure change him a whole lot.

"He was so pitiful that we kept throwing the good cheer into him like he was a sick Just the same, that hunch of mine kept working, and I made a stiff bet with myself that he'd never get that trunk out of my sight till we'd got our money out of it. "The customs lads didn't keep us more

than a minute or two, and there we was in a compartment for London, the old boy saying over and over that he'll feel safe the minute he's shaved. We get in all right, and, say, he was that scared going out of the station we had to hold him up between us-looking for the hand on his shoulder, understand.

"We go to a quiet little hotel where Eddle and I always stop, and get the trunk inside. I stay by that while Eddle gets a room. Then the old boy grabs his bag and

says:
"'Now it's all right for me to shave

ain't it?'
"And Eddie says: "'Yes, for Heaven's sake go shave and

get it off your mind!'

"So he says: 'Will you come with me or watch the trunk till they can bring that up!'

"And I says: 'We'll watch the trunk, if it's just the same to you.'

"I think it's much better you do,' he

says; 'you can't tell who might be about.'

"And off he goes to the room to share, while we waited for the porter that took his bag to come back and get the trunk.

"It won't be much, says Eddle—'cake and coffee for a week; but it was better they nothing."

than nothing.'
"So we chin back and forth there for
about ten minutes, till I says:
"'How about that porter coming back
to get this trunk up?' So Eddie grahe another porter and tells him to wrestle the trunk, and you bet I follow him right along

"Eddie's waiting at the door of the room when we get there. 'He can't be in here, he says, 'because I've knocked!' So the porter with the trunk opened the doo with a key and, sure enough, no one it there. Lust then along comes the fire with a key and, sure enough, no one is there. Just then along comes the firs porter and says our friend changed his mind and went out the side entrance am off in a taxi with his bag about fiftees minutes before. We was surprised at the naturally; but gee, I felt good we had ou trunk there! I knew he hadn't anything is his old suitesse. So the porter puts the

trunk there! I knew he hadn't anything is his old suitcase. So the porter puts the trunk inside and we go in and lock the door and just look at each other.

"'I got it,' I says—'he was too nervou to shave himself, so he went to a barber.

"'More likely,' says Eddie, 'he say some one he knew and ducked out quick to another hotel. Poor little devil!—and left all the stuff here. But we'll be squar with him. If he don't communicate we't take our bit out and leave the rest in the trunk here for him.'

take our bit out and leave the rest in the trunk here for him."

""Well," I says, like you or any may would, 'I ain't greedy so long as I get a I want and what's fair and decent; but don't see how he wins a whole half of after he's left us here to do all the world Anyway." I says, 'let's see how much we split and do the splitting afterward.

"At that we pry the lock loose with poker and pull the stuff out of the trunk the get down to this here secret bottom."

Doc paused. Life died from his face to the stuff out of the stuff out of the stuff out of the trunk that the stuff out of the trunk that the stuff out of the stuff out of the trunk that the stuff out of the stuff out of the trunk that the stuff out of the stuff out of the trunk that the stuff out of the s

live in; the vermin nearly ate me up!"
"The food was so bad that I got sick with
it!" "The camp was filthy; I couldn't stand
the smell!" "The meat was rotten! I was
afraid to eat it. They told me the company
paid for good meat, but the boss was taking
his bit out of the contract."

And been is a payage from the every

And here is a passage from the experi-ence of a young Hungarian immigrant. He had been a cooper in the old country, but found American methods so different that he would have to learn the trade over again before he could get work. He had lived by peddling, odd jobs, and the like, for a year, when he saw this sign in the window of an employment office: "Wanted. fifty men; free shipment; two and a half dollars a day." The story proceeds as

"He applied at once and paid two dollars in advance for the job. He was shipped to a Southern coal mine, where he worked outside shoveling ground ten hours a day. He slept in the company shanty. He was not charged for the shanty, but paid two dollars a week for the bedding. He pre-pared his own meals, securing provisions from the commissary store of the company. He had to buy from the company. . On pay day he discovered he was receiving

only one dollar and forty cents a day. The charges for the employment office and for the bedding were taken out, and the remainder just covered his commissarystore debts. He did not know whether this job was a strike-breaking job or not—only the boss would not allow the men to go away; he threatened to kill them if they went. So during the night he ran away and walked to Washington, and then finally to New York. He slept in fields or in empty barns. His meals he earned by taking odd jobs on farms."

From the threat of the boss it is easy to

see that this, as the Hungarian suspected, was a strike-breaking job.

Being a Russian, with a Russian's temperament and talent for subtleties, Speek believes strongly in what he calls the psychological background. He questions these men and gets from them sincere an exercise the ordinary investigator is more. points the ordinary investigator ignores. He finds, for example, that few if any of them are married—at least in the full sense of the term.

# Ambitious Americans

Some married in youth, but deserted their families. Most have hoped at some time for that experience, which is the right of any normal man; most admit having known in youth some girl whom they wished to marry. They gave over that hope long ago. Homeless, lacking all opportunity to meet decent women, they take what feminine association they can get; and that association they find in and about saloons, which represent in their lives what his club, his lodge, his sitting room or his dancing class represents to the man of better luck or better abilities.

Speek has found, also, the psychological background for that drink habit we have lightly supposed to be the seat of all misery in the American laborer. The American is by tradition and environment rather than by nature ambitious. To the European peasant the order of society seems forever arranged by a superior power; that he should rise to a higher and more affluent social class is usually beyond his imagination. The American, on the contrary, has lived in the land of opportunity.

The notion that any man may rise to the highest position by his own efforts has been dinned into him from the beginning of his education. As time goes on and he fails to rise, as starvation period follows starvation period, he drinks in order to revive this imagination of success that life has almost killed in him; and the fact that his loafing place, his only expression of social life, is the saloon, does not help him to cure the

And this casual laborer of the type I have been trying to sketch figures in all our primitive industries. He furnishes the raw, human material for farming. The day has gone when the American farm hand was a stout young fellow who expected, after he had saved a little money, to stake out a quarter section of his own. The quarter

# What Men Know of Motorcycle Tires

# In Four Years One Has Out-Distanced All

In 1910 the first Goodyear Motorcycle tires were sold. In 1911 the output multiplied itself by 32. In 1912 sales were 139 times greater than in 1910. The 1910 figures were multiplied by 183 in 1913.

And this year, three out of every four new motorcycles sold will carry Goodyears. For this tremendous gain there is but one answer—super-service proved by these thousands of tires.

# 115,000 Motorcycles This Year

That is the number of motorcycles that will be Goodycar-equipped in 1914. What better evidence could there be of the superiority by which men have come to know and prefer Goodyears?

Remember, too, that Goodyear Mo-torcycle tires have won and held every world's record for speed and durability. It is not enough simply to make a good tire. There must also be the Goodyear knowl-

edge by which these tires can excel under every road Rival makers say "Just

as good as Goodyears. But the evidence gives you the facts.

Goodyear leadership has been won in the realm of automobile tires. These men meter their mileage, And the same successful factors of leadership now come to you in these Goodyear Motorcycle tires.

What motorcycle tire, then, offers you more than Goodyears? What man can make a better motorcycle tire than Goodyear-based on actual records?

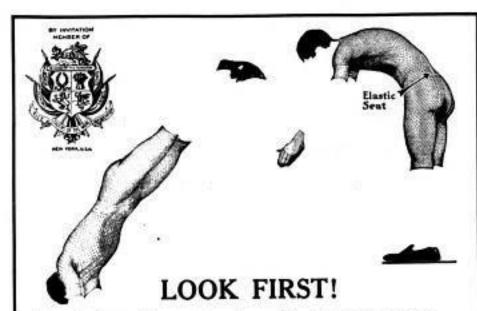

And when you consider that Goodyears cost you no more than other standard makes, why should you take

sections are all taken up. The farm hand is now a casual laborer, working hard during the plowing and planting seasons, tramping or resting until harvest time, working at bonanza wages for a few weeks during the harvest—and, when that is done, living as best he can during the winter.

Of like habits are the men who construct

our railroads, dig our big irrigation ditches, cut our timber, load and unload our freight

cut our timber, load and unload our freight
at the lake ports. No one can venture a
guess at their number, but it must run into
the millions; and of these millions few, if
any, ever hold steady employment.

This is an American problem. Europeans, it is true, know the casual laborer;
but he cuts no such figure in their society
as in ours. Conditions there are settled;
society has shaken itself together. Though
they have periods of prosperity and depresthey have periods of prosperity and depression, the variation is not so wide as in America. Then, too, they have broken and harnessed all their industrial resources.

When an American railroad suddenly decides to double-track an overland line; when the Government or a corporation undertakes a new irrigation system; when an era of building in our pioneer cities booms the lumber market—we have a mighty shift of labor, such as never occurs in Europe. When the double track or the irrigation system is finished, when a cessa-tion of building causes a drop in the demand for lumber, we suddenly throw back whole battalions of labor into the army of the unemployed.

Again, the psychological aspects of the problem trouble the closer-living European but little. The German, the English or the French laborer does not tend to wander. He sticks to his county, canton or depart-ment. In that district dwell the few less competent men who represent casual labor. They lose their places when work is slack they are the first to be laid off when hard times arrive; but somehow, with the help of relatives and mates, they tide over the seasons of unemployment.

# Better Conditions in Europe

The district is home to them; they have those normal relations with women and family that keep a man sweet on life. They manage even to marry. They have, in short, some social ties other than those furnished by the saloon and the scarlet woman. Their curve of life does not necessarily run downward; though Europe knows the man who, by dint of irregular living and periods of loafing, goes from unemployment to un-employability, that man is not typical there. So far as we can learn, he is typical with us.

The problem, it is true, includes condi-tions we cannot wholly escape. We still figure as an agricultural country; we are still engaged in developing our resources. Agricultural labor and such other primitive labor as ditchdigging, tracklaying and building need an open season. Our seasonal manufacturers, though they proceed most busily in winter, still cannot begin to ab-sorb the army of outdoor laborers made idle by winter. Slack seasons have always been

and always will be. What we can escape is the appalling loss of time in the busy season caused by our grievous and characteristically American failure in industrial teamwork. The Cali-fornian fruit crop is rotting on the trees for want of pickers at the very time when the ag-ricultural laborers of Kansas and Nebraska are resting between planting and harvest. Often the wheat of Kansas and Nebraska is dropping from the standing stalks at the very time when a decline in the lumber market has thrown an army of Northern lumbermen out of work.

Along a certain railroad, which connects Philadelphia and New York, lies a district of passably good agricultural land, un-broken or abandoned. Why, in the slack spring or autumn, are not our unemployed

laborers clearing that land?

And what is our society doing that it permits the headless rush of labor to unprofitable fields? Ford, the automobile man, announced last autumn his famous profit-sharing plan. He remarked, in pass-ing, that he expected soon to enlarge his factory. The news spread through the West; ten thousand laborers, most of them without mechanical training, rushed into Detroit and settled on the town for the winter. San Francisco has been advertising her Exposition. The impression got abroad that there would be much work in San Francisco. For weeks the westbound brake beams and blind baggages were crowded; before the movement ended, the charity organizations

of San Francisco were sending out warnings to their Eastern correspondents.

Only last year, at a season when work was plentiful, a railroad wanted a large force for a fortnight's rush work. By promise or hint of a steady job all winter it lured thousands of laborers away from the more profitable harvest—and discharged them all when the fortnight had passed.

fortnight had passed.

The case of John Smith, the floating common laborer, doomed by social forces greater than himself to industrial ruin and premature old age, should appeal, I suppose, to the philanthropy in us; but Christianity is still far from a working theorem in dealing with social forces. And the feeling to which we must appeal in trying to improve the lot of John Smith is enlightened self-interest. He is worn-out and useless for production at thirty-five; yet he has, on a normal expectation, fifteen or twenty more years of consumption left to him.

In some way or other society must support him until the end. Further, half his working days up to thirty-five have been lost, not only to himself but to the world; and a lost day's work, as our copy books used to inform us, is the most complete waste we can imagine. If John Smith does not need those working days, industry as a whole certainly does.

The old-fashloned social moralist, incapable of seeing more than the individual, would have said that the trouble with John Smith was a flaw in his education. Let us teach him a trade; let us establish craft schools. But the trades will absorb only somany men; if John Smith had learned a trade and prospered thereby he would merely have pushed Jim Brown back into unorganized casual labor. We need common laborers just as much as we need plumbers, electricians and paper hangers.

No; it is a matter of teamwork. Europe, with a far less pressing need than our own, has already put that teamwork on foot. In this, as in many other problems of modern industry, we are far behind those Europeans whose monarchic institutions we were taught in our youth to despise. Let us see, in another article, what Europe has done, and what we can do.

Editor's Note-This is the second of a series of articles by Will Irwin. The third will appear in an early issue.

# Rain by Wireless

WEATHER control—rain ordered for midnight, day after to-morrow—may be a wireless victory in the next generation. Now it is weird and visionary; but Sir Oliver Lodge, who is in the top rank of living scientists, thinks it not improbable, and is now calling on his fellows to begin wireless studies with this purpose in mind. The more there is discovered about the way wireless telegraphy works, the more it is evident that weather and wireless waves are tangled with each other.

Almost every one knows that wireless telegraphy works better by night than by day and has peculiar jumps of efficiency at sunset. A wireless operator on shipboard in the far North found that during a display of the aurora borealis the northern lights were widely disturbed when he sent out wireless signals from his ship.

The growing theory concerning the way wireless waves follow the curve of the earth is, in simple language, that the upper layers of the air form a sort of magnetic cushion against which the wireless waves can bound along. Sir Ollver wishes to have experiments made by discharging very powerful wireless waves from kites under all kinds of weather conditions, in order to ascertain whether the waves will, under any conditions, make clouds condense into rain, or prevent them from condensing.

rain, or prevent them from condensing.

It is not to be expected, of course, that rain could be obtained from a dry sky, but normal conditions of the air would leave much opportunity for weather control if the theory should prove workable.

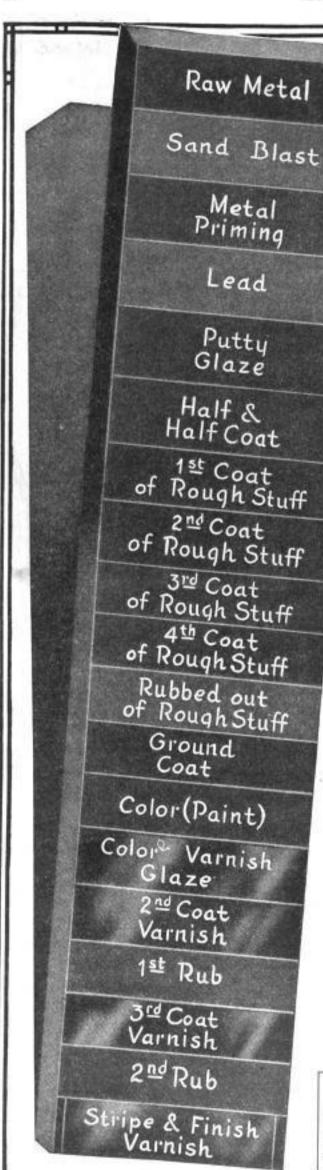

The total eclipse of the sun on a path from Greenland to Persia next August is to be made the occasion for elaborate wireless experiments. Wireless signals will be sent out from within the path of shadow and across the shadow, and the effect of the shadow on these signals should give more clews to the whole problem.

-

**7**OU'VE observed, haven't you, that the Studebaker FOUR finish looks as bright and clean and fine after a year's hard use as in the beginning? That kind of finish fights off depreciation.

What do we mean by that?

We mean it adds actual cash value when you sell the car and buy another.

We emphasize this finish because it typifies a score of operations on this FOUR in which Studebaker exactness goes far, far beyond ordinary practice.

Twenty-four operations produce this finish.

As many, and as finely and thoroughly done, as on the costliest cars.

Seventeen of them are painting operations—with a sand blast first.

Why the sand blast?

F. O. B. Detroit

SIX Sedan Molel "15" Touring Car Molel "11" Coupe Six-Panienger "SIX"

To remove every impurity and make it impossible for the paint to flake.

Few cars—even among the highest priced—use this precaution.

You couldn't buy a better finish, no matter what price you pay.

Not only extra-zeal in painting characterizes this FOUR.

Scrupulous exactness in every process, excess-caution in designing, steel-testing, heattreating, case-hardening; special-care in stamping, drilling, machining, assembling,

Unite all these and you begin to understand why we feel justified in pronouncing this FOUR the best value in the world at \$1050.

> The Studebaker Proof Book describes and pictures the scientific precision of Studebaker manufacturing operations. Send for it.

# AN AMERICAN VANDAL

(Continued from Page 15)

"Behold, m'sieur! We are now approach-ing a wine shop on the left. You were most gracious and kind in the matter of luncheon.
Kindly permit me to do the honors now.

It is a very good wine shop—I know it
well. Shall we stop for a glass together,

It was the first time since we landed at Calais that a native-born person had offered to buy anything, and, being ever desirous to assist in the celebration of any truly notable occasion, I accepted and the car was stopped. We were at the portal of the wine shop when he plucked at my sleeve offering another suggestion:
"The chauffeur now-he is a worthy

fellow, that chauffeur. Shall we not invite

I was agreeable to that too. So he called the chauffeur and the chauffeur disentangled his whiskers from the steering gear and came and joined us. The chauffeur and I each had a small glass of light wine, but the general took brandy. Then ensued a spirited dialogue between him and the woman who kept the shop. Assuming that I had no interest in the matter, I studied the pictures behind the bar. Presently, having reduced the woman to a state of compara-

tive silence, he approached me.
"M'sieur," he said, "I regret that this
has happened. Because you are a foreigner and because you know not our language, that woman would make an overcharge; but she forgot she had me to deal with. I am on guard! See her! She is now quelled! have given her a lesson she will not soon orget. M'sieur, the correct amount of the sill is two-francs-ten. Give it to her and let

s begone!"
I still have that guide's name and address n my possession. At parting he pressed is card on me and asked me to keep it; and I did keep it. I shall be glad to loan it o any American who may be thinking of soing to Paris. With the card in his pocket will know exactly where this guide lives; and then, when he is in need of a guide, he an carefully go elsewhere and hire another

I almost failed to mention that before we arted he tried to induce us to buy somehing. He took us miles out of our way a pottery and urged us to invest in its ares. This is the main purpose of every side—to see that you buy something and terward to collect his commission from the topkeeper for having brought you to the iop. If you engage your guide through se porter at your hotel you will find that steers you to the shops the hotel people we already recommended to you; but you break the porter's heart by hiring arguide outside, independently, the guide eers you to the shops that are on his own ivate list.

# A Transaction in Gaiters

Only once I saw a guide temporarily imped, and that was in Venice. The ies were leaky that day and the weather s raw; and one of the ladies of the party re pumps and silk stockings. For the otection of her ankles she decided to buy pair of cloth gaiters; and, stating her ention, she started to go into a shop that alt in those articles. The guide hesitated noment only, then threw himself in her th. The shops hereabout were not to be sted—the proprietors, without excep-n, were rogues and extortioners. If dame would have patience for a few of moments he would guarantee that she what she wanted at an honest price. seemed so desirous of protecting her

t she consented to w n a minute, on a pretext, he excused self and dived into one of the crooked ys that thread through all parts of nice and make it possible for one who wis their windings to reach any part of city without using the canals. Two of secretly followed him. Beyond the first ning he dived into a shoe shop. Emergafter a while he hurried back and led lady to that same shop, and stood by, ling softly, while she was fitted with ers. Until now evidently gaiters had been on his list, but he had taken steps emedy this; and though his commis-on a pair of sixty-cent gaters could have been very large, yet, as some osopher has so truly said, every little added to what you have makes just a

licum more.

Indeed, the guide never overlooks the smallest bet. His whole mentality is focused on getting you inside a shop. Once you are there, he stations himself close behind you, reënforcing the combined importunities of the shopkeeper and his assembled staff with gentle suggestions. The depths of self-abasement to which a shopkeeper in Europe will descend in an effort to sell his goods surpasses the power of description. London tradesman goes pretty far in this direction—often he goes as far as the side-walk, clinging to the hem of your garment and begging you to return for one more look; but the Continentals are still worse. A Parisian shopkeeper would sell you the

bones of his revered grandmother if you wanted them and he had them in stock; and he would have them in stock too, because, as I have stated once before, a true Parisian never throws away anything he can save. I heard of just one single instance where a customer desirous of having an article and willing to pay the price failed to get it; and that, I would say, stands with-out a parallel in the annals of commerce and

An American lady visiting her daughter, an art student in the Latin Quarter, was walking alone when she saw in a shop win-dow a lace blouse she fancied. She went inside and by signs, since she knew no French, indicated that she wished to look at that blouse. The woman in charge shook her head, declining even to take the gar-ment out of the window. Convinced now, womanlike, that this particular blouse was the blouseshedesired above all other blouses the American woman opened her purse and indicated that she was prepared to buy at the shopwoman's own valuation, without the privilege of examination. The shop-woman showed deep pain at having to refuse the proposition, but refuse it she did; and the would-be buyer went home angry and perplexed and told her daughter what had happened.

# Where Desdemona Never Lived

"It certainly is strange," the daughter said. "I thought everything in Paris, ex-cept possibly Napoleon's tomb, was for sale! This thing will repay investigation. Wait until I pin my hat on. Does my nose need powdering?

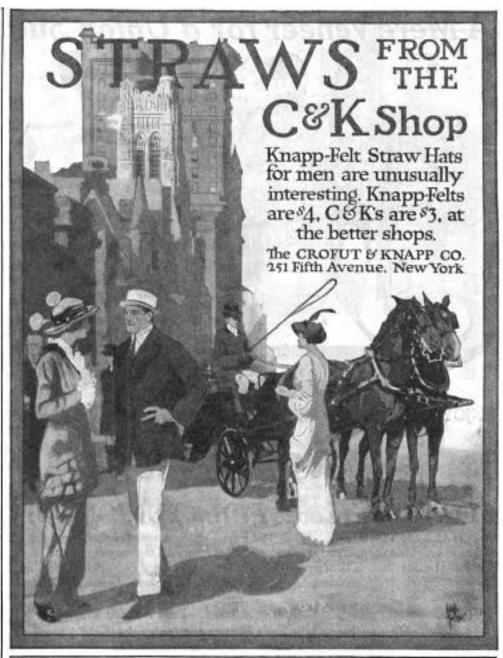

Her mother led her back to the shop of the blouse and then the puzzle was revealed—for it was the shop of a dry cleanser and the blouse belonged to some patron and was being displayed as a sample of the work done inside; but undoubtedly such a thing never before happened in Paris and probably

never before happened in Paris and probably never will happen again.

In Venice not only the guides and the hotel clerks and porters but even the simple gondoliers have a secret understanding with all branches of the retail trade. You get into a long, snaky, black gondola and fee the beggar who pushes you off, and all the other baggars who have assisted in the push-ing off or have merely contributed to the ing off or have merely contributed to the success of the operation by being present, and you tell your gondoller in your best Italian or your worst pidgin English where you wish to go.

It may be you are bound for the Rialto; or for the Bridge of Sighs, which is chiefly distinguished from all the other bridges by being the only covered one in the lot; or for the house of Desdemona. The lady Desdemona never lived there or anywhere else, but the house where she would have lived, had she lived, is on exhibition daily from nine to five; admission one lira. Or perchance you want to visit one of the ducal hat are so numerous These palaces are still tenanted by the descendants of the original proprietors; one family has perhaps been living in one palace three or four hundred years. But now the family inhabits the top floor, doing light housekeeping up there, and the lower floor, where the art treasures, the tapestries and the family relics are, is in charge of a caretaker, who collects at the door and then leads you through.

Having given the boatman explicit directions you settle back in your cushioned seat to enjoy the trip. You marvel how he, standing at the stern, with his single oar fitted into a shallow notch of his steering post, propels the craft so swiftly and guides it so surely by those short, twisting strokes of his. Really, you reflect, it is rowing by shorthand. You are feasting your eyes on

THE CURTIS PUBLISHING COMPANY Independence Square, Philadelphia, Pennsylvania the wonderful color effects and the group-ings that so enthuse the artist, and which he generally manages to botch and boggle when he seeks to commit them to canvas; and betweenwhiles you are wondering why all the despondent cats in Venice should have picked out the Grand Canal as the most suitable place in which to commit suicide, when—bump!—your gondola swings up against the landing piles in front of a glass factory and the entire force of helpers rush out and seize you by your arms—or by your legs, if handler—and try to drag you inside, while the affable and accommodating gondolies boosts you from behind

while the affable and accommodating gondoller boosts you from behind.

You fight them off, declaring passionately that you are not in the market for colored glass at this time. The hired hands
protest; and the gondoller, cheated out of
his commission, sorrows greatly, but obeys
your command—at least he pretends to
obey it; but a minute later he brings you
up broadside at the water-level doors of a
shon dealing in antiques, known approprishop dealing in antiques, known appropri-ately as antichitas, or at a mosaic shop or a curio shop. If ever you do succeed in reach-ing your destination it is by the exercise of much profanity and great firmness of will. The most insistent and peaky shopkeepers

of all are those who hive in the ground floors of the professedly converted palaces that face on three sides of the Square of Saint Mark's. You dare not hesitate for the smallest fractional part of a second in front smallest fractional part of a second in front of a shop here. Lurking inside the open door is a husky puller-in; and he dashes out and grabs hold of you and will not let go, begging you in spagnettified English to come in and examine his unapproachable assortment of bargains. You are not compelled to buy, he tells you; he only wants you to gaze on his beautiful things. Believe him not! Venture inside and then decline to purchase and he will think up new and subtle Italian forms of insult and insolence to visit on you. They will have brass bands out for you if you invest and brass knuckles if you do not.

### The Aristocrats of Venice

There is but one way of escape from their everlasting persecutions, and that is to flee to the center of the square and enjoy the company of the pigeons and the photog-raphers. They—the pigeons, I mean— belong to the oldest family in Venice; their lineage is of the purest and the most unde-filed. For upward of seven hundred years the authorities of the city have been feeding and protecting the pigeons, of which these countless blue-and-bronze flocks are the direct descendants. They are true aristo-crats; and, like true aristocrats, they are content to live on the public funds and grow fat and sassy thereon, paying nothing in

No: I take that part back-they do pay No; I take that part back—they do pay something in return; a full measure. They pay by the beauty of their presence, and they are surely very beautiful, with their dainty mincing pink feet and the sheen on the proudly arched breast coverts of the cock birds; and they pay by giving you their trust and their friendship. To gobble the gifts of dried peas, which you buy in little cornucopias from convenient venders for distribution among them, they come for distribution among them, they come wheeling in winged battalions, creaking and cooing, and alight on your head and shoulders in that perfect confidence which so delights humans when wild or half-wild creatures bestow it on us; though, at every opportunity, we do our level best to hunt

and harry them to death.

At night, when the moon is up, is the time to visit this spot. Standing here, with the looming pile of the Doge's Palace bulked behind you, and the gorgeous but some-what garish decorations of the great cathe-dral softened and soothed into perfection of outline and coloring by the half light, you can for the moment forget the fallen state of Venice, and your imagination peoples the splendid plaza for you with the ghosts of its dead and vanished greatnesses. conceive of the place as it must have looked in those old, brave, wicked days, filled with knights, with red-robed cardinals and clanking men at arms, with fair ladies and grave senators, slinking bravos and hired assas-

senators, sinking braves and mred assas-sins—and all so gay with silk and satin and glittering steel and spangling gems.

By the eye of your mind you see His Illuminated Excellency, the frosted Christ-mas card, as he bows low before His Eminence, the pink Easter egg; you see, half hidden behind the shadowed columns of the long portico, an illustrated Sunday supplement in six colors bargaining with a stick of

intriguing, and scent the plotting; you are
an eventures to a slice out of the life of the nest sinister, the most artistic and the most

nurderous period of Italian history.

But by day imperious Caesar, dead and num'd to day, stops a hole to keep the wind may; and the wild ass of the ninety-day nor stamps his heedless hoofs over the spot where sleeps the dust of departed grandeur. By day the chug of the motor boat routs not old sleepy echoes from cracked and crannied ruins; the burnished golden frescos of Saint Mark's blare at you as with brane trumpets; every third medieval durch has been turned into a moving-picture place; and the shop-keeping paraates buzz about you in vermin swarms and bere holes in your pocketbook until it is al one large, painful welt. The emblem of Verice is the winged lion. It should be the boll weevil.

In Rome it appears to be a standing rule that every authenticated guide shall be a rolent Socialist and therefore rampantly antiderical in all his views. We were in Rame during the season of pilgrimages. From all parts of Italy, from Bohemia and Hangary and Spain and Tyrol, and even from France, groups of peasants had come to Rone to worship in their mother church and to be blessed by the supreme pontiff of their faith. At all hours of the day they were pasing through the streets, bound for Saint Peter's or the Vatican, the women with kerchiefs over their heads, the men in their Suday best, and all with badges and tokens

on their breasts. At the head of each straggling procession would be a black-frocked village priest, at ence proud and humble, nervous and exalted. A man might be of any religion or of to religion at all, and yet I fail to see how be could watch, unmoved, the uplifted faces of these people as they clumped over the mobiles of the Holy City, praying as they went. Some of them had been saying up ill their lives, I imagine, against the comng of this great day; but our guide—and we tried three different ones—never beheld this sight that he did not sneer at it; and not once did he fail to point out that most of the pilgrims were middle-aged or old, taking this as proof of his claim that the Church no longer kept its hold on the younger people, even among the peasant classes.

The still more frequent spectacle of a marching line of students of one of the holy calleges, with each group wearing the dis-tinctive insignia of its own country—purple ross or green sashes, or whatnot—would exite him to the verge of a spasm.

# The Terrible Rollmops

Our guide in Vienna was the most stupid human being I ever saw. He was profoundly ignorant on a tremendously wide range of subjects; really, he had a most complete repertoire of ignorance. He must complete repertoire of ignorance.

have spent years of study to store up so
mininformation. This much interesting misinformation. This guide was much addicted to indulgence in a peculiar form of twisted English, and at odd moments given to the consumption of a delicacy of strictly Germanic origin, known in the language of the Teutons as a Rollmops. A Rollmops consists of a large dilled
turumber, with a pickled herring coiled
round it ready to strike, in the design of the
nattlemake-and-pinetree flag of the Revolation, the motto in both instances being in effect: "Don't monkey with the buzz saw! He carried his Rollmops in his pocket and bequently, in art galleries or elsewhere, would draw it out and nibble it, while Esseminating inaccuracies touching on pictures and statues and things.

Among other places, he took us to the church in Vienna. As I now recolect it was six hundred years old. No; on erond thought I will say it must have been ider than that. No church could possibly secome so moldy and mangy looking as hat church looked in only six hundred ears. The object in this church that intersted me most was contained in an ornate has case placed near the altar and alongide the relics held to be sacred. It did not xuctly please me to gaze at this article; out the thing had a fascination for me;

will not deny that. It seems that a couple of centuries ago here was an officer in Vienna, a captain in ank and a Frenchman by birth, who, in he midst of disorders and licentiousness,

lived so godly and so sanctified a life that his soldiers took it into their heads that he was really a saint, or at least had the making of a first-rate saint in him and, therefore, must lead a charmed life. So-thus runs the tale-some of them laid a wager with certain Doubting Thomases, also soldiers, that neither by fire nor water, neither by rope nor poison, could he take harm to himself. Finally they decided on fire for the test. So they waited until he slept—those simple, honest, chuckle-headed chaps—and then they slipped in with a light and touched him off. Well, sir, the joke certainly was on those soldiers. He burned up with all the spontaneous enthusiasm of a celluloid comb. For qualities of instantaneous combustion he must have been the equal of any small-town theater that ever was built—with one exit. He was practi-cally a total loss and there was no insurance.

They still have him, or what is left of him, in that glass case. He did not exactly suffer martyrdom—though probably he per-sonally did not notice any very great difference-and so he has not been canonized; nevertheless, they have him there in that church. In all Europe I saw only one sight to match him, and that was down in the crypt under the Church of the Capuchins, in Rome, where the dissected cadavers of four thousand dead—but not gone—monks are worked up into decorations. There are altars made of their skulls, and chandeliers made of their thigh bones; frescoes of their spines; mosaics of their teeth and dried muscles; cozy corners of femurs and pelvises and tibias. There are two classes of travelers I would strongly advise not to visit the crypt of the Capuchins' Church—those who are just about to have dinner and want to have it, and those who have just had dinner and want to keep on having it.

### The Tragedy of Two Bound Hands

At the royal palace in Vienna we saw the finest, largest and gaudiest collection of crown jewels extant. That guide of ours seemed to think he had done his whole duty toward us and could call it a day and knock off when he led us up to the jewel collections, where each case was surrounded by pop-eyed American tourists taking on flesh

at the sight of all those sparklers and figur-ing up the grand total.

The display of all those gems, however, did not especially excite me. There were too many of them and they were too large. A blue Kimberley in a hotel clerk's shirt-front or a pigeon-blood ruby on a faro dealer's little finger might hold my attention and win my admiration; but where jewels are piled up in heaps like anthracite in a coal bin they thrill me no more than the anthracite would.

A quart measure of diamonds of the average size of a big hailstone does not make me think of diamonds but of hailstones. I could remain as calm in their presence as I should in the presence of a quart of cracked ice; in fact, calmer than I should remain in the presence of a quart of cracked ice in Italy, say, where there is not that much ice, cracked or otherwise. In Italy a bucketful of ice would be worth traveling miles to see.

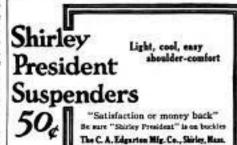

ou could sell tickets for it. In one of the smaller rooms of the palace we came on a casket containing a necklace of great smoldering rubies and a pair of bracelets to match. They were as big as cranberries and as red as blood—as red as arterial blood. And when, on consulting the guidebook, we read the history of those rubies the sight of them brought a picture to our minds, for they had been a part of the wedding dowry of Marie Antoinette. Once on a time this necklace had spanned the slender white throat that was later to be sheared by the guillotine, and these brace-lets had clasped the same white wrists that were roped together with an ell of hangman's hemp on the day the desolated queen rode, in her patched and shabby gown, to the Place de la Révolution.

I had seen paintings in plenty and read descriptions galore of that last ride of the Widow Capet, going to her death in the tumbril, with the priest at her side, and her poor, fettered arms twisted behind her, and her white face bared to the jeers of the mob; but the physical presence of those precious, useless baubles, which had cost so much and yet had bought so little for her, made more vivid to me than any picture or any story the most sublime tragedy of The Terror the tragedy of those two bound hands.

Editor's Note-This is the ninth in a series of articles by Irvin S. Cobb. The tenth will appear in an early number.

LEWIS EASY BUILT HOMES

# The Cadillac State of Mind

Doubtless you know what we mean when we speak of the Cadillac state of mind.

We mean the way that everyone—everywhere—talks and thinks and feels about the Cadillac.

That state of mind is the same today as it was yesterday, a year ago yesterday, and ten years ago yesterday.

It will be the same tomorrow and, no doubt, a year from tomorrow, and ten years from tomorrow.

But what a wonderful thing it is when you come to analyze it—this country-wide, world-wide unanimity.

It seems almost incredible that so many millions of people, who differ and disagree on a myriad of other subjects, should so strikingly, startlingly concur concerning one motorcar.

This concurrence is not confined to the Cadillac clientele.

It is not confined to Cadillac owners nor to Cadillac dealers.

It is shared by owners of all kinds of cars, by dealers in all kinds of cars, and by makers of all kinds of cars.

And what is it they admit concerning the Cadillac?

They agree, unconsciously perhaps, in regarding the Cadillac as a car apart—a car not in any "class" excepting its own.

You must have had the evidence of this yourself, hundreds of times—in hundreds of different ways.

You must have heard a score of hot discussions concerning other cars stop short when some one said "Cadillac."

"Oh, well—of course—the Cadillac." You've heard that time and time again, haven't you?

Well, for every time you have heard it, the same admission of pre-eminence has been uttered a hundred thousand times.

In the face of such overwhelming tribute, how idle it would be for us to intrude our own modest praises of Cadillac characteristics.

How futile to enter our claims of supremacy which everyone concedes—which no one disputes.

How much better to refer you to your own city, to your friends—to yourself!

Even though you do not drive a Cadillac, you must know that you would surely not be the loser if you did.

You know beyond the shadow of a doubt that it is a good thing to be a Cadillac owner.

And some day, when you obey your innermost convictions, you surely will, if you can, become a Cadillac user.

# THE LANTESCANE ROSES

(Continued from Page 18)

Persis sat down helplessly on the cabin couch. She felt fairly unequal to facing Tom with these in evidence. He could not possibly suppose the steamship company was an Italian landlord.

"Take them away and put them on the table," she added after an instant's thought. As the man moved obediently to do her bidding she stopped him. "Wait a minute!"
From the mass she chose a single flower.
"That's all, thank you."
She waited until he had left the room

before she opened her traveling bag, took out a volume of Browning, which she had been intending to read all the way, and care-fully laid the rose within. Then she put the

Browning back into her bag.
"That's the last of that nonsense!" she

said to herself with great decision. Even as she said it she felt a sudden rending of her heartstrings. All the whistles had stopped shrieking and she became aware of slow pulses beating in the soles of her feet. The ship was moving. She climbed hurriedly on the couch and gazed out through the porthole. The wash of a placid sea was the first thing she saw and, widening across it momently, a pier, a shore, Genoa, Italy itself, diminishing and slipping and fading from her view every minute, becoming faint, like the remembered perfume of a

By another day the salt breath of the sea By another day the sait breath of the sea had driven even the last vestige of that per-fume away. And by another week Persis had ceased to sigh for a remoter shore and saw her own native land—any land at all, indeed—looming in her dreams as an infi-nitely desirable though too-remote possibil-ity; which is only a way of saying that they had the usual Christmas crossing and got in two days late, on Christmas Eye itself. two days late, on Christmas Eve itself.

Persis, with feminine forethought, had laid in her store of gifts abroad and tied them all neatly in ribboned packages during what might be called days of convalescence; but Tom had put his trust in Providence— "So like a man!" said Persis disapprov-ingly. Wherefore it was agreed between them that Persis should go straight to their apartment, while Tom dashed down to the office and tipped everybody in sight, thereafter stopping all the way up Fifth Avenue to lay in presents for innumerable sisters,

cousins and aunts.
"I'll be up for dinner anyhow," he said cheerfully, putting Persis carefully into

their waiting car.

Then, beckoning a taxi, he piled himself in, with all Persis' beribboned gifts for distribution, and rolled away, a monument to American patience in the masculine and happy as only the returned American can be.

The warmth of their pretty and luxurious apartment, all glowing with color and comfort and with many ingenious electric contrivances for yet more comfort, cheered even Persis' heart. Tom's mother had been over and even the dinner was waiting, ready to be served. Secure in the undisturbed privacy of Christmas Eve, Persis made herself happy in a luxurious house gown; and while she waited for Tom she amused herself by reading the cards on the piles of boxes and packages heaped in heart-warming anticipation of their Christmas return.

There was a pile of letters, too, and she began sorting these. One was from Janet Seabury, with the San Carlo postmark; she laid it aside to read first of all, and as she put it down she had a curious obsession. It seemed to her the room was full of the perfume of roses, yet there were no roses about. Her cheeks grew warm. Was it possible the sight of an Italian postmark could call up associations so vividly as to make her smell imaginatively?

She sniffed again. There were roses in the room—she was sure of it! Her questing eyes fell with sudden relief on a long pasteboard box. That was it, of course! Somebody had sent her roses for Christmas; it happened every year. To make sure, she opened the box; and with the half-lifted cover in her hand she stopped to ask herself an absurd question: Would the roses be red? And then, as suddenly, she found herself supposing things. Suppose? And suppose? She lifted the cover, and stood gazing almost superstitiously at the con-tents of the box. The roses were re 1-and there was no card. She rang for the ser ant. "When did these come?

They had come sometime that morning, the maid did not know precisely when, from one of the florists; the maid did not

know which. The bell had been ringing all day, but she had understood the boy to say it was an order from Europe. The maid asked whether she should put them on the

table.

"No," said Persis. "Put them"—she hesitated a moment—"in the drawing room," she concluded.

Was this what the count had meant by his enigmatic "Perhaps not—who knows?" Nearby attentions might mean anything, but attentions across an ocean could mean but one thing.

It secretly excited and pleased her to think this thing might be, even though she determined that, of course, she must not let it be if it really was. She must take steps to end it at once.

Suddenly she remembered Janet's note. Janet was not a very perspicacious person, but she might accidentally drop some word. Persis sat down, looking very much as she had looked in the Lantescane gardens, and tore open the note. She read it hurriedly, passing over the "lovely hotel," the "quite too lovely view," and the "quaint atmos-

phere."
"She seems to have forgotten I have seen it," thought Persis with sarcasm—until she came to the "delightful terrace," when she began to read with intentness:

We take all our breakfasts and luncheons on it, and at present have it all to ourselves except for one gentleman, a Count Lantescane"—here Persis turned a page and, hunting frantically for a context, finally chased to the fourth page—"whom I dare say you will remember, for he says he met you. I wonder you never mentioned him, as he is quite too charming, with the most speaking eyes"—Persis' lip curled slightly; "but perhaps," Janet soothingly offered, "you did not see so much of him as we do, for we are told he is very reserved with strangers. He has the most wonderful old villa and garden, which he took me all over the other day, and the most wonderful roses! They have been in his family hundreds of years. And he simply over-powered me with them, which was a great compliment, as he does not give them to everybody. He is going to show me the family portraits."

At this point Persis let the letter fall. The Lantescane roses at their proudest never boasted anything to equal those in Persis' cheeks. Her eyes were bright and hard, her lips were scornful. So, then, he had been nothing but a vulgar flirt, the vulgarest kind imaginable! No doubt he flirted with every American who came along. And her little Italian idyl had been the cheanest kind of incident. the cheapest kind of incident.

She walked into the drawing room and glared at the roses. She should hate roses—red roses—as long as she lived! But the very force of her revolt caused it to spend itself quickly. Her anger suddenly failed her; she could have cried instead. She remembered the count's manner, always perfectly respectful, and that Janet was undeniably a forthputting person; she might have exaggerated. She might have foisted herself on him, she might even have hinted that she would like the roses those roses not given to everybody! And there was Genoa, and the steamer; and here were the roses!

Everything in Persis struggled fiercely to maintain a hold on its Italian idyl. She was still struggling when the sound of Tom's latchkey sent her hurrying into the hall; she could not meet Tom in front of those roses! Tom must not see that any-

thing had happened.
She need not have worried. Tom was in such a state of paradisaical bliss, having breathed again the air of Broadway, that he would have been incapable of noticing anything unless it had been thrown at him. He had actually come up in the subway for fun, to convince himself he was really here; and he kissed Persis thrice over and smiled his way through the whole dinner like a gay and handsome boy. He had found everybody busy with his and her Christmas tree, to every one of which Tom and Persis had been invited; and every one had sent love. Tom congratulated himself gleefully on their quiet first evening at home.

"I told them all we'd make the rounds tomorrow if they'd let us off tonight," he

Then he came round to kiss Persis again for the little jade seal ring from Florence

and the silver-mounted tortoise-shell cigar case from Naples, and to lay beside her plate a small stamped and gilded leather case, the very sight of which brought up at once all the jewelry shops of Italy; and which, being opened, revealed a scarab necklace of beryl and cloudy amethyst. "Oh, Tom!" exclaimed Persis. He brought his heels together and made

her an elaborate foreign bow.

"Ricordo d'Holia!" he said dramatically.

"I learned that much Italian anyhow; it was plastered over every blessed thing in that country."

"It's wonderful!" said Persis of the neck-lace. "Tom, you extravagant boy, you shouldn't have!" Her tone was curiously remorseful.

"Oh, as for that, it's worth as many dol-lars here as franca there; I showed it to a jeweler," answered her husband lightly. "And you seemed to like it; I thought it

would remind you of San Carlo."

It did! Persis sat looking at the beautiful jewel, and it flashed across her perverse mind that it was precisely the typical gift of the rich American husband. She shut the case and looked across at her husband. He was lighting his after-dinner cigarette with a vast sigh of content.

"My, but it's good to be back!" he said.

His eyes went happily from his wife round the room and came back to the pretty table, with its shining lights, its silver and glass. "But isn't there something I'm miss-ing?" His brows contracted in thought as he stared at the little ferny centerpiece.
"I have it—it's the flowers! I knew there
was something unnatural."
"The flowers!" Persis repressed the

smallest start.

"Roses—red roses!" repeated her hus-band. "We've had them so long I feel quite lost without them. Besides, there ought to be some. I took particular pains——" With his usual promptitude of action he had already rung the bell. "Weren't there some flowers, Manton, from the florist?"

The footman would inquire that Parti-

The footman would inquire; but Persis stopped him.

Oh, you mean the roses? They are in

the drawing room."
"They did come; then that's all right. But why didn't you have them on the table? Weren't they all right?"
"Oh, yes," said Persis. "They were beautiful!"

She rose and slipped quickly into the other room; by the time her husband had joined her she had herself thoroughly in

joined her she had herself thoroughly in hand. He contemplated the enormous hothouse beauties with satisfaction.

"Some rose!" was his laughing comment. "By Jove, I'd like to show them to His Highness, the Count! I used to tell that man they didn't know a rose over there. I don't think Italy can give us anything on roses. But," he added tolerantly, "it's only fair to remember that it's a matter of france there—dollars here. You could buy out the count's whole garden with a few of these bunches."

"Francs and dollars!" repeated Persis mechanically. She was standing very straight and looking also very straight at her husband; there was a look of dawning intelligence about her. "And buy out the count's garden'! Do you—do you mean that you ever did—that you did buy roses at San Carlo?"

"Well, what did you suppose, my dear?" asked Tom in some surprise, "You seemed perfectly stuck on the count's; it was a very cheap way of making you happy.

perfectly stuck on the count's; it was a very cheap way of making you happy, surely. I just gave him a standing order for roses that first night."

for roses that first night."

"He just gave him a standing order for roses that first night!" repeated Persis' brain to her dully. "For roses, those family roses the count said"—quite honestly, it now appeared—"they did not give to every one."

"You knew he sold flowers, didn't you?"

said her husband smiably. "He's as poor as poverty, like most of those old families; so he sells his fruit and flowers. Very sensible of him too. I fancy I was one of his best customers this long while. Didn't you notice be seemed quite cast down when we came away? He supplies the hotel with vegetables in return for board, and sells his roses all through the Riviera, clear to Genoa."

"To Genoa!" said Persis. "Why, yes;

so that's how -

"Yes; that's how. I told him to supply them all the way, as far as he could. He's got a little vineyard, as he said, up there, and he shipped roses to our hotel too;

that's how I was able to get them for you-

and on the steamer too."
"I see!" said Persis. She did—at last.
"Unluckily," added Tom, smiling at her,
"he couldn't whiff them over by wireless or cold-storage them across; so on this side it had to be hothousers. But I cabled the order so that you shouldn't miss your Italy too much at first."

There was a touch of unconscious wistfulness in the glance that sought his wife's face; that was what he had feared most that she might miss her Italy. But she was

looking fixedly at the roses.
"I don't see why you never told me,"

she said slowly.
"What? About the count? Why, I guess I just never thought of it," replied her husband. "You had the roses and you

her husband. "You had the roses and you seemed to enjoy them—that was all that mattered, wasn't it?"

"You might have told me they were from you."

"Why, when you already knew it?"

"How do you know? How could you be sure I knew it?" persisted Persis.

"Why, you took them, didn't you? And wore them?" said her husband simply. Then a sudden illumination struck him. "You don't mean to saw" he avaluated. "You don't mean to say," he exclaimed with a laugh, "that you really thought the hotel furnished them free and fresh, right

Persis was stricken through and through by an absolutely new sensation—that of shame. It turned her hot and cold together. She looked at her tall young husband, with his unsuspecting clear eyes, and veil after veil fell away from her own. She realized all at once that she had married a great gentleman—one not only incapable of imagining certain things, but who would not have believed them if they were told to

him. In his world they simply did not exist.

And she had gone through Italy with him looking for—the count! That was what it came to; and, really, it was pathetic!

reame to; and, really, it was pathetic!

Persis knew a wild pang of pity for her
silly self—not for Tom; for nobody had
been able to do him out of his Italy!

Together with this perception came an
enduring one of the vast difference between
empty heads and full ones. The foolish
little confession with which she was prenational to salve her conscious headers and paring to salve her conscience became sud-denly literally too foolish for words. The count had been the least, as he had also been the worst and was haply to be the last, of her subjects for contrition, as she saw it

Accordingly she did the wisest thing in her power: instead of confession she walked straight to absolution—in the arms which, as though by unconscious habit, curved to

as though by unconscious nable, curved to take her in their sheltering clasp.

"Never mind what I thought!" she said with a laugh that was fully half a sob. "I've been several kinds of an idiot; but it doesn't matter—it doesn't matter one bit!" She gave herself a moment for the triumphant realization of that fact, leaning close

against the sheltering arms.
"But there's one thing I do want you to know—our three months haven't been entirely wasted!"

"Of course not! You're looking a lot better, Persis."

His wife glanced at him with a kind of

admiring despair; then, to his intense aston-ishment, she buried her face in his waistcoat. "Tom," she exclaimed in a voice suited to this unusual action, "you are too delight-ful!" A still more smothered voice added: "Tom, I—I didn't suppose you cared so much."

The arms about her tightened instinc-

"You didn't suppose I cared!" her husband repeated, and looked down at the buried head in puzzled wonder. He asked himself whether this was the effect of climate and he had unwisely brought her back too soon. "You didn't suppose I cared!" he reiterated in growing amaze-ment. "After all these years!"

"No-because of all these years!" came in a correctional murmur from the waistcoat; and Tom, even Tom, experienced a partial illumination.

The tiniest smile crept into his eyes and

the corners of his mouth.

"What on earth," he asked dryly, "did
you suppose I went on living with you for?"

"Oh, habit—custom—les convenances—
any old reason!" Persis answered with an effort at lightness.

Her husband took her chin in his hand and lifted up her face, but her eyes refused to meet his; she had no intention that he should see the tears in them.

HOBART G. TRUESDELL, A.M., Printpal, Main St., Competical Literary Institution, Suffield, Com-

"You little goose! Well, you want to get that particular idiocy out of your noddle

without loss of time."
"I mean to," answered Persis meekly, "preliminary to getting a few other things in." Hastily she followed up this weird statement, which was as near as she ever came to confessing: "Only, one thing, Tom—please, for a while, don't send me any more red roses! I—I'm sick to death of them!" she blazed forth with sudden

"Why, for mercy's sake, didn't you say so before!" gasped Tom. "You could have had any blooming thing you wanted— white, yellow, pink, blue! Just say the word. Anything to make you happy, Persis!"

He stopped bewildered. Persis was shaking—he thought, at first, with tears; but it was with laughter. Tom eyed this it was with laughter. To hysterical tendency sternly.

"I don't want even blue roses, thank you," she said. "I don't want anything—not anything but you—just you! Oh, not anything but you-just you!

She stopped, because no word could express what she wanted to say, and because, also, she suddenly perceived there was no need to say it. The strength of that loyal arm about her, the twinkle in the blue eyes looking down at her, and the little laugh that ran through her husband's voice when he spoke-all told her that; and these things were more and more moving to her than a thousand romances, though all he said was:

'Anything to make you happy, Persis!"

# OUR CONTINENTAL POLICY

(Concluded from Page 20)

European Powers undertook that control they would never withdraw from the island. Mr. Roosevelt explained it as follows:

"Our own Government has always refused to enforce such contractual obliga-tions on behalf of its citizens by an appeal to arms. It is much to be wished that all foreign governments would take the same view. But they do not; and in consequence we are liable at any time to be brought face to face with disagreeable alternatives.

'On the one hand, this country would certainly decline to go to war to prevent a foreign government from collecting a just debt; on the other hand, it is very inadvis-able to permit any foreign Power to take possession, even temporarily, of the custom houses of an American republic in order to enforce the payment of its obligations; for such temporary occupation might turn into a permanent occupation."

When citizens of a country are in danger or national honor requires it, however, a government must act swiftly and with firmness.

An insult to the flag may seem a slight thing to go to war about, but it must be re-membered that the flag is the emblem of the nation's honor, and insults to it cannot be overlooked. A high and formal courtesy is insisted on by all nations claiming the respect of the world.

No matter what the final result of affairs in Mexico may be, it is certain that our re-lations with other nations, especially the Southern republics, will be in some degree affected. If our intercourse with these governments is ultimately to become more friendly, and if in the end some plan of efficient and permanent cooperation is likely to be evolved, it will be a distinct advance in diplomatic relations on this continent, Whatever the final result may be, however, we must in the end make our conception of the Monroe Doctrine, as an American policy, clearer and more definite.

It is, therefore, of the first importance that the people shall have a correct understanding of the exact limitations of this Doctrine. Governments are influenced by the pressure of public opinion, and this public opinion must be intelligent if the policy of the Administration is to be farsighted and

RUBBERSET Tooth Brush is composed of thirty-1 four perfect little brushes—each made like the famous RUBBERSET Shaving Brush. Each tuft is a perfect RUBBERSET brush in miniature—not a single bristle can be pulled out of its solid base.

The bristles of each tuft are gripped in a cone of solid vulcanized rubber. The bristle tufts are inserted in cone-shaped holes in a plate—and they can't be pulled through these holes with a pair of pliers.

Over this plate is moulded the top of the brush and you have a tooth brush whose bristle-base is water-tight, and impervious to all use and misuse. You have the

# Abbott Detroit

# Offers a Rare Opportunity

By Edward F. Gerber President Abbott Motor Car Company

I want 50 more dealers to handle Abbott cars.

I want men of character and responsibility, who will give the line added prestige.

I want men of ambition, with the ability to plan large undertakings and the energy to carry them out.

The purpose of this advertisement is to put before such men an exceptional opportunity for commercial and financial success.

# My Unusual Plans

In November, 1913, I purchased a controlling interest in this company.

Prior to that time I was a retail dealer in automobiles. Thus I had first-hand knowledge of the dealer's problems. And I knew from experience that the success of any automobile concern is in direct proportion to the success of its agencies.

So I have set about to make sure of dealer efficiency. I have made extensive arrangements, for the benefit of Abbott dealers and users alike. First and foremost, I demand that Abbott cars give good value. I insist on this, to make sure of a ready market.

Then, I accept no more dealers than I can give personal attention. Even with increased facilities, I only want 50 more now.

I give each agency sufficient territory in which to operate profitably. And I see to it that dealers have the co-operation of every department in this institution.

# **Efficiency Throughout**

My organization is particularly well qualified to render able assistance. From every standpoint it is a strong organization.

This company has been in existence five years. During that time it has put out 6000 machines. It has gone slowly and cautiously. It has built no model without first making sure of its mechanical perfection.

To manufacture Abbott cars I operate a splendid plant, with machinery of latest design. Experts are in charge of every department, to insure strict maintenance of a systematic manufacturing policy.

The engineering ability behind Abbott cars is of the highest order. Our designerin-chief is recognized by experts as one of the leaders in his profession.

This man has designed and built 1000horsepower engines. He has designed and built motors, axles and electric starters. He has designed and built automobiles, power plants and machinery. Even our rivals concede his greatness.

# Liberal Advertising

The Abbott publicity appropriation for the coming season will establish us in the front rank of advertised automobiles.

National mediums of wide circulation, such as *The Saturday Evening Post*, will be used. I shall personally supervise this campaign.

Then I shall employ large newspaper space in the territories where we are represented. Millions of folders, circulars and catalogs will be distributed. Dealers will have maximum assistance in the creation of Abbott demand.

# Financial Strength

Our resources are sufficiently large to assure the future conduct of the business along broad-gauge lines. Sufficiently ample to guarantee permanent service.

Here is a factory run on a strictly economical basis. Cost figures are kept scientifically. Overhead is reduced to a minimum.

Here is a factory practically without debt. It owes no borrowed money. Against it there are no bonds, notes nor mortgages. No watered stock exacts its tribute of dividends. Our equipment is paid for and clear, and we are operating with a clean financial slate.

# A Great Proposition

This organization has given to the Abbott line qualities which make for success. Scientific engineering, appearance, comfort—these are built into every car.

Financial strength, service, advertising all are generously provided.

And now I offer a line of four-cylinder and six-cylinder models, ranging in price from \$1785 to \$2290, with which the right dealer can compete with other makes successfully.

No other line, I believe, affords greater attractions.

# A Certainty for You

Now I suggest that you apply this advertisement to yourself.

If you are in the automobile business and are not satisfied with present arrangements you have before you an opportunity to better yourself.

If you are not making financial headway in proportion to your efforts—this advertisement presents a chance to increase your profits.

If your line does not interest buyers and you find yourself losing sales—here are wonderful selling possibilities within your grasp.

Even if you are not an automobile dealer but are considering the business—it will pay you to investigate my proposition.

Our 1915 advertising campaign begins at once. So to get the full benefit it is necessary to act now. If possible arrange for a trip to Detroit and an inspection of our plant.

I invite correspondence from capable men. Please address me personally. I promise your inquiry immediate attention and careful consideration.

Edward F. Gerber, President Abbott Motor Car Company, Detroit, Michigan

# THE LAME DUCK

# Views of an Innocent Bystander

WASHINGTON, D. C.

DEAR JIM: If so be the President shall select Mr. Frederick W. Lehmann, of St. Louis, as one of the representatives for this country at the mediation proceedingswhich, on the one hand, may have gone over Ningara Falls in a barrel by the time you get this, or, on the other hand, Blon-dined across those tempestuous waters on a tight rope—that selection will be a good thing and a kindly.

Mr. Lehmann put in a couple of years here as solicitor-general in the Taft Administration, though a nominal Democrat; and we watched him operate with exceeding joy. His specialty is getting in touch. In early life he decided he must lay in a large and assorted stock of information, and he laid it in. He first studied a few political almanaes, and then took up the encyclopedias and learned those from cover to cover.

It may be the President desired to have the mediation negotiations prolonged. If he did he chose wisely when he selected Lehmann, for, with the slightest encouragement, Lehmann will exude information

and opinions twenty-four hours a day.

The boys up on the hill, who comprise our national association of lawmakers, are in a frightful stew about getting home to see how things are going in relation to their renominations. Various tentative dates have been set for the adjournment of Congress. A tentative date for the adjournment of Congress, James, is any date that is not O. K.'d by Mr. Woodrow Wilson, President of the United States. His date is the only genuine date, and no substitutes will be allowed or recognized. As yet, his sole response to the impassioned pleas for an adjournment has been the erection of a reat and commodious tent in the back yard of the White House, and the announcement that he thinks he can be quite comfortable therein during the heated term.

# Tenting in the White House Grounds

Congress has no tent, albeit Congress could go on the road as a circus any time and increase the revenues materially. Also, Congress has thirty-three senatorial re-election problems on its hands, and four handred thirty-five similar problems pertaining to the House of Representatives. Congress has been in session practically since Mr. Taft made his justly celebrated reverse-English revision of the tariff away back yonder in the summer of 1909, and has been in session continuously since Mr. Wilson came in.

It is the aggregated opinion of the legis-lators that that man Wilson has no heart. He listens to their appeals for permission to adjourn and go home and get in touch with the boys and the girls—in the states where the girls vote—smiles in a surprised but

interested manner, and asks softly:
"Why, is it possible you desire to go
home before my program is completed? I
certainly am astonished, especially as I have made my plans to remain in Washington until all my bills are laws. You do not

want to go away before I do -- now, do you?"
"Certainly not," they say, with forced gayety. "We do not want to go home a minute before to-morrow night."

So far as the appropriation bills are conevrned, Congress can easily get away by July first, or earlier if occasion demands; but the appropriation bills are not the only ones. There is that little question of the repeal of canal tolls in the Senate, where there is no cloture, and where nearly every senator has a large gob of passionate pro-test or of dignified declaration on his chest. And just three paces to the rear is that collection of antitrust bills, which has been so maltreated by patriots with ideas-and without the same-that the collection now looks, reads, proposes or proclaims about as much like the original drafts as it looks and reads like a textbook on meteorology.

Various other little matters are pending, to say nothing of our Mexican muss; and every time the boys are brightened by the hope that an agreement for a get-away day may be reached they are immediately de-messed by the knowledge that that tent is dure in the back yard of the White House, and that the President can keep quite cool in it, and will—until he passes his bills. It is a serious and perplexing problem with the legislators. They think they have done enough. They are willing the Senate should take its time, as it will, over the canal-tolls fight; but they do not think they should be required to stay here and fuss round with antitrust legislation, especially as there is a fairly good supply of that on hand as it is—and especially, further, as

hand as it is—and especially, further, as candidates are springing up against them back home almost every day. That is a curious phase of our politics— the constant cropping up of new candidates. It should be printed in every newspaper in every state all the time that the only way for a state, or any locality in a state, to secure adequate representation in Congress is to select good men, send them to Washing-ton and keep them there. The new repre-sentative and the new senator gets nowhere. Experience and length of service are the only things that count in Congress.

Any state may secure a very important place in Congress by sending good men and keeping them there. There was a time when Iowa dominated the legislation of this country; and not so long ago Wyoming, with less total population than the apportionment law requires for the ordinary congressional district in a populous state, had one of its senators as chairman of the tremendously important Appropriations Committee, and the other as chairman of the great Judiciary Committee. Wyoming allowed her legislators to stay in office.

# North Carolina's Position

We are about to have another example of this. North Carolina is soon to hold a commanding position. As it is now, in the Senate, Senator Simmons, from that state, is chairman of the Finance Committee, the committee of which Nelson W. Aldrich was chairman for so many years, and Sena-tor Overman is ranking member and act-ing chairman of the Judiciary Committee.

Over in the House, when Oscar Under-wood moves across to the Senate, as he will do next spring, Claude Kitchin, of North Carolina, will become chairman of the Ways and Means Committee and leader of the Democrats-provided, of course, the Democrats retain the House. In any event, in case the Democrats lose the House, Kitchin will be leader of the minority and ranking Democrat on the Ways and Means Committee. Also, owing to the appoint-ment of Henry Clayton to the Federal bench in Alabama, Representative Webb, of North Carolina, becomes chairman of the big House Committee on Judiciary. This proves two things: The first is that if a state continues her men in Congress

If a state continues her men in Congress they will eventually get to the top, pro-vided they are men of even average worth, and thus attain the power that will be of inestimable benefit to the state. The sec-ond is that Congress offers a good field for serious and honest endeavor, provided the people give the endeavorer a chance to try.

All that is needed is attention to business and an opportunity to serve, and the reand an opportunity to serve, and the re-wards will come; which rewards, by the way, are greater for the constituents than for the constituted. The representative or the senator has to work, and work hard; and the state, owing to the position at-tained, gets the results of that labor. And those results invariably are greater in direct ratio to the length of service allowed. However, the ambitious hove back home

However, the ambitious boys back home do not think of this, and they are cropping up everywhere, while the men who want to be reflected are tied in Washington. The statesmen are sore. They want to go home. The only urbane person is the President. He assures them he has not the slightest objection to their going home-provided, of course, they will do a few little additional

things for him that he desires to have done. There was a dispatch in the papers the other day from London, which made a great hit in certain quarters in this city. It concerned a dinner or something, where Ambassador Page proposed a toast. That wasn't what made the hit, however. The joy-provoker was the last line of the dis-patch, which said: "The toast was drunk in silence!"

Yours postprandially, but quietly,

# THE NATURAL QUESTION NOT TO ASK

(Concluded from Page 27)

"And the crowd answers like a chorus, as though it was one of their revival meetings: Yas, suh!'-all except the big fellow,

Roberts.
"'I'm gwine wif you, Mars Wee-yet!'

"'I'm gwine wif you, Mars Wee-yet!
he says.
"'No!' says Whitey Waite.
"'Mars Wee-yet!' yells Roberts—and
I'm blest if he doesn't flop down on the
ground and begin to bellow like a kid.
"'Go back to your work!' says White'y;
and that big buck gets up whimpering and
goes back. I wonder why Whitey is going?
He isn't taking his wife, you know."
"You might ask him," I suggested.
"What?" Dinwiddie actually yelled at
me. "Are you crazy?"
"I guess you're not!" I said mollifyingly.
"I guess not!" he emphatically agreed
with me.

I left for New York two days later. The next year I went to the Isthmus—this time with an official party. On the dock at Cristobal I ran across Waite and Nettie. He nodded caimly and held out his left hand. With the other he held a small handbag such as women carry at times. Then

I shook hands with Nettie—in silence!
"Well, how are you both?" I asked,
with the cheerful imbecility of all writers, which makes so many people wonder who it is that really writes their articles for them. "Fine!" he answered.

I looked at her. "We came to see the secretary of war," she vouchsafed. "He's a friend o' his!" And she nodded toward Whitey to show

And she nodded toward whitey to show me whose friend the secretary was.

We moved out of the way of a rushing baggage truck. This parted Whitey and me from Nettie.

"When I left you last year you were going——" I stopped because he nodded.

I had to. It was what the nod was intended I had to. It was what the hod was intended to do and I knew it. Moreover, I knew I could not help knowing it; and this power-lessness actually irritated me so that I asked bluntly: "Did you get him?"

For all reply he shifted the little hand-satchel to his left hand and held up his right. I saw the thumb and the forefinger pointing unward.

ing upward.
The other three fingers were cut off at

the first joint!
"Then ——" I began, and suddenly saw
him watching me with that unblinking
ophidian stare which made me think of paralyzed eyelids and also of ice-cold thoughts concerning me somewhere behind the inscru-table pale-blue eyes.

He nodded, took the bag in his maimed right hand and rejoined Nettie.

I felt as though there were a dozen con-gealed spots within me. These kept my curiosity in cold storage until hours after I left them.

It was the right hand-his pistol hand. The fingers were not chopped off or bitten off. They were sliced off. Perhaps George's murderer tried cold steel. Whitey might have seized the sharp blade with his right hand and shot with the left—or perhaps

Whitey himself used cold steel.

But he got his man. I knew he would.

But I did not learn how. I knew i should not.

Do I still wish to know? More than ever; much more than you who read this, because, knowing Waite, I could dramatize so many

But I did not ask for details—I did not dare! And if you do not realize why I did not dare I have not made you see White; Waite as I knew him. And if I have not made you see him it does not matter, after all, how curious you may be.

THE Far West and the Far North have I produced some pretty good men in their time. Well known in the old buffslo days of Saskatchewan was Joe Beaupré, famed a thousand miles as the biggest eater in the North. Joe was not six feet tall, but he was a broad, deep, thick sort of man, with a hand like a ham and a stomach like nothing else in the world. He would eat an entire boxful of apples at one sitting and think nothing of it.

Once, having encountered a gentleman who thought he was some eater, Joe con-sumed fifty-three pounds of buffalo meat in one day, and topped off with a raw turnip, a six-pound piece of pork, some lard and two loaves of bread. The best his compet-itor could do was thirty-seven pounds of

Beaupré was so strong he never would fight any man for fear he should kill him. One day, while sledging on a narrow trail with an obstinate horse, he became angered, struck the horse on the head with his fist and killed it. He loosened the harness and threw the dead animal on one side of the trail. He never really knew how strong he Once he was taken captive by the Indians, but they were glad to set him free, warrior though he was, because he ate up everything they had. Beaupré died of rheumatism while still a young man.

A great many stories about big daily journeys done by dog drivers in the North are heard from time to time. As a matter of fact there are more days when the driver covers twenty-five miles than when he covers fifty; but very probably there are authenticated instances where half-breeds have run from seventy-five to eighty miles day behind a dog team.

Some of these men are superb specimens of manhood, and perhaps their stories lose

nothing in the telling.

The ability of the Northern Indians and half-breeds to pack heavy loads is well known. These men have rather narrow ambitions in life, and to be stronger than all his neighbors is fame for any one of them. It is well known that one half-breed, rather an old man, stood for ten minutes posing for some photographers, carrying on his back seven sacks of flour, each weighing a hundred pounds. His legs trembled under him, but he was game.

The usual load on a portage is two hun-

dred pounds, if the going is at all good. Men often carry six hundred pounds for a short distance; and they will pack seventy-five pounds all day, six days at a stretch, for a dollar and a half a day.

Some of them will take on eighty-five pounds. The ordinary white man cannot carry forty pounds a day without great dis-

comfort long before the close of the day. In all likelihood what is called a fifty-pound pack on the trail does not really weigh thirty pounds on the scale.

I have seen half-breeds, on a portage, play along with three or even four sacks of flour on their shoulders. Once a slender boy, not over seventeen years old, posed for his pho-tograph. He had on his back three sacks of flour, and on them another half-breed, whom he had invited to climb on top of the load.

These men live hard lives. There are few doctors and no hospitals in the Far North, and the man who is injured has to take his chances. One man, now trying to make a living as a cobbler in a Northern town, while running his trapping lines seventy-five miles from the nearest house, shot a hole through his foot with a rifle. It was six days before he could get help. The strain proved very hard on his constitution.

Again, we saw a half-breed on Athabasta River roll back his shirt sleeve and try to dress a wounded arm. A rifle shot has taken off most of the forearm and damaged the elbow. Crippled though he was, this chap had been among a scow crew two days before any of us discovered that he had been injured.

On the same flotilla of scows was the transport master of a big fur company. Be was a very angry man, because he had fallen from a cabin roof and broken his collec-

He had told his men how to bind it up as best he could, and was lying under an awning drinking gin and smoking—though he had to hold his pipe between his tors while he filled it with his good hand.

Fire in Missouri Athletic Club. 30 Lives Last. A Grinnell Sprinkler System Would Have Soved Every Life-By Putting Out the Fire at its Start

### Today is the End!

### Thousands of Business Men Are Tempting Fate When Fire-Safety Is Free

N spite of the warnings of a dozen holocausts, thirty business men perished in the Missouri Athletic Club fire.

In spite of the enormous number of businesses destroyed by fire each year, thousands of men everywhere are risking their steady going businesses on a mere chance.

They know that a Grinnell Automatic Sprinkler System in their buildings will absolutely prohibit a serious fire.

They know that such a system will soon pay for itself, through the sweeping insurance premium reductions it earns, and then pay them a handsome annual profit.

Further than this, many of them know that they can get this system through construction companies without investment. In such cases the cost is distributed over a number of years and met annually by the insurance savings.

Why don't these men jump at the chance to get a Grinnell Automatic Sprinkler System by one of these methods? Simply because they feel that fire in their buildings is as remote as Doomsday. They have never had a fire and think they never will. This feeling is almost a superstition with them. They can't see the fire hazards which they are told are the

cause of high premiums. Therefore, they regard them as a myth.

But yesterday's score of fire victims know now that hazards are actually sleeping fires, which awake suddenly, no man knows when, to deal destruction.

You may know it tomorrow. But today you are still in the thraldom of your old superstition.

You think you are immune from fire. And yet at this very moment, some man, somewhere, is watching fire consume the business efforts of his life-time.

And his insurance policy will cover only a fraction of his real loss. It won't bring back his customers, his organization, his good will, his markets, or any of his future plans for business expansion. His business tomorrow will never dawn. Fire has made Today the end!

That fire in your building is only asleep. Don't let it awake and find no one on watch. The chance is too great! The delay too costly. Fill out this coupon today, so you will not blame yourself later.

When you find out how soon your Grinnell System will pay for itself, you will want us to hurry the installation.

REDUCES FIRE LOSS 9645, REDUCES INSUR-ANCE PREMIUMS 40 TO 90%.

# When Beauty Was Sacred

Seven vestal virgins tended the ever-burning sacred flame of Vesta in ancient Rome.

Absolute cleanliness was one of their religious obligations. Their house, which was maintained by the state, contained baths of surpassing beauty and luxury.

A most important feature of the toilet, as well as of every great Roman household, was the use of fine oils apparently palm and olive.

The utter luxury of the Roman bath is today enjoyed by the more than two million women who use Palmolive Soap. In this delightful form, palm and olive oils are most perfectly blended.

Those who use Palmolive daily find there is nothing else quite like it for cleansing and soothing even the tenderest skin. It leaves the skin smooth, firm and white and protected against irritation.

Palm and Olive Oils alone give Palmolive its delicate color. Naught else is needed. The natural delightful fragrance is a veritable breath from the Orient. And the price is only 15c a cake.

# Palmolive

#### Palmolive Shampoo

— the Olive Oil Shampoo — makes the hair lustrous and healthy, and is excellent for the scalp. It rinses out easily and leaves the hair soft and tractable. Price 50 cents.

#### Palmolive Cream cleanses the pores of the skin and adds a delightful touch after the use of

skin and adds a delightful touch after Palmolive Soap. Price 50 cents.

Threefold Sample Offer—Liberal cake of Palmolive, bottle of Shampoo and tube of Cream, packed in next sample package, all mailed on receipt of five two-cent stamps.

#### B. J. JOHNSON SOAP CO., Inc., Milwaukee, Wis.

Canadian Factory: B. J. Johnson Soap Co., Ltd. 155-157 George Street, Toronto, Ont. In hard water or soft, hot water or cold, Palmolive lathers freely and quickly. It imparts a smooth, clear complexion, and adds that touch of charm unknown to ordinary toilet soap. It is very hard—does not waste.

### THE MUTINEER OF THE MARY BLOUNT By GOUVERNEUR MORRIS

HANLEYTOWN girl who couldn't talk ship was hardly considered respectable. When she ied, she married a captain, e, boatswain or foremast or she didn't marry at all. anleytown wife could have aboard her husband's ship e dark and found his specs for him, or his thimble, as she could have descended her own cellar and laid inhands upon the apple bar-But this special knowledge of little use to her. She selhad occasion to go aboard husband's ship, and if she I help herself she never went voyage in her.

metimes, sooner than be rated in the first light of ymoon, wives sailed with ands; but this was the excepand not the rule. A whalecompletely out of touch with zation for three, four and five years at a time is no e for a woman, however rly she may be loved.

aptain John Haithway ought we been a proud and happy

Six whalers, anchors atrip all sails drawing aloft and were moving slowly out of eytown Harbor. Of these though not the largest or iest, the old Mary Blount, whose solid quarterdeck his vere planted, was the most rated and the most beloved. ie six seasoned navigators mmand of the six whalers, ain John Haithway was the gest. He was twenty-one of age. He had risen durse voyage, lasting five years, cabin boy to first mate. now the owners had made

ought then at that moment re been proud as a peacock. st the whole of manhood efore him, and he was beng life at the top. His ship reathered the sea-stresses of v fifty years, and she was

and as a new-minted dollar. In all these years she had never made an unprofitable te. Her record was known over the whole world: "Follow the Mary Blount," was pr saying: "she smells whales."

sought to have felt very proud. But he was only twenty-one and very much in love, b instead he felt very unhappy. He was saying good-by to Hanleytown—how small hite houses looked already!—it must be for years and it might be forever. Why evil hadn't he followed the impulses of his blood and married her and brought her

ho was he, to have concluded that she was too young for marriage, and to have set If up to play father and mother and brother and minister to the little wild thing heart was like a warm stove and whose face was like a rose?

y-ay, sir!"

The first mate, a graybeard of fifty, having shot a long stream of brown tobacco juice into the sea, crossed the deck smiling.

"A propitious start, sir." "Very, Mr. Tuttle."

"A fine lot of men forward, sir. Some of our best families represented; not many of these modern soldiers and sea-lawyers."

"On any of your voyages, Mr. Tuttle, did the master have his wife or his daughter along?"

"Yes, sir."

"How did it work?"

"Why, very pleasantly for all hands, sir."

Captain Haithway sighed. "In ordinary circumstances a

sailor leads a lonely life, Mr.

The young captain's romance being well known to everybody aboard the Mary Blount, Mr. Tuttle averted his face and nodded his head.

"So much so," pursued Cap-tain Haithway, "that the ex-cesses into which he is carried by short liberty are readily understood."

"If a sailor's excesses," said Mr. Tuttle, "were spread out over the whole substance of his life, instead of being lumped here and there like cold butter, there would be no more moral man

"And you believe in wives sailing with their husbands?"

"Firmly, sir - Excuse me, sir, what did you say?"

"I think I started to say that I wished I had discussed this with you sooner, Mr. Tuttle."

"I don't wish to intrude upon your private thoughts, sir. But believe me, sir, there isn't a man aboard this ship who doesn't feel for you, sir."

"She is so young," exclaimed Captain Haithway, "and has no mother. I have put her to board with a most excellent old woman; but three or four years, Mr. Tuttle, three or four years is an agonizing length of time. I wish to heaven I

had brought her with me."

An hour later the cabin boy, Bowers, a great blushing lad of sixteen, approached the master.

"What can I do for you, my lad?" "You can let me have the key to your stateroom, Cap'n Haithway. I want to turn down the bed'n put things to rights."

"Is the door locked? I didn't lock it. I haven't got the key."
"Maybe I'm wrong, sir. I'll try again."

He returned in two minutes.

"The door is locked, sir." "Well, I'll see about it presently. You can find something else to do."

Captain Haithway stood for some time longer, his eyes upon the low coastline that had swung between him and Hanleytown. Then he shook himself and went below. He had a picture of her in his stateroom, and he wanted to look at it and kiss it. He had

"Not in This World! Not in This Life!"

forgotten that the door was locked. He shook the knob angrily and exclaimed: "Who the devil has locked this door?

He drew back with the idea of bursting the lock with his shoulder, when a key was heard turning in it and the door swung open. His first insane thought, on seeing who stood in the narrow doorway, was that the daguerreotype he had of her had come to life. Then a great trembling seized him.

"I had to come," she said. "Say that you won't send

me away."

He just stood and looked. Then he opened his arms, and as they closed, his voice breaking, he cried: "Not in this world! Not in this life!"

The wind had gone down with the sun, and the six whale ships in close company were now merely drifting. It looked as if they would have to anchor for the night.

"Mr. Tuttle."

"Ay-ay, sir!"

"There is a stowaway aboard."

Mr. Tuttle scrutinized his master's face closely. Then a smile trembled at the corners of his mouth.

"You don't mean -

"She had locked herself in my stateroom, Mr. Tuttle. I can't send her back now, can I?

"No, sir."

"As we have no minister -

"You forget Mr. Lightfoot, sir."

"Mr. Lightfoot?"

"Yes, sir. He is going out in the Admiral Colt as a passenger to Honolulu."

Captain Haithway's face brightened immeasurably. "I will be obliged to you, Mr. Tuttle, if you will lower a boat, and invite the Reverend Mr. Lightfoot to come aboard. You will also be so kind as to invite the captain of the Admiral Colt and the other captains to join us at

dinner." "With the greatest pleasure."

AS MR. TUTTLE had said, the men forward were a fine lot. But even oak is not proof against rot. The oldest man forward was also the strongest and potentially the most able. But he was one of those perverse men who cannot be content with their own wickedness. If he wasn't undermining some one's natural instinct toward virtue he

But for the shortness of his legs Crandle would have been a giant. But for the fact that his nose had been turned permanently to one side and flattened by some terrible blow, he would have looked like Neptune before that god's beard turned gray. The history of his evil deeds—when ashore—followed him from ship to ship. He was known to the police of every seaport he had ever visited. To the reverend gentleman who conducted the Seamen's Mission in Honolulu he was a most odious memory.

He loved an argument, and the Scriptures themselves furnished him with his most offensive sacrileges.

And he was a sad cross to Mrs. Captain Haithway. Perhaps the child, so wild and wayward before her romantic marriage, had something in common with him-an inherent love of escapades, mischief and turning other people's preconceived notions topsy-turvy. Perhaps she felt that if she had been a man, with a man's opportunities for going downhill, she could have been just such a man as he was. For we are apt to hate and denounce most vigorously those very qualities in which our own nature participates. It is the dishonest man who cries out most loudly against dishonesty; it is the sinner himself nearly always who flings the first stone.

Bowers, the cabin boy, an excellent boy in his way, but overgrown physically and undergrown mentally, was the first of the ship's company to fall under the spell of Crandle's plausible tongue. It was like the moth and the flame. Every time Bowers went near Crandle he got singed, until those wings which float youth and innocence were no longer strong enough to carry him. He lost the strong grip which almost all New England boys of that day had upon religion. He learned to regard the commandments as expedients for controlling large populations rather than as stepping stones to the salvation of individuals.

"And why," Crandle would say, "did Moses forbid the people to eat pig? 'Cause in hot countries pigs is poison. Why did he order the doctors to use sharp stones when it came to cutting off legs and arms? 'Cause in those days the only other thing they had as would cut was copper, and copper spells gangrene. When you allow that old Mose had horse sense, you are talking; but when you advances that he had any religion in him you talks like a woman or a sky pilot. Why did Solomon have three hundred wives and Captain Haithway's only got one-as he boasts about? If God's God, His thoughts is immutable, being right first clip out of the box. If it was right for Solomon to have three hundred, then it's wrong for the old man only to have one; or else God has changed His mind. And if His first idea was wrong, I denies him a Godlike mind; and how do I know He ain't a-going to change again? Mebbe He'll hold out next for a baker's dozen. Boy, you take it from me marriage numericals ain't got nothing to do with God. They has to do with human nature, which is the same as dog nature, and climate -

And in the end the boy Bowers went gloomily about the ship, full of doubts, wondering if goodness was only cowardice after all, if all men were really devils in their hearts, if expediency was the only basis for laws which he had been brought up to look on as divine; and, like the average boy, inclined to aggression and the shattering of mysteries, and almost persuaded that dolls are stuffed with sawdust.

"What is happening to that poor boy?" asked Mrs. Haithway one night at dinner, the afore-mentioned boy having just left the cabin. "He looks as if he

had lost his last friend, Mr. Tuttle." "I think he is beginning to lose his first illusions," said the mate, "at his age!"

"Which is only a shade less than mine, Mr.

"Boys are always younger than girls at the same age. Some one has told him that the moon isn't made of green cheese. Just now he doesn't know whether to believe that or not. Once he is convinced one way or the other, he'll be all right again and go about laughing and blushing and upsetting things as he used to."

"It's all that Crandle," exclaimed Mrs. Haithway. "Bowers can't keep away from him. I shall give him a piece of my mind!"

"Crandle?" her husband asked.

"I shall tell him."

"I wouldn't interfere with the men too much."

"Your ship's in my house. And I shall make it clean from cellar to garret!" Captain Haithway regarded her with a won-

derful pride. And then he turned to Mr. Tuttle. "But it beats the Dutch," he said, "how the girl that everybody said didn't even know how to cook or darn stockings turns out to be an A-number-one housewife, that spoils her husband for ever sitting down to a bad meal again and with the smallness of the stitches she puts

into his mending." "How," asked Mr. Tuttle, coming on?"

"When I came aboard," said Mrs. Haithway, "I had nothing but the things I had on. Now I've got six changes and three dresses, and I'm beginning to knit stockings like mad. Chanler is the best knitter before the mast, and I got him to give me lessons. And then"—here she beamed with excitement-"don't let them know that I know, please; but a little bird told me: the men are making me a wedding present. It's a great sea-cloak of blue for the cold latitudes. It has a hood lined with baby seal—one of the men had two skins in his chest-and it's to be all embroidered up and down with pictures of ships and and: and whales. And Shattuck has rigged a lathe and he's to ing the buttons out of whale teeth, and each button is to scrimshawed with bouquets of flowers in blue and red a green and inlaid with mother-of-pearl."

Mr. Tuttle, already in the men's secret, asked her h she had found out. She laughed aloud.

"One day I saw Chanler looking at me with his eyes! of tears. I said: 'What's the matter, Chanler?' And said it was nothing, only I reminded him so of his in 'darter' as he left at home—same eyes, same nose, sa height-why, he'd bet a hat we was the same meas round the shoulders, and before I could say Jack Robins the old hypocrite had snatched up a piece of rope's end; taken the measurement he wanted."

"You never told me of this,"

"Oh," said she, "I knew there was something in wind; so I went to Crandle. I said: 'Crandle, they me Chanler is a most exemplary husband.' Crandle si 'Him a what?' 'Yes,' I said. 'He was telling me about little daughter.' 'Chanler,' said Crandle, 'ain't marri As for a daughter—well, when he gets shore leave be lig out for the nearest botanical garden in the company of resident clergyman, and if he ever found a little daugh in the cabbage patch I ain't never heard tell about it. was lying to you, ma'am, that's what Chanler was do And if I know the man, he's readin' his Bible at t moment in the hope that God will overlook the sin."

And then she told them how in similar wise she ! found out about the color of the coat, the embroidery, lining of the hood and the buttons. For it seemed that u every point her taste had been artfully consulted.

At this very moment the starboard watch was eating dinner on deck. Shattuck had finished two of the butt for the cloak and was exhibiting them.

NE day they took a sperm whale that stowed eig barrels of oil. The cutting in, the trying out and subsequent cleaning up took the "heart out of a week," Crandle put it, and in subtle ways affected the future the whole ship's company.

"Do You Want to be a Cabin Boy All Your Life?"

In the encounter with leviathan, Edmonton, the boatteerer, who first fastened to him by a noble throw, was cescatly so caught in a snag of the swiftly running line o which his iron was attached that his left forearm was coled almost to the bone. With the line slipping overoard and the boat tearing along at ten or twelve knots, aging and plunging, the bow-oar improvised a tourniquet nd saved Edmonton from an immediate and painless eath, so that later he might succumb to the torture of lood poisoning.

As a result of this accident, Crandle, the most experinced man forward, was promoted to be boatsteerer in

dmonton's place.

During the cutting in Mr. Tuttle slipped from the itting-in platform and hurt his side, not, it was thought the time, very seriously. But events proved this diagnosis be sadly mistaken.

With the inside history of Crandle's promotion Mrs. aithway had something to do. She had been looking pale d drawn for several days, and during a short spell of rfectly calm weather had complained of feeling seasick;

erefore her husband could deny her nothing.

"The more his record has ood in his way," she said, he worse his record has His wickedness isn't stubborn but what a litresponsibility and a little ccess might heal it. And, sides, it will bring him where characters are onger and better formed in the fo'c's'le. He'll under your eye, and if u can't make something his strength and courage, m I'm wrong and all the stains who have kept n down were right." After thinking this over hile, Captain Haithway t for Crandle and told a of his promotion. for once the fo'c's'le apter had his breath en away and was at a

for words. Presently

managed to say: "I'll to do my duty, sir."

the youthful captain

led and shook his head.

"I wish you would say 'I will do my duty,' not 'I'll try," said he. "You are one of those men who do what they please with their lives."

Crandle said nothing, and Captain Haithway turned on

his heel and then turned back.

"By the way," he said, "you owe your promotion less to me than to Mrs. Haithway, Crandle. She would be bitterly disappointed if it didn't turn out well. She believes that you will from now on be a good example to the men, both afloat and ashore."

Crandle cleared his throat in a peroratorical way, blinked his big agate eyes, and said nothing.

"You may move your belongings aft immediately." Crandle darted forward, and spying Bowers called to him:

"Boy," he said, "have you read that book I loaned you?"

"I haven't had a chance yet."

"You bring it to me."

The boy went and came.

Crandle took the book in his immense hands.
"I got another book," he said, "will do you more good 'an this one."

It Looked as if They Would Have to Anchor for the Night

"What's that, Crandle?"

"Mr. Bowditcher's Navigator,"

And as a first attempt to do his duty, Crandle turned and tossed the book into the sea. Later on that same day his collection of colored prints, purloined from various sailorheavens up and down the world, followed it. Later still Mrs. Haithway seized an opportunity to congratulate him on his promotion.

"I have you to thank, ma'am," said he.

"I am putting my money on you," she said gayly, "and I hope you'll try to do your duty."

"But I ain't a-going to try."
"Oh, Crandle!"

"I'm going to do it."

There was that in his repressed but powerful voice which sent a thrill through them both.

"I believe you," she said; "and I thank you!"

WHALING ship, unless full of oil or for some press-A ing reason, does not attempt to sail the shortest line between two points. In a voyage that may last five years

time is of very little value. In good whale-pasture a ship will cruise north, south, east and west by day, as suits the whim or the instinct of her commander, and lie to at night. She is not designed with any view to expedition. She is almost as square forward and aft as a sawed log. She is built with very thick timbers and planks of very heavy stuff; after a few months her bottom becomes rank with sea-growth; and her steering gear, very slightly improved upon that which sufficed for Noah, cannot hold her to a straight course for more than a minute at a time. Sailors say that in hell there is a punishment for those who have lived in too much of a hurry: it is always to be trying to get somewhere quickly in a whale ship.

(Continued on Page 48)

# Sutting With a Blunt Knife

By Maude Radford Warren

HE following is the autobiography of Thomas Barrows, which he related some dozen years after he was gradu-

from college: hen I left college and went to work I

such habits of playing, so little interest in business, and ittle notion of how to apply myself to it, that my ations in the practical world were precisely like cutting a blunt knife when there is no excuse for the blade not g sharp. I know now that I was a typical college boy. ne way my home life was typical-that is, my parents ght I was the brightest and best-looking chap in the munity, and they made silent and constant sacrifices we me the advantages they never had.

y father had not gone to college; he had been pitched into the world at fifteen to earn his own living, and tever education he got after that he picked up himself. ad, therefore, an exaggerated idea of the importance rmal education. Every personal disadvantage he had id to the fact that he had not been fully educated, had forced to stick at his work too closely to mix with le and use what schooling he had and acquire more

was really an attractive, lovable man; but, because ever grabbed the center of the stage and forced people ten to monologues, he thought he did not know how eet men-was not a mixer.

ras a mixer from the start of my schooldays. The way ered from my father was that where he had diffidence consideration for other people I had conceit and cheek. er laid my ease and my popularity to the fact that getting higher education. I remember once when I college Freshman, and some friends called, I talked aly to them and played and sang some college songs. e say when they went away they said to each other I was a fresh cub, pushing my agreeable parents into ackground; but after they had gone, and I had retired e dining room to bone up enough French to keep

myself from flunking, I heard my father say proudly to

my mother:
"Marian, that boy can meet people better at his age now than I can at my age. It's because his youth is being prolonged, and he's getting from books and his teachers and classmates the kind of education that makes a man broad—that fills him with such resources that he can handle any situation life may put up to him."

Well, all I got out of the speech was that my parents were sensible enough to appreciate me. I never doubted that their estimate of my powers was correct. I was quite sure I could dominate any circumstances in which I might be placed, because I was used to success. It never occurred to me to question whether or not the successes I had enjoyed were worth while. It sufficed me that I had always got whatever I had gone after and always expected to. As to that education of which my father spoke, I do not think I ever spent ten minutes thinking about it.

My father's notion was that I was in touch, through books and teachers, with the master ideas of the world; and that when I finished my course I should be well fitted to survive in any hard struggle for livelihood. My notion of my college course was that I must do enough work to pass in each class, so that I might end up with a sheepskin. It was considered something of a disgrace not to be able to graduate; but it was not considered a disgrace for a fellow to avoid real education, as I did-always provided he were avoiding it for something he considered better worth while.

What we collegians considered better worth while was social leadership and athletic leadership. Usually they were the same thing. Next after them came leadership in the affairs of the mind. There were among us a few boys

and girls who were what we called sharkswho swallowed knowledge as we social leaders lapped up the adulation of our fellows. When we heard these people recite in class, answering the questions in which we

failed and even presuming to discuss knotty points with the profs, we respected them; but, as a rule, we did not ask them to join the fraternities and sororities. Sometimes we did; but usually such students were without the social graces-more concerned with books than with people. They were after what was going to count in their future work. I and my kind were after a good time. We admired them-but we would rather have been the fullback or the shortstop.

And I am sure they envied us too. I am sure that many a girl-grind wished she had been born pretty and fluffy, and the sort that would be chosen to lead the grand march, rather than the person she was. I am sure, too, that many a man who made a recitation to an admiring whisper from the male idlers of "Gosh! Hear the spiel!" would far rather have had a fraternity boy whisper: "Say, old hoss, don't forget the jamboree this eve!"

I was a leader, because I was a halfback, and because I sang in the glee club, and because I could tear off lowcomedian stunts in dramatics-because I could imitate the president giving a talk in chapel, and the dean of the women walking across the campus, and a dog and a cat having a fight on top of the fence of a German and an Irishman. If there was anything ornamental and attractive and utterly futile-so far as the real business of life was concerned-that thing I could do. One of my stunts was making smoke-rings about the size of doughnuts. I cannot count the number of hours I spent practicing that accomplishment and the amount of nicotine my system absorbed before I was a past master in it.

They say that often a frivolous youngster, sidestepping away from education during his first college year, settles down to business in his Senior year. He begins to apply

himself hard, and to try and relate what he is learning to the serious business of life; but my serious business in life during my Senior year was still the business of having a good time.

About the spring of my last year I did a little reflecting. It was not to the effect that I was wasting my father's hard-earned money; that I had ruined a new suit of clothes in a fraternity house scrap; that I had spent a lot of time talking nonsense to girls whom I should never see after the year was past. No; my reflections merely were to the effect that time was galloping by and that all too soon the dear old friendships would be over-I should be graduated and

have to fend for myself.

Plenty of fellows-some of them the grindshad fended for themselves in college; but I was not one of them. My father had five thousand a year and I was his only child. When a candid uncle asked how it was I did not get the scholastic honors which accrued to the classmate who looked after my uncle's furnace, my father replied that I was in so many things besides my work that I could not be a specialist. He wanted me, he said, to be developed in all directions. I should have to specialize when I was in business

As I had shown no taste for any particular profession it had been decided that I was to enter the business in which my father was. He was the head designer of a stationery firm; and as the management liked him he hoped that he should be given a small partnership some day; and he had been promised that a place should be made for me. It would be a small place; but my father said that a man of power could rapidly forge ahead in that firm, and that the smallness of the beginning was nothing—it was the power of making good that mattered.

Just before I was graduated the management of the firm changed. The new partners were men who did not know my father. He was kept on, because that had been a stipulation of the old partners, who had valued him; but most of the other heads of departments went, and it was made clear to my father that the old

patriarchal days were over; that not only need he never hope for a partnership, but also that any jobs of importance the firm gave away would be given to relatives of their own.

My father's chief regret was that he and I should not be working in the same place. He had no doubt that such a brilliant youth as myself would soon find his opportunity. Neither had I. Probably I saw myself cruising easily along the highroad of the world, while various jobs raced up to me and offered themselves for my inspection—I to choose the most profitable and doubtless the easiest; but that was not the way it worked out.

My father had plenty of friends; but when we came right down to it, not a great deal of business influence. Not very many five-thousand-dollar-a-year men are able to land a big job for a young, inexperienced fellow—and it was a big job I was after. Father made many inquiries, but his influential friends generally had sons or nephews of their own they had to take care of.

"Don't get impatient, Tom," said my indulgent dad.
"We can afford to allow you a little time in which to look round. I'm not in favor of your falling into the wrong job through impatience of results."

#### A Self-Made Electrician's Opinions

HE NEED not have counted on my impatience at first. It was still summer-time and I loafed along with my friends, as I always had in the summers; but in the autumn a change came. I used to visit the boys in the fraternity house; they welcomed me-but with a difference. I was a graduate and therefore an outsider. I was a brother, but of a past generation. I was not on the football team any more nor in the glee club nor in the dramatic club. Moreover my friends began to say to me:

"What! Haven't landed anything yet?"

I woke up to the fact that playtime was over. I thought I was thoroughly awake—but I was not. Even my experience of the next few weeks did not do more than shake the first veils of drowsiness from my eyes. I set out to find work for myself, taking as my first medium the advertising columns of the newspapers. I answered over four hundred advertisements of all kinds, using every precaution to make my replies as businesslike and convincing as possible. I sent out over seventy typewritten applications—for which my father paid-to picked addresses. I made innumerable applications in person. In almost every case I was met by the same fatal question:

What do you know about our business?"

If I did not know something about his business the prospective employer did not seem to care how fine my personal qualities were, or how excellent was my mental

"Did You Try to Find Out How Important a Customer This Clark Is?"

capacity, or how promising my zeal. He would not even give me a chance to show what I could do. Many of these men told me I was too old-I was twenty-two. They wanted young men in their teens, who would be cheaper, last longer, and, not having college training, would be more easily reduced to mere cogs in the business machine.

Among the manufacturers particularly I soon found out that what an employer wants is not a man of theory, but a man of brains who has had an unusual amount of experience, who knows the state of the art thoroughly, and who understands all kinds of tools and what they are capable of doing. This seems to be the only kind of man who is regarded as of any account in a manufacturing business.

My experience in getting turned down merely led me to believe that it was hard for a young fellow capable of big things to get a start. I was sure there was plenty of room at the top and that I was fitted for the top; the difficulty was to break in. Usually I was turned down with dispatch, but one self-made man, an electrical engineer, turned me down with the trimmings of a long speech.

"I don't want any young fellow who has been trained in technical school," he stated; "I don't believe in them." I replied that I had not had a technical-school trainingthat I had had simply the four-years course in college.

"That's a little better," he said; "but still, young fellow, you are four years to the bad. I'm sorry, for you look as if you had the germ of a brain. When I make electrical engineers I do it in this way: I select boys of sixteen or seventeen for machine-shop apprentices. I watch over them to see that they are the material for good machinists, and I weed out the wrong ones. Those that have unusual ability I put in training for electrical engineering.

'I give them a year at benchwork and one at toolwork, shifting them round considerably, so that they can get the knowledge of that part of the work which is required to make of them good electrical engineers. Then I put them in the testing department for half a year, in the drafting department for half a year, in the erecting department for a year, and in the operating department for a year.
"While they work in this way they are surrounded

constantly by an electrical atmosphere, and they will absorb through observation and association nine-tenths of all the knowledge they will need to have regarding electricity. Meantime they can study at night school, so at the end of five years they will be fairly good electrical engineers-and, at that, they will have half a dozen more years of work in them than the college man.'

I listened to this politely but skeptically, and as the engineer was a judge of men he saw my disbelief. He leaned forward in his chair and discharged a long forefinger at me.

"Young man," he remarked, "I can see that you are a believer in the technical colleges. There are close to one hundred and thirty of them in this country, including universities that have special departments devoted to technical training. Let us say thirty thousand boys take these courses and ten thousand of them leave these schools each year. What becomes of them?

"Don't you see that there would have to be an enormous demand in order to provide places for the large number of young men supposed to be trained for the higher and better positions' I could tell you of hundreds of chaps who have real merit, and who after six or eight years o higher schooling are glad to be hired for twenty cents an hour, which is the same price that othe men get who haven't had the schooling.

"There is a big electric company in this city that takes boys from these technical college and gives them two years in the testing depart ment, starting them for the first six months a twenty cents an hour, and giving them-towar the end-twenty-seven and a half cents. Th boys are then taken to the engineering depart ment, where they start in at about the same pa they have been getting in the testing depart ment, and there they spend two years. Mayb they are twenty-seven years old by this time They will be lucky enough if they can go out an get three dollars a day.'

#### A Start in the Valve Business

'AND why should they get more? They at a still far from being electrical engineers, it they aren't machinists; and a good electric engineermust be a machinist. They have had a experience in erecting or operating; they kno nothing about costs—knowledge that is nece sary to enable them to make estimates. I te you, young man, I don't believe in the comb nation of four years of mental activity in colles with two years afterward of practical shopwor in the student course, calling largely for phys cal exercise. It isn't the most effective method for training commercial, designing and constru tion engineers. It fails to give the necessar insight into the practical side of electrical eng

neering and into the proper relation of the economic force

of an industrial organization.

Shop-practice courses at college can give at best but slight idea of the real industrial situation. Considering t limited equipment of colleges and the brief time they of allow, they can initiate the students only in a very gener way into practical processes, and give them but a speakir acquaintance with machines and materials.

"Besides, considerations of the elements of time # money in carrying out practical work are entirely neglecte at college. No one can succeed in industrial life who h not a hard-and-fast appreciation of economic values. young man can't get a conception of these values unle he has an extended experience in practical work in whi time and money play leading parts. You're not graspl what I'm telling you, young man, though I've spent a sm fortune of time on you already. So, get out!"

I got out, carrying away merely the impression that did not want to be connected with any kind of engineeri work, and also that the big engineer did not believe college men simply because he was self-made. All the san I continued to find that those employers who did belie in college men somehow had no place for me. I was s blind as to what was the matter with me; but I was far in comfortable in my mind, for all my other friends seemed have good positions, with plenty of chance for promotic I know now that most of them were bluffing—but, still, th had something to bluff on.

It was my father who at last landed me a job. He# held to his theory that it would be a tragedy for me to started on the wrong job; but he now said that one way knowing the wrong job was trying it and leaving it. had a friend who was with a firm that manufactured val and steam-fittings. This friend, Mr. Burton, was beat the brass-valve department. He knew I was looking for position; and, though his firm did not care much for t college-bred product, Mr. Burton engaged in his office at fifteen dollars a week.

I should have been thankful—and, in a way, I w I had no desire to sponge on my father any longer. Tak an allowance from him while I was in college seemed to quite a different thing from taking it while I was not do anything-not even making a pretense at studying; lot I left my suburban home on the Monday I started war felt a good deal of mortification. My dreams had too to the stars—and here I was a clerk! As I walked 10 Canal Street before turning west to the office I might be noticed the hordes of eager and even hungry-looking hanging about the windows of the labor-employment and cies; but I merely felt sorry for myself.

Our office was in the same building with our shops. as I passed up the stairs to my new work I could heaft

ming and clash that bespoke the labor of hundreds of 5 but of what they were making I knew and cared sing. I knew Mr. Burton well, for he was a neighbor irs. He was a fine-looking man, with shrewd, kind blue , red cheeks that somehow added to the genial look is face, and a pointed beard that gave him a slightly essional air.

is expression, however, was far from being that of the sroom, and, for all his gentle manners, any one who a judge of men would have seen that my new manwas not in the least to be trifled with; but at that time

is not a particularly close judge of men. expected Mr. Burton would start me off with some sort piel-and he did, but briefly. He said that any man had it in him to rise could rise with this particular pany, and that the best way to get on was to make elf as familiar as possible with the manufacturing and kings of the firm; and that, above all, I must realize eriousness of business. The steady thinking man would on: the flighty or indifferent one would be left behind. wo or three times he repeated that phrase—the seriousof business. If only I had listened to him with my ie mind—really grasped what he was trying to impress with-I might have saved myself some humiliations; I merely gave him the specious attention I had rded my professors. I had come to him as a stop-gap, use there was nowhere else to go, and I was not in the interested in the work. All I cared for was the fifteen irs a week-the pittance, as I called it privately.

#### Getting Broken to Harness

R.BURTON, first of all, took me downstairs and showed me the workings of the timeclock. I did not like to be bered; I hated the democracy of that timeclock, even igh the manager himself had a number. Then he took hrough the shop, from the foundry to the plating room. ight to have interested me. I ought to have felt the ificance and even the grandeur of what I casually ced at: but all I saw was a confusion of belts and shafts. th seemed to me to shadow their blackness on the ewashed walls.

saw flying splinters of steel, one of which struck me on cheek; grimy faces where, nevertheless, pallor showed dark eyes gleaming out of them stolidly, scarcely eing at us in order not to hinder the piecework.

I saw countless parts of valves dropping from machines or resting in great boxes, and I did not ask a single question about them. I saw long double boards, with rows of brass hooks, on some of which order slips were impaled; and I did not know or care that they were there to save the foreman clerical work. I merely felt that after all I was lucky in that I was not born to work in a shop.

My work was to write out orders and do other small details of clerical work. I had a desk between two clerks who did the payroll work and the cost work. The sunniest corners of the room went naturally to the manager, the assistant manager and the stockkeeper; but I had a good place and plenty of light. The work was easy; I mastered it at once, and I suppose I had a corresponding contempt for it. I soon became friendly with the other clerks in the office. They were not my sort exactly, but plenty of my classmates had not been, either, and yet I had got on with them.

As I have said, I had a gift for mixing. Presently I got used to my situation. I missed the freedom of movement of the college, where my closest confinement had been an occasional three hours in a laboratory, always with the privilege of moving about. It bored me to be on duty from eight until five-thirty; but I had an hour off at noon and after a while I did not mind the routine. Having a job I lifted up my head among my fellows once more, lied about the pay I was getting, bragged about my chances of promotion, called on girls and went to parties. In short, I was once more exactly the same joyful drifter I had been in

At the end of the first month I was called to Mr. Burton's desk.

"Tom, this won't do!" he said briefly. "You have been

late four mornings this month."

"Yes, I know," I said, feeling that I must smooth him
down exactly as I had smoothed down my professors. "I take the seven-twenty. When it gets in on time I'm here on time."

"I take the seven-fourteen," Mr. Burton said crisply. "Twenty-four days out of twenty-eight I get to the office six minutes ahead of time; but that keeps me from being late four times. If I can do it you can. Your position ought

to be just as important to you as mine is to me. That's all!" I retreated to my desk feeling aggrieved. Two or three nights a week I went to parties or to the theater or to the fraternity house. It was not always easy to be at the

> station by seven-fourteen-six minutes leeway between seven and eight is always a help. I was doing the confounded firm a favor anyway-it was not every office that could have a college man like me at its beck and call; but for all my inward grumbling I took the earlier train. Perhaps I subconsciously realized that I was lucky to have work at all. Soon after I was made a special order clerk; and, though this was really no promotion, somehow I felt as if it were.

> Presently I paved the way to a serious reprimand. A customer sent us a valve specifying a certain repair he wanted made, which would cost about two dollars. The foreman saw that it

would be useless to make this repair unless other work were done on the valve, which would bring the cost up to five dollars. Without consulting the customer I told the foreman to go ahead with it.

When the valve went backthecustomerobjected to the price. We had to write several letters before he was at all placated, and even then the firm felt it would have to absorb the extra cost. Mr. Burton took me to task.

"You showed very poor judgment in that matter, Tom," he said, "and a high-handed way that it is not our policy to take with our customers."

"Why, I figured I'd be saving time for the customer," I said glibly; though, as a matter of fact, I had not done any real figuring at all. "It would have taken two or three days if we'd written to him. Besides, the work had to be done."

"That's not the point," Mr. Burton said. "If you

I Went for a Long, Cold Walk and Did Some Hard Thinking

sent your overcoat to a tailor and told him to put on new braid and buttons, you'd object if he sent it back with a new lining you hadn't asked for. If you're going to stay with us, Tom, you'll kindly try to take your work seriously."

I smarted under that. I knew I had blundered, and for a few days I read over every order with the care that a nurse gives to a doctor's instructions. Then I blundered again. I suspect my mind was on a trivial honor that had come to me that morning-a song I had written had been incorporated in the college songbook. I was thinking of going to the fraternity house that night to be congratulated.

#### A Walk and a Turning-Point

AN ORDER came early in the afternoon from a customer, which was what we call a breakdown job. The man telegraphed that a valve on a high-pressure line in his manufacturing plant had broken, and he wanted one sent to him by express at once. I went to the foreman and asked him whether he could get the job out that night. He said he could not possibly, but he would have it ready before noon the next day. I took the word to the shipping department. The manager happened to be there and he inquired the name of the customer.

"Clark, I think," I said.
"Not the Clark-Ralston Company?" he said.

"I-I don't know," I replied.

"You come back to the office," he said grimly. We went back to the office. Mr. Burton looked at the

telegram; then he stared at me. "Did you try to find out how important a customer this Clark is, or why he wanted the valve on his high-pressure line, or what the consequence would be if he didn't get it?'
"No, sir," I said. "I went straight to the foreman."

"Well, you go back to the foreman," he said.

The foreman said he had not understood it was the Clark-Ralston Company or that the valve was to be sent by express, or he would have rushed it. By a little overtime work, he said, he could get the valve off that night.

Mr. Burton started in then and there to give me the talk that was the turning point of my life. He explained that the Clark-Ralston Company were most important customers; that the very 'warning "breakdown job" ought to have put me on my mettle; that the company's shop was running with a great number of men; that it was a high-pressure plant, and that they must have had to shut down part of their plant until that valve was in shape.

He said that if the valve had not been sent until the next y-which was Friday-it would have arrived on Washington's Birthday-which was Saturday-and that would have meant two idle days. He said I had handled the situation with the stupidity and inexpertness of a child of ten. What more he might have said I do not know. Luckily for me the head of our firm sent for him.

I did not go to the fraternity house that night. I went for a long, cold walk and did some hard thinking. For the first time I realized how utterly worthless I was. I did not show as much skill as some of the clerks who had scarcely gone through the high school.

For the first time I saw that my college education had, so far as business was concerned, got me nowhere. I had not learned one thing in college that I had been able to apply to my present work. I had felt above my work—had

I Had Spent a Lot of Time Talking Nonsense to Girls

### FREDDYET CIE

PHOTO, D1 AGE, FEDER, NEW YORK CITY

T IS always a perplexing question how to provide for younger sons, and the immediate relatives of the Honorable Freddy Foulkes had forfeited a considerable amount of beauty sleep in connection with the problem.

"My poor darling!" the Marchioness of Glantyre sighed one day, more in sorrow than in anger, when the Honorable Freddy brought his charming smile and his graceful but unemployed person into her morning room. "If you could only find some congenial and at the same time lucrative post that would take up your

time and absorb your spare energy, how grateful I should be!" "I have found it," said the Honorable Freddy, with his cherubic smile. He possessed the blond curling hair and artless expression that may be symbolical of guilelessness or the admirable mask of guile.

"Thank heaven!" breathed his mother. Then, with a sense that the thanksgiving might, after all, be premature, she inquired: "But of what nature is this post? Before it can be seriously considered one must be certain that it entails no loss of caste, demands nothing derogatory in the nature of service from one who---I need not remind you of the fact that your family must be considered."

She smoothed her darling's silky hair, which exhaled the choicest perfume of Bond Street, and kissed his brow, as pure and shadowless as a slice of cream cheese, as the young man replied: "Dearest mother, you certainly need not."
"Then tell me of this post. Is it anything," the Mar-

chioness asked, "in the diplomatic line?"

"Without a good deal of diplomacy a man would be no good for the shop, but otherwise your guess is out."

Doubt darkened his mother's eyes, "Don't say," she exclaimed, "that you have accepted a club secretaryship? To me it seems the last resource of the unsuccessful man."

"It will never be mine," said Freddy, "because I can't keep accounts and they wouldn't have me.

Try again."
"I trust it has nothing to do with art," breathed the Marchioness, who loathed the children of canvas and palette with an unreasonable loathing.

"In a way it has," replied her son, "and in another way it hasn't. Come! I'll give you a lead. There is a good deal of straw in the business,'

"You cannot contemplate casting in your lot with the agricultural classes? No! I knew the example of your unhappy cousin Reginald would prevent you from adopting so wild a course. But you spoke of straw.

"Of straw-and flowers-and tulles."

"Flowers and tools! Gardening is a craze that has become fashionable of late; but I cannot calmly see you in an apron, potting plants."

"It is not a question of potting plants, but of potting customers," said Freddy, showing his white teeth in a charming smile.

A shudder convulsed Freddy's mother. Freddy went on, filially patting her handsome hand: "You see, I have decided, and gone into trade.

### By Richard Dehan

If I were a wealthy cad I should keep a bucket shop. Being a poor gentleman, I am going to make a bonnet shop keep me. And what is more-I intend to trim all the bonnets

There was no heart disease on the maternal side of the house. The Marchioness did not become pale blue and sink backward, clutching at her corsage. She rose to her feet and boxed her son's right car. He calmly offered the left one for similar treatment.

"Don't send me out looking uneven," he said simply. "If I pride myself on anything it is a well-balanced appearance. And I have to put in an appearance at the shop by

He glanced into the mantel mirror as he spoke, and, observing with gratification that his immaculate necktie had escaped disarrangement, he twisted his little mustache, smiled, and knew himself irresistible.

"The shop! Degenerate boy!" cried his mother. "Who is your partner in this—this enterprise?"

You know her by sight, I think," returned the cherub coolly. "Mrs. Vivianson, widow of the man who led the

Doncaster Fusiliers to the top of Mealie Kop and got shot there. Awfully fetching and as clever as they make them!'

"That woman one sees everywhere with a positive procession

of young men at her heels!"
"That woman, and no other."

"She is hardly -

"She is awfully chic, especially in mourning."

'I will admit she has some style." "Admit, when you and all the other women have copied the color of her hair and the cut of her sleeves for three seasons past! I like that!"

Freddy was growing warm. "When you accuse me of imitating the appearance of a person of that kind," said Lady Glantyre in a cold fury, "you insult your mother! And when you ally yourself with her in the face of society, as you are about to do, you are going too far. As to this millinery establishment,

it shall not open.' "My dear mother," said Freddy, "it has been open for a week."

proof or the Transport and to the State of the

He drew a card from an exquisite case mounted gold. On the pasteboard appeared the follow inscription in neat characters of copperplate:

> FREDDY ET CIE. COURT MILLINERS 11, CONDOVER STREET, W.

"Freddy and Company!" murmured the strid parent as she perused the announcement.

"Mrs. V. is Company," observed the son will spice of vulgarity, "and uncommonly good a pany too. As for myself my talents have at last in scope and millinery is my métier. How often you haves that no one has such exquisite taste in the arrangement

'As you, Freddy! It is true! But -

"Haven't you declared over and over again that; have never had a maid who could put on a mantle, adja fold of lace, or pin on a toque as skillfully as your own set "My boy, I own it. Still, millinery as a profession-

Can you call it quite manly for a man?"
"To spend one's life in arranging combinations to off other women's complexions-can you call that women for a woman? To my mind," pursued Freddy, "it is only occupation for a man of real refinement. To con-Beauty with beauty! To dream exquisite confect that shall add the one touch wanting to exquisite ye or magnificent middle age! To build up with deft tood a creation that shall betray in every detail, in every de-

the hand of a genius united to the soul of a lover, and reap not only gold but glory! Would this not be fame?"

"Ah! I no longer recognize you. You do not talk like your dear old self!" cried the Marchioness.

"I am glad of it," replied Freddy, "for, frankly, I was beginning to find my dear old self a bore." He drew out a watch, and his monogram and crest in diamonds scintillated on the case. His eye gleamed with proud tri-

umph as he said: "At twelve I am due at Condover See Come—not as my mother, if you are ashamed of my pri sion, but as a customer ashamed of that bonnet"-13 Glantyre was dressed for walking—"which you out have given to your cook long ago. Unless you a prefer your own brougham, mine is at the door."

The vehicle in question bore the smartest appears The Marchioness entered it without a murmur and whirled to Condover Street. The name of Freddy 61 appeared in a delicate flourish of gold letters also

justely decorated portals of the establishment, and the hie-glass window contained nothing but an assortment lphnes, ribbons, chiffons and shapes of the latest mode, and a single completed article of head apparel.

The street was already blocked with carriages, the vestior parked, the shop thronged with a vast and everpressing assemblage of women, among whom Lady lature recognized several of her dearest friends. She abid she had not come, and looked for Freddy. Freddy ad vanished. His partner, Mrs. Vivianson, a vividly ned elegant brunette of some thirty summers, assisted three or four charming girls, was busily engaged with ger would-be customers, not a few, who sought admission the inner room, the pale green portière of which bore in adjusters of embroidery the word atelier.

"You see," she was saying, "to the outer shop admisis guite free. We are charmed to see everybody who

us to come, don't you know, and show them glatest shades and shapes and things; but nsultation with Monsieur Freddy - we arge five shillings for that. Unusual? shaps. But Monsieur Freddy is Monsieur

"Why do you ask? Is it true that he is the anger son of the Duke of Ancestous?" "Dear madame, to us he is Monsieur

edly; and we ask no more." "A born tradeswoman!" thought Lady lutyre as the silver coins were exchanged tlittle colored silk tickets bearing mystic miers. She moved forward and tendered stalf crowns-and Freddy's partner and sity's mother looked each other in the er but Mrs. Vivianson maintained an inrable composure.

And then the curtains of the atelier parted da young and pretty woman came out

fieldy. She was charmingly dressed and wore the most quiste of hats, and a murmur went up at sight of it. She atched out her hands to a friend who rushed impulsively net her, and her voice broke in a sob of rapture.

"Did you ever see anything so sweet? And he did it anagic-one scarcely saw his fingers move!" she cried. He friend burst into exclamations of delight and a ma arose about them:

"Wonderful!"

"Estraordinary!"

"He does it while you wait!"

"Just for curiosity, I really must!"

ltd a wave of eager women surged toward the green ties. Three went in, being previously deprived of their

headgear by the respectful attendants, who averred that it put Monsieur Freddy's taste out of gear for the day to be compelled to gaze on any creation other than his own. And then came the turn of Lady Glantyre.

She disbonneted and entered the sanctum. A pale, clear, golden light illumined it from above; the walls were hung with draperies of delicate pink; the carpet was moss-green. In the center of the apartment, on a broad, low divan, reclined the figure of a slender young man. He wore a black satin mask, concealing the upper part of his face, a loose loung-

WITH TILES FEBRE, NEW YORK CITY ing suit of black velvet, slippers of the same with the embroidered initial F. ad him stood, mute and attentive as slaves, half ben pretty young women, bearing trays of trimmings very conceivable kind. lent, the Marchioness stood before her disguised son. mily put up his eyeglass, to accommodate which aid sion his mask had been specially designed, and moed her to the sitter's chair, so constructed that with ach of Monsieur Freddy's foot on a lever it would ive, presenting the customer from every point of He touched the lever now, and chair and Marness spun round slowly. But for the presence of the Wladies, with their trays of flowers, plumes, gauzes Tibbons, Freddy's mother could have screamed. All abile Freddy remained silent absorbed in contem-90, as though trying to fix on his memory features for the first time. At last he spoke.

Itall." he said, "and inclined to a becoming embon-1. The eyes blue-gray; the hair of auburn touched with silver; the features of the Anglo-Roman type, somewhat severe in outline; the chin - A hat to suit this client"-he spoke in a sad, sweet, mournful voice-"would cost five guineas. A Marquise shape, of broadtail"—one of the young lady attendants placed the shape required in the artist's hands-"the brim lined with a rich drapery of chenille and silk. . Needle and thread, Miss Banks. Thank you." His fingers moved like white lightning as he deftly wielded the feminine implement and snatched his materials from the boxes proffered in succession by the girls. "Black and white tips of ostrich falling over one side from a ring of cut steel," he continued in the same dreamy tone. "A knot of Point d'Irlande, with a heart of Neapolitan violets, and"-he rose from the divan and lightly placed the beautiful completed fabric on the Marchioness' head-"here is your hat, madame.

Five guineas. Good morning. Next, please!"

Emotion choked his mother's utterance. At the same moment she saw herself in the glass silently swung toward her by one of the attendants and knew that she was suited to a marvel. She paid her five guineas, made her exit, and returned home, embarrassed by the discovery that there was an artist in the family.

One thing was clear-no more was to be said. The Maison Freddy became the morning resort of the Smart World: it was considered the thing to have hats made while society waited. True, they came to pieces easily, not being copper-nailed and riveted, so to speak; but what

poems they were! The charming conversation of Monsieur Freddy, the half mystery that veiled his identity as his semimask partially concealed his fair and smiling countenance, added to the attractions of the Condover-Street atelier.

Money rolled in; the banking account of the partners grew plethoric; and then Mrs. Vivianson, in spite of the claims of the business on her time, in spite of the Platonic standpoint she had up to the present maintained in her relations with Freddy, began to be jealous.

"Or-no! I will not admit that such a thing is possible!" she said as she looked through some recent entries in the daybook of the firm. "But that American millionairess girl comes too often. She has bought a hat every day for three weeks past. Good for business in one way, but bad for it in another. If he should marry, what becomes of the Maison Freddy?"

She sighed and passed between the curtains. It was the slack time after luncheon and Freddy was enjoying a moment's interval. Stretched on his divan, his embroidered slippers elevated in the air, he smoked a perfumed

PROTO. BY THE TRANSPIRENTIC APPROPRIES OF

cigarette, surrounded by the materials of his craft. He smiled at Mrs. Vivianson as she entered and then raised his eyebrows in surprise.

"Has anything gone wrong? You swept in as tragically as my mother when she comes to disown me. She does it regularly every week and as regularly takes me on again." He exhaled a scented cloud and smiled once more.

"Freddy," said Mrs. Vivianson going direct to the point, "this little speculation of ours has turned out very well, hasn't it?"

"Beyond dreams!" acquiesced Freddy.

She went on: "You came

to me a penniless detrimental, with a talent of which nobody guessed that anything could be made. I gave that gift a chance to develop. I set you on your legs, and -

"Me roild! You don't want me to rise up and bless you, do you?" said Freddy with half-closed eyes, awfully, you know, all the same!"

"I don't know that I want thanks, quite," said Mrs. Vivianson. "I've had back every penny that I invested and pulled off a bouncing profit. Your share amounts to

little while you'll be able to pay your debts." "I shall never do that,"said Freddy with

a handsome sum. In a

feeling. "Marry and leave me-perhaps," went on Mrs. Vivianson. A shade swept over her face; her dark eyes glowed; the lines of her mouth hardened.

"Keep as you are!" cried Freddy, rebounding to a sitting position on the divan. "Where's that new Medici shape in gold rice-straw, and the amber crêpe chiffon, and

WHOTO, BY JOSE PROCES, NEW HORS CITY

the orange roses with crimson hearts?" His nimble fingers darted hither and thither, his eyes shone, and his cheeks were flushed with the enthusiasm of the artist. "A tuft of black and yellow cock's feathers à la Méphistophélès!" he cried; "a topaz buckle, and it is finished. You must wear it with a jabot of yellow Point d'Alençon. It is the hat of hats for a jealous woman!"

"How dare you!" cried Mrs. Vivianson; but Freddy did not seem to hear her-he was rapt in the contemplation of the new masterpiece. And as he rose and gracefully placed it on his partner's head Miss Cornelia Vanderdecken was ushered in. She was superbly beautiful in the ivory-skinned, jetty-locked, slender American style, and she wore a hat that Freddy had made the day before, which set off her charms to admiration.

She occupied the sitter's chair as Mrs. Vivianson glided from the room, and Freddy's blue eyes dwelt on her worshipingly. To do him justice he had lost his heart before he learned that Cornelia was an heiress. Now words escaped him that

brought a faint pink stain to her ivory cheek.

"Ah!" he cried impulsively. "You are ruining my business!"

"Oh, why, Monsieur Freddy? Please tell me!" asked Miss Vanderdecken with naive curiosity.

"Because," said Freddy, while a bright blush showed beyond the limits of his black satin mask, "you are so beautiful that it is tor-

ture to make hats for other women—since I have seen you." There was a pause. Then Miss Cornelia's bangles clashed and her silk foundations rustled as she turned resolutely toward the divan.

"I can't return the compliment," she said, "by telling you that it is torture for me to wear hats made by any other man since I have seen you; for other men don't make hats, and I can't really see you through that this you wear over your face. But

# Cutting Down Some Staple Unnecessaries By James H. Collins

GETTING RID OF THE SMOKE FROM THE FACTORY CHIMNE

Carelessness and Ignorance are Jaid to be Responsible for Ninety Per Cent of the Worst Jmoke

THE business world has now set seriously to work to eliminate by better management a number of unpleasant things connected with its affairs that-only yesterday-were considered unpreventable. Industrial accidents make up the largest item, and the next largest and most expensive seems to be smoke.

Many years ago a few esthetic critics raised objections to the smoke from the factory chimney because it was not beautiful, and the very idea was new to the business world, which was astonished and could only retort that smoke from the factory chimney meant prosperity—more wages and profits; more goods and comfort for everybody. Smoke from the factory chimney was really a form of human happiness-and there could not be too much of it. In the United States a great national election was won on the platform that abundant black smoke should

pour from all factory chimneys.

By and by the opponents of smoke found a more practical objection - that it was immensely expensive. Some startling facts were collected. Smoke-measuring devices were made and the fall of soot was reduced to figures.

In London it was found that about six hundred and fifty tons of soot fell every year on each square mile of the city, doing damage estimated at twenty-six million dollars a year, with a fuel waste of a million more. And that was only an everyday matter-for a London fog, which is only smoke out of the higher regions dropped down into the city by atmospheric conditions, could cost as much as a million dollars a day in delay and

In Pittsburgh careful estimates indicated a yearly loss of ten million dollars, chiefly in damage to clothes and buildings, cost of washing, painting, papering, replacing of corroded metal, damage to merchandise, artificial lighting, and the like.

In Chicago the smudge bill was figured at forty million dollars a year; in Cincinnati at one hundred dollars for each family-and so on.

#### Numbers for Smoke Clouds

FINALLY Uncle Sam's experts made a national estimate, placing the smoke loss by damage and waste at a round half billion dollars yearly-or seventeen dollars for every man, woman and child in all our cities and towns.

When ideas have any vitality at all they grow. By this time the business world itself admitted that smoke was not beautiful-except in a symbolic way-and the bill of costs was not disputed.

"What are you going to do about it?" asked Business. "How are we to run our plants without making smoke?"

The answer was, smoke laws, smoke inspectors, smoke fines, smoke preventers, and other measures designed to cut down smoke production. Much was accomplished. Big industrial plants partly cured the smoke evil by patent stokers or better methods of firing boilers; v improvement, not elimination.

Hundreds of little plants continued to make smoke in the small quantities that went to produce the great aggregate. Household chimneys continued their business at the same old stand; and the extent to which they are responsible for the smoke evil is shown very clearly in London, where it is estimated that more than half the coal used is burned in household grates-smoke has been an issue in London for five hundred years at least.

The inspector could not catch such offenders; and there were other smokemakers who, though anxious to reduce

A Great National Election Was Won on the Platform That Abundant Black Smoke Should Pour From All Factory Chimneye

their contribution, had to face great difficulties-rail locomotives furnish a large share of a city's smoke instance, yet could not be fitted with mechanical sta or fired to eliminate smoke to the degree possible in industrial power plant.

Worse yet, it was found that the smoky chimney not cause so much damage as the one apparently su less. Exact tests were devised by which the inspe looking at smoke through an instrument, could gi a figure rating as number-one smoke or numbersmoke-or whatever it might be. But the chimney ducing dense number-three smoke for fifteen min calling out the inspector and bringing down a fine found to cause far less damage from soot and cinders the innocent-looking stack producing a light nun

two smoke all day; for, though the latter was confor to the law, its daily output of soot might be enorm

#### Smoke Washed But Not Ironed

TN OTHER words, when smoke was taken up setiit was found to be as many-sided as other modern lems; but today the whole business world has its a tion directed toward smokeless production, and several different directions the real article seems act to be coming.

One way of dealing with smoke that yields exe results is turning round the old proverb and in recognizing that where there is fire there will alwasome smoke. This point of view leads the engine stop trying for smokeless combustion and see wh something cannot be done with smoke after it has

There are the smokewashers, by which smoke an industrial plant is forced through water spray cleansed of its solid matter. About one per cent : coal burned under boilers with the best equipms automatic stokers will pass out of the chimney a and tiny cinders. To the average citizen's eye. chimney looks clean, because there is little of the co cloud which he regards as smoke; but with a plant ing a couple of thousand tons of coal daily, located heart of a city, there will be a daily deposit of from twenty tons of soot and cinders constantly raining on the neighborhood and causing complaint.

The smokewasher removes all this objectionable and, though it may be costly to a corporation i quantities of water necessary must be purchased. certainly economical to the community. And ther direct advantage to the company that warrants th penditure; for a large electrical corporation in the considers the washing of its smoke one of the! forms of peacemaking between the public and itse

This kind of smoke treatment naturally less attempts to do something useful with the washing even in a small plant installed at a railroad round to wash the smoke from a hundred locomotives the half a ton of washings weekly, while a big power |

### THE DANCING CARNIVAL

USTARD pie or canned pear?" asked the waitress; to which Goldie Dailey answered:

"If it's pears I want some, an' if it ain't I ant 'em anyway, an' they can charge me itra. But don't bring just a stingy half!" The waitress stared haughtily and withrew to tell the kitchen that the blonde tress was kicking again. Johnny Trippit d Bologna, the Terpsichorean Juggler, who ere having luncheon at the same table, inned.

"The chow in these one-nighters sure is mpin awful!" said Goldie, hungrily cutting e last tag of meat from a chopbone.

"When I ain't nourished correct it tells," served Bologna. "No man can do my stuff he don't git plenty of meat. I come near oppin' a big weight right on my coco yesrday mat'née-an' all from misjudgin'. I never make that mistake on stronger edin'.'

"I used to hear they gave you cold stringans an' apple pie for breakfast through w England, but I didn't believe it," said hnny. "It's been worse'n that in some these tanks. They don't know what com-

"The dressin'-rooms ain't fit for an animal t," said Goldie as the waitress grudgingly posited a whole canned pear before her, wonder where Lionel is?" Silence met s query; so she repeated it, with a similar ult. "You can't both be deaf," she said arply. "What are you grouchin' about

"I got no use for that guy," said Bologna ruptly. "Not that I'm knockin'."

Johnny nodded approval. Goldie looked ignant as she rearranged a fold of her gray e wnist.

'I tell you, kiddo," said Johnny, "he ain't re on professional ethics. I was tellin' ne Willetts how certain acts has been alin' an' usin' our material, an' how I had wyer after the parties, an' that killin' was good for 'em—an' he the same as defended An' he's too fresh, ain't he, Fred?" 'He laughed right out after me remarkin'

t the chooser who was passin' out your steps might be his company, for all we could tell," said Bologna. "I'm picious of him. We don't know where he come from-re's a million Western acts. We don't know what or who re harborin'.

But you do know he's scored a personal hit an' it's got r angora, don't you?" cried Goldie. "Lionel's nice an' ibly artistic, an' I wouldn't 'a' had half the light an' de to my work if he'd never joined. I see values truer

That guy entered this show as property man; an' e he's got a little part he thinks he'll tunnel under me, the next thing grab you for a partner an' git some adway bookin'," said Johnny; and the waitress ried to the kitchen to notify her associates there that redheaded actor was angry.

Now you're talkin'!" said Bologna, uneasily avoiding

fie's scorching glance.

I see Miss Duffy huntin' me; so I'll ask you to kindly se me," said Goldie; and she trailed her black satin t into the hotel office, where Daisy Duffy was telling the that there was no place like dear old New York.

aisy had a small and wrinklish face and the greaset was never entirely out of her eyebrows. There was narily a gap in the back of her bodice, proving the ations of her reach; but she wore such modish wraps such excessively split and pegtopped skirts, and had a profusion of gold cords and tassels depending from elf, that small details were unimportant. Persons ous of her acquaintance must expect to hear of her rce and her difficulty in finding number-two shoes-it not all skittles, this having little feet. She catalogued ts simply; things happened with Daisy either before ter her operation.

e put an arm through Goldie's when the latter had put handsome seal coat, and they went out together, as y people commenting on Goldie's bright hair and clear skin as on Daisy's tassels and pink fur leg-muffs, ned to protect the wearer against a January wind and

p-split costume. He's fussin' over Lionel, as though the poor boy was a inal," confided Goldie: "but I sha'n't stand naggin', if we are engaged. Would you?"

By Helen Van Campen

"I Hit Their Cursed Leader in the Eye!"

"I'd just let him say what we'd do and then I wouldn't do it," counseled Daisy. "You didn't go and tell about Lionel writing the song to you? Don't you! Redheaded men are mean at best, dearie; so he's only being true to his nature."

"He forbade me goin' to dinner with a very old friend. The party's a jeweler and as highminded as can be!"

"A woman would be mad not to show a little kindness to a jeweler," said Daisy. "I should get to training Trippit in a hurry, or he'll be impossible; for they grow that way when you give in to them. Wouldn't you hate to live in one of these teenchy-weenchy towns? It gives me the creeps to think of it."

"Yes, they're extremely hick; but then they don't realize it, I s'pose," said Goldie. "We better be hikin' for the theater. I do hope Johnny doesn't make any threats against Lionel! It seems like all we draw in this world is

The company playing one-night stands through New England was called by the profession the Trippit and Dailey Road Show. Theatrical critics in the towns booked described it as two-dollar vaudeville. The owners of musical shows with large casts and heavy expenses called it any harsh name that occurred to the defamers. Charlie Levy, the backer in New York, had visited only the receiving tellers of his bank since the opening week. It was a money-getter.

Trippit and Dailey drew the one salary that was considered high in times when the most ordinary act received pay on an extravagant scale. Everybody doubled by working in the Dancing Carnival, which formed the last half of the show. The company carried a few special drops and set pieces, but they were able to use house scenery to an extent that helped to keep the bills at a low figure.

Goldie always got the star dressing room, Johnny the next choice, and the other artists squabbled over what was left. It was a dancing show, arranged to meet the demand of the moment; and the feeling of the performers toward each other was as pleasant as was usual where many temperamental persons in the same line of work played two shows a day, contending bitterly for favor.

Lionel Lamotte had been recruited in Boston. The show's accredited property man had developed rheumatism

and cried off on six weeks of one-night stands; and Lionel, briefly explaining that he was a Western professional out of work, offered to be property and baggage master, and to play a small part in the "revue" for thirty-five dollars a week. He modestly said that he could dance, play the violin and piano-and if the manager wished he would write his own part. He was hired, and Sam Josephs, the company manager, declared him the material of which big-time acts were made. Lionel told inquirers that his mother had been connected with the theater; and so she had—as scrubwoman to a San Francisco stock house, where big-eyed, curious Lionel filled her buckets and wrung out soiled cloths as he listened and learned.

A property man who had been with Réjane taught him to build the most intricate properties, and a stage carpenter whose wife was an ex-ballerina often took him home to dinner and a dancing lesson. The theater's first violin wanted to make a musician out of him, and they would work together at a piano from midnight to foggy dawn. Lionel had to take naps in the dressing rooms between bucketfillings. The property man urged him to study for the drama; the ex-ballerina was certain that he could dance a path to fame; and the violinist, fearful of the grind of dreary hours in a theater orchestra if his pupil played no better than himself, sadly bade the boy decide without advice.

Lionel thereupon became a barker for a circus sideshow, sending money to his mother with such regularity that she scrubbed no longer. He played in a restaurant orchestra in Los Angeles, then went out with Smoke's Mustodonic Minstrels, playing a violin in the orchestra, doing the press work and taking tickets on the gallery door, and faking trombone—for ten dollars weekly.

These various employments occupied him until he was twenty, when his mother died, leaving him a collection of musty photographs, a ribbon worn by Fanny Davenport, and her famous signed letter from Pete Dailey, in which he inclosed two dollars for the washing of some shirts.

Lionel set his face Eastward, crossing three states with a dog and pony circus, and another with a medicine show to which his oratorical gifts were valuable. He rode the brakebeams of an overland train into Chicago and was uninjured by the extensive airing. He was twenty-one before he got to New York; and its bigness, and the stone wall that successful performers and busy booking agents, and managers whose business was done only through agents, seemed to form against one lone boy, cowed him thoroughly. He registered at an agent's office and became so used to the clerk's sniffish cry, "Nothin' for you today!" that he dreamed it, and would have fainted from amazement had the clerk ever admitted that there was anything for him, on that or any other day!

The Trippit and Dailey Company did not hear of these vicissitudes, for Lionel had learned not to mention failures. He had twenty cents when a stagehand, who was a Native Son and because of it had been assisting this other Californian, remarked that the show at his house that week needed a property man.

"I guess I know too much about too many things and not enough about any one of 'em," Lionel later told Goldie. who answered:

"Then specialize in one an' git somewhere! What do you like best?"

"Drama," said Lionel; and Goldie confided that she had always felt that, with time to study, emotional drama would have claimed her.

She suggested a few changes when he brought the part he was writing to her. They rehearsed a little secretly. Lionel forgot the vivid beauty of Vera Kelly, of the Sisters Kelly, and his plan to ask Vera to a fine dinner as soon as his finances permitted the feast. What a privilege-to be on friendly terms with a real star! And the star was young and blonde and pansy-eyed, with plump arms and a white throat rising gracefully from plaited lace ruffles or severe round necks of velvet gowns that were of the most alluring colors. Her nails had the bright pink polish considered modish in vaudeville, and he liked to watch her many rings flash when she moved her fingers.

Vera Kelly's little nearseal jacket and her inevitable white waist and brown skirt, with heavy-soled tan shoes, disgusted him after he had walked with Goldie, delightful

in velvet or silk crêpe, and twelve-dollar shoes. Goldie had a different set of rich furs or a splendid coat for each day of the week; but she was not proud or above talking to persons lacking similar wardrobes. And when he said that one with her sympathy, and her power of characterization would have been at the very top in drama, she asked quite humbly whether it were too late to try.

"Oh, why don't you? Give yourself a chance! What's vaudeville?" cried Lionel, with the memory of the agent's clerk smarting. "You're above these people and you owe

it to the world to take your proper place.

"An' I bet I could git an' audience goin' if I was in the legitimate," said Goldie; "but I simply never knew a single person who could put me next to the game. An' it's six nights, an' in some only Sat'd'y matinée—though others have Wednesday too; but that's only eight shows as against fourteen with us. An' look at the rep they git if they're a real hit!"

They rehearsed often; and Manager Josephs, when the bit was interpolated, wrote the backer to try and catch the show one of these days and watch Goldie Dailey and the new kid. Lionel was making a little part stand out. He was able to ask Vera to dinner now; but she ate alone, for Lionel was thinking of his art and of Goldie, who listened avidly as he limned a grander destiny.

"I'd just have to lift myself from the vulgarians an' give my whole soul to the work," she said. "Maybe it was evil influences made me a champion buck dancer instead of a dramatic actress, an' you were sent to guide me, Lionel! But if I did cut loose from the two-a-day where would you think I'd develop quickest?"

"Far, far from all this," said Lionel vaguely; and as soon as they separated he pondered the matter.

Goldie must retire temporarily and seek the lonely spaces, whence she should emerge triumphantly capable of interpreting the works of the masters. And suppose Lionel Lamotte wrote the play that first displayed her genius? He had done Smoke's press work, and composed speeches that sold innumerable bottles of an Indian tonic, for the medicine show. He would invade the lonely spaces with her—one more could not really disturb the silence. Write? With Goldie near, he could write plays that would startle press and public! Goldie did not consider Lionel as necessary to the realization of her ambition until he outlined the plot of a play. Then she saw his worth.

"I like you lots, Lionel; but as to bein' ever anything more, why, nothin' doin', for I'm engaged to Johnny, an' I s'pose we'll keep on, though if I see I can do good in drama I sure will leave the act, even if he does git peeved," said she. "Mona Morton's a toe dancer, an' her husband's a legit—though, at that, he's as dull as a fruit knife, an' I don't see how she endures him! Those combinations ain't unusual, though, an' we could both live our lives. Time'll

"Trippit is a weed compared with the fragrant flower of your talent," said Lionel, much encouraged; and when Goldie was not looking he wrote the remark down to use in the play.

She sighed. He was a handsome weed! Fresh-colored, thick-framed and strong, and as light-footed a dancer as the slimmest man could be, Johnny was physically attractive; while Lionel, lean and small, his complexion the hue of a picked chicken, was not. But Lionel had remarkable eyes. They were large and black and talkative, and their homage was inspiring. Goldie thought of them as she strolled to the theater with Daisy. Entering, they heard the stage doorkeeper saying:

"Yes-no one allowed back without an order from the front, so I put her out; an' then I found this paper.

She's been lookin' at your snowshoes."

"An' this here's notes on our snowshoe dance-Gee! It's one the choosers, an' she's got away on us!" claimed Johnny; and the doorkeeper added that the woman had been talking to the show's property man. Goldie followed Johnny to the property room in search

of Lionel. Daisy and Bologna the Juggler went also. "What's he doin'?" demanded Bologna, hearing a

queer sound.

Johnny flung a door open, discovering Lionel Lamotte intently practicing what Trippit and Dailey's billing described as an eccentric dance. The snowshoes were real; and as Lionel was unfamiliar with the hitch used by the team he had tied the thongs in a bunglesome way, confining his heels instead of leaving them free. He was awkwardly trying to execute a step; and, caught in a silly position, he flushed and endeavored to get out of the lacing.

"Will you take off them shoes or will I bust you right on your beezer?" shouted Johnny, and Bologna deemed

his language temperate.

"Oh, Johnny, you mustn't! Stop, now!" warned Goldie; and Lionel said:

"I only put 'em on to see how they felt, and I apologize. Ain't that sufficient?"

"Performers coppin' other parties' tricks are gittin'

pretty numerous—not that I mean parties here—an' again p'raps I do," said Bologna, bulging his wide chest with a tremendous breath. Johnny coldly asked about the strange woman and

Lionel as coldly replied that all he knew was that he had told her she must not touch the snowshoes, whereat she had laughed and left. "Mr. Lamotte ain't a chooser, an' I don't see any harm

in him tryin' the snowshoes on," said Goldie. "If I don't care, Johnny needn't. Now let's git made up an' leave Lionel be. You come on with me, John. D'you hear me?"

Johnny murmured hoarsely as Goldie led him off. Daisy encouraged Goldie with a wink. But Bologna lingered; and he said to Lionel:

"The chooser that makes notes on my turn'll be drove out of this land! Git me?"

"No, I don't—and I don't propose to hear your views; so get me on that point!" said Lionel hotly. "What's the matter with you fellows in this troupe? Are you scared of having some of the fat cut out of your parts? Looks like it."

Bologna rumbled that if he did not have to make up he would show some people! And Lionel, setting the snow-

shoes outside, shut the door on the juggler.

The Sisters Kelly had opened the performance; Gene and Fanny Willetts, society entertainers, were now on. Daisy Duffy and her Different Dancers, six girls who were useful in the revue, were hastening into their costumes. When the Happy Harmonists, four gentlemen who sang ballads and danced, succeeded the Willetts, Goldie was in an entrance, clad in a jaunty suit of white satin coat and

tight knickers, trimmed with swansdown, with a swansdown cap. All her diamonds adorned hands and breast. Trippit and Dailey's new act was a winter setting, and the team entered on snowshoes over a drift of property snow. Then they danced-and the feat had put another hundred on their weekly salary.

Goldie dreamily watched Billy Graff, of the Harmonists, doing a burlesque tango with the act's lanky

"Have to set this bunch on fire to heat 'em up," gasped Billy as he danced near her, and Goldie smiled as the audience finally decided to clap. She was still smiling when Johnny, bearing the snowshoes, appeared beside her.

"Goldie, will you please be a little less realistic with that Lamotte today?" he pleaded. "You don't want the comp'ny to see me have to lam him, do you?"

'Sacrifice my art to your jealousy? I'd be ashamed

They Waltzed Off to a Clamor That Brought Them Out to Take Six Bows

to give the public less'n my very best," said Goldie vir ously; and Johnny retorted;
"It's you draggin' him up. He can't do you a liek

good, kiddo!"

"Didn't he sit out in front, movin' from A to R, so's git the effect an' tell me if I had enough red on after w switched from blackface? You never done it! An' I wo let his an' my actin' suffer for any one!"

"Be sure it is actin', Goldie—others ain't so positiv

he said darkly.

As they worked she thought with anger of his reque What effrontery in a man who opened the Dancing Carni with Vera Kelly, dancing the Brazilian Tango and Maxixe, and concluding the offering by holding Ve languorously supine on his arm, while he gazed arder into her black Irish eyes!

When she finished her turn Goldie changed quickly to white dress she wore in the Carnival. A maid fluffed her shining hair. She was ready for the revue, and at callboy's shrill Time! she took her place at the forem table, in what was presumbably a colorful vision of night life of Broadway. The Kelly Sisters were back of !

All performers sat on gilt chairs arranged in a semicir with tables between the chairs. It was a restaurant wit dancing platform, and the drop rose on Johnny, now ordinary evening clothes, in altercation with a comtaxicab driver who had pursued him from the street. comedy policeman dragged the chauffeur off and Joh seated himself at a table across the stage from Gol Daisy's dancers unobtrusively filled in at the tables. action was rushed-Gene and Fanny Willetts doing time and turkey trot; Bologna, the Terpsichorean Juggle America's supreme novelty—tossing first oranges, cannonballs, while he jigged merrily and caught the nonballs on the back of a hefty neck.

After each number the stage audience clapped t hands and yelled, and the comedy policeman, who Billy Graff, of the Happy Harmonists, danced out to what they meant by it, which delighted the real audie on the other side of the footlights. The policeman has look earnestly into Johnny's face, then display an enorm star and attempt to arrest him, which fed Johnny to trick of suddenly standing on his hands, and on them da ing a buck at such speed that the policeman could maintain a hold on him.

While this continued, a youth with long black hair. black eyes enlarged by the lavish use of make-up, mor slowly from table to table, until he faced Goldie. Wit dramatic cry, she held a hand to her heart, and the you commenced a wailing tune on the violin he carried. audience laughed as she fell under the spell of his musiperhaps they wondered how she could, for it was me ocre—and the player crept steadily closer until be less over and she leaned faintly back. A final note and his = clutched her! But she repulsed him with a look of her

at gradually faded as he played again, retreating. mosching, retreating, until she rose, dazedly following he went sinuously between the tables and made his exit. Goldie glanced defiantly at Johnny as she returned to prous applause. She waltzed to meet Lionel, who entered m the opposite side, playing a gay tune as he waltzed ward her. She had to tantalize him, eluding him as they ed up and down, Lionel sawing frantically, the orchestra seding with him. He threw down the violin and Goldie lted an instant; then each danced alone, dipping, gliding, onel's great eyes beseeching, his arms imploring, until abruptly bent, when he kissed her-and they waltzed to a clamor that brought them out to take six bows and give an encore.

He'll be expectin' to be featured next-the way he's eived," said Gene Willetts to Johnny, who said shortly:

'I'll feature the long-nosed mutt!"

Foldie and Johnny danced together in the finale, singing t stirring number, Good-Night Rag, with the company ging and dancing back of them. Trunks were rapidly ked and street clothes hurried into, as they were due in ther town for the night performance. Goldie and Daisy it in a cab to the station, while the others walked or rode the street cars. Vera Kelly loitered behind her sister z, who was wedded to Billy Graff and too busy with a all Graff boy to worry over Vera. Lionel was still in the ater, attending to the trunks in his capacity as baggage-

Lionel, would you like me to wait for you?" asked Vera idly; and she blushed with shame when he said:

Not today—I've got my play to think of, you know."
Oh, I hate her, when she's got Trippit and then takes

-I hate her!" said Vera agely, and she went out the blustery March d with a tear in each k eye, and later declined nind little George Graff le his mamma took a nap he train.

No one does anything nean' I'm goin' to do the e!" said Vera sharply; Billy Graff whispered to wife that she had not a the same girl since that p had joined.

oldie motioned Lionel to of her seat, though she Johnny coming along aisle. One of the Harists informed the train fuctor that Lionel was manager, and chuckles general as the conducpatiently waited for iel to become less ensed with the fair visage

I'm workin' on the big e in the third act toin my head, of course; I've got it doped out t," Lionel was saying. en there's got to be the own for the emotions, a smaller punch again the finish. I suppose clod of a producer'll pargue us out of a fourth but I'll never give in, you vote with me, ie. It's killin' to think e delay while you'll be

yin', when we might be puttin' on a two-year run-yes ondon later. A play with real merit will go, over there." had already spoken guardedly of having been-in a -a pupil of Madame Réjane; and he mentioned the nique of acting with an ease that convinced Goldie of

ound judgment and vast experience.

f I hadn't run into you I might have been a plain ler all my entire career!" she marveled. "Now listen! ly b'lieve I could jump right out an' do emotional this very minute! Naturally some people have to be ed, 'cause they don't understand stage business an' n't any presence; but I got that, an', oh, Lionel, you imagine how I long to be on a stage completely alone old a house by the spell of my art!"

Ve could go on without the trainin'," said Lionel, highly

"for I- Eh?"

ght up; "for I— Eh?"
"ickets! Tickets!" said the conductor.

'hat guy ain't our manager! He's only the property " said the voice of Bologna; and Goldie was discond at the presence of Johnny and the juggler in the seat. "Mercy! Do you s'pose they heard?" she asked agitated whisper, and Lionel mumbled while trying k as though he was keeping still:

lo! Just sat down-couldn't have."

"If we're interruptin' anything put us next an' we'll blow," said Johnny. Goldie did not reply. Occasionally Bologna whispered steadily to Johnny. Goldie and Lionel remained silent.

"Them keepin' so quiet now's a tip they was discussin'

secrets before we come," Bologna opined.

"I heard you, Fred Bologna; an' the next time you want sumpin mended, or your money kep' for you so you won't gamble it, you can ask others to do it!" cried Goldie. got the privilege of talkin' over my business with parties work with, ain't I?"

"All I contend is, you're misled," said Bologna.

Goldie turned again. Johnny's chin was protruding; and that was ominous, for when that chin was stuck belligerently outward he was ready to promote trouble.

SAY, Lionel, you change seats an' let him sit with me," was the suggestion that made Lionel rise, loudly announcing that he had a little writing to do. He went to the half seat at the end of the coach without a word for Vera Kelly, who looked up hopefully as he approached. The six Different Dancers bade the Happy Harmonists note how quickly Johnny took the vacated space.

"If I figgered that whiffet was tryin' to steal my honey he'd be bounced out of this troupe," said Johnny, stroking

Goldie's hand with large, warm fingers.

"It ain't a case of bein' stole, dearie. Am I or am I not allowed personal liberty? Women ain't slaves!

"Engaged ones oughta ignore all other parties," said Johnny; and Bologna, interested, said from the rear:

"True for you, John! One's plenty for 'em."

he could shave his absurd little black mustache, and that would improve him. Still, looks were not essential to art and it was weakness to think so.

"Who does this little baby love?" queried Johnny; and she said with a pang:

"Oh! I-I-a person ought to think of their art."

"Walden next stop!" bawled a trainman, and the company crowded into the aisle.

'Remember who put you where you are, Goldie. You're awful prone to fall for flattery," said Johnny. "And-Eh? Josephs is callin' me. I'll see you at the showshop."

"My own talent put me here," Goldie thought resentfully, and at that moment Lionel poked a folded note at her. While the train was slowing for Walden she read:

"He cannot appreciate you like me. Will find you soon as I get the trunks over. You are the sunshine of the life of your Lionel."

It was on mauve paper and peculiarly scented. The odor was different from that with which Lionel perfumed his handkerchief. Johnny sneered at him for using any; but Goldie and Daisy, discussing it, decided that the perfumery was only another indication of Lionel's refinement. Goldie put the note in a pocket of her mink coat as Daisy whispered:

"What was he writing, dearie? He had the raptest look!" Bologna pushed by the ladies as Goldie fumbled in her pocket. He had reasons for haste, for hidden in his capacious hand was Lionel's mauve message, abstracted by the juggler as soon as Goldie deposited it.

"It's gone!"

"You must have dropped it, dear!"

"Oh, Daisy, s'posin' some of 'em find it!"

"Swear you never set eyes on it," said Daisy.

Some one called out that the woman who had been making notes on Trippit and Dailey's act in Newtown was in the next coach; that Johnny was seeking her and would hire a detective if he missed her-and he requested Goldie to unpack his theater trunk if he was

"Be calm, dearest lady!" begged Lionel, rushing up as Goldie stood uncertainly on the platform.

"Calm? An' our original stuff that we evolved with our hearts' blood-for, b'lieve me, it's no frolic to create new dancin' steps, Lionel-our stuff bein' peddled over the land by pirates?" said Goldie, near to tears. "We'll invoke the copyright law, though! That stuff's protected, she'll find! Oh, if I just get my hands on that dame!"

"Think of the future only. These things ain't worth your cryin' over," said Lionel; but Goldie retorted:

"Don't talk foolish, Lionel! I'll see that woman behind the bars yet, an' so'll Johnny. Oh, it's originate an' originate, an' then find dubs coppin' it!"

Lionel went blithely through the main street of Walden, halting under arc-

lights to scribble on a sheet of scented mauve paper that was one of several he had found in the property room at Newtown after the unknown woman had disappeared. He kept them because he liked the fragrance. While writing to Goldie a wonderful plan had come to him. Instead of searching the pitiably inadequate ranks of leading men for one who would not be constantly trying to overshadow Goldie in the great drama, he would play the part himself! Goldie should have the fattest lines and the thrills that wrenched tears from enthralled audiences.

And when the play was done, with actors hastening into street clothes, Lionel Lamotte, the world's youngest actormanager-playwright, would escort his beautiful star to the Lamotte limousine; and as they rolled away toward Broadway he would lay his all at her feet and ask whether she preferred the Little Church Around the Corner or some town where there was no bother over a license.

He saw a dim light down an alley and turned in, and was then yanked roughly from the limousine of fancy to the

stage door of fact by hearing:
"You the Dancin' Carnival's prop'ty man?"

"I am, sir," replied Lionel. And one of the men on the steps said: "Leave us glim your union card."

(Continued on Page 50)

"Fred Bologna, will you quit hornin' into my business?" cried Goldie. "Maybe you wouldn't be droppin' your stuff s'much if you rehearsed instead of tellin' Johnny how to floor-manage me! I think you're a lot too flip!"

"He means it friendly," defended Johnny.

Bologna became melancholy, and Goldie smiled and shrugged as on the cover of her tin make-up box she beat the chorus of a ballad that Lionel had dedicated to her.

"You only need to give a guy like Lamotte the once-over to git him tagged," said Johnny. "But listen, Goldie,

you're my kiddo, ain't you?"

He masterfully slid an arm about her and she had a sudden desire to forego the drama, remaining an untrammeled vaudevillist, who might dance down the spotlighted years with Johnny. They had intended to wait until more money was amassed and then take out a show of their own like the Dancing Carnival, and have all the profits for themselves, instead of working for the backer and paying booking commissions to the syndicate; but when Johnny headed his company she would be charging three dollars to the West—the East would not pay it—and riding in her private car. And the Lionel whom Johnny scornfully termed a whiffet was to write plays round her unique talents. Perhaps Lionel would be less lathy when he was older. Anyway,

### THE WAR REPORTER

### By SAMUEL G. BLYTHE

THE leisurely and literary war correspondent is of the past. He is done, down and out. The Spanish War made him groggy. The Russian-Japanese War put him on the ropes, and he took the count in the Balkan War.

Long ago the war reporter filled his shoes, as will be demonstrated in Mexico if occasion arises. Moreover, so far as this country is concerned, the best war reporters do not go to war. When I say best I mean best in a news sense. That is what a reporter is for-to get news. That is what people desire to have about a war-news. War news is not descriptions of scenery, or speculation on strategy, or recital of brave deeds, all excellent and interesting when they get over the wire. War news is, first, whether we won or didn't win; and, second, what it cost us in blood to win or what we lost in losing. It is well enough to detail, in such picturesque diction as may be, what was done; but that isn't the main point. The main point is-Did we whip them? And how many were killed and wounded?

Therefore, whatever may happen in Mexico—and there's no telling what will happen as this is written—the best and quickest news will come, not from the writing men at the

scene of hostilities, but will come from the writing men at the seat of government, at the national headquarters of the army and the navy. That is the way it worked in the Spanish War, and that is the way it has worked thus far in this Mexican affair. The reason is simple enough. News is no good unless it is printed. I know a man who sat for four hours at Key West with the news that the Maine had been blown up in Havana harbor bottled in him. He was the only man in the United States who had the information. Think of the splash he might have made if he had sent that news North. He didn't, however. He waited for the official dispatch from Captain Sigsbee, and after that where did the news, the information for the people, come from? It came from Washington reporters, of course.

Mind you, I am not saying that special commissioners, and sob sisters, and word painters, and persons with literary reputations, and professional war correspondents, and all such are not excellent newspaper properties when a war is going on. Not that. They are, and more power to them, on the broad general theory that it is the business of the writing people to hook the editor people whenever they get a chance. What I am saying is that the news of this war, if it is a war, will be provided by the war reporters, not by the special commissioners, or the novelists, or the poets, or the other literary men that will flock to it. The news will be sent in by the men whose trade it is to send in news,

#### The Passing of Percival Piffle

ALSO—and watch the development of this prophecy—you will not find in this Mexican trouble—if so be there is more trouble than there has been—you will not discover in the columns of your newspapers one-tenth of the special and so-called literary stuff that decorated those pages during the brief progress of the Spanish War. When that little struggle broke we had not been at war for thirty-five years, and there was an entirely new crop of editors and managers in charge of the newspapers, a crop of editors and managers who knew nothing of war save that it is big news, and they were crazy for it.

The signed-statement freak had developed a few years before that date. The sole idea of the editors on many of the newspapers seemed to be to have the story of a news event written not by a man who knew news when he saw it, knew how to get it and how to handle it, but by somebody who had written a passable short story or had put out a hook or something of the kind. Most of the stuff was incredibly bad, considered from a straight newspaper viewpoint. But the editors thought they were giving character to their papers by printing a sloppy story written by Percival Pendenni terary light, and playing it up

PHOTO, BO EINE POWELL, LOS AMGELES

What They Read at the Front

all over the first page as a special mark of enterprise, instead of printing in the prominent place the news sent in by Bill McGinnis, regular reporter, and putting what Percival had to say in agate on the market page, where it belonged.

The signed statement craze was a manifestation of a curious sort of editorial snobbishness. It was explained to me once by its inventor in this way: "I am anxious to have my newspaper the medium whereby the persons who are considered authorities shall express their views, opinions and conclusions to the public. I want my newspaper to be the vehicle of transmission. I want to be identified, as owner and editor of this newspaper, with these men." You see, he wanted to benefit by the association.

That was all well enough in its way, if the signed statement had been confined to such expression; but it wasn't. It degenerated to a struggle to get into the papers signed statements from almost any person with a name, whether the person had a statement to make or not, and still further degenerated to a plane where, when a burglar was arrested, a signed statement from the burglar, the burgled, the policeman, the mayor, the indignant taxpayers, the leading minister, the leading soubrette, and the poet of mark at the moment were printed, and the facts about the crime incidentally put in—if there happened to be space.

When the Maine was blown up, and for some years before, we were right in the middle of the craze. Signed statements were the newspaper thing. They were all the editorial rage. So the big newspapers, having a war and not knowing exactly what to do with it, cut loose and hired special commissioners by the dozen, and bought boats, and put up jungle printing presses, and fired off, with big gobs of expense money, all sorts of persons who could write, or who couldn't write but thought they could, or who had written, or who had been in the public eye in some manner, and announced in large type that the war would be reported for them exclusively -always exclusively a trained corps of experts in tatting, mandolin playing, bridge whist, poems of passion, popular fiction, realism, buck-and-wing dancing, ragtime, science of war, tactics, taffy, and so forth, and that no expense would be spared.

Well, that part of it was correct. No expense was spared—that is, no expense for the editors and managers. Some of them are not through paying Spanish War bills yet. I know of a case where the thrilling pictures of a war he didn't see by a special commissioner cost his editor and manager \$1900 a column for each column printed. Coal was fifty dollars a ton, and boats were a couple of hundred dollars a day, and cable tolls were high, and, all in all, when the editors and managers who were crazy for a war, and secured all these special commissioners at an enormous

expense, totted up, they for the expense had indeed the enormous, that permanent culation results had been and you haven't heard and those editors or managershing for war since. Any time editor feels as if we must the with somebody, he goes to files and gets out the expectation of the Spanish affair, shrieks for continued peases.

The result has thus far b and the result will continu be, in case there is war, there will be fewer special missioners at the seat of and that the work of get the news back home wil mostly done, not by mili experts or naval experts or tlemen with literary rep tions, but by regular repo whose business it is to get news back home, and who k how to do the same. And said, a good many of those ular reporters will be no as the war than the State, War Navy buildings in Washin Nevertheless and not withst ing, they will furnish a proportion of the facts, such flub-dub as there m: will follow in due course the word artists on the bell ent spot, or as near there prudence dictates, but not away that the regular repo cannot be asked to inform what has been going on.

There were not many wires at the time of our War, or many quick presses, or any such developme the science of getting newspapers quickly on the st Hence a number of men made reputations as war spondents, and deserved them, for they had time, : story was a story until it appeared in print. Now a st a story only until the moment it gets into the news rosome newspaper. The methods of transmission are a fected and the competition is so keen, that the whole cess of reporting a war depends on success in getting a and the failure of reporting a war comes from the los wire. Consequently, the men who will be most use this contingency will be the men who know how to wire and what to do with it after they get it, and no men who have to think their thoughts before they car them adequate expression, and who lack that report faculty of thinking their thoughts and giving them e sion at one and the same moment.

#### The Stories Printed in Red Ink

7OU will observe on the part of our great newspa Y sort of dignified repression when it comes to co this war, provided there is a war, as it is necessary to: this day and date. There will be some special co sioners, of course, but only some; not all can be in to leave home by offers of large sums of money and the ing out of the lure of glory to be gained. You will fin the men who send back the news of this war will b who are reporters first and literary persons a bad s not men who are literary persons and nothing else. far be it from me to cast any aspersions on my calling if I were an editor of a newspaper, or director of a association, I'd rather have Bill Sheppard, or I Harmon, or Skipper Merriweather, or Charley Mi son, or any one of fifty other boys I could name at th of war for me, than all the novelists and poets who be induced to attach themselves to the army in the f the ships in the water.

So far as the lure of glory goes, that is where the breaks up of general debility. There were probable hundred American writing men of all kinds in the Si War, and if you will tell me the name of one man secured any enduring reputation out of that affair II it all back. The conditions won't let them. There chance for a George Alfred Townsend, or a Whitelaw or a Nordhoff, or a Joe McCullough in these days of tins and wires. The long and leisurely story doesn't in time for the first edition. It is held over for Sunfaread by a few. Whereas the bulletins of the report printed in red ink and absorbed by the million.

That was never better illustrated-this difference between the old and the new-than on a certain ecusion during the Balkan War. Two Englishmen saw a big engagenest. They were the only two writing men who did see it or, to put it is another way, the only two who ar it and had a chance, or made a chance, to get in a story about it. One of these Englishmen was a war prespondent, a big, talented man with a great gift of style. The other as a reporter. They got wires inultaneously. The literary man gote a wonderful story of the enpgement. He began with some descriptive stuff that was great. He proceeded toward the battle in picpresque and vivid language, telling paphically of the events that led to the engagement and painting a fine picture of all the welter of this prelinitary to the battle. Just before his story got to the battle and the nest of it his paper in London was ampelled to go to press.

The reporter, being a reporter, sated his story with the battle. He sich't waste any time on a description of the events leading up to the

eggement, but he jumped, bing! into the event the other rents led up to. The result was that while the opposition paper in London had an excellent piece of descriptive writing his paper had the story of the battle on the same noting, and the second half of the other man's story, which was a great piece of description, was printed on the by after the regular reporter's story had thrilled London with its facts and its clear, crisp, masterly narrative.

#### The Helplessness of Men at the Front

OF COURSE these men were both trained newspaper witers. Most of the special commissioners are not. Size of them may have had a little experience on newspapers, but the great bulk of them were hired, and are tirel, because they have reputations as writers—not newswiters, but fiction writers and other kinds of writers. With the best conditions surrounding them they were at a great handicap when stacking up against reporters who now how to write a news story; but with most wires annuandeered by the navy and the military, with incredible hardships to be suffered and hustling to be done to go wires and get stuff away, they simply blew up. This was the case in the Spanish War, in the Russian-Japanese for and in the Balkan War. If there is war in Mexico it will be the case in the Mexican War. It is all in the day's

surk for the reporter. He as a job to do and he does to The special commissioner, sing a special commissioner, sust needs be special, and sinds up by not being any-hing except a drag on the syroll.

Moreover, since the hittuis days of our Spanish w, when there were as uny correspondents in Cuba ni sijacent thereto as there ere volunteer majors and slorels - which means an tornous number-the perons in direction of warfare ave tightened up, and have aposed regulations and retrictions that make war reerting most difficult, and et a game for the literary prespondent, Methods of thing have changed, too, ith the introduction of highand long-distance ins, and the wireless, and I that, A battle line now my be forty miles long. In te Russian-Japanese War by let the correspondents ma section of a battle here td there; but if they had Fen them free rein no man wild have seen more than a inute portion of any enagement. In the Balkan ar most of the correspondthe never saw any fighting any kind. They were dely in the rear.

Howard Banks, Private Secretary to Secretary Daniels, Passing Out War Builetins

A high military authority told me in London, a year and a half ago, when they were talking of fighting Germany, that in the event of that war they wouldn't have any correspondents along at all; and our own War Department, as I shall show presently, has issued regulations that make the man who has access to the news in Washington of more importance to his paper, in a news sense, than a man who is somewhere in the rear of the fighting line. In Cuba, during the Spanish War, cables that could be used freely were miles and miles away. Think of the difficulties that will ensue in Mexico if our army should advance on the city of Mexico. The army will need the wires for long periods. Individuals must be restricted in their dispatches so all may have an equal chance. In one case, in the Balkan War, they allowed the correspondents two hundred words each. Imagine a special commissioner trying to tell a battle story in two hundred words. Why, he'd need more than two hundred words to get in all his capital I's. However, a good reporter can tell a lot in two hundred words, and, in a race for a free wire, he'll beat a special commissioner three miles an hour, and have his story in the home office before the special has finished writing "By Peter P. Punk, author of Wars I Have Caused, My Experiences in Battle, and so forth."

Returning, therefore, to my original proposition, let it be said that the men who have thus far told the American people what has been happening in Mexico have been, not the special commissioners and the literary lights, but the reporters, mostly the reporters in Washington, and in conjunction therewith the reporters in Mexico. That was what happened during the Spanish War, and during the Boxer troubles in China when we had an acute interest in this country. The word painting came from the front, but most of the news came from the Washington reporters. And that will continue to be the case.

It works out this way: The commander-in-chief of the army and navy is in Washington. The head of the War Department is in Washington, and so is the head of the Navy Department. The men in the field and on the ships are operating under the direction of their generals and admirals, and the generals and admirals are, in turn, operating under the direction of the heads of their departments in Washington, the Secretary of War and the Secretary of the Navy, who must report to the President and Commander-in-Chief. The generals and the admi-

rals, and their subordinates in the field and on the ships, must necessarily be in close touch with one another and with headquarters. Wires are needed for the transmission of these reports. The military authorities in a war are the supreme authorities. It is of more consequence to them to have their superiors know what is doing than to let the newspapers know, and as most battles are fought and most movements made in regions where the wire facilities are not so great as they are between Washington and New York, the men in the field and on the ships use the wires first for official reports and the transmission of news to their superiors in Washington, and then let the reporters have them.

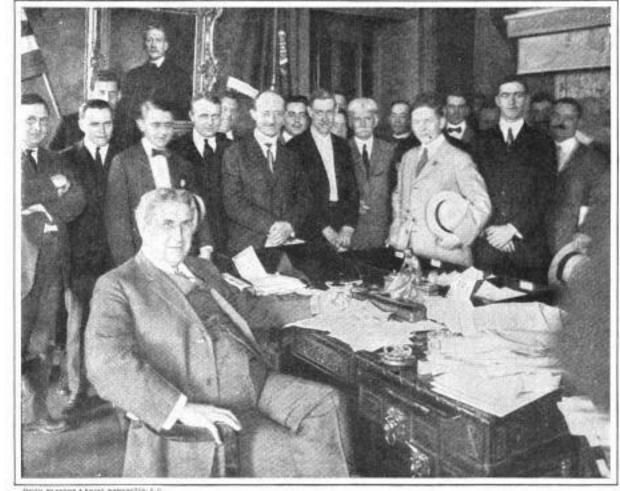

#### How Naval News Is Given Out

Suppose there should be a battle in Mexico City. The first real news of that battle—real news—whether we won or lost and how many were killed and wounded—would come to Washington to the War Department and the President. If a reporter on the field were exceptionally lucky he might get a flash through, but the first real news would come to Washington. There it would be given out, and the Washington men, with scores of wires at their disposal, would hurry it to their papers, and presently the full stories would come from the field. Details are always interesting, but the main facts are usually embodied in the

official reports, and, as it stands now, the official reports are handed out quickly and frankly and freely.

Take the incident at Vera Cruz, for example, or go back further than that and begin with the Tampico flag affair. There is a small room in the Navy Department called the press room. This is the headquarters for the men who report for their newspapers and for the press associations the happenings in the Navy Department. There is a telegraph room in the Navy Department and one in the War Department, and all messages intended for the Secretary of War or the Secretary of the Navy come direct over those wires. As soon as that story broke the wires became jammed with reports from the men in command in the southern waters. Also the Navy Department and the War Department became immediately vitalized into places of intense activity,

The first news was navy news. Secretary Daniels put an officer in charge of the wires, and detailed Lucien Howe, private secretary to Assistant-Secretary Roosevelt, and a former newspaper man, to prepare and give out the war bulletins. This was the procedure: A dispension of the content of the procedure of the procedure.

Secretary of War Garrison With the Newspaper Men Gathered About His Desk for the Afternoon Interview

from Admiral Mayo, say, was received. The officer in charge read it, transmitted a copy of it to the man it concerned and to Secretary Daniels, and handed a copy to Mr. Howe. A number of expert typewriter operators were on duty at all times. They rewrote the dispatch as prepared for the papers on the necessary wax sheets, and an electric mimeograph machine turned out copies at great speed. These copies were taken immediately to the pressroom, where the reporters were waiting for them, and as quickly put on the wires for the newspapers represented by the reporters.

If anything required explanation or comment, these reporters could reach the men who could explain or comment, and that explanation or comment was hurried away too. This service continued for twenty-four hours a day, and was organized in the War Department when it came the army's turn at Vera Cruz. Then, too, the Washington reporters were in touch with the White House and the office of the Secretary of State and with the happenings

This was the first news, and this will be the first news in the event of war. Soldiers and sailors are capable bulletin writers and get their facts straight, but naturally they do little story writing. Necessarily, also, what each Washington reporter received was identical with what each other reporter received. Interpretations and comment and significance depend, in all cases, on the capability of the reporter and the soundness of his sources of information, and can be individual; but the news-this first news-was the same for everybody and will be.

The fact that this first news is identical, both in form and in extent, is what makes the necessity for reporters in the field with the army and on the ships with the sailors. The newspapers are not completely standardized as yet, and they require individual treatment, and use their individual sources to supplement this official news. Also, there may be instances where the headquarters in Washington will deem it advisable to withhold certain facts as a matter of policy. Hence the big newspapers send men of their own to the scene of operations, and ask them to report what they see and hear to supplement these official bulletins and the later and more detailed dispatches given out by the Washington departments.

The Washington war reporters have two advantages: They are able to get what has happened before the men in the field can send it in, because the military authorities have first use of available wires, and also can censor, if they choose, what the field men desire to send. Of course the departments can and do censor their official dispatches before they give them out, but not in the main details, not in the important news, not in casualties and not in general results. Then again the Washington reporters are in a position to get, before the field men, information of what action is intended, except so far as actual operations dictated by the exigencies of the local situations are concerned. For instance, they probably know that a general has been ordered to advance, but the field men are the ones to note how he advances and what he does after he has gone forward. This information is not always available, and not even generally available, in case of hazardous operations or when foreknowledge would be to the advantage of the enemy. But, all in all, an expert Washington reporter can keep in rather close touch with what is going on and what is intended, and he has the tremendous advantage of being in a place where he can tell his newspaper, and through his newspaper the public, of the course of the events of the day, because he has plenty and unimpeded facilities for getting his dispatches away.

In contingencies like this the work is continuous. Officers in the field and on the ships send dispatches at all times of the night and day. The telegraph forces in the departments and in the White House are continuously on duty. There must be constant watch for news. The taking of a town or the assault of a port may occur any time, and the news of it may come in at any time. Hence somebody is always on duty. The morning papers will take dis-patches until six o'clock on the day of publication, and the

evening papers begin demanding news at that hour a keep up the demand until late at night. The morning n come back to duty again in the early afternoon. The papers, with morning and evening editions, maintain wi that are up and in working order all the time. Throu the medium of telephones the chiefs of the War and Na Departments are always on call for important communi tions, and there is a force on hand in the offices ev-

Under Secretary Daniels, who is a newspaper edi himself, the system developed this year is as satisfacts as it can be, everything considered. Of course if papers could have it so they would get the dispatches fi and give them to the President after they had finished w them; but unfortunately the President and the Secretar of War and of the Navy will not allow this. However there is not much delay, and if it comes to real war th will be less still.

The position of the man in the field is far more difficu He is where things are happening, and his job is to get news to his paper. He is at the mercy of the men in co mand of the army to which he is attached, and subject stiff rules and regulations, recently made much stiffer. prevent any disaster coming to our forces through pres ture disclosure of plans. Moreover, battlegrounds are picked out because of their accessibility to wires and cab Battles usually happen, not at a given point, but as a tated by circumstances.

The job of the man in the field is to get the wire. T is the beginning and the end of it, the top and the b tom of it; the tremendous difficulty of it and the sole rew of it. Get the wire! It isn't of a particle of interest editors, sitting miles away and impatient for big first-p. flashes or for something to carry an extra, how the repor gets the wire or where he gets it. He must get it. If does get it, and beats the other papers with his story, tl may pay his expense bills without cutting any items c

#### CALLY LLUSTRATED BY CHARLES LIVINGSTON BUL

The Story of a Perfect Gentleman

BETTERSEA trem?
Right, miss!" My wife,
who has been married

long enough to feel deeply gratified at being mistaken for a maiden lady, smiled seraphically at the conductor, and allowed herself to be hoisted up the steps of the majestic vehicle provided by a paternal county council to convey passengers-at a

loss to the ratepayers, I understand-from the Embankment to Battersea.

Presently we ground our way round a curve and began to cross Westminster Bridge. The conductor, whose innate cockney bonhomie his high official position had failed to eradicate, presented himself before us and collected our fares.

"What part of Bettersea did you require, sir?" he asked of me.

I coughed and answered evasively:

"Oh, about the middle."

"We haven't been there before," added my wife, quite gratuitously. The conductor smiled indulgently and

punched our tickets. "I'll tell you when to get down," he said,

and left us. For some months we had been considering the question of buying a dog, and a good deal of our spare time-or perhaps I should say of my spare time, for a woman's time is

naturally all her own-had been pleasantly occupied in discussing the matter. Having at length committed ourselves to the purchase of the animal we proceeded to consider such details as breed, sex and age.

My wife vacillated between a bloodhound, because bloodhounds are so aristocratic in appearance, and a Pekinese, because they are dernier eri. We like to be dernier eri even in Much Moreham. Her younger sister, Eileen, who spends a good deal of time with us, having no parents of her own, suggested an Old English sheep dog, explaining that it would be company for my wife when I was away from home. I coldly recommended a mastiff.

Our son John, aged three, on being consulted, expressed a preference for twelve tigers in a box, and was not again invited to participate in the delimits.

The Leading Object Proved to be a Small, Wet, Shivering,

Whimpering Puppy

Finally we decided on Aberdeen terrier, of an age:

sex to be settled by circ stances, and I was instructed to commi cate with a gentleman in the North advertised in our morning paper that Al deen terriers were his specialty. In course we received a reply. The advert recommended two animals-namely, Ce Chief, aged four months, and Scotia's Pr aged one year. Pedigrees were inclosed, e about as complicated as the family tre the House of Hapsburg; and the favor o early reply was requested, as both dogs v being hotly bid for by an anonymous d in Constantinople.

The price of Celtic Chief was two guineas; that of Scotia's Pride, for reas heavily underlined in the pedigree, twenty-seven. The advertiser, who resi in Aberdeen, added that these prices not cover cost of carriage. We decided to stand in the way of the gentleman Constantinople, and having sent back pedigrees by return of post, resumed debate.

Finally Stella, my wife, said:

"We don't really want a dog with a | igree. We only want something that bark at beggars and be gentle with be Why not go to the Home for Lost Dog Battersea? I believe you can get any you like there for five shillings. We will up to town next Wednesday and see al it—and I might get some clothes as well.

Hence our presence on the tram. Presently the conductor, who had kir

pointed out to us such objects of local in est as the River Thames and the House Parliament, stopped the tram in a crow thoroughfare and announced that we v in Battersea.

"Alight here," he announced facetion "for 'Ome for Lost Dawgs!"

Guiltily realizing that there is man true word spoken in jest, we obeyed b and the tram went rocking and whizzing of sight. We had eschewed a cab.

"When you are only going to pay shillings for a dog," my wife had poin out, with convincing logic, "it is sally to

and pay perhaps another five shillings for a cab. It doubles the price of the dog at once. If we had been buying an expensive dog we might have taken a cab; but not for a five-shilling one."

"Now," I inquired briskly, "how are we going to find this place?"

"Haven't you any idea where it is?"

"No. I have a sort of vague notion that it is on an island in the middle of the river, called the Isle of Dogs, or Barkng Reach, or something like that. However, I have no loubt

"Hadn't we better ask some one?" suggested Stella.

I demurred.

"If there is one thing I dislike," I said, "it is accosting otal strangers and badgering them for information they ion't possess—not that that will prevent them from giving t. If we start asking the way we shall find ourselves

Putney or Woolwich in no time!"
"Yes, dear," said Stella soothingly.
"Now I suggest —" My hand went to my pocket. "No, darling," interposed my wife hastily; "not a map,

lease!" It is a curious psychological act that women have a constitutional version to maps and railroad time-They would rather consult a alf-witted errand boy or a deaf raiload porter. "Donotletusmake aspecacle of ourselves in the public streets gain! I have not yet forgotten the ay when you tried to find the Crystal alace. Besides, it will only blow away. sk that dear little boy there. He is oking at us so wistfully."

Yes; I admit it was criminal folly. A an who asks a London street boy to e so kind as to direct him to a Home or Lost Dogs has only himself to thank

if the consequence.

The wistful little boy smiled up at us. e had a pinched face and large eyes.
"Lost Dogs' 'Ome, sir?" he said surteously. "It's a good long way. o you want to get there quick?"
"Yes."

"Then if I was you, sir," replied the fant, edging to the mouth of an alley-ay, "I should bite a policeman!" nd, with an ear-splitting yell, he mished.

We walked on, hot-faced.

"Little wretch!" said Stella.

"We simply asked for it," I rejoined. What are we going to do next?"

My question was answered in a most credible fashion, for at this moment man emerged from a shop on our tht and set off down the street before He wore a species of uniform; and ablazoned on the front of his hat was e information that he was an official the Battersea Home for Lost and arving Dogs.

"Wait a minute and I will ask him,"

mid, starting forward.

But my wife would not hear of it. "Certainly not," she replied. "If we k him he will simply offer to show us e way. Then we shall have to talk him-about hydrophobia, and lethal ambers, and distemper-and it may for miles. I simply couldn't bear

We shall have to tip him too. Let follow him quietly."

To those who have never attempted track a fellow creature surreptitiously rough the streets of London on a hot y, the feat may appear simple. It is reality a most exhausting, dilatory d humiliating exercise. Our difficulty not so much in keeping our friend sight as in avoiding frequent and

expected collisions with him. The general idea, as they on field days, was to keep about twenty yards behind him; t under certain circumstances distance has an uncanny bit of annihilating itself. The man himself was no hustler. ce or twice he stopped to light his pipe or converse with riend.

During these interludes Stella and I loafed guiltily on the vement, pointing out to one another objects of local erest with the fatuous officiousness of people in the foreand of hotel advertisements. Occasionally he paused to itemplate the contents of a shop window. We gazed ustriously into the window next door. Our first winw. I recollect, was an undertaker's, with ready-printed ressions of grief for sale on white porcelain disks. We I time to read them all. The next was a butcher's. re we stayed, perforce, so long that the proprietor, who s of the tribe that disposes of its wares almost entirely by personal canvass, came out into the street and endeavored to sell us a bullock's heart.

Our quarry's next proceeding was to dive into a public house. We turned and surveyed one another.

"What are we to do now?" inquired my wife.
"Go inside too," I replied with more enthusiasm than I had hitherto displayed. "At least, I think I ought to. You can please yourself."

"I will not be left in the street," said Stella firmly. "We

must just wait here together until he comes out."
"There may be another exit," I objected. "We had better go in. I shall take something, just to keep up appearances; and you must sit down in the ladies' bar, or the snug, or whatever they call it."

"Certainly not!" said Stella.

We had arrived at this impasse when the man suddenly reappeared, wiping his mouth. Instantly and silently we fell in behind him.

For the first time the man appeared to notice our presence. He regarded us curiously, with a faint gleam of recognition in his eyes, and then set off down the street

Out of the Gray Dawn Loomed an Ecrie Monster, Badly Singed, Wagging Its Tail

a good pace. We followed, panting. Once or he looked back over his shoulder a little apprehensively, I thought. But we plowed on.

"We ought to get there soon at this pace," I gasped. "Hello! He's gone again!"

"He turned down to the right," said Stella excitedly.

The lust of the chase was fairly on us now. We swung eagerly round the corner into a quiet by-street. Our man was nowhere to be seen and the street was almost empty. "Come on!" said Stella. "He may have turned in

somewhere."

We hurried down the street. Suddenly, warned by a newly awakened and primitive instinct, I looked back. We had overrun our quarry. He had just emerged from some hiding place and was heading back toward the main street, looking fearfully over his shoulder. Once more we were in

For the next five minutes we practically ran-all three of us. The man was obviously frightened out of his wits, and kept making frenzied and spasmodic spurts, from which we surmised that he was getting to the end of his powers of endurance.

"If only we could overtake him," I said, hauling my exhausted spouse along by the arm, "we could explain

"He's gone again!" exclaimed Stella.

She was right. The man had turned another corner. We followed him round hotfoot, and found ourselves in a prim little cul-de-sac, with villas on each side. Across the end of the street ran a high wall, obviously screening a railroad track.

"We've got him!" I exclaimed.

I felt as Moltke must have felt when he closed the circle at Sedan

"But where is the Dogs' Home, dear?" inquired Stella. The question was never answered, for at this moment the man ran up the steps of the fourth villa on the left and slipped a latchkey into the lock. The door closed behind

him with a venomous snap and we were left alone in the street, guideless and dogless.

A minute later the man appeared at the ground-floor window, accompanied by a female of commanding appearance. He pointed us out to her. Behind them we could dimly descry a white tablecloth, a tea cozy and covered dishes.

The commanding female, after a prolonged and withering glare, plucked a hairpin from her head and ostentatiously proceeded to skewer together the starchy white curtains that framed the window. Privacy secured and the sanctity of the English home thus pointedly vindicated, she and her husband disappeared into the murky background, where they doubtless sat down to an excellent high tea. Exhausted

and discomfited, we drifted away.
"I am going home," said Stella in a
hollow voice. "And I think," she added bitterly, "that it might have occurred to you to suggest that the creature might possibly be going from the Dogs' Home and not to it."

I apologized. It is the simplest plan, really.

IT WAS almost dark when the train arrived at our little country station. We set out to walk home by the short cut across the golf course.

"Anyhow, we have saved five shil-lings," remarked Stella.

"We paid half a crown for that taxi which took us back to Victoria Station," I reminded her. "Do not argue to-night, darling," responded my wife. "I simply cannot

endure anything more." Plainly she was a little unstrung. Very considerately, I selected another

"I think our best plan," I said cheerfully, "would be to advertise for a dog."

"I never wish to see a dog again,"

replied Stella.

I surveyed her with some concern and said gently:

"I am afraid you are tired, dear."

"No; I'm not."

"A little shaken, perhaps?"

"Nothing of the kind. Joe, what is Stella's fingers bit deep into my biceps

muscle, causing me considerable pain. We were passing a small sheet of water which guards the thirteenth green on the golf course. It is a stagnant and unclean pool, but we make rather a fuss of it. We call it the pond; and if you play a ball into it you send a blasphemous caddie in after it and count one stroke.

A young moon was struggling up over the trees, dismally illuminating the scene. On the slimy shores of the pond we beheld a small moving object.

A yard behind it was another object, a little smaller, moving at exactly the same pace. One of the objects was emitting sounds of distress.

Abandoning my quaking consort I advanced to the edge of the pond and leaned down to investigate the mystery.

The leading object proved to be a small, wet, shivering, whimpering puppy. The satellite was a brick. The two were connected by a string. The puppy had just emerged from the depths of the pond, towing the brick behind it.

Digitized by Google

"What is it, dear?" repeated Stella fearfully.

"Your dog!" I replied, and cut the string.

#### 111

WE SPENT three days deciding on a name for him. Stella suggested Tiny, on account of his size. I pointed out that time might stultify this selection of a title.

stultify this selection of a title.
"I don't think so," said
Eileen, supporting her sister.
"That kind of dog does not
grow very big."

"What kind of dog is he?"
I inquired swiftly.

Eileen said no more. There are problems that even girl: of twenty cannot solve.

A warm bath had revealed to us the fact that the puppy was of a dingy yellow hue. I suggested that we should call him Mustard. Our son John, on being consulted—against my advice—by his mother, addressed the animal as Pussy. Stella continued to favor Tiny. Finally Eileen, who was at the romantic age, produced a copy of Tennyson and suggested Excalibur, alleging in support of her preposterous proposition that

It rose from out the bosom of the lake.

"The darling rose from out the bosom of the lake, too, just like the sword Excalibur," she said; "so I think it would make a lovely name for him."

"The little brute waded out of a muddy pond towing a brick," I replied. "I see no parallel. He was not the product of the pond. Some one must have thrown him in, and he came out."

"That is just what some one must have done with the sword," retorted Eileen. "So we'll call you Excalibur, won't we, darling little Scally?"

She embraced the puppy warmly and the unsuspecting animal replied by frantically licking her face.

However, the name stuck, with variations. When the puppy was big enough he was presented with a collar, engraved with the name Excalibur, together with my name and address. Among ourselves we usually addressed him as Scally. The children in the village called him the Scalawag

His time during his first year in our household was fully occupied in growing up. Stella declared that if one could have persuaded him to stand still for five minutes it would have been actually possible to see him grow. He grew at the rate of about an inch a week for the best part of a year. When he had finished he looked like nothing on earth. At one time we cherished a brief but illusory hope that he was going to turn into some sort of an imitation of a St. Bernard; but the symptoms rapidly passed off, and his final and permanent aspect was that of a rather badly stuffed lion.

Like most overgrown creatures he was top-heavy and lethargic and very humble-minded. Still, there was a kind of respectful pertinacity about him. It requires some strength of character, for instance, to wade along the bottom of a pond to dry land, accompanied by a brick as big as yourself. It was quite impossible, too, short of locking him up, to prevent him from accompanying us when we took our walks abroad, if he had made up his mind to do so.

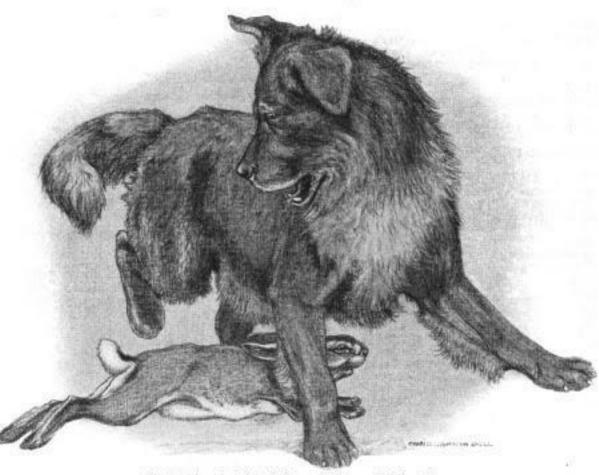

The first time this happened I was going to shoot with my neighbors, the Hoods. It was only a mile to the first covert and I set off after breakfast to walk. I was hardly out on the road when Excalibur was beside me, ambling uncertainty on his weedy legs and smiling up into my face with an air of imbecile affection.

"You have many qualities, old friend," I said, "but I don't think you are a sporting dog. Go home!"

Excalibur sat down on the road with a dejected air. Then, having given me fifty yards start, he rose and crawled sheepishly after me. I stopped, called him up, pointed him with some difficulty in the required direction, gave him a resounding spank and bade him begone. He responded by collapsing like a camp bedstead, and I left him.

Two minutes later I looked round. Excalibur was ten yards behind me, propelling himself along on his stomach. This time I thrashed him severely. After he began to how! I let him go, and he lumbered away homeward, the picture of misery.

In due course I reached the crossroads where I had arranged to meet the rest of the party. They had not arrived, but Excalibur had. He had made a détour and headed me off. Not certain which route I would take after

The Fugitive Ran Right Underneath Him on Its Way to Cover

reaching the crossroads, he was sitting very sensibly under the signpost, awaiting my arrival. On seeing me he immediately came forward, wagging his tail, and placed himself at my feet in the position most convenient to me for inflicting chastisement.

I wonder how many of our human friends would be willing to pay such a price for the pleasure of our company!

As time went on Excalibur filled out into one of the most terrifying spectacles I have ever beheld. In one respect, though, he lived up to his knightly name. His manners were of the most courtly description and he had an affectionate greeting for all, beggars included. He was particularly fond of children. If he saw children in the distance he would canter up and offer to play with them. If the children had not met him before they would run shrieking to their nurses. If they had they would fall on Excalibur in a body and roll him over and pull him about.

On wet afternoons, in the nursery, my own family used to play at dentist with him, assigning to Excalibur the rôle of patient. Gas was administered with a bicycle pump, and a shoehorn and buttonhook were employed in place of the ordinary instruments of torture; but Excalibur did not mind. He lay on his back on the hearth rug, with the principal dentist sitting astride his ribs, as happy as a king.

He was particularly attracted by babies; and being able by reason of his stature to look right down into perambulators, he was accustomed whenever he met one of those vehicles to amble alongside and peer inquiringly into the face of its occupant. Most of the babies in the district got to know him in time, but until they did we had a good deal of correspondence to attend to on the subject.

Excellibur's intellect may have been lofty, but his memory was treacherous. Our household will never forget the day on which he was given the shoulder of mutton.

One morning after breakfast Eileen, accompanied by Excalibur, intercepted the kitchen maid hastening in the direction of the potting shed, carrying the joint in question at arm's length. The damsel explained that its premature maturity was due to the recent warm weather and that she was even now in search of the gardener's boy, who would be commissioned to perform the duties of sexton.

"It seems a waste, miss," observed the kitchen maid; "but cook says it can't be ate nohow now."

Loud but respectful snuffings from Excalibur moved a direct negative to this statement. Eileen and the kitchen maid, who were both criminally weak where Excalibur was concerned, saw a way to gratify their economical instincts and their natural affection simultaneously. The next moment Excalibur was lurching contentedly down the gravel path with a presentation shoulder of mutton in his mouth.

Then Joy Day began. Excalibur took his prize into the middle of the tennis lawn. It was a very large shoulder of mutton, but Excalibur finished it in ten minutes. After that, distended to his utmost limits, he went to sleep in the sun, with the bone between his paws. Occasionally he woke up and, raising his head, stared solemnly into space, in the attitude of a Trafalgar Square lion.

y now lay white and gleaming on the grass beside fell asleep again. About four o'clock be roused himself and began to look for a suitable place of interment for the bone. By four-thirty the deed was done and he went to sleep once more. At five he woke up and pandemonium began. He could not remember where he had buried the bone!

He started systematically with the rose beds, but met with no success. After that he tried two or three shrubberies without avail, and then embarked on a frantic but thorough excavation of the tennis lawn. We were taking tea on the lawn at the time. and our attention was first drawn to Excalibur's bereavement by a temporary but unshakable conviction on his part that the bone was buried immediately underneath the tea table.

As the tennis lawn was fast beginning to resemble a golf course we locked Excalibur up in the washhouse, where his hyenalike howls rent the air for the rest of the evening, penetrating even to the dining room. This was particularly unfortunate, because we were having a dinner party in honor of a neighbor who had recently come to the district, no less a personage, in fact, than the

new lord-lieutenant of the county and his lady. Stella was naturally anxious that there should be no embarrassments on such an occasion, and it distressed her to think that these people should imagine that we kept a private torture chamber on the premises.

However, dinner passed off quite successfully and wadjourned to the drawing room. It was a chilly September evening and Lady Wickham was accommodated with a seat by the fire in a large armchair, with a cushion at he back. When the gentlemen came in Eileen sang to use Fortunately the drawing room is out of range of the wash house.

During Eileen's first song I sat by Lady Wickham. He expression was one of patrician calm and well-bred repose but it seemed to me she was not looking quite comfortable I was not feeling quite comfortable myself. The atmospher seemed a trifle oppressive: perhaps we had done wrong i having a fire after all. Lady Wickham appeared to notic it too. She sat very upright, fanning herself mechanically and seemed disinclined to lean back in her chair.

After the song was finished I said:

"I am afraid you are not quite comfortable, Lad Wickham. Let me get you a larger cushion."

"Thank you," said Lady Wickham, "the cushion I have is delightfully comfortable; but I think there is something hard behind it."

Apologetically I plucked away the cushion. Lad Wickham was right; there was something behind it. It was Excalibur's bone!

#### IV

AWALK along the village street was always a gre event for Excalibur. Still, it must have contain many humiliating moments for one of his sensitive disp sition; for he was always pathetically anxious to mal friends with other dogs, but was rarely successful. Litt dogs merely bit his legs and big dogs cut him dead.

I think this was why he usually commenced his mornic round by calling on a rabbit. The rabbit lived in a hut in a yard at the end of a passage between two cottage the first turning on the right after you entered the villag and Excalibur always dived down this at the earliest oppt tunity. It was no use for Eileen, who usually took him on these occasions, to endeavor to hold him back. Eith Excalibur called on the rabbit by himself or Eileen we with him; there was no other alternative.

Arrived at the hutch, Excalibur wagged his tail and contemplated the rabbit with his usual air of vacuous beneficience. The rabbit made not the faintest response, by continued to munch green feed, twitching its nose in a suprior manner. Finally, when it could endure Excalibed admiring inspection and hard breathing no longer, turned its back and retired into its bedroom.

Excalibur's next call was usually at the butcher's six where he was presented with a specially selected and qui unsalable fragment of meat. He then crossed the road the baker's, where he purchased a halfpenny bun, for whi his escort was expected to pay. After that he walked in shop to shop, wherever he was taken, with great deals and enjoyment; for he was a gregarious animal and has send behind or underneath almost every counter in the flage. Men, women, babies, kittens, even ducks-they

ere all one to him.

At one time Eileen had endeavored to teach him a few mple accomplishments, such as begging for food, dying this country, and carrying parcels. She was unsuccessin all three instances. Excalibur on his hind legs stood yout five feet six, and when he fell from that eminence, as invariably did when he tried to beg, he usually broke mething. He was hampered, too, by inability to disiguish one order from another. More than once he growly escaped with his life through mistaking an urgent peal to come to heel out of the way of an approaching tomobile for a command to die for his country in the iddle of the road.

As for educating him to carry parcels, a single attempt is sufficient. The parcel in question contained a mislaneous assortment of articles from the grocer's, includlard, soap and safety matches. It was securely tied up, d the grocer kindly attached it by a short length of string a wooden clothespin, in order to make it easier for

calibur to carry. They set off home.

Excalibur was most apologetic about it afterward, ides being extremely unwell; but he had no idea, he plained to Eileen, that anything put into his mouth was meant to be eaten. He then tendered the clothespin i some mangled brown paper, with an air of profound asement. After that no further attempts at compulsory acation were undertaken.

It was his daily walk with Eileen, however, which introced Excalibur to life-life in its broadest and most nantic sense. As I was not privileged to be present at opening incident of this episode, or at most of its subseant developments, the direct conduct of this narrative e passes out of my hands.

Ine sunny morning in July a young man in clerical ire sat breakfasting in his rooms at Mrs. Tice's. Mrs. e's establishment was situated on the village street and s. Tice was in the habit of letting her ground floor to gers of impeccable respectability.

t was half past eleven, which is a late hour for the clergy weakfast; but this young man appeared to be suffering n no qualms of conscience on the subject. He was king an excellent breakfast and reading the Henley ilts with a mixture of rapture and longing.

Ie had just removed the Sportsman from the convenient tress of the teapot and substituted Punch when he ame aware that day had turned to night. Looking up perceived that his open window, which was rather small of the casement variety, was completely blocked by a \*, shapeless and opaque mass. Next moment the mass aved itself into an animal of enormous size and suring appearance, which fell heavily into the room, and

Like a stream that, spouting from a cliff, Fails in mid-air, but, gathering at the base, Remakes itself.

to its feet and, advancing to the table, laid a heavy i on the white cloth and lovingly passed its tonguech resembled that of the great anteater—round a cold ken conveniently adjacent.

ive minutes later the window framed another picturetime a girl of twenty, white-clad and wearing a der-blue felt hat,

tht up on one side silver buckle which ikled in the hot ning sun. The custarted to his feet. dibur, who was now gon the hearthrug nembering the ken, thumped his miltily on the floor, made no attempt

am very sorry," Eileen, "but I am d my dog is tresing. May I call him

Certainly!" said urate, "But"-he ed his brains to e some means of ring the departure sradiant, fragrant n-"he is not the in the way. I am glad of his com-; I think it was neighborly of him 1. After all, I suphe is one of my hioners. And--he blushed-"I you are too."

Eileen gave him her most entrancing smile and from that hour the curate ceased to be his own master.

"I suppose you are Mr. Gilmore," said Eileen.

"Yes. I have been here only three weeks and I have not met every one yet."

"I have been away for two months," Eileen mentioned. "I thought you must have been," said the curate, rather subtly for him.

"I think my brother-in-law called on you a few days " continued Eileen, on whom the curate's last remark had made a most favorable impression. She mentioned my name.

"I was going to return the call this very afternoon," said the curate. And he firmly believed that he was speaking the truth. "Won't you come in? We have an excellent chaperon," indicating Excalibur. "I will come and open the door.

"Well, he certainly won't come out unless I come and fetch him," admitted Eileen thoughtfully.

A moment later the curate was at the front door and led his visitor across the little hall into the sitting room. He had not been absent more than thirty seconds, but during that time a plateful of sausages had mysteriously disappeared; and, as they entered, Excalibur was apologetically settling down on the hearthrug with a cottage loaf between his paws.

Eileen uttered cries of dismay and apology, but the

curate would have none of them.

"My fault entirely!" he insisted. "I have no right to be breakfasting at this hour; but this is my day off. You see I take early Service every morning at seven; but on Wednesdays we cut it out—omit it and have full Matins at ten. So I get up at half past nine, take Service at ten, and come back to my rooms at eleven and have breakfast. It is my weekly treat."

"You deserve it," said Eileen feelingly. Her religious exercises were limited to going to church on Sunday morning and coming out, if possible, after the Litany. "And how do you like Much Moreham?"

"I did not like it at all when I came," said the curate, "but recently I have begun to enjoy myself immensely." He did not say how recently.

"Were you in London before?"

"Yes-in the East End. It was pretty hard work, but a useful experience. I feel rather lost here during my spare time. I get so little exercise. In London I used to slip away for an occasional outing in a Leander scratch eight, and that kept me fit. I am inclined," he added ruefully, "to put on flesh."

"Leander? Are you a Blue?"

The curate nodded.

"You know about rowing, I see," he said appreciatively. "The worst of rowing," he continued, "is that it takes up so much of a man's time that he has no opportunity of practicing anything else-cricket, for instance. All curates ought to be able to play cricket. I do my best; but there isn't a single boy in the Sunday-school who can't bowl me. It's humiliating!"

"Do you play tennis at all?" asked Eileen.

"Yes, in a way."

"I am sure my sister will be pleased if you come and have a game with us some afternoon."

The enraptured curate had already opened his mouth to accept this demure invitation when Excalibur, rising from

the hearthrug, stretched himself luxuriously and wagged his tail, thereby removing three pipes, an inkstand, a tobacco jar, and a half-completed sermon from the writing table.

EXCALIBUR was heavily overworked in his new rôle of chaperon during the next three or four weeks, and any dog less ready to oblige than himself might have felt a little aggrieved at the treatment to which he was subjected.

There was the case of the tennis lawn, for instance. He had always regarded this as his own particular sanctuary, dedicated to reflection and repose; but now the net was stretched across it and Eileen and the curate performed antics all over the court with rackets and small white balls which, though they did not hurt Excalibur, kept him awake. It did not occur to him to convey himself elsewhere, for his mind moved slowly; and the united blandishments of the players failed to bring the desirability of such a course home to him. He continued to lie in his favorite spot on the sunny side of the court, looking injured but forgiving, or slumbering perseveringly amid the storm that raged round him.

It was quite impossible to move Excalibur once he had decided to remain where he was; so Eileen and the curate agreed to regard him as a sort of artificial excrescence, like the buttress in a fives court. If the ball hit him, as it frequently did, the player waiting for it was at liberty either to play it or claim a let. This arrangement added a piquant and pleasing variety to what is too often-especially when indulged in by mediocre players-a very dull game.

Worse was to follow, however. One day Eileen and the curate conducted Excalibur to a neighboring mountain range-at least, so it appeared to Excalibur-and played another ball game. This time they employed long sticks with iron heads, and two balls, which, though they were much smaller than tennis balls, were incredibly hard and painful. Excalibur, though willing to help and anxious to please, could not supervise both the balls at once. As sure as he ran to retrieve one the other came after him and took him unfairly in the rear. Excalibur was the gentlest of creatures, but the most perfect gentleman has his dignity to consider.

After having been struck for the third time by one of these balls he whipped round, picked it up in his mouth and gave it a tiny pinch, just as a warning. At least, he thought it was a tiny pinch. The ball retaliated with unexpected ferocity. It twisted and turned. It emitted long, snaky spirals of some clastic substance, which clogged his teeth and tickled his throat and wound themselves round his tongue and nearly choked him. Panic-stricken, he ran to his mistress, who, with weeping and with laughter, removed the writhing horror from his jaws and comforted him with fair words.

After that Excalibur realized that it is wiser to walk behind golfers than in front of them. It was a boring business, though, and very exhausting, for he loathed exercise of every kind; and his only periods of repose were the occasions on which the expedition came to a halt on certain small, flat lawns, each of which contained a hole with a flag in it.

Here Excalibur would lie down, with the contented sigh of a tired child, and go to sleep. As he almost invariably lay down between the hole and the ball, the players agreed

to regard him as a bunker. Eileen putted round him; but the curate-who had little regard for the humbler works of creation, Excalibur thought-used to take his mashie and attempt a lofting shot, an enterprise in which he almost invariably failed, to Excalibur's great inconvenience.

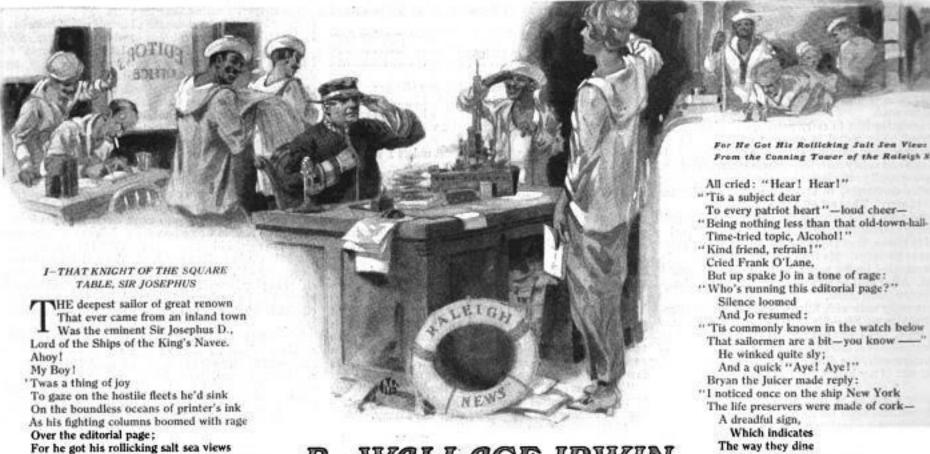

Country walks were more tolerable, for Eileen's supervision of his movements, which was usually marked by an officious severity, was sensibly relaxed on these days and Excalibur found himself at liberty to range abroad amid the heath and through the coppices, engaged in a pastime that he imagined was hunting.

One hot afternoon, wandering into a clearing, he encountered a hare. The hare, which was suffering from (Continued on Page 69)

Men, Women, Bables, Kittens, Even Ducks-They Were All One to Him

### IDOLS OF THE KING

By WALLACE IRWIN

ILLUSTRATED BY M. L. BLUMENTHAL

> And I says to me mate: 'Oh, dash me blue, He's so darned good that he can't be true!

II-SIR JOSEPHUS INDORSETH A DRY OCEAN

'Twas all in the reign of the good Wood-row-Set the type, Butter the pipe! The kingly trumpets began to blow With a toot and a blare and a Ho-men-ho! "Knights of the Square Table, come ye all For a Cabinet meeting in White House hall! And we must decide this very day In our justly famous impartial way How to settle up, ere the next cockcrow, The banks and the trusts, and Mexico."

Then up to the Cabinet Table Square Many a chosen knight came there: Sir Bryan the Juicer in pilgrim's mail, Back from his Quest of the Holy Kale; Sir Frank O'Lane of the manner hale; Sir Burleson; Sir Garrison; Crown Prince Expectant Lord McAdoo; Sir Agricultural Houston too; Sir Redfield, wearing his whiskers done In the manner of 1881; And, last but not least, the Lord High Chiefus, Boss of the Admirals, Sir Josephus.

King Wood-row's face, it was fair to see; King Wood-row's eye, it was keen to look As he turned to the page marked 73 In the office file of the Domesday Book. "Come," he repeated; "it's time, you know, To settle the trusts and Mexico."

Then quick As the kick Of the very Old Nick Up jumps Jo; Cries: "Whoa!" Or, rather, "Yo-ho!"-Which is, I believe, the regular way For a nautical man to begin his say. "Mexico and the trusts, my eye! We've settled so oft that they've gone plumb dry; But strike me hot If I haven't got Under my vest A topic drier than all the rest."

That sailormen are a bit-you know -

And a quick "Aye! Aye!" Bryan the Juicer made reply: "I noticed once on the ship New York

King Wood-row on his royal throne-

Shouldn't live at home on the ocean blue

As a first-class traveling man should do-

Three-quarters bedsteads; plenty of light;

But I see no sense why a sailorman,

Being bred free-born, an American,

Valet service day and night;

Nay, he dealt, bejings,

With original things.

Till Pa Neptune, Rising Upward, Quaffed the Jea and Yelled: "Hooray!"

Banquets; movies-Just to prove he's Equal quite to the captain bright And better, by heck, than the midshipmite." So Sir Josephus, down he sat In his neat department, and straightway gat Clerks, stenographers, notary pubs, Second assistants and office dubs: And they quickly drew In a type tattoo

"Orders 6,000,022: For every sailor who pulls a rope Silk pajamas and scented soap; Food like a toff; Wednesdays off; And to show respect, let the cannons roar-Twenty-one guns when he goes ashore -

Thus ad lib. ran the orders plain; So the common sailor who plowed the main Stopped plowing a while And said with a smile:

"Blest be ye, Josephus D.! Though ye don't know much o' the salt, salt sea, Ye're awful good to the poor A. B.

#### THE FAKERS By Samuel G. Blythe

THE reporter from the Chronicle came round that night, and Hicks gave him an interview also, and secured a line t stating that he was to open law offices lextown. This reporter was Peter Farley, told Hicks his paper had Democratic rings inasmuch as it was largely financed Rollins.

Who is Rollins?" Hicks asked Farley. Why," said Farley, "he is a nice old p who made a world of money in the ber business. He has retired and now s crazy for free lumber. He's a low-I man, almost a freetrader, a statets man, and he believes in some Swiss key-business they call the initiative the referendum and in universal priies and all that sort of guff. He takes ics like he takes his religion, thinks the ocratic party is called upon to restore nation to the principles of the fathers, s Grover Cleveland, adores Bryan, and up his money to keep up a sort of a pocratic organization. He meets the it on my paper, too, and gets his money's h by printing long screeds abusing the ublicans and saying kind words for iam Jennings Bryan and Thomas rson. He's the greatest letter-writer of a correspondence school, and is ys drafting platforms and circulating

about his new political fads."
sort of a crank?" asked Hicks.
so, sir, not a crank. He's a decent old whose passion is Democratic politics. one of the biggest stockholders in the l Metropolis. He's always fighting the t-car company and our gang of grafting

men, and is a fine, upstanding, publiced citizen. Better look him up if you're mocrat."

shall," said Hicks. "I'll call on him

frow." at morning Hicks made some inquiries about Rollins liscovered that Rollins was supposed to be worth half lion dollars, that he had no political ambitions himut was resolved there should be a Democratic party extown if he was the only member. He was state

sitteeman for that party and generally headed the

ess local tickets. ks found Rollins in his office in one of the local sky-ers. He was hunched up in a chair, writing a long to the editor of a New York paper in which he was ing out the utter lack of patriotism and the criminal ard of the rights of the people in a certain Republican proposal. He was a small man, bald, with a smoothn, leathery face and deep-set eyes that burned with rvor of his partisanship. His desk was covered with piles of pamphlets which he had written and had had d at his own expense, and on his office walls there pictures of Thomas Jefferson, Andrew Jackson and m Jennings Bryan, and a facsimile of the Declaration ependence.

wdy," saluted Rollins as Hicks entered.

w do you do, Mr. Rollins-I assume you are Mr.

ar assumption is correct. Have a chair. What can

you?"
s handed him his letter of introduction. "I am cks," he said, "and I take great pleasure in presents letter from an old friend of yours, Representative

ins read the letter, drumming with the fingers of one m his desk as he did so.

m're the young man who had the interviews in the

I suppose?"

of the party in this city." ere than that, son, more than that. I'm almost all

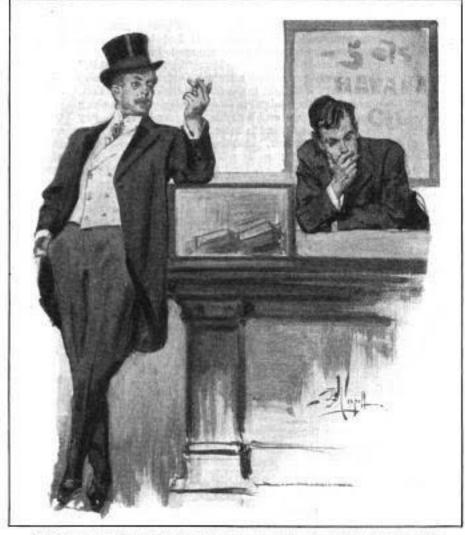

to the Democratic party in Rextown."

all, I desire to join hands with you, to enlist under inner, to aid you in your fight against the entrenched rupt forces of Republicanism.

ns looked at Hicks shrewdly. "You do, do you?"

what reason?"

· the reasons I just gave you. I hope I may be

"Do You Mean to Jay You Have the Nerve to Take That Claim Into Court?"

Rollins whistled. He got up, walked to the window, glanced out on the street, came back and drew his chair over to Hicks.

"Young man," he said kindly, putting his hand on Hicks' knee, "excuse me if I appear to be surprised. This rather takes the breath out of me. The idea of a lawyeryou are a lawyer, ain't you?"

Hicks nodded.

"Well, the idea of a lawyer coming to a Republican hotbed like this and joining the Democratic party-a lawyer, you know, one of those persons who always look before they leap into politics—the idea of that rather flabbergasts me. You know-" and he smiled a curious little smile at Hicks-"you know, my boy, there hasn't been a real, live recruit to the Democratic party in Rextown or Corliss County for five years, and we lost a lot of our fellows on the free-silver issue."

"All the more reason you should want me, then," suggested Hicks.

Sure, but it sort of paralyzes me, just the same. How long have you been a Democrat?"

Hicks knew this question would be put to him and he had prepared his answer.

"Long enough," he said rather oratorically, "to feel certain that this country is going to ruin under the maladministration of the Republican party, influenced as it is by special interests and controlled by corporate greed. Long enough to have faith that, through the medium of the enlightenment of the people, a return may be made to the principles and practices of the fathers, and our country saved from the rape of the plutocrats and the sack of the unscrupulous stock-jobbers of Wall Street."

Rollins' look of curiosity changed to one of admiration, "Good boy!" he said. "Good boy! Go on."

"I am a newcomer, as you know," continued Hicks, most encouraged, "and I have a deep, patriotic interest in politics. I believe in Democratic principles. I am for the plain people, unalterably for the masses as against the corrupt classes. I know of your unselfish devotion to this high cause. I desire to join with you, to aid you, to fight with you, and eventually to assist you in redeeming this city and this state from these Republican abuses. Am I welcome?"

"Hooray!" shouted Rollins, jumping to his feet and clapping his hands. "That's the real McCoy! In a month I'll have you out making speeches. Are you welcome? Why, my boy, you are as welcome as an August rain after a dry spell in the Corn Belt. Welcome! Why you are positively providential. Let's talk things over.'

They had a long conversation. Hicks soon discovered that Rollins was fanatical in his belief in Democratic principles, that he considered himself a sort of crusader against what he called "the mammoncontrolled party of special interests," meaning the Republicans, and that he was willing to spend his money freely, asking nothing but the fun of the fight. He went over the situation in detail with Hicks, told of his work and of the organization he endeavored to maintain, and explained how he was handicapped by the general apathy. Then he read Hicks extracts from several of his pamphlets. These proved to Hicks that, even though a fanatic, Rollins had a clear mind, good reasoning powers and an excellent command of simple and forceful language. He told Hicks of the local situation, dominated by the Republicans for years, working through a local boss named Paddy Ross, and explained how the public utilities-the street cars and the electriclight plant and the water works and the gas works-could get anything they wanted because they kept Ross on their payroll and Ross was the Republican organization leader. Hicks' knowledge of general polities stood him in good stead. He was most polite and deferential to Rollins, and soon was on terms of friendship and implied association with him. His letter of introduction had established him primarily, and he completed the good impression himself.

As he rose to go Rollins asked Hicks

whether he had any cases yet. "Why, no," Hicks replied; "I arrived

only yesterday, you know."
"Well, how'd you like to take a case for me? An old rapscallion named Jim Barkiss is trying to beat me out of a claim I've got

on his property. Know anything about contracts?

"I've studied contracts," evaded Hicks.
"All right, here's the case;" and Rollins went off into a long recital of his difficulties with Jim Barkiss, telling an involved story of deals and mortgages and liens and payments and rebuttals to which Hicks listened in a daze.
"Got it?" asked Rollins. "Got it clear in your mind?"

"Perfectly," fibbed Hicks, who had no idea of what it was all about.

"Good," said Rollins, "here are the papers," and he thrust a mass of legal documents into the hands of Hicks. 'See what you can do."

Hicks took the papers and rose to go. "Good-by, Mr. Rollins," he said. "I shall see you soon and often and we'll reorganize and rejuvenate this Democratic party out here. Good day."

He put out his hand and Rollins took it. "Son," he said, "I don't know whether I'm playing fair with you or not in giving you that case. It's been in litigation here for a long time, and I got so mad about it that I just took it from the hands of my regular lawyer who was jockeying along on it. The lawyer on the other side is Jim Chittlings, a hard customer in a case like this, and you are young in the law, very young in the law."

"Oh, that's all right, Mr. Rollins. I'll do the best I can with it and maybe my youth will help me."

"Yes," repeated Rollins, "you are young in the law. Haven't you forgotten something?"

"No," Hicks replied, looking about, "I think not." Rollins laughed. "In that case," he said, "you are the oddest lawyer I ever came in contact with. You haven't asked me for a retainer."

Hicks in his confusion could think of nothing to say. He had forgotten the most important detail of the practice of his profession.

"Never mind," soothed Rollins, "I'll write you a check. It may come in handy," and he gave Hicks a check for a hundred dollars. That young man bowed himself out with his heart thumping, his brain reproaching him for his lack of business acumen and the check clasped tightly in his

MARMADUKE HICKS was walking on air when he 1. went down the street. He arrived at the Hotel Metropolis, went to his room and looked lovingly at his check. It was his first legal fee. He examined the papers Rollins had given him, but could make nothing of them, so he put them in his trunk and went down into the lobby. He met Bignall again, and talked to him for an hour discussing the best location for an office and various matters of that kind. He inquired about boarding houses and secured several addresses. Next morning he took his money and his letter to the First National Bank, opened an account, and called on Mrs. Hungerford, who kept a boarding house not far from the business portion of the city. The food and rooms at Mrs. Hungerford's had been praised by the banker to whom Hicks had the letter of introduction.

Mrs. Hungerford's boarding house proved clean and comfortable. She told Hicks that most of her boarders were of the better class of clerks and business women, with a professional man or two, and she offered him a room, in the rear on the third floor, for fifty dollars a month with meals. He engaged the room and moved in that afternoon and on the following day set about renting an office.

He hesitated between two rooms. One was in a threestory brick building near the post office, a former residence that had been built over into offices, and the other was in the Blanding Block, the biggest structure in Rextown. The rent of the first room was twenty-five dollars a month and the rent of the Blanding Block office was twice that. Tommie walked through the halls of both buildings. There were a dentist or two, an architect, a couple of insurance agents and five lawyers in the old building. In the Blanding Block there were rows of glass doors carrying in gilt letters the names of lawyers and business agencies of various kinds. It did not take him long to decide on the office in the Blanding Block, and he bought some furniture for it on the installment plan. That night he stood in the hall and looked admiringly at the gilt sign on the door of his office. It read:

#### T. MARMADUKE HICKS ATTORNEY-AT-LAW

In a day or two his furniture was installed and his father's law books had arrived, accompanied by a letter from his mother expressing the hope that they might be used for the promotion of justice and truth and the welfare of the people. Hicks put them on his shelves, where they made a good showing, although most of them were reports of New York State and not of much consequence for local use. There were a few books of universal character. He gazed at these speculatively, wondered what was in them and what he might be able to do with them. He hung his certificate and diploma on the walls, took steps to have himself admitted on motion to the local bar, and after that had been accomplished, with the aid of Senator Paxton's letter and the influence of an old friend of his at the Rextown bar, he began the consideration of the Rollins-Barkiss case.

It was a complicated case. There were claims and counterclaims and records of previous actions begun and dropped. Hicks studied the papers long, but could make little of them. His only conclusion was that Rollins claimed one thing and Barkiss another; the legal phases of the case were entirely beyond him.

He spent some days puzzling over the papers, evolving schemes that had no legal foundations. It was all he had to do, except make three or four appearances each day in the lobby of the Hotel Metropolis, and drop in at the city hall and courthouse, with occasional visits to the probate court and the county clerk's office, where he simulated intense occupation and consulted records assiduously.

He knew so little law he could get no grasp of the questions involved. He ardently desired to make a showing, and felt he could get business from Rollins if he could win this case. On the same floor of the Blanding Block the offices of Johnson, Jacobs and Jones, the leading lawyers of Rextown, occupied half a dozen rooms. Hicks had called on these lawyers and they had received him with grave politeness and welcomed him to the city. He had noticed, at a desk in the corner, a man who had a big bulging forehead, wore glasses and was shabbily dressed, and who had a general air of being grateful he was permitted to sit down in an out-of-the-way place and read calfbound books.

Hicks inquired about this man and learned he was Gudger, a great student and a fine lawyer, but a periodical drunkard. He remained sober for two or three months and then drank beavily until he had to be taken to the hospital. He had no control over his appetite for liquor, and for that reason had no practice and no standing at the bar. But he knew the law, knew more of it than Johnson, Jacobs and Jones combined. So they used him when he was sober to help in the preparation of their cases and took him back after a spree, paying him a small salary and giving him the impression that they were his benefactors for allowing him to draw a few dollars a week and do most of the real work round the place.

Hicks went into this office and spoke to Gudger. "By the way, Mr. Gudger," he said, "could you make it convenient to come into my office this afternoon some time? I have a little matter I desire to discuss with you."

"I'll go now," Gudger replied.

They walked to Hicks' single room. "Sit down, Mr. Gudger," said Hicks. "This is what I want to lay before you: I have been here but a short time, as you know, but many pressing matters engage my attention. Mr. Perkins G. Rollins has given me a small case that really I have not the time to handle. I was wondering if you would look

over the papers, prepare a plan of action for me and elaborate the points of law involved. Of course I shall compensate you, and it really will be a great service to me, for I am so busy I cannot attend to the preparation of the case myself."

Gudger looked round the room, with its array of useless law books, and at Hicks, who was endeavoring to give the impression of a man rushed with his work. He smiled a little wan smile. He had just returned from a prolonged spree, was weak and trembly and had been severely reprimanded by his employers. He needed money. "Let me see the papers," said he; "I guess I can do it."

Hicks gave him the papers, which Gudger noticed were the only papers in sight in the office. Hicks realized that, too, and instantly resolved to fix up bundles of legal-looking documents for place on his desk. Also he resolved to buy a file case and put it in the room.

"I'll look them over," said Gudger, "and let you know later."

Hicks visited Rollins several times, talked politics with him and reported progress. He wrote several letters to Senator Paxton and spent a good deal of his time in the Hotel Metropolis, getting acquainted with the business and professional men of the city, who used the lobby and barroom and café of the Metropolis as a sort of downtown club. He found that the men who frequented the hotel-and they were most of the important men of the city-drank a good deal of whisky, especially between five and six o'clock in the afternoon. Hicks was not an abstainer nor was he a steady drinker. He kept a little whisky in his room for such use as was needful, and though he smoked cigarettes he never smoked on the streets or in public places. He refused invitations to drink rather impressively but was enough of a mixer to keep in the good graces of the crowd, and he made many acquaintances who liked to hear him discuss affairs at Washington, and wondered at his easy familiarity with the great men of whom they read in the papers. Hicks knew all the famous statesmen and gossiped about them intimately, never failing to bring himself into the foreground of whatever picture he was painting. Between times he considered the question of a church connection.

After a week's study Gudger came in with a package of papers in his hand. "I have examined that Rollins-Barkiss matter, Mr. Hicks," he said.

Hicks was writing a letter. He looked up and replied pompously: "Excuse me a moment, if you please, Mr. Gudger. I have a matter here I must close up.'

Gudger, who had himself in hand again, smiled a flickering sort of a smile and sat down. Tommie wrote vigorously for a minute or two. He signed his name with a flourish, held the letter up before him and read it with evident admiration, and turned to Gudger. "My stenographer," he said, "is ill this morning and I am compelled to write a few of my most pressing letters by hand. I am sorry I detained you, but this is a most important matter."

Gudger observed that Tommie laid the letter aside without putting it in an envelope. "Take your time, Mr. Hicks,"

he said, "I am in no hurry."
"Ah," continued Tommie, turning in his chair, "did I understand you to say you have examined into that Rollins

claim, Mr. Gudger?"

"I have."

"Sorry to have imposed so trifling a matter on you, but I am exceedingly busy. What do you find?"

'I find Rollins has a fair case. Barkiss owes him some money, but it isn't clear just how much. I have set forth the law on the point, have briefed the cases that apply and made a statement of the facts for you. I trust it will be satisfactory."

Gudger was pathetically eager. He needed the money Hicks promised him.

"Excellent, Gudger," patronized Hicks. "I shall look over the papers and reimburse you for your time and trouble."

"Thank you, Mr. Hicks, thank you." And Gudger went out.

Tommie shut and locked his door and read the papers carefully. Gudger, good lawyer that he was and skilled in the preparation of cases, had handled this one in a most competent manner. He had made his statement of facts, his statement of the contentions of the other side, and he cited the law to uphold his own conclusions, cited it voluminously. It was an orderly, complete and illuminating presentation of the Rollins side of the controversy, Tommie spent all that day in studying Gudger's work. He had a retentive memory, and he learned what Gudger had written so he could recite it. Thus fortified he sat back to consider what he should do. He didn't dare to go into court, nor did he want to have Gudger appear for him. Beyond the words Gudger had written, Hicks had no knowledge of the law or the procedure necessary.

After thinking a time be went down the street to see his friend Charley Bignall, the reporter on the Globe.

"Bignall," he asked, "do you know James K. Chittlings the lawyer?"

"Sure."

"What kind of a man is he?"

"He's a big, beefy bluffer and gets away with it. He sh sters along pretty successfully. He pretends to be a lawy and he doesn't know any too much law. When he tries case he depends on noise to pull him through. He does go into court much though. That would show him up. H the grandest compromiser we have. And he is always the money. Why?"

"Oh, nothing in particular. He's the attorney on t other side of a case I am interested in, and I wanted know about him. That's all."

XII

AS HICKS walked back to his office that word "co promiser" constantly recurred to him. Why not co promise this? Evidently, from what Bignall told hi Chittlings was much the same sort of lawyer he was, w more experience, perhaps, but with as little law. knew Chittlings spent a good deal of time in the lob of the Hotel Metropolis, and he went there and look round. Chittlings was leaning against the cigar-case a loudly telling the bored cigar clerk of a recent exploit of h when he defeated a lawyer from the adjoining county is will case.

Hicks approached the cigar-case by easy stages, sta ping at the desk to look at the register, at the newsta to glance at the display of periodicals, and at the telepho desk to say a word or two to the operator. He stood a listened to the last part of the recital of Chittlings, laugh when laughing time came, and as Chittlings finish exclaimed: "That's a good one!" with evident apprec tion. Chittlings was pleased. He said a word or two abs the weather and asked: "Stranger here?"
"Oh, no," answered Hicks, "I am T. Marmaduke Hic

lawyer, with offices in the Blanding Block."

"Glad to know you, Mr. Hicks. I'm James K. Chittli and I'm a lawyer too."

"Chittlings?" repeated Hicks in pleased astonishme "James K. Chittlings? Why, I certainly am glad to m you. I have a case, I think, in which you are my oppose and I am charmed to know I shall meet so cultured ag tleman and so learned a lawyer in the arena of the court

"What case is that?" asked Chittlings. "I don't re-

your connection with any of my cases."

"Rollins vs. Barkiss." "Oh, that! Is Rollins at that again?" exclaimed Cl tlings contemptuously. "That isn't a case; it's merel cat-hop."

"There are some eleven thousand dollars involve Hicks protested with some warmth. Chittlings looked at Hicks narrowly. Evidently

eleven-thousand-dollar case was important to this you man. "Look here," he warned, "you are on a dead card

that claim, my friend. You can't collect it and you kt "I think it would be well to leave that phase of

matter to the adjudication of the courts." "Do you mean to say you have the nerve to take t

claim into court?" "You will be served with due and formal notice of

intention at the proper time."

"You don't say! Well, so long. By the way," he ad as he turned to go, "where's your office?" "In the Blanding Block."

"I may drop in to see you some day. Good-by, glad have met you.'

Two days later Chittlings came in, glanced round little room, with its sparse furnishings and its array of revised statutes of New York, smiled and said: "How Hicks. How's business?"

"My docket is reasonably well filled."

"Glad to know it. There are so many lawyers in burg it's hard for a new one to get a toehold. The wolves for business, and they've got most of it cinchs "I haven't found it so," Tommie replied, wishing

had a greater number of legal-looking documents on desk and resolving to get some more as soon as Chittli

"Say, Hicks," said Chittlings, scating himself and is ing a cigar, "how strong are you with Perk Rollins? It a smoke?"

"I never smoke."

"Well, forgetting that, how strong are you with P Rollins?"

"What do you mean?"

"How much influence have you with him?"

"He is one of my best clients."

"Well, if that's the case and you can work him, what the use of dragging this thing through the courts? W not compromise?"

Hicks straightened in his chair. "This is a case that of not admit of compromise," he said with much dignity.

'Don't it! Let me tell you, my young and callow from there never was a case that didn't admit of compressi when the lawyers who had it wanted to fix it that way a there was anything in it."

"I do not so understand the theory of the law." He was most important as he said this.

"Well, you will so understand it if you want to make a ring at it. I tell you it's nonsense to drag this thing gough the courts when there are bigger things we might doing. Let's fix it up."

"My client has instructed me to sue it."

"Then get him to uninstruct you. Rollins is a good old up, but visionary, and Barkiss ain't worth a hoot, beyond certain point, for any lawyer to fuss with. Let's fix it."
"What do you propose?"

"Why, there's right on both sides. Barkiss owes Rollins me money, but not as much as Rollins says he does. I'll mit the first part of it. If we take it into court you can't t the eleven thousand to save your soul; but you can get udgment for a certain amount if you are any good at the w at all."

"How much?" asked Hicks eagerly. Chittlings laughed. "That's for you to find out, if you

to law about it," he said.

'Well, what's your proposition?" Hicks gave what he ought was a good imitation of a businesslike question. 'You go down and see Rollins and find out the lowsum he will take. I'll see my man and find out how ich I can get him to give. Then we'll meet and fix it up."

'Fix it up?'' asked Hicks. "I n't understand. I am a lawyer, . Chittlings, and bound by the ics of my profession."

'Also I take it," said Chittlings uply, "you are bound by the essities of making a living. Run ng now and see Rollins and come wn to my office on the third Chittlings went out, leav-Hicks very indignant.

He grew calm as he thought the tter over. He knew in his heart would be at a serious disadvanein court, having had no practice e a little in justices' courts back ne when he was a student. His tism urged him to go ahead with case and told him he could win brilliantly, but he felt inward givings. Occasionally he adted his limitations to himselfoften, but once in a while. He frightened at the prospect of ing a case against this big, noisy, ffing lawyer, and although he Gudger's word for it that he some law and some facts on his , he didn't relish the encounter. wanted to be surer of himself m he made his first public aprance. Besides, there might be it in the contention of Barkiss t he didn't owe Rollins all of en thousand dollars. There was side of it to consider. Also e would be a quicker fee, in ition to the retainer of one huni dollars he already had, in case compromise. And lawyers did promise cases. He knew that. he went to see Rollins, who ted him cordially and asked what he thought of Senator rich's iniquitous tariff policy. Inexcusable," Hicks replied,

knowing what the policy was. ropped in to see you about that ciss matter."

What about it?" asked Rollins, was deep in a platform for the Democracy he intended to pose at the forthcoming con-

Why, I was thinking I might pose that difficulty by a shorter e than recourse to the tedious

esses of the courts." All right," Rollins answered absently. "Do whatever st. Say, do you think the platform should begin with ging denunciation of the Republican party, or with a ment of the attitude of the Democracy toward the ession of the people and then the arraignment of the

ublicans?" Take up the cause of the people first by all means," "Suppose I could get you eighty-five sed Hicks. ired dollars from Barkiss? Would that figure be

factory to you?" Pshaw! They'd never stand for eighty-five hundred is; that's entirely too long. My idea is about five sand words."

Dollars, I meant, not words, Mr. Rollins. I am speakbout the Barkiss matter."

The Barkiss matter? Oh, yes; what about it?" think we can compromise for a substantial sum."

"All right; go ahead. Don't bother me about that now. want to get this pronouncement of political principles written. Listen to this anti-corporation plank.

Hicks listened politely while Rollins read what he had written as establishing the attitude of his party toward the monopolies fostered and owned by the criminal rich.

"That'll make them cringe, I'll bet," said Rollins.

"Undoubtedly," assented Hicks warmly. "It is a great summing-up of the tenets of our party in that regard simply great. If I can get eight thousand dollars, shall I take it?"

"Oh, yes, yes. Don't bother me," protested Rollins. "Let's go over this tariff plank. The curse of this country and the workingmen in it is high protection. Let me read you what I have written."

And he read his tariff plank, which demanded an instant and scientific revision of the tariff along the lines of tariff for revenue only.

As he finished Hicks applauded. "That's fine!" he cheered. "That's the most statesmanlike argument I have ever heard. You certainly are a master of words, Mr. Rollins. I am quite sure I can get seventy-five hundred dollars for you. Shall I take it?"

"If I Can Get Eight Thousand Dollars, Shall I Take It?"

"Eh?" said Rollins, blinking his eyes; "I thought you said eight thousand, a moment ago."

"Oh," Hicks suavely replied, "I said eight thousand tentatively. Seventy-five hundred is a sure thing."

"Well, get what you can. I must finish this platform and have it printed. Get what you can. Good day. Come in to-morrow and I'll read it to you again."

"That will give me great pleasure. Seventy-five hundred it is then.

"Yes, yes," Rollins replied impatiently. "I'm going to give them a great blast on the currency question, a great blast."

HICKS called at the office of Chittlings next day. That exponent of the law had a suite of three rooms a reception room with an office boy at a desk, a second room where there was a clerk and a typewriter and an array of law books, more than Hicks had ever seen outside of a law library, and an inner room where Chittlings sat at a big rolltop desk. This room was well furnished. There were some leather chairs, a polished table piled high with papers bound with tape, a picture or two on the wall and a leather lounge.

"Morning, Hicks," greeted Chittlings after Hicks had gone through the formality of sending in his name by the office boy-Tommie resolved to have two rooms and an office boy, it gave an air of business and prosperity to a place. "Morning. Have a cigar. Oh, I forgot, you don't smoke. How are things?"

"I am very well, thank you," Hicks replied.
"Seen Rollins?"

"Yes. Have you seen Barkiss?"

"Saw him yesterday. What will you accept?"
"What will you give?"

"Oh, let's not haggle about this; it isn't big enough. I'll give eighty-five hundred dollars."

"I'll take nine thousand."

"Come off! I've got to get something for myself. Take it or leave it at eighty-five hundred and I'll get my regular fee from Barkiss and a split from you."

"A split?

"Yes, a split. You know what a split is, I suppose. If you don't, let me tell you that splits are the greatest discouragers of long-fought litigation in court this world has ever known."

"Do you mean that you want me to divide something with you?"

'Certainly, why not? You didn't tell Rollins you could get eighty-five hundred dollars, did you—didn't name a specific sum?"

Chittlings looked narrowly at Hicks, who felt that this big, boisterous man had caught him in a crime. He was chagrined and humiliated, for although he had underestimated to Rollins the sum of money he thought he could get in compromise, he hadn't gone so far with the matter in his own mind as actually to plan to give Rollins less in settlement than he received.

Hicks was horrified. It seemed to him that Chittlings had read his mind, had interpreted his action, had literally detected him stealing something. He was familiar in a way with illegal money transactions, and had heard stories of sums paid in Washington to expedite or retard legislation. The morals of the situation did not bother him so much as his apparent detection.

He looked at Chittlings, who was preparing to write a check. Hicks caught hold of the arms of his chair, steadied himself, licked his dry lips with his tongue and replied huskily: "Of course I mentioned no specific sum, but what difference does that make to you?"

"Just this difference," said Chittlings. "If I compromise this thing with you for eighty-five hundred dollars, which is a fair compromise, I'll give you a check for that amount and you'll give me a check for five hundred. Then you can deposit my check and pay Rollins seventy-five hundred dollars, or what you please, and we'll both make some money, for you can bet Barkiss will pay me my eighty-five hundred back, and another legal difficulty will have been compromised without recourse to the tedious processes of the courts."

Hicks rose. "Look here, Chittlings," he exclaimed, "I may not know much about the law, but I know something about the Eighth Commandment. That's plain larceny and you know it, and I'll not be a party to it."

Chittlings grinned.
"All right," he said, closing the checkbook, "have it your own way. Only let me tell you something-you'll never make five hundred any easier. Go ahead and suc and I'll be right on deck."

"That may be so," Hicks retorted emphatically, for he had regained his self-possession, "but I won't begin my career as a lawyer in this city by stealing five hundred dollars from Rollins or any other man. My price is higher than that, Mr. Chittlings, and when you get ready to talk business to me on a strict business basis, without any larcenous trimmings, I'll see you in my office. Here is my card." #### Slow Grinding

WE HAVE long believed there should be some Federal control over the issue of railroad securities, and that the body in which that control should logically be vested is the Interstate Commerce Commission; but a reasonable method of exercising the control is very important.

The bill now before the national House of Representatives provides, in effect, that, before issuing any capital obligation, a railroad must apply to the commission; whereupon the commission shall send a copy of the application to the railroad commission—or to the governor and attorney-general if there be no railroad commission—of every state in which the railroad "operates any part of its lines"; virtually inviting such states to participate in the deliberations.

This is all wrong. To be tolerable, public control of railroad issues must be exercised with reasonable dispatch. There is hardly a week in a normal year when some road is not issuing capital obligations. To make every issue the subject of wordy, snail-footed deliberations would create a condition as bad as the disease it seeks to cure. Instead of inviting the states to participate in the proceedings of the Interstate Commerce Commission the law should make the findings of the commission binding on every state commission that has jurisdiction in the matter.

The Interstate Commerce Commission itself is a rather overworked body. Its delay in deciding the application of the Eastern roads for a five-per-cent advance in freight rates shows that it needs accelerating rather than retarding.

In passing on railroad securities it ought to be given a free hand and every opportunity to act with reasonable promptness. The questions concerning any railroad issue are whether its objects are legitimate and whether bonafide value is received. Certainly the Interstate Commerce Commission may be trusted to determine those comparatively simple questions. When they have once been determined by a trustworthy public body, there is no valid reason for collateral or supplemental state proceedings.

#### The Socialistic Tendency

CERTAIN businesses are necessary to modern life. Railroading is an example. Cut off from rail facilities a man might be ruined, a community might perish. So, for years, the law has exerted a constantly increasing control over railroads. A railroad cannot discriminate among its patrons—it must serve all alike; and of late it can charge only such rates as the law permits.

Fire insurance is obviously in a different category. Broadly speaking, anybody who so elects may get along without it, assuming the hazard himself. And a fireinsurance company may discriminate at will among its patrons. Any company may refuse to write a policy on any risk and the law will have nothing to say in the matter.

The other day, however, the United States Supreme Court—by five to three, one justice not participating—affirmed the power of a state to fix the rate at which fire insurance shall be written. Admitting that fire insurance is of a personal rather than a public character, the majority of the court holds that, nevertheless, it is so charged with public in a state of involve the power to regulate it in

behalf of the public. We venture a lay and ignorant opinion that the court would have decided differently fifteen or twenty years ago—when it was holding, for instance, that the Sugar Trust was beyond the reach of the Sherman Law.

Socialization moves steadily forward. Every year the principle that the interests of society are paramount advances a step further.

#### The Wallace Researches

THANKS to the indefatigable industry of two Americans— Dr. and Mrs. Charles William Wallace—which has dug up the records of a venerable lawsuit and certain proceedings of a sixteenth-century Commission of Sewers, we now know quite accurately what sort of concern that Globe Theater was in which one William Shakspere was a stockholder, and within the walls of which the stockholder's celebrated dramatic pieces were presented.

For several years Doctor and Mrs. Wallace have devoted their entire time to the most painstaking search among the public archives for new light on Shakspere and his activities. They have already examined upward of three million official parchments.

It appears that when the Globe Theater site was leased by the theatrical adventurers two hovels stood on it. With the exception of some ponds it was the lowest spot on Bankside, and the Thames overflowed it every spring. For a long time it had been used as a dumping ground for refuse—and a sixteenth-century refuse heap may safely be described as the real thing in the way of garbage. Shakspere's partners are sternly commanded, "on pain to forfeit," to pull certain props and posts out of the sewer.

Imagination dwells fondly on that theater: standing ankle deep in the mire, with one grimy knee showing through the rent in her coarse woolen petticoat, her blouse split up the back, her hair in a snarl, and a muddy smudge on her cheek where she has just swatted a mosquito with a hand as heavy and as soiled as a blacksmith's—but speaking, nevertheless, with the tongues of men and of angels.

Her beautifully carved, gilded and upholstered sister of to-day would faint away at sight of her; and it would not matter much if she never came out of the faint.

#### A Verdict

AMURDERER enlisted the sympathy of a very rich man. His defense was that a dream irresistibly impelled him to assassinate his foe. The rich patron, according to the newspaper report, "practically cornered the available expert testimony in the defendant's behalf, seven of the highest-priced alienists of the city being put on the stand to support the dream theory." Eloquent counsel quoted compassionate poetry to the jury and the latter returned the following verdict:

"We find that the defendant committed the act charged in the indictment, but at the time of the commission of said act was an insane person, and since the commission of said act has permanently and completely recovered from such lunacy."

The defendant may have "permanently and completely recovered from such lunacy," but our criminal jurisprudence has not. Leaving the question of a defendant's mental condition to a lay jury enveloped in a fog of hired expert testimony makes a farce of what ought to be a rather serious matter.

#### The Plum Tree

ILLINOIS has one Democratic United States Senator and in all probability will presently have another. The burning political question in that state at this writing is whether that other shall be Roger Sullivan or some patriot whose Jeffersonian heart beats in truer sympathy with that faction of the party to which the present Senator belongs.

Chicago papers are pointing out—as an important factor in the solution of this question—that all the Federal and state jobs will be filled by nominees of the faction opposed to Sullivan. What makes the Sullivan Democrats mad—we read in a press report—is the fact that all the assistant district attorneys, deputy marshals and deputy revenue collectors will be selected by the foe.

In these circumstances, we suppose, the Sullivan Democrats are the only persons who are entitled to be mad. The public, which pays the salaries of these Federal employees and depends on them for service, is presumed to be quite satisfied so long as its servants are sound on the grand question of opposition to Sullivan. Whether they can read and write is a secondary consideration.

#### Bonds Over the Counter

IN APRIL the city of New York sold sixty-five million dollars' worth of bonds at a small premium to a single bidder, who immediately resold the bonds to investors at a profit of some four hundred thousand dollars. The profit was legitimate enough, and the method of selling bonds

that nearly all cities and states employ is based on a profit to the middleman. This method is to invite competitive bids and award the issue to the highest bidder. Almost invariably big investment banks and bond dealers in intermate touch with the investment market get the bonds an resell them to actual investors at a profit.

To avoid a middleman's profit the city must about competitive bids and offer its bonds over the counter at a upset price. In this New York sale there were two has dred thirty-two separate bids, many of them for sma amounts and many at a higher price than the successful bidder paid; but no combination of other bids would have brought the city as much as the successful bidder paid though that price was less than actual investors readily paid immediately afterward.

Competitive bids almost invariably throw the bonds in the hands of middlemen. A city or state that wishes establish a direct market for its bonds must sell them on the counter at an upset price.

#### The English Telegraph

THE telegraph business of Great Britain, as conducts by the Post Office, results in a heavy annual loss, recent statement by Postmaster-General Hobbouse, quotin the London Times, attributes this loss "mainly to disixpenny telegram, which costs eleven pence to transmand deliver."

A telegram of twelve words, address and signature bein counted as part of the message, transmitted anywhere Great Britain, costs twelve cents of our money. This very cheap. Naturally telegraphing is highly develop in England, the number of messages a head being near twice the number in the United States. That the twelvents did not cover the cost of the message was evide from the large yearly deficit; but it appears from the statement by the postmaster-general that the loss on eatwelve-cent message is decidedly greater than had be supposed. He puts the cost of the message at twenty-transfer.

In short, the sender pays little over half the cost; to ther half—or forty-five per cent—coming out of the pubtill. British citizens who use the telegraph frequently; a sort of subsidy at the expense of those who use it infiquently or not at all.

The bulk of the telegraphing in Great Britain is or short distances, for which the cost of a message here twenty-five or thirty cents against twenty-two cents the but the whole cost here is paid by the sender of the messag which seems to us the logical arrangement.

#### A Significant Difference

INCOMES of from fifteen to twenty-five thousand d lars will pay nine or ten times as heavy a tax under t new British Budget as they pay here. In round numbe fifteen thousand dollars will pay one thousand dollars t twenty thousand dollars will pay fifteen hundred doll tax; twenty-five thousand dollars will pay two thousand dollars.

Yet the most significant difference between the Brit tax and the American appears with respect to what we a moderate incomes. Generally an American income of thousand dollars pays only ten dollars tax. The Brit tax on an income a penny over five thousand dollars to be two hundred ten dollars; on an income of seven five hundred dollars it will be three hundred seventy dollars—instead of twenty-five dollars as here.

Two hundred and eighty million dollars is the estima yield of the new British income tax. When a government comes to lean so heavily on an income tax it must tak stiff toll from incomes in the moderate class.

It is only a question of time when our Federal levyt get down to incomes of a thousand or tifteen hund dollars; and the comfortably-off man—with an income say, of from five to fifteen thousand dollars—will near something more than small change to discharge his due to the Government.

#### How it Works in Practice

AFTER two years' deliberation Massachusetts passel eight-hour law for workers under sixteen years of a Ruin of industry, displacement of young workers, incresyouthful vagrancy and various other ills were predict as usual.

A canvass of the state shows that over ninety per of the children under sixteen who were employed betthe law went into effect are still employed; that a major of the few children who were displaced have gone to schothat family hardships attributable to the displacem or curtailed earnings of youthful workers have been pligible; and that there has been no increase in youth idleness and crime.

Crippled industries, beggared families and ruined of dren have been predicted at every step in the direction protecting youthful workers; but the predictions no come true.

### WHO'S WHO-AND WHY

#### Serious and Frivolous Facts About the Great and the Near Great

come to advert, in what it were not amiss to term well-dissimulated jocundity, to the Honorable James P. Clarke, of Arkansas, as genial and jovial a person as ever harbored a grudge for twenty years.

HE time has now

The Honorable Clarke, who wears an e at the extreme end of his name to distinguish himself, if such be necessary, from the Senator from Wyoming and the Speaker from Missouri, has just, as it appears, been returned to the Senate for the third time by an enthusiastic constituency and an excess of some seven hundred votes or so over the competing candidate in the primary, the same showing that the Arkansas proletarians hold their enthusiasm in reasonably measured check. Of course the face of the returns may be changed, but never the inscrutable face of the senator;

id it all goes to show that when those Arkansans are out it they can mask their enthusiasm to a considerable gree of obfuscation.

Some of the residents of that imperial commonwealth are ant to refer to the senator as Old Cotton Top-some of em. Others do not so refer to him. They refer to him herwise, those others do; but that is a local issue. The int is that even some of his constituents thus nickname e senator—affectionately, no doubt; for, as I have said,

certainly has a mild d forgiving disposition, out the same as the sposition of a bear with sore paw. That, of arse, is not the reason the white-polled term intimacy. The senor's hair furnishes the st. They call him Old stton Top because his p looks like cotton. id, being a joyous and idsome senator, he joysly and gladsomely es the appellationst as he likes many per things-or dislikes em, as it may happen d generally does.

The senator first began exude gladness and e in Washington in 03, when he was the ppy hero of a most felicus occasion. He had m elected to the Senate, ceeding the late James Jones, and went on to ashington to take his it. The other Arkansas nator was the late mes H. Berry, who was nus a leg and plus the eem of all his colgues. Now it had so ppened, as the story es, that Berry and arke had had political ferences, which were what they may have been, but which seemed to be organized a demagogue, a statesman, a politician and a human for nine hundred and ninety-nine years, so far as the genial Clarke was concerned.

Ordinarily when political enemies come to represent the same state in the Senate they forget the enmity for the few minutes devoted to the swearing in of whichever one of them is newly arrived in the arena. They go up to the rostrum together; and, though one may be hoping the other chokes and is willing to help that desired condition along by use of such choking apparatus as Nature may have provided him with, the hoper stands smilingly by and watches the ceremony with a fine congratulatory air. Not so when the kindly Clarke was sworn in. He went up alone. There is a citizen who never forgives and who never, never forgets.

When it comes to expressing himself as to his resentments, or on any other subject, the senator conservatively can be called voluble, not to say fluent. You may have heard in your time orators who have talked rapidly and whose word-per-minute record was high. So have I. But when it comes to the rapid production of language every talker who could or can talk in a precipitate manner seems mute, dumb, silent and otherwise impeded of speech as compared to Clarke. That man's output of language is so terrifyingly great, so paralyzingly fast, that he is always from three to five hundred words ahead of the comprehension of his hearers.

#### The Vocal Machine Gun in Action

HE TALKS so fast that the ordinary mind fails to grasp what he is saying. He sounds like a pneumatic riveter geared up to the highest speed. The words cascade out of him. His language is always in a state of flood. His oratory breaks down every restraining levee. He speaks with celerity and velocity-he does that!

I should suppose it would be worth going miles to hear him telling one of his pet grudgees what he had in mind to say about him. Of course he would talk so speedily that one could not understand what he was saying; but it would be a terrifying spectacle-like Vesuvius in action or the Beehive Geyser blowing its head off-and genially too; with all the geniality of a Bad Lands blizzard!

There was that time in the Democratic caucus, not so long ago, when the senator was interested in a bill concerning cotton futures. He spoke for his bill-that is, I say he spoke for it, because speaking is the generic term for his performance. In reality he erupted for the bill. It was a great speech—the speech of a lawyer, an orator, a planter, machine gun shooting language.

The senator battered his colleagues with argument, entreaty, defiance, praise, cajolery, demand, pleading, flattery and invective. The quicker-witted never were within six sentences of keeping up with him and the duller ones were whole paragraphs behind. The subject of his remarks was that he desired his bill indorsed by the caucus.

A time to vote had been set. He talked until that time, which coincidentally was luncheon time also. As he finished he noticed various senators edging toward the door, thinking to hurry downstairs and revive themselves with apple pie and other well-known revivers.

I want a vote!" he said.

Up rose Senator Vardaman, who has hair and language in equal profusion.

"I want a vote!" roared Clarke, for other senators were leaving.

"But," soothed Vardaman, "I am going to say a few words in support of the senator's contention ——"

"Sit down!" commanded Clarke in his most affable manner and his usual one. "I'd rather have a vote than all the speeches you can make in a year. Sit down!"

He has ideas of his own on many subjects. One is that people write too many letters. That is a fact. People do write too many letters and answer too many also. The senator's ideas on this epistolary subject can be comprehended in the succinct statement that he thinks ninety per cent or thereabout of the letters received by a statesman are not worth answering.

Most senators have clerks and stenographers and secretaries and other scriving appliances in their offices. Clarke has none. Answer letters or write them? Not James P. Clarke!

Every politician has his own system for obtaining and retaining the support and suffrages of his constituents. Most of them are directly opposed to the Clarke method; but that seems to have its merits, for when we come to look his career over we discover that he has been rather continuously successful in getting office. He began the practice of law at Helena, Arkansas, in 1879, but did not get the system into resultful working order until 1886, when he was elected to the lower house of the Arkansas legislature.

After that he went right along. He was sent to the state senate in 1888 and served until 1892, becoming president of that body in 1891 and ex-officio lieutenant-governor. In 1892 he was elected attorney-general for the state; and so well were his genial characteristics appreciated that they offered to renominate him. He declined, but could not stop the popular demand for him, and went into the governor's chair

in 1894. After he finished with the governorship he moved to Little Rock, resumed the practice of the law, and so increased his hold on the people that he was sent to the United States Senate in 1903, and has been there ever since, getting a reelection in 1909, at the close of his first term.

He had opposition in the primary when he ran this year for his third term, but at the time of this writing seems to be ahead about seven hundred votes and sure of another term. However, that is a mere detail.

The moral of this discourse is that if you are benignant and forbearing you cannot fail to get along well in the world. The submoral is that there have been occasions when certain persons, one of whom is mentioned herewith. have done fairly well by adopting another sort of attitude.

There is a lesson inculcated in this simple narrative with its duplex moral; but at the moment just what that lesson is escapes me entirely.

In the Watered Melon Patch

26

### TRAVELING DE LUXE

PROTE, BY THE PENNSYS HAVE BEEN BOARD COMPANY

AFTER relieving me of eight dollars and a half, the jauntily mustached young man handed me a ticket, almost exactly the size of this page, which entitled me to one lower berth on the North Express from Paris to Berlin.

The journey is shorter by three hours than that between Chicago and New York when performed by the fastest trains—which, as the American railroads take some pains to inform you, are the fastest trains for that distance in the world. You leave Paris at a quarter-of two in the afternoon and reach Berlin at half past seven the next morning, with a one-hour change of time during the night. The distance, in fact, is less by about three hundred miles than that between New York and Chicago.

Eight dollars and a half for the privilege of occupying a berth during a seventeen-hour journey seemed rather steep; but in addition to the berth I received an interesting piece of literature in the above-mentioned mammoth ticket. It was finely embellished with advertisements of hotels and steamships, and contained the following important official notice:

The fare for berths cannot be refunded if travelers are unable to make use of them. Reimbursement can only be obtained, after deduction of the booking fee, in event of berths being relet to other travelers for the same journey. If the carriage in which berths have been reserved does

If the carriage in which berths have been reserved does not arrive at destination the company will only reimburse that portion of the fare for the journey not effected.

The company does not recognize any responsibility whatever with regard to hand baggage or any other object which travelers are authorized by the railway regulations to keep with them in the cars, and the conductors and other officials of the company have strict instructions not to accept any responsibility whatever under this heading.

Obviously, then, I must travel with manly self-reliance and not weakly depend on the company to take any particular care of me or my belongings. When the porter showed me to my expensive berth this is what I found:

#### The European Idea of Luxury

THE compartment was not over two-thirds the size of our Pullman compartments and rather less than half the size of our Pullman drawing rooms. A single seat ran along one side, occupying all the space on that side. Opposite the farther end of the seat, beside the window, was a shallow cabinet containing a folding lavatory, much like those in our Pullman compartments. It was fitted with a little shelf, which let down and made a reading table in front of the window.

The shelf was down when I entered the compartment. On it were a magazine and a couple of newspapers; also, the elbows of a stout blond gentleman, who was smoking a cigarette and looking over one of the newspapers. His bulky bag occupied half the baggage rack. In addition to the bag he carried a suitcase, which, just by a hair, missed being a steamer trunk. This suitcase stood against the wall opposite my end of the one seat, leaving only a few inches between my knees and its ponderous self.

The porter heaved my bag into the vacant half of the baggage rack and I sat down with one foot on each side of my fellow-passenger's suitcase. Probably I looked a bit dismayed—not because of the suitcase, but because I felt as though I had walked into a perfect stranger's bedroom. The blond gentleman who occupied the window end of the seat must have noticed my pained expression, for he smiled in the most friendly manner and mustered up enough

### By WILL PAYNE

fragmentary English to express a polite fear that the suitcase was somewhat inconvenient for me. Unfortunately, he added, there was no other place for it.

I could see that at once. It was impossible to put it in front of him, for the little cabinet with the folding lavatory was in the way. It was impossible to put it under the seat, for all the space there was occupied by mysterious contrivances appertaining to the car. There was absolutely no place for it except in front of me; and I assured my unchosen bedfellow that nothing gave me greater pleasure than to travel with a stranger's suitcase figuratively clasped to my bosom. My companion, by the way, turned out to be a Swede and a very agreeable person after we had broken the ice and a great deal of language in establishing a more or less rudimentary means of communication.

An occasion soon arose. I wished to smoke, but my smoking materials were in my bag, and there was no way of getting at the bag except by climbing over my companion.

I may mention that this North Express is one of the crack trains of Europe, running from Paris to Berlin, Moscow and St. Petersburg, nearly all the way over governmentowned railroads. Its accommodations throughout were about the same as those furnished me. The car was lighted by gas. At one end was a tiny toilet room, marked for men, with no washbowl in it. At the other end was a room a few inches larger, marked for women, and containing a washbowl; but I soon discovered that neither men nor women paid any attention to the signs designating the respective sexes. Each compartment contained but one seat, and half the seats faced in one direction and half in the other. In other words half the occupants of the carrode backward, whichever way the train was going.

To be sure, half the occupants of all European cars must always ride backward. They maintain that riding backward is quite as pleasant as riding forward, and presumably it is for them; but I suspect that the pallid woman who dashed out of a backward-riding compartment and raced to the end of the car, with a handkerchief to her mouth, was of a different opinion.

This North Express, like other alleged trains de luxe in Europe, is an enterprise of the International Sleeping-Car Company, a Belgian corporation that corresponds to our Pullman Company in that it has a virtual monopoly of the sleeping-car business on the Continent outside of Germany.

Its scale of prices and accommodations in general are well illustrated by the Paris-Berlin instance. The distance from Rome to Paris is less by fifty miles or so than from Chicago to New York and the fastest train makes the run in twenty-six hours. The price of a single berth for that journey is twelve dollars. Across France, from Calais to Marseilles, a berth costs thirteen dollars. From Paris to Lisbon it is seventeen dollars.

This, you understand, entitles you to one berth in a small compartment that contains two. Once in a blue moon the other berth will be unsold and you will have the compartment to yourself; but the Belgian company is by no means addicted to running superfluous cars, and usually you will be boxed in for the night with a perfect stranger.

Europeans generally condemn the indecency of our standard Pullman cars, where a person has to undress with nothing but a thick curtain to shield him from the gaze of his fellow passengers. As to whether, on the score of modesty, that is inferior to being shut up with a stranger for a day and a night in a sort of double-decked dog kenni I do not pretend to say, not being an expert on the subject but personally I prefer the curtain.

And there is no escape from your compartment. The trains de luxe have no buffet or observation car to whit you may stroll for a change of scene. There is no snowing room, for everybody who wishes to smoke is supposed to do so in his own compartment. When your legs become cramped from sitting there is no relief except by studing in the corridor, where your fellow passengers have a squeeze by you in going from one part of the car to another.

At mealtime, to be sure, there is the dining car; and I soon discovered that, unless you have the forethought is forbid it, the porter invariably makes up your berth is soon as you go to dinner. Coming back from dinner there is nothing to do except go to bed, stand in the narrow corridor or jump out of the window. Forbidding the perset to make up the berth would, of course, require a joint agreement with the other occupant of the compartment; so the easiest way is to go to bed. Once you are in it, the bed is comfortable enough for a person whose principal dimensions are longitudinal rather than horizontal. The berth is longer than our Pullman berths and not over two-thirds as wide. How a really fat passenger could sleep it one without hanging over somewhere is a mystery.

#### Big Prices for Small Comfort

To BE sure, this benevolent sleeping-car company has something rather extra in the de-luxe way. During the season—that is, from January to the middle of April—1 runs a train to the Riviera for which it apparently musters its best equipment. The compartments seem rather large and better arranged than in the usual cars. And to rise across France on this special train de luxe you pay twenty dollars and a quarter—not for the train, but for a best from twenty minutes to three in the afternoon until had past ten the next morning. It is a very fast train, but not fast enough to catch up with the bill.

I used to think the Pullman Company pursued a policy that was tainted here and there by selfish motives; but a comparison with the European sleeping-car monopoly in Pullman Company is a sunny-hearted Santa Claus, with no thought on earth but of the good it can do unto other. For a rough-and-ready formula, you may say that in European concern charges about three times our Pulman rates and gives about half our Pullman accommodations.

Going to my twelve-dollar berth at Rome I found a usual, a stranger already in possession, and at the winds end of the seat. His two suitcases and a bundle complete filled the baggage rack. His leather hathox took of the little shelf by the window. His huge bag stood on the far and his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard his two overcoats and an umbrella hung on the standard hung on the standard hung of the st

Nearly all Europeans with whom I discussed the passiblect defended the arrangement of these sleeping on the ground that for a man and wife or two intraveling together the compartment is more pleasant our open cars. Unfortunately, however, travelers of always go in pairs; and in the United States a

traveling together can get a compartment or drawing room for far less than it costs to ride in one of these contrivances.

In France and Italy you cannot take a sleeping car unless you have a first-class ticket, and the first-class fare there is about half again what it is here. In Italy only hand baggage—what you can lug into the compartment and pile round on the rack, seat and your fellow traveler—is carried free; and in France you are allowed only sixty pounds of checked baggage.

As a typical instance, the distance from Rome to Paris is less by fifty miles than from Chicago to New York. The first-class fare is thirty-one dollars, the sleeping-car berth is twelve dollars, and the carriage of a trunk weighing a hundred forty-eight pounds is seven dollars—making an even fifty dollars for the journey de luxe, or about double the cost of making an American journey of the same length at the same speed and in considerably greater comfort.

Of course if this monstrous sleeping-car concern were transplanted to the United States it would have the President, the Cabinet, Congress, at least forty state legislatures, a united press and an outraged public down on its head within a fortnight. Neither its prices nor its alleged accommodations would be endured.

As one illustration of its generous attitude, it informs you: "In the event of a passenger's being unable to travel the company will endeavor to relet the berth on due notice being given. Should the berth be unoccupied the holder of the ticket is not entitled to a refund of the fare paid. When a berth has been booked and a postponement of the journey is desired, the date of departure may be changed on forty-eight hours' clear notice being given before the schedule time of departure as originally fixed, and on payment of a second booking fee; always provided, however, that the company shall not have been compelled to refuse accommolation for the same train, this resulting in a loss."

Any one who knows the readiness with which berths may be canceled or changed in the United States will appreciate the difference.

This sleeping-car company operates all over Europe, and only in Germany has any attempt been made to protect assengers from its exactions; in fact, apologists for the ompany say that its unconscionable tolls result partly rom requirements which the various state railroads lay on t—a sort of fraternal Robin Hood arrangement for the ommon purpose of plucking the tourist. They will tell ou in France that only Americans, Englishmen and lunaics travel first class. However that may be, the general heory outside of Germany is that comfort in travel is trictly a luxury and to be taxed as such.

#### Pay and Take Your Chances

TENERALLY speaking, the classification of fares in J Europe is resorted to not as an index of comparative omfort, but as an index of comparative respectability. For example, all the motor busses in Paris charge firstass fare and second-class, the former being three cents ad the latter two cents. Whichever fare you pay, you ride exactly the same bus—but in one case on one side of a artition and in the other on another side. An American in discover absolutely no difference between the firstass ride and the second-class; yet it is a common thing Paris to see a man stand on a street corner and let several process pages that are bound for his destination, such of

Paris to see a man stand on a street corner and let several asses pass that are bound for his destination, each of em having empty seats, but no empty seat of his class. he is first class he will let a bus with empty second-class ats pass and save his dignity. If he is second class he lil let a bus with empty first-class seats pass and save s cent.

So, also, on their railroad trains. Payment of first-class re does not insure you accommodations in any way perior to those you might get with a second-class ticket, site generally the first and second class compartments are in the same car. The first-class French or Italian compartment has seats for six people, three on a side, with an arm between the seats so that each passenger is assured his due space. It is a little wider than the second-class compartment, giving more foot and leg room.

The second-class compartment has one undivided seat along each side and is supposed to hold eight people. Invariably it is upholstered in a color different from that of the first-class compartment, which, after all, is the chief physical distinction between the two classes. True, if both compartments are filled to their capacity you will have somewhat more room in a first-class than in a secondclass; but the difference is hardly worth quarreling about.

Your actual bodily comfort in either compartment depends entirely on how much room you have, and there is no certainty that you will not have more room in a secondclass compartment than in a first-class.

For example, the most comfortable ride I had in France was from Boulogne to Paris. My ticket was first class; but, as it was a train to meet an English boat, nearly everybody else had first-class tickets. The porter dutifully conducted me to a first-class compartment that already contained four passengers and their bags, two of the passengers being women. As there was no sign to the contrary, I should presumably be permitted to smoke; but smoking in the faces of two strange and elderly ladies, whose faces somehow did not seem to go well with smoke, was hardly agreeable.

Farther on in the same car I found a second-class compartment with nobody in it and took possession. The conductor gently remonstrated with me for riding in a second-class compartment when I had a first-class ticket; but as I refused to move he gave it up with a resigned shrug of the shoulders which was eloquent of a long experience in dealing with American insanity. So I had the compartment to myself all the way to Paris and could never ask for a more comfortable journey. How much my social standing may have suffered I did not stop to inquire.

It was the social system and no idea of comfort that led to the adoption of compartment cars in Europe, and it keeps that type in vogue. First-class passengers must be carefully partitioned off from second-class, and second from third. Of course, having adopted that style of car, Europeans fatuously endeavor to defend it on the ground of comfort. They say their first-class carriages quite equal in comfort our parlor cars, but no impartial man from Mars would admit the claim. In freedom of movement and independence of other travelers our parlor cars have a decided superiority. You can sit in a parlor car all day and hardly be aware that anybody else is on the train; but you cannot sit in a tight little compartment with three or four strangers without being almost constantly aware of them. It is impossible for them to speak without your hearing every word, and one of them can hardly move without your knowing it.

Your first-class billet is mostly a lottery ticket as regards comfort. You are not invariably sure even of a seat. While I was in Paris a friend came in from Cologne. He had a first-class ticket, but until some one got out the only place for him was on a little folding seat in the corridor. True, in France you may assure yourself a seat by having one registered in advance for a fee of a franc. The regulation of the government railroad is that if the seat is booked by telephone, telegram or letter it must be paid for and taken thirty minutes before the train starts. If it is booked personally and the fee paid at the time it must be occupied at least three minutes before starting time, but it is generally impracticable to register a seat except at the train's point of departure; in fact, it is not very often done anywhere.

Whether your compartment is first, second or third class, it is quite sure to be filled with as much hand baggage as it will hold, and everything, from a jewel case to a shoe-box, comes under the designation of hand baggage in Europe. Whatever a cab will carry and a porter can shove through the car window or door is entitled to transportation in the car. The reason, of course, is that the railroads everywhere charge for the checking of all but the smallest trunks, and some of them charge for checking any trunk.

A trunk that would be carried free anywhere in this country cost five dollars and forty cents from Paris to Berlin, four dollars and eighty cents from Berlin to Lucerne, seven dollars from Rome to Paris, and so on, which helps one understand why European trains are heaped with luggage. Of course the railroads there derive no profit from their baggage charges, so far as native travel is concerned, for the native traveler with a hundred and fifty pounds of baggage would distribute it among several ponderous bags and cases, and pile those up in the passenger car, where it would be carried free. If only native travel were concerned no doubt European roads would soon adopt our more convenient method of hauling baggage free in a separate car, instead of hauling it free in the passenger cars; but those roads catch a considerable number of Americans, who are addicted to the trunk habit, and from whom quite a profit is derived.

I should mention that a solitary traveler on an international sleeping car can avoid the unpleasantness of sharing his box with a stranger by taking the whole compartment. "As a general rule," says the company's book of information, "a passenger desiring the exclusive use of a two-berth compartment must pay for two railroad tickets and two sleeping-car tickets." There are certain exceptions, applying only to first-class passengers. On the North Express, for example, one may have exclusive use of a compartment by paying one sleeping-car fare and a half; on the Paris-Barcelona Express, by paying two sleeping-car fares—in both cases only one railroad fare being required.

#### The Steep Fares of Southern Europe

THE minimum cost of travel by this de-luxe system, however, is quite high enough for ordinary taste without spending anything extra for mere comfort. Outside of Germany and Austria-Hungary, to ride de luxe you must hold a first-class railroad ticket, and first-class fare is high everywhere in Europe.

Excluding suburban business, first-class fare in the United States probably averages somewhere round two cents and a half a mile—though I do not know of any exact statistics on the subject, as all passenger business is usually lumped together; but over a large part of the most thickly settled portions of the country, which naturally produce the most travel, two cents a mile is the rule.

French railroad fares are based on a sliding scale, according to distance. If you travel five hundred kilometers you pay slightly less for a kilometer than if you travel fifty. For the longer runs it works out a little over three cents and a half a mile for first-class fare and a trifle under two cents and a half for second-class. The Italian schedule is pretty nearly the same. Your first-class fare, then, is about eighty per cent higher than in those regions in the United States where the two-cent rate obtains, and twenty per cent higher than where the three-cent rate prevails. Generally the first-class fare alone comes to decidedly more than our first-class plus Pullman. When you add a sleepingcar tariff two to three times as high as ours you find that de-luxing is a quite expensive luxury; in fact, like some other expensive luxuries over there, it is mainly for foreign consumption.

Of course all this applies to privately owned roads as well as to those owned by the state; in fact, as I mentioned in a former article, the finest train in France is on the state railroad, a new suburban service running twelve miles from Paris to Versailles. The aisle is in the center of

The Grandaddy of Our Modern De-Lune Trains

### DISCARDS By IDA MAY EVANS

BY THEIR signs ye may know them. The signs of a staidly flourishing small town of the Middle West are six. First is the tall red standpipe on the hill, which furnishes water to the town. Second is the prominent confirmed bachelor, more or less young, who sits in the real-estate or the insurance office his more hustling father bequeathed him and gives expectation to the town. Third is the leading druggist, who waxes fat under perennial suspicion of owning the most prosperous blind tiger between Kentucky and South Clark Street, Chicago. Fourth is the smart young wife of the leading merchant—he is not so young-who sends to Kansas City for flowers and a four-piece orchestra for her affairs.

At these affairs—which, calling on Bertha M. Clay's word-palette for aid, can be described only by that verbal ocher, recherche—the brightest ornament is the prominent bachelor. And

there is always an indefatigable rumor that if this gentleman had cared to interfere the leading merchant would not now be host at the recherché affairs. The inner circles of the Ladies' Aid Society expect something to happen yet!

Fifth is the more or less pretty daughter of the leading banker. And sixth is the elderly maiden, who was kept company with for many years by one of the town's promising young men, finally dropped by him like a stale radish, and who since has given the old men and the little children something to talk about until Death—"the great silencer" claims them for his own.

Rudolph Warner sat in the neat real-estate office his father had bequeathed him and, with corpulent legs languidly crossed, looked out at Main Street. Sixteen of his thirty-five years had been spent with languid crossed legs in a more or less interested survey of that thoroughfare. At present the street and the air above were white snow-sheets and hence not excitable to vision. Boredly Mr. Warner reached for a package of chewing gum on his desk.

With care he was selecting the pinkest fragrant stick when the door was flung open, letting in a slap of cold air and an oldish girl. Rudolph looked up, grunted "Howdu-doo?" and went on selecting gum.

And by that slighting reception Cora Kaley's slight social position in Jannsville was defined—for, had it been Louise Brown, the plump blonde daughter of Brown, of the City National, Mr. Warner would have dropped the gum, uncrossed his corpulent legs in a twinkling and sprung up to brush the snow from Louise's brown plush-and-beaver coat—and this in spite of a faint distaste for Miss Brown's frequent incursions to his business quarters.

Bets had been on in Jannsville for several years as to whether Louise would land Rudolph. And Jannsville rather reproached him. Louise was a nice girl and almost pretty. A trifle overweight, perhaps, and more than a trifle egotistic. But do you expect a wife to have no drawbacks at all? Yet, in the moment of reproach, Jannsville felt a pride in harboring so fastidious a male.

And if it had been Mrs. James Todd, the clever young wife of Todd, of the Leading Drygoods and Ladies' Cloaks and Suits, Rudolph Warner would have scrambled up in half a twinkling, pulled off her sealskin coat and hung it on the radiator to dry, and urged the whole package of gum on her. When Mrs. Todd had been Lill Connors at the high school the odds had not been in favor of Louise. It was pretty generally known that James Todd would have had hard sailing had not Lill been piqued by Rudolph's dilatoriness.

The town blamed him severely. Lill was a nice girl and as pretty as pink plum jelly—a bit malicious of tongue and laugh, perhaps; but there are worse faults. And, though James Todd made an excellent husband, being hard hit by the income tax and more than willing that the Weekly Democrat should have frequent occasion to accuse his wife of recherchéness—two virtues not often found in the same husband—Jannsville was sympathetic to Lill.

But Cora Kaley-poor, poor Corry! No one expected Rudy Warner or anybody else to spring gallantly up at

Cora Had Been Stunned Into Inaction by the Fight

her entrance. When Kel Holmsted, four years before, left Jannsville and her, she had forfeited all claim to Jannsville's respect. Six years had Kel kept company with her—taken her to parties and the dances at the armory; eaten supper every Sunday evening with her and her mother. Then, when lengthened time made marriage expected imminently by Cora, her mother and the town, Kel discovered that Jannsville offered only middling prospects to a young man of his caliber. The best held out so far was the sociably pleasant but not lucrative clerkship in Meck's Cigar Store.

Most people did not consider Kel much, in spite of silky yellow hair and a handsome white forehead. His father was an unprosperous blacksmith; his mother was notorious for her ragged dishtowels. With such antecedents Kel was thought lucky to get a nice, steady, capable girl like Cora, who, besides entertaining him in the six years, had worked a steady way from the rural school to Jannsville's first grade; then to its third; then to penmanship instructor of all its grades. At least Jannsville thought him lucky—until he made it plain that he did not want her.

And immediately Jannsville knew that it had known all along that Cora was poor stuff. And my! she looked lots older than twenty-four! Jannsville hastily hunted dates for comparison and counted back. Her father had been dead nine years. Was she only fifteen then? Yes. Her mother had stretched the insurance money until Corry was old enough to teach. Well, anyway, she looked older. Kel lingeringly kissed her when he left and made her promise to write to him real often. Kel was good-natured.

Jannsville waited eagerly. Bets in Meck's Cigar Store and opinions in the church parlors were ten to three that Kel Holmsted would run out of postage stamps, so far as Cora Kaley was concerned, before six months went by.

A week after he left, the white-goateed postmaster reported one postcard. It said that a letter would come later; he was tired traveling on the train—excuse leadpencil. Nine days later came a letter. Cora did not open it while the mailman was at the gate.

Well, Jannsville, whatever its failings, had perspicacity. A few bets were too extravagant, a few opinions too farfetched; but at the end of eight months Uncle Sam's mail service was not burdened by any missives for Miss Cora Kaley. The last that came was a tinseled view of Butte, Montana. It hoped that Corry and all were well. He himself was enjoying good health. So-long!

Jannsville laughed dryly—in cigar store and in church parlor. Jannsville did not know as it blamed Kel. Maybe she had been sort of pretty six years back—for folks who like that white-skinned, sharp-chinned style. Once, in the gushy romanticism of the third year of high school, Kel, in a composition, had described her: "Hair like melting ebony, eyes the soft gray of dusk, and cheeks of winsome apple-blossom pink—too pale for red, too colorful for white." Every one had at the reference and reported it to Cora who had been supple-blossom pink—too pale for red, too colorful for white." Every one had at the reference and reported it to Cora who had been supple-blossom pink—too pale for red, too colorful for white." Every one had at the reference and reported it to Cora who

When F sticed that her nose was as sharp a cek was separated from her

mouth by a temperish furrow—signposts of crankiness and old-maidhood. And her expression was strained—as though only a strong will held back spleenful outbursts. Jannsville parents remembered how often in the past their offspring had complained that Miss Kaley was a cross old thing, always making scholars write their letters over.

Scorn is a freak weed. You never know when a big crop has grown to mature leafage under the surface of daily mentionings, ready to fling forth widespreading verdure whenever that dry surface is raked by an untoward hap pening. Cora held her hear high; but every one saw that she was soured and cranky and getting old.

And young Jannsville de spised her, even though i labored under her instruction; but, though it despises her, it sniveled, rubbed whimpered, erased and madits m's and o's as painstak ingly perfect as grubby, toil ing young fingers could make

them. Miss Kaley did not coax the young idea to shoot She tweaked its ears. Mean old thing!

Young Jannsville was glad "her feller run off an wouldn't marry her! Who blamed him? Gosh! She neve would believe a feller couldn't help gittin' inkstains all ove his copybook!" And young Jannsville often yelled thes sentiments after Miss Kaley on the street—whenever a adjacent alley furnished a chance to duck out of sigh before her gray eyes got the identity of the yeller.

Older Jannsville said resentfully that she need not tak her spite out on poor little innocent children, and suggeste a change in penmanship instructor. The school boartalked it over. Professor Blayne, who had been superin tendent for eighteen years, pulled at his graying mustache scratched his graying head with an impatient green penciand dryly advised that she be retained. She was competent. He and the board had been pestered by severs incompetents before her.

The board was accustomed to take his advice. And of Mrs. Graham, with whom the professor had boarded those eighteen years, chirped broadcast that he said he had never yet heard of a child dying of a tweaked ear. So Jannsvill laughed and good-humoredly decided that, since Corry has to support her mother, it would be a shame to take the position away from her.

Poor Corry!—they laughed it again; for Kel, meetin itinerant fellow townsmen, gave them to understand the he would never be back. Tell Cora she was perfectly fre so far as he was concerned; and Kel grinned while he sai it, and added immediately that Corry was a good girl an a nice girl —

"Nice old girl!" one fellow townsman had insinuate merrily.

Kel admitted that she was getting along in years. Seve or eight years and eighteen do not make twenty. Ke kindly hoped, though, that she would marry some alright chap. As for him, he did not care to settle. And he winked at the fellow townsman, who winked back; an then they had a drink together on the foolishness of olgirls anyway.

So, bearing all this in mind, it would have been foolis to expect Mr. Warner to hop gallantly up and whisk the snow from Miss Kaley's black cloth coat and small black felt hat. He merely looked up for her to state her business which she did with concise brevity. She and her mother wished to sell the cottage that had been their home so long and she had come to list it with him.

"Leaving town?" uninterestedly asked Rudolph as he

noted: "Six rooms; lean-to; cellar; big yard; come Hill Street and Fourth Avenue—nine hundred dollars."

"Maybe!" briefly watching his languid pencil. A snowflake dropped from her hat and melted on the side of her nose. With a black-gloved hand she irritably wiped it away. "Don't waste time!" impatiently. It was the same curt impatience of voice that was so efficacious in winning the lovely curls of capital S from stiff, uncuring young fingers. "This is January; February, March. School lets out the first of June. I'd like it sold by April."

"Well, we'll do our best," lazily. Rudolph was addicted to the royal we. "But not more than a million people a week are looking to buy in Jannsville, you know!

Mr. Warner's pleasant smile stamped this as pleasantry such as the ethics of business courtesy entitled even Corry Kaley to. She did not smile appreciation of the merry quip. She looked Mr. Warner over, from his large, smoothcombed brown head to his large brown-leathered feet. Down in the third grade any eight-year-old wielder of the slippery penholder could have told him that such a look meant: "Don't you dare tell me that's the best you can do!" And the third-grader would have warned Mr. Warner to look out or he would get shaken until his chin jabbed a hole in his shirt.

However, Mr. Warner was not of the grades. He closed his notebook, yawned and unwrapped another stick of gum, meantime tossing off politely:

"We'll miss you from our midst, Miss Cora."
"Will you?" Miss Cora's voice was dry. She added as she turned to go: "Mother heard at last week's meeting of the Ladies' Aid Society that the new barber was looking ound to buy. You might see him first."

"Why, yes; I will," agreeably. "I hadn't heard; but dare say he would be thinking of buying. Got quite a amily, I believe; and rent mounts up." And Mr. Warner houghtfully chewed up another crackling pink stick.

"I'll drop in day after to-morrow to see what you've ione," said Cora, and got briskly out before the startled Rudolph could tell her that real-estate business was not ransacted with such tempestuousness.

"Huh!" he grunted displeasedly. "Does she think I'm whirligig?"

His displeasure was cut short, however. Mrs. James Fodd fluffed in, snowed-on, gay-eyed and breathless. She and passed Cora on the pavement, and the two had achanged the casual nods of women who came up from irst grade together, but for several years have seen each ther only on Main Street and at church.

"Oo-ooh!" she shivered.

Rudolph sprang up so speedfully that his gum slipped rom tongue tip to throat and he had to pause to cough it ip. Then, with his bare hands, he whisked the snow from drs. Todd's sealskin coat.

"Why don't you stay home, where it is warm?" he

olicitously demanded.

"I came down to see you!" declared she; but it was not n affectionate declaration. It smacked of belligerency, and he took a chair with the air of a lady prepared for arguzent. Mr. Warner sank back in his own swivel leather omfort and chewed gum industriously-one might almost hink uneasily. "I want to know!"

Mr. Warner rudely interrupted:

"If you want to know who's going to lead the grand arch of the dance given next week by the Civic Beauty lub for that darned old gladiolus bed in the public quare-why, I can tell you right at the start. It won't

"It will! You've got to! Why won't you?"

As the angry sentences hurtled at him Rudolph Warner isibly cringed; but he defiantly repeated: "I won't!"

"You shall! lease, Rudy!" Mrs. odd entreated. No one looks so rumptious as you t the head, espeally the last few mrs."

Her eyes, beautilly big and brown, vinkled as they eneated.

Rudy stiffened. uring the last few ars he had taken iconsiderable flesh. e was not obtuse nd he did not cribe that twinkle admiration of his anly form. Lill id a mean habit of aking fun of folks their faces, which as one reason, ough nobody but udolph knew it, at she was Lill odd and not Mrs. arner.

"I won't!" flatly. For fifteen years re led every dogned grand march this doggoned wn. And I've uck! It's -"You lazy -

"I'm getting old and fat," imperturbably. "And Carl Lowry is de-lighted to take my place. I've spoken to him and it's all fixed up, my dear girl."

Lill regarded him sulkily. To her and Janusville the chief event of every year was the midwinter dance. Sheand others-began in July to plan a gown for it. James Todd—and others—got pop-eyes every New Year at the mighty price tag one frail gown can carry. For months before and weeks afterward Mrs. Todd, as manageress, moved in a glamorous atmosphere of authority and style. She took a slam at the dance as personal.

"Carl Lowry," coldly, "couldn't lead his grandmother in out of the rain!"

"He took four tango lessons in Kansas City last week," insinuatingly.

She brightened.

"Did he? I must get him to teach me! But," this spitefully, "won't Louise rave when she learns her embroidered gold crêpe -

"She needn't," generously; "Louise goes with the lead."

Mrs. Todd laughed unkindly, considering that she and Miss Brown were dear friends.

"She's a nice girl," reproachfully; "and a sweet girl."
"Too nice for me, I sometimes fear," amiably. "And"— Mr. Warner hesitated; but there were passages in the past that made for confidence between Mrs. Todd and himself—"as sweet as a fat apple dumpling."

"Shame on you!" Lill reproached; but she laughed. "If she'd lift those fat heels when she walks instead of sliding 'em along!" Anxiously: "But you'll be in the march? Please! I want it to be a howling success this year!

Rudolph stretched lazily. He had heard her voice that same want many previous years.

"Oh, I'll tag along somewhere," carelessly.

"With whom?" demurely. "If Carl has Louise at the head

"Oh, I don't know-don't care!"

"Ethel Brake?" Lill's eyes were guileless.

"Good Lord, no! Louise would have a fit. She thinks

Then the most prominent bachelor of Janusville broke off in confusion, having said eight words more than he cared to say to Mrs. James Todd. Lill's laugh rang.

"My dear man," she caroled, "some day you'll fall off that fence you straddle so carefully. And oh, the bump you'll get!"

It was Mr. Warner's turn to sulk.

"Anyway, dances are a doggoned bore," he grumped; "and I wish folks with nothing to think about but clothes and places to show their clothes would give the town a rest for a while."

Lill huffily quit laughing.

"Well," tartly, "whom will you take? I don't know who's left, except"—she laughed, recalling whom she had met on the pavement—"Corry Kaley."
"Maybe I'll take her!" sulkily. "Wouldn't she be sur-

prised-and tickled?" Conceit plastered his sulks.

'She might turn you down!" carelessly.

Mr. Warner laughed.

"No one ever yet refused me," he puffed, and looked straight at Mrs. Todd. She would remind him he was fat, would she?

Lill's under lip drew up contemptuously against its mate. That complacency of conceit was one strong reason, though no one but herself knew it, that she was Mrs. James Todd and not Lill Warner. She looked straight at

"There is something in being careful not to give folks a chance to refuse you," she retorted sweetly. And as she left she reflected: "I must say I prefer James to him!"

"Must say I prefer Louise to her!" reflected Mr. Warner comfortably.

And then he rejoiced in that clever idea of using Corry Kaley to glaze a rasping social predicament. Good! He had not known his own brightness! From now on he would make a point of gallantry to the ineligibles of Janusville femininity. Next time he would take Miss Addicks, the rheumatic, wrinkled dressmaker. Louise could not say a word! Ethel could not say a word! Lill could not say a word!

And so a week afterward, while Jannsville suppressed a smile, Corry Kaley stepped by his side in the grand march

parade. But since she was only Corry Kaley-a pitied bit of discard—there was no prelude of gallant flummeries such as are usual at such times. Had she been Louise, Mr. Warner would have engaged the livery stable's best hack two weeks beforehand, and would have seen that its cushions were dusted clean and its wheels washed spotless for Miss Brown's gold crêpe gown to make the journey of three blocks that lay between the Brown mansion and the armory. Likewise with Ethel-except that he might have passed up the wheel inspection. And had it been Lill, he would have sprinted to speak first for the town livery's treasure of treasures, a second-hand taxicab. Lill was not too backward to scream outright that she wouldn't put a

In Spite of the Overture You Could Have Heard a Pin Drop at That End of the Armory

### The Meeting Place in Summertime

#### Is Around a Dish of Puffed Grains

Every morning, countless families are now meeting around a dish of Puffed Wheat or Puffed Rice. Some eat them with cream and sugar-some mix them with their fruit.

Every evening, legions again meet around Puffed Wheat or Puffed Rice in milk. At supportime or bedtime these dainty morsels form an ideal good-night dish.

At noontime, Puffed Wheat and Puffed Rice form the welcome luncheon. At dinner, they are scattered like nut meats over the ice cream. In the afternoon, girls use them in candy making, and hungry boys when at play eat the grains like peanuts.

The millions who do this know the utmost in a cereal-food delight.

#### The Perfect Foods

Prof. Anderson, in these puffed grains, has created the perfect foods. Here, for the first time, all the food granules are broken. Digestion can instantly act.

Inside of each grain there occur in the making a hundred million steam explosions. And the airy morsels which result are the bestcooked foods in existence.

They are foods for any hour. They never tax the stomach. And every atom of food value has been made available. No other method has ever created such ideal foods as these puffed grains.

## Puffed Wheat, 10c Except in Puffed Rice, 15c West

In the hot days coming-when you want to save cooking-when you want cool foods, easy to digest-serve a wealth of Puffed Wheat and Puffed Rice.

Serve them as breakfast cereals, as dairy dishes. And use them like confections, for the taste is like toasted nuts.

Each puffed grain has a different flavor. But each is crisp and bubble-like and thin. Each is a dainty which everyone enjoys. Each marks the limit in good food.

Serve them both. Order a package of each from your grocer, then let the children vote on which they like best.

#### The Quaker Oals Company

Sole Makers

delicate white charmeuse satin train in a dirty seedy hack for any man! But Cora

Rudolph waited until the night of the dance, until the dance was in full swing, unfance, until the dance was in full swing, until couples were already taking their places for the grand march, before he sought Cora in that end of the armory which was roped off for the mere spectators—the hot polloi, as Mrs. James Todd termed them in her high-geared moments.

Hart Lowry, only child of the leading druggist, was more tolerant. He was a tall-hored youth, with ever like role golys of

boned youth, with eyes like pale gobs of faded blue calcimine, whose gaudy neckties and gaudier footgear made up for Jannsville's lack of an art gallery. Janusville knew very well that the profits of less necessary stuff than drugs procured that costly gaudiness; but art is art, whatever its source, and only a few spiteful folks discussed grand jury action.

Hart had once read a volume of Balzac clear through; and he held that the bourgeois had a right to live. "You gotta have different classes," he rebuked Lill, "or there wouldn't be no such thing as society

To which Mrs. Todd sniffed that she s'posed so; but she wouldn't dance on the same floor with any barber on earth!

Cora was sitting with her mother and old Mrs. Graham, who had given her boarders a four-o'clock supper in order that she might have plenty of time to squeeze into her blacketamine. Almost all Jannsville was grouped round. Miss Addicks in cracked, green taffeta; her apprentice scared in white lawn. Farther away the barber was stiff and tongue-tied in brown cheviot and brown piqué gloves; his wife, in light gray pongee, overskirted with shadow lace, tapped longing toes to the music.

The Baptist preacher was not there. He was at home writing a sermon on the seductiveness of modern society; but Professor Blayne was there, in his Sunday shiny black broadcloth, with his graying hair rumpled up because he had just run angry fingers through it when old man Haydy, beside him, got personal over the impersonal sins of the Republican party.

Rudolph made his leisurely way through the groups, nodding pleasantly at wrinkled Miss Addicks, who fluttered at the honor;

apologized for treading on Professor Blayne's wide black toes in an awkward effort to avoid knocking Mrs. Graham's wide blacketamined knees, sat down beside Cora and remarked genially that he thought a deal was in process of making, and by the way, was there a cistern?

Cora broke off in a terse sentence to old Mrs. Graham concerning the absolute unregeneration of Louise Brown's fourteen-

year-old brother.
"Cistern? Oh!—our cottage? Yes—cement-lined."

"That's good," said Rudolph. And then, after a fling at the weather, another smile at Miss Addicks, a good evening to Cora's mother and another to Mrs. Graham, and a friendly nod to Professor Blayne, he carelessly and casually asked whether he might

have the pleasure of Miss Cora's company in the march just forming, unless she were

already engaged.

In spite of the booming overture you could have heard a pin drop at that end of the armory. Cora had half turned back to continue her conversation with Mrs. Graham. She jerked round in open-mouthed amazement. Her mother jumped. Except by a very natural temperishness, Cora had never betrayed that she writhed over Kei's defection; but her mother had never attempted to disguise her maternal shame.

Such defection is hard on a mother in a town where society and marriage call for Roman script. Was it possible that Corry might again be kept company with? You could hear motherly hope in her excited breathing. Professor Blayne quit talking and looked mildly amused. Under his graying mustache there seemed to hover a con-

ing mustache there seemed to hover a congratulatory smile.

Old Man Haydy leaned forward to hear again what he had heard but could not believe he had heard. In his old peaked face was the light of avid curiosity.

Cora murmured "No"; but her mother gave her a push, and so did old Mrs. Graham. She stood up. Perhaps in that curious, eager, hoping atmosphere she judged it easier to accept than to refuse the careless casual invitation. She partly turned, me though in apology to some one of the group, or as though for permission. Her mother or as though for permission. Her mother beamed it; old Haydy beamed; Miss Ad-dicks beamed; Professor Blayne beamed; old Mrs. Graham beamed. A fine, faint pink came over her sharp-featured white face, softening her—making her younge, Rudolph Warner afterward remembered. Or was it the proximity of wrinkled, yellow Miss Addicks that rubbed off some of her years.

And he afterward remembered that she

had had on a very becoming dress.

Through the koi polloi of spectators and down the grand march, which was to Januville as the golden chariot races were to Rome in its prime, twittered amused conments; but the twitter was not hysterical.

Every one—except perhaps Cora's mother—knew that Rudy did not mean anything.

Every one, though, knew it in a different

Cora knew—then and afterward—that a careless casual bit of courtesy had been interpolated in a business chat. Louis knew that Rudy did not care for any parlan but her own sweet self. Cora was noboly Ethel Brake pettishly knew that he ha altogether misconstrued her meaning wies in a thoughtless moment she had wished that grand marches could be left out. She hated them.

Mrs. James Todd knew that he was reminding her of the nasty dig that he had given her the other day, "Conceint thing!" she sniffed; and at home that night she kissed Mr. Todd so tenderly that neurologist might have wondered whether regret, pique or self-reassurance of fidelity prompted the affectionate tribute.

Mr. Warner attached no significance in the event except as an item to be related

grinningly over the breakfast table the next morning to his mother. And there would have been no significance attached by any one—except perhaps Cora's mother—had not Lill Todd a week later been hard pressed to fill out the five pages of corre-spondence that friendship with a married schoolmate in Kansas City exacted from her monthly.

Like most talkative people, Lill loathed letter writing. She groaned at the labor of remembering interesting items and jotted them down in hodgepodge connection. And so, merely to start a page, she men-tioned that Rudy had Corry Kaley as partner in the grand march of the midwinter dance.

Jenny, the married schoolmate, remem-bered Cora as a pretty, self-contained girl— not as discard. She knew that Rudy Warner always led the grand march. She interpreted the news as significant, and passed it on with her interpretation. And so in less than two months, through the mouths and pens of five or six more or less inter-pretative people, it finally reached Kel Holmsted, who had wandered far and wide without locating the prospects that Janns-ville had not offered.

Kel was surprised. He had always pictured Corry as patiently teaching school and waiting until he should return—which he had no intention of ever doing. Why, Corry was old! She had been old when he left! Well! Well!

Now it happened that when Kel heard the news he had been homesick for some time—if a lazy, calfish, forlorn feeling is entitled to insult that decent, sad word. And for some time he had rather resented the fact that Cora Kaley, so to speak, kept him from going home. He had wished that she would move away so he might re-turn. He took the news of her engagement

turn. He took the news of her engagement to Rudy as a glad removal of a barrier.

And—by jingo!—Corry had done well for herself! Kel had always trailed along in the pale orbit of conquest that lay outside Rudy's glowing center; and, despite a very fair opinion of his own desirability, he knew that, matrimonially considered, Mr. knew that, matrimonially considered, Mr. Warner outclassed him as Jannsville's one taxicab outwheeled its hack. Corry was a lucky girl, by George! He would congratulate her! He wondered, though, what Rudy saw in her. She had been sort of pretty years ago, before she got thin and oldish; but no style—not a mite! Maybe, though, she had perked up. Well, anyway, he would go back; and he bought a ticket and started. and started.

Helena, Montana, where Kel happened to be when he bought his ticket, is a long journey from Jannsville. So many days on a train gives you time for thought—doubledover, crisscross, labyrinthic thought. Kel's mind traveled the usual backing, circling, winding paths pursued by a certain grade of masculine mind when it learns that the fruit it threw away as specked or vapid has been picked up by a connoisseur and adjudged of rare delicacy

The first day, Kel framed congratula-tions to Corry. The second, he wondered, with mirth, how she had landed Rudy. The third, he wondered—without mirth. The third, he wondered—without mirth. The fourth, his mouth curled cynically. And all this time he had been under a delusion that she cared for himself! He had even felt sorry for her. Huh! Guess no man need waste pity on a woman! What fickle things women are

On the fifth day Kel Holmsted wrapped himself in aggrievement, like an abandoned orphan. And this was the tenor of his thought: Oh, faithfulness! How art thou departed from this earth!

The sixth—why, certainly! He was the injured party—had been all these years! She wrote only two letters in reply to that last postcard, and a girl who thought anything of a man would have feared that those two might have miscarried and she would have written to find out whether he got them. What good coconut-cream pie her mother used to make every Sunday! Kel's mouth watered. Montana—the part he knew—was as shy of good pie as of coconut trees.

On the seventh day, however, Kel nobly and sadly decided not to interfere—unless his feelings overmastered him at sight of the guilty pair. Under the nobility of resolution lay a fear that his feelings would be unmanageable.

Meantime Rudolph had not sold the Kaley cottage. He was out of town a week or so, at home with a cold a week, out of town again for a few days. On his return he found a curt note. What had he done?

THE SILENT INDIAN COM

Rather irritated, on his way home to dinner that evening he stopped to tell Cora that the barber did not think cement-lined cisterns were healthful. Back in Ohlo he had been raised with a slime-lined one—and good old-fashioned things were good enough

Cora's mother opened the door. She fluttered obviously at Mr. Warner's appear-ance. Effusively she showed him into the small parlor, where Cora was correcting school papers, and then almost tripped in her obvious haste to get out of the room

and not intrude on her daughter's prospects.

Mr. Warner stared a little at Cora. Somehow she was not the same as the prim, hurrying, black-garbed woman he knew elsewhere. She had on a loose white house dress, and at the moment of his entrance she had lazily stretched her arms up back of her head. The relaxed attitude or the soft dress made her seem younger and softer-featured. And he was positive she was smiling as he came in—a soft, happy, perky smile—with her eyes fixed on the school papers, which surely were nothing to smile at. Then her arms fell down; she rose, and somehow, though he could not remember the exact moment of the transformation, she had all at once become the oldish woman with whom he was familiar.

Her first words were ill-tempered:

"Idiot!" For a second Rudy Warner actually thought she meant him instead of the barber. Then she demanded: "Well, have you any one else in view? It is an excellent little house," with an appraising glance round the room; "and if I weren't leaving town it wouldn't go so cheaply."

He said he had not heard of any one who was thinking of buying. Cora Kaley looked

was thinking of buying. Cors Kaley looked at him. The look snapped:
"Why haven't you?"
Rudolph drew himself up offendedly. Good gracious! The woman evidently thought be ought to run his legs off to sell her diable size hand and her diable size hand and her diable size hand and her diable size hand a life. her dinky nine-hundred-dollar house! He guessed he would tell her he did not care to

"Of course, if it is too much bother," she cut in unpleasantly, "I'll list it with Elliot." Rudolph Warner was not thin-skinned,

at least where such as Cora were concerned; but a pachyderm would have felt the sting of her tone. That tone had been spiraled and pointed on every small bad hoy in Jannsville, and it knew just how to wriggle a hurting way under a fellow's hide.

Mr. Warner blinked. Was she calling him lazy? Mr. Warner said warmly:

"It takes time to sell property, my dear Miss Kaley. Handling real estate is not like—like"—he grabbed at a rebukeful simile—"teaching children their A B C's." That was designed to put her in her place.

Designs gang oft agley. Miss Kaley did not seem to be put any place. She shrugged her thin shoulders—rather, she jerked them. Rudolph had never seen a mere shrug so at least where such as Cora were concerned;

Rudolph had never seen a mere shrug so aquiver with rudeness and skepticism. If he had not been Rudolph Warner he would have reddened. As it was he felt a distinct heat wave travel that line of his neck pressed

heat wave travel that line of his neck pressed by the top of his low collar. He had worn low collars for two years—high ones hurt. "I am doing my best!" he snapped. "Jannsville is not a booming town——" "Far from it!" resignedly. Mr. Warner, being a leading representa-tive of the town, was angered by that. Of course it was not much of a town. He had collivened many dull hours in his office chair enlivened many dull hours in his office chair by calling it unnice names; but Cora Kaley should not cavil! She belonged to that class of earth whose rightful heritage is boomlessness not that his distinction be-tween himself and her lay clearly defined in his mind, but the gist of it swelled his sluggish thought centers.

"Oh, there might be worse!" he retorted.
"There might!" she agreed. Doubt en-

"You may miss the town when you get away," he told her. "It is hard to pull up stakes when you've lived in a place all your life." He spoke as one who had clung to dear old associations at the cost of soulracking ambition.

Cora Kaley looked at him exasperatedly.

When she looked at a youngster that way it cringed and hastened to whimper: "Honest! I didn't — "And Rudolph Warner cringed under the look. He sensed a verbal

tweaking.
"Sometimes stakes rot and fall down of

themselves," she tartly flung at him. "I "Is I won't pine and die away from Janus-!" Somehow all the bitter, aching, temdi resentment of the past years was ng out naked by the two tart sentences.

Rudolph wriggled. Really it was not de-cent—parading her misery like that. What if she was soured? It was not respectable to tell every one! He edged toward the door. First thing he knew, she would be edging toward him for sympathy. It was a relief to him that Professor Blayne should step in at that moment, with a hasty: "Got those test papers corrected yet?"

"Try to do something next month," she

called crossly after him.
"Won't if I don't feel like it," Mr. Warner childishly muttered to himself out on the sidewalk. "She's more domineering than Which, though Mr. Warner did not realize it, showed that Cora had risen considerably in his estimation. Never before had she been compared so honorably by

him or any one else.

He did not do anything that month—reason: Nothing to do; so he coldly told Miss Kaley some five times, when she waylaid him at his office or on Main Street. Jannsville was no more inclined to buy a cottage than to finance an expedition to the South Pole. Then he spent eight days in

The afternoon of his return Mrs. Todd met him in front of her husband's store. She was giggling. Her pretty eyes were aglow. Her face crinkled impishly. He laid her bubbling gayety to her new spring attire—a brilliant green broadcloth so lownecked that Jannsville had expected for a week to hear she had pneumonia and was ready to say it served her right. He learned that her gayety was not self-inspired. "Have you heard?" she giggled. "Kel got back two days ago!" "Kel Holmsted?" uninterestedly. "Fiz-zled out there?"

zled out there? "Oh, I don't know; guess so," as though that were of no importance. "But what do you think? He's grumpy because you cut him out with Corry Kaley!"

And Lill's laugh rang out in so earsplit-ting a cascade of glee that several chronic Main Streeters looked round and thought to themselves:

"There's those two together again! Jim Todd better watch out! Something'll hap-

Rudy stared uncomprehendingly at her. "What in Sam Hill are you talking

about?' He heard about the grand march and

Again her thrill of mirth sent scandal down Main Street. Rudolph took the news as dumfoundedly as a hungry laborer would take a live chicken from his dinner pail instead of the expected hard-boiled egg.
"What!" And then he laughed so hard

and long that the chronic Main Streeters edged up in a body to hear what it was about. And this is what they heard, as soon as Rudy could control his mirth enough to articulate: "Well, what kick's he got coming anyway? Staying away all these years! Did he expect to find her ready to

be picked up any time he came back?"
Two Main Streeters hurried over to the
drug store to tell old Mr. Lowry, who
chuckled it to Hart, who ran over to snicker it to Meck, who told Kel when he came into the cigar store an hour later. Kel heard it injuredly, but nobly.

"I know I had no right to expect her to be faithful. I didn't expect her to. I know," bitterly, "what women are. I sent back word that she was to consider herself absolutely free." He reached into the case for a stogy. "I had no prospects." His martyr-sad voice gave the impression that only manliness held back the tears. Broken-heartedly he walked out, forgetting

Broken-heartedly he walked out, forgetting in his grief to pay for the stogy.

After Lill gigglingly left him Rudolph had gone smilingly on his way, to be buttonholed a few yards farther on by Cora herself, who had seen him and had run across the street to intercept him. He looked at her with amused interest. Was she elated over Kel's return?

And then Mr. Warner got a distinct shock. Either he had never looked closely at her before or Kel's return had transfig-

at her before or Kei's return had transfig ured her. The sharpness had left her face. She was actually pretty! Like Lill, she was gay in new spring attire-a bright blue mandarin effect unlike her usual oldish modest garb; but it was not her dress, or the color the March wind had whipped into her face, or the snap in her eyes, that changed her. She had an air of vibrancy, an animation—a pleasant animation that underlay her physical aspect. She seemed on tiptoe with life. She looked happy! Rudolph Warner was disgusted. All for that dub!

#### Travel on "A.B.A." Cheques

'A. B. A." Cheques will relieve you of worry about the safety of your travel funds, simplify your calculations in foreign currency, save you the trouble and expense of exchanging money at frontiers and eliminate many of the petty annoyances which often mar the pleasure of a foreign trip.

American Bankers Association

### Cheques

are accepted exactly the same as currency by hotels, railway and steamship lines generally, and by the best shops, in every part of the world. They will be cashed by any one of 50,000 banks.

They are safe for you to carry because your counter-signature-which identifies you-is required to make them good and because they may be replaced if lost or stolen.

They are making travel money matters safe and easy for thousands of American tourists. They are the ideal funds for commercial travelers everywhere.

"A. B. A." Cheques are the only travelers! cheques accepted under the law in payment of U.S. customs duties.

#### Get them at your Bank

Ask for descriptive booklet. If your bank is not yet supplied with "A. B. A." Cheques, write us for information as to where they may be obtained in your vicinity.

BANKERS TRUST CO., NEW YORK

STREET, SQUARE,

records are broken and new records made. MMUNITION It was U. S. Cartridges that won the World's Championship at Bisley, England, during the Olympic Games of 1908; that again won World's Championship at Stockholm, Sweden, in the Olympic Games of 1912; that won the Pan-American Championship at Buenos Ayres in 1912 and that in 1913 won a list of prizes so long that it requires a special folder to list them all. The reasons for this superiority are not mere technicalities which only experts can appreciate-they are as plain as the nose on your face:-

Our priming charge contains neither mercury nor ground glass. These materials are hard to mix uniformly-you can see that. Besides, ground glass is not a good thing to drive rasping along the delicate rifling of your gun. Next, ground glass absorbs 16% of the heat. Our primer materials, being themselves combustible, actually increase the heat of the flame.

This hotter flame gives a quicker ignition, and, as our priming is a strictly chemical combination, it always acts uniformly. The absence of fulminate of mercury in the U. S. Primer protects the brass cartridge case from becoming brittle and weak.

The Government makes only cartridges with a non-mercuric primer. World's Championship Rifle Teams habitually use U. S. Cartridges.

Send Postal for Interesting Historical Booklet, "American Marksmanship" United States Cartridge Company Dept. S, Lowell, Mass. Makers of THE BLACK SHELLS

"I heard the barber is still looking," she began, without preamble. "Don't you think you can do something with him?" Entreaty softened her usual tartness of tone. "I told old Mr. Elliot; but it seems the bester out his chie one day and now the barber cut his chin one day and now

they don't speak."
"I don't like that," Rudolph objected—
"listing the house with everybody else!
Anybody would think you didn't rely on

Kel's return might have charmed Cora

into a certain youth and grace; but her into a certain youth and grace; but her temper was only laid away, not discarded. "Maybe anybody'd think about right!" she snapped. "It seems to me that Janus-ville offers a splendid opening for a bright, live man!" And she flounced off. "I suppose," choked Mr. Warner, "she thinks that addled Kel Holmsted is brighter and more alive than me!"

and more alive than me!

He stamped to the barber shop. The barber was busy and told him to come back

in the evening.

At the supper table that evening Kel's mother asked him rather uneasily whether he had seen Corry yet. She had not heard all that was being bandied about, but she had always felt that Kel was a trifle to blame in his treatment of Cora.

Kel said nonchalantly that he had not. Maybe he would drop round that evening. After all, he argued to himself, Rudy could not object to an ordinary call for old times' sake. He retired to his room and shaved. And if Rudy did object he would tell him a few home truths about treacherous friends. He hoped the fellow would be there.

Supper in the Holmsted home and dinner in the Warner home were served about the same time. Kel finished shaving as Rudy put on his overcoat to go down to the barber shop. The Kaley cottage was between the Warner home and the shop. Rudy came down the street as Kel went up the Kaley steps; and the imp of perversity or spite impelled Rudy to step up those steps right at Kel's heels. He argued that Cora would like to hear that the barber was amenable

to reason in the matter of cisterns.

Mrs. Graham was there. She had dropped in to ask Mrs. Kaley for some tomato seed; but she, as well as Mrs. Kaley, knew what was what and they both clat-tered to the kitchen to be out of the way. And Professor Blayne, who had dropped in to discuss a school matter, beat a quick retreat, his eyes twinkling, a decided smile hovering under his graying mustache; though Cora, her face pink, pressed him

to stay.

Evidently she had been expecting one or the other. Rudy assumed that it was Kel. She had on a new low-cut blue silk dress. Kel assumed it was Rudy. She had fluffed her hair high and prettily. "For that duf-fer!" each mentally exclaimed.

Then from seven-thirty until eleven Kel Then from seven-tairty until eleven Kein related the past, present and future of Montana, boring Rudolph, who unsuccess-fully tried to interject a synopsis of Janns-ville's doings, which bored Kel. At eleven o'clock Cora herself yawned. Each took that yawn to himself and sullenly went home; and each, as he went, sullenly despised her taste. That dub!

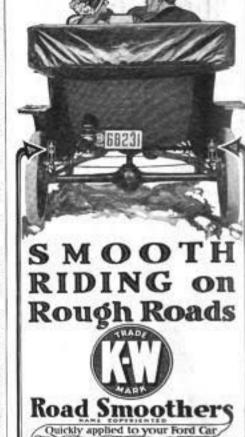

Either Professor Blayne or Mrs. Graham spread the news of the double call and its length. Between breakfast and dinner the next day Janusville buzzed with bets and opinions; and during the ensuing weeks not only Rudy Warner but all the town sat up and took notice that Corry Kaley was no longer the same woman. Somehow, sometime, she had gone back to the selfcontained prettiness, the softer features, the kissable pinkiness of her girlhood. Jannsville rubbed its eyes.

Of course it was Kel's return—so most

people declared—which had transconnented her and caused her to buy gay new clothes that almost outsplashed Lill Todd. It was others protested. Rudy no such thing, others protested. Rudy Warner was the man. Ever since he asked her to be his partner in that grand march, they now remembered, she had blossomed out like a primrose in the sun.

"I thought she looked terrible sweet that night before he asked her," Miss Addicks said. "I was watching her and thinking it was a shame ——" was a shame -

Old Mrs. Graham cut in with grim glee: "Well, the shame's biting Kel Holmsted now. They say him and Rudy pretty near came to blows in Meck's Cigar Store the other night. Kel was flinging round hints about two-faced, double-dealing fat scoundrels; and Rudy up and told him the town had worried along without him for a spell and would like to try it again."

### This Lubricant Puts the Kibosh on Friction

Oil or grease plus Dixon's selected flake graphite is as much better than oil or grease alone as oil is better than water.

Why? Because graphite gets at the cause of friction. No matter how highly polished a bearing may be, under the microscope it looks like the surface of a rasp file. Oil and grease cannot permanently fill up these roughnesses.

Dixon's selected flake graphite fills them, smooths them, makes a new oily surface that eliminates the grinding of this microscopic rasp. Heat or cold will not affect graphite. Pressure makes a graphite surface smoother. The harder it is used, the finer finish it develops.

### DIXON'S Graphite Lubricants

Some motorists speak disparagingly of graphite. We don't blame them. There are makers of graphite greases who think any graphite is a good lubricant. The fact is, Dixon's selected flake graphite is the only graphite that will not pack or ball up, because this peculiar form of graphite will not adhere to itself.

Some dealers do not recommend Dixon's Graphite Automobile Lubricants. Why? Because they can buy greases for 3c a pound and sell them for 25c. The profit is

We make high priced, high grade automobile lubricants. We sell only dealers who are in business to stay, who sell real service. They know and recommend Dixon's Graphite Automobile Lubricants. If you will go to such a dealer and buy a can of

Cora's mother grew proud, and she was much sought after. In response to pressure she told Miss Addicks and old Mrs. Graham—under the seal of secrecy—that she had heard Kel say one night as she passed the parlor door: "But I had no prospects!" And Cora had laughed: "And have you any now?" And Mrs. Kaley puffed with pride as she repeated what Rudy said the very next night as she was again said the very next night as she was again passing the parlor door: "I don't want to run the chump down behind his back, Corry; but that trifling, sappy, clod-pated booby isn't the man for you! Here for years other men haven't dared to pay you any attention because they supposed you belonged to him!" Lill did not believe that last. She went

to Rudy. "That old girl -

"I believe you and Cora went to school together," Mr. Warner coldly remarked; and then excused himself because the barber

and then excused himself because the barber was waiting to sign some important papers. "Well, I'll be ——" Lill was too much of a lady to finish it.

Thoughtfully she made her way to a luncheon given by Ethel Brake, where Cora was the guest of honor. Ethel was surrendering gracefully. Louise had declined to come, however. She was indisposed. After the luncheon Mrs. Todd dropped in to call on Mrs. Holmsted. Kel was at home. Lill laughed at him. laughed at him.

"I don't believe it!" she declared.
"What?" he mumbled, red-faced.
"That you refused to fight Rudy and won't meet him face to face!"

on't meet him face to face!"
Mrs. Holmsted sputtered:
"Who said so?"
Lill laughed. Kel grabbed his hat.
"He won't say it again!"
Mrs. Holmsted began to cry:
"He'll kill him! Oh, that wicked Cora

Kaley!"

Rudy was not in his office. The man next door told Kel that he guessed he had gone down the street. Kel traced him from Meck's Cigar Store to the drugstore, back to the cigar store, to the bank, to the barber shop, up the street that led to the Kaley cottage. And from office, cigar store, bank, drug store, barber shop and street, Janns-

villers trailed after him excitedly. Some-thing was going to happen!

And it happened right in front of the Kaley gate, which Rudy had reached on his glad, proud trip to deliver the barber's check to Cora. It was Saturday afternoon; so young Janusville was out enjoying the

warm spring air.

After luncheon Cora had gone on to a teachers' meeting, and she was returning from it just as Rudy reached the gate and Kel came tearing down the street. By her side, chatting pleasantly about young Jannsville's brains and lack, walked Pro-fessor Blayne. His expression was benefi-cent until he glimpsed Kel hurrying. It changed then to apprehension.

Rudy turned to see what had caused the change; and what he saw in Kel's face caused him to throw up his fists to meet it. The check fluttered to the pavement, where

Professor Blayne later rescued it.

And then Rudy and Kel went to it. It was unfortunate that a hitching post and a hydrant, both of iron, should have been so near. The back of Rudy's head hit the hydrant; but in compensation Kel's spine later was bent round the hitching post.
Rudy's fists landed in Kel's eyes. Kel's
fists at the time were welting Rudy's abdomen. Rudy kicked Kel's right calf until it
was never the same again. Kel put a blow
on Rudy's chest that almost mixed his two lungs into one. And two new spring suits were bloody, torn affairs when Professor Blayne, furious and spluttering with his fury, jumped at the two fighters and yanked them apart.
"What are you fighting about?" he de-

manded, with a display of feeling that seemed to make their troubles more his

business than their own.

Bloody and breathing hard, they invol-untarily looked at Cora Kaley, who had been stunned into inaction by the fight. Professor Blayne clutched them, regarding them quizzically while he said:

"I really do not see why you should bat-ter each other up—on account of the young lady who is to be my wife!" His clutch re-laxed. He turned to Cora. "My dear," reproachfully, "you may remember that I begged you as long ago as last January to make it public——" make it public -

"I wasn't going to have Jannsville gab-bing over my affairs again," resentfully

In every trade—to be really progressive and up-to-date— you must have motor delivery. Your competitors realize this. Many of them already have supplanted horses with motors. Others are doing it every day.

Simply to have a motor truck, however, is not sufficient. The important thing is to have the sensible sized truck. Stewart 1500 pound delivery trucks are daily convincing owners in more than 65 lines of business in 100 cities that they are sensible sized trucks. Light enough to make fast trips over big territories economically. Strong enough to endure the severest service. Necessary for at least a part of the delivery work of every business.

Light Delivery

TRUCKS

Why not follow the judgmentbased on experience-of motor-wise Stewart owners? They have done the experimenting for you. To be guided

by their choice is to avoid an unwise purchase.

Stewart owners' enthusiasm is easy to understand when you consider that in one year our sale of repair parts aver-aged only \$1.37 for every Stewart truck in service. This, we

should be changed.

believe, is an unparalleled record. It explains why owners keep on buying more Stewarts.

Stewart-the Right Truck

owners is confirmed by motor truck experts, dealers and engineers. These

men endorse the Stewart as the long-

awaited solution of the merchants'

delivery question. They praise the logical design of the Stewart-its

sturdy construction, its smooth, silent

operation, its simplicity and its econ-

omy. Not one has been able to point out a flaw or to name a feature that

Men who first visualized this ca-pacity of truck—the 1500 pound size—

build the Stewart. They have special-

"Him! Him!" Kel Holmsted wabbled a bloody hand at the professor and turned unbelieving, bleeding eyes on Corry. "Why be's old ——"

unbelieving, bleeding eyes on Corry. "Why he's old ——"

"N-not—not old Blayne!" hoarsely whispered Mr. Warner.

"How dare you talk that way!" Cora Kaley stamped a foot at them. "You!" she shot scornfully at Kel. "Or—you!" she flung disparagingly at Rudolph. "I'll have you know he is only forty-five! And neither of you two no-accounts is an infant—except in wits!"

Jannsville avers that Professor Blayne chuckled softly as be tenderly led his excited ladylove into the house. And Jannsville heard her say:

"I don't care! They needed it!"

In the Weekly Democrat's column of personal mentionings the following week were the following items:

the following items:

"Professor and Mrs. Blayne left imme-Professor and Mrs. Binyne left immediately after the ceremony for Joplin, where Professor Blayne has been offered the superintendency of the schools. The bride's mother accompanied them and will make her home with them. We fear that Jannaville's schools will feel their double loss."

"Mr. and Mrs. Brown, of the City National Bank, announce the engagement of their beautiful and charming daughter Louise to Mr. Rudolph Warner, Jannsville's most popular and prominent bachelor."

And:

"Mr. Kel Holmsted has again departed from our midst after a brief but enjoyable visit with his parents. He avers that the West offers better prospects to young men than our staider vicinity. We wish him luck!"

#### THE LAME DUCK

#### Viewe of an Innocent Rystander

Washington, D. C.

DEAR JIM: Every man who is eligible, and who has made any sort of start in national politics—and some who have made no start at all—carries in the back of his head the idea that some day something may happen which will help to make him President of the United States.

It is a great thing to be President of the United States; for, aside from the momentary power, the office carries with it historical immortality—that is, for time without end every President's name will be carried in history as that of a man who was once chief executive of this nation, whether any other glory is accorded him or not. The name will survive.

Circumstances and conditions always

Circumstances and conditions always dictate who shall be President; and, more often than not, the man who is made President because of any certain set of circumstances and conditions has little or nothing to do personally with the creation of either.

Occasionally, however, there comes a time
when an opportunity arises that—if properly handled—will assist the man who so
deals with it to attain that highly desirable
position. This does not happen frequently,
but once in a while it does happen.

There is an opportunity of that kind in

There is an opportunity of that kind in Washington right now, as I write this letter to you. It does not seem to me that it will be accepted; but it may. However, if the exactly right man had this opportunity there is no doubt he could do much toward making so great a name for himself with the people that the presidency would not be be-yond his legitimate ambitions and far easier

of attainment than it otherwise would be,
I refer to the investigation of the affairs
of the New York, New Haven & Hartford
Railroad, now in progress before the Interstate Commerce Commission. That may be completed or adjourned before you read this; but it is in progress as this is written. And not since Mr. Justice Hughes, of the United States Supreme Court, investigated the life-insurance scandals in New York has there existed so great a chance for the making of a permanent impression of personal worth on the minds of the people as exists in this investigation, and what may follow it or arise out of it.

This investigation comes at a time when the people are peculiarly susceptible to its disclosures, and of a temper to demand not only stern justice for the men who wrecked

Outside it's breathless. Indoors it's close with the stuffiness of deadened air

between walls. Move to the porch! Change it from a place where the glare is to a place where the air is by putting in

# Porch Shades

While other people swelter in dining rooms you'll have appetite. While they toss in bedrooms you'll sleep calmly. Your nerves will be soothed, bathed into health by that great nerve specialist, Pure Air. You'll say, "Why didn't I think of that before?"

Vudor Shades let people see out but not in. They admit air but exclude heat. Their light, strong wooden strips are lock-stitched together by fish-net twine that won't tot. They are reinforced by double warps at both edges, or — if very wide shades — by double warps at intervals throughout their width. So their durability is enormously increased. Vudor Shades, too, measure a drop of full 8 ft. when in use, while most other shades have a drop of only 71/2 ft.

Yet Vudor Porch Shades sell at a less price than competitive shades which lack the patented Vudor special features. They're stained indelibly. Made in all shades—to harmonize with your house. From \$3 to \$10 will probably equip your porch. Send for samples for bungalows in special colors.

that road but also to exalt the man who secures that justice for them. It is the culmination of a long series of similar dis-closures that have made the people fighting mad over the methods used by the captains of high finance to enrich themselves without regard to the rights of others or to the laws of the land.

Ten years ago there was but slight protest over these conditions, and that encouraged the men who engineered them at that time to a feeling of security. Their successes were great. They were able to do about anything they wanted, and they began to think they could buy anything they wanted and buy anybody who might be of service to them.

Of course it is obvious that no bribing or buying could have been done had not the men who were useful consented to be bribed; and no buying could have been done if there had not been men willing to sell. But that is not the point. The men who sold their votes and the men who took bribes were but a small portion of the public; and the men who bought them and bribed them, and wrecked properties for their own gain, and watered stock, and sat in boards of grafting directors, and were utterly remorseless as to whom they hurt if they helped themselves, were chiefly at fault, because they had the means for bribery and corruption, and used them; whereas all the bribed and corrupted had were weak morals and that greed for money which made the transactions possible both ways.

In this particular instance, ten years ago the New Haven road was a dividend-paying, honorable and respected institution. It was the field for investment for those who wanted to not the search. and no buying could have been done if

was the field for investment for those who wanted to put their small moneys into some-

thing that would insure safety, permanence and a fair return. Then the wrecking began. Now the New Haven was not the only corporation in which this was done. For many years similar railroad processes had been carried on by men as greedy for money and the shutting off of competition as the New Haven crowd; and some knowledge of what had been going on began to get out among the people.

#### The Man on the Job

After a time protest began to become vigorous. There were signs of revolt. That revolt presently became a revolution; and now, at this moment, there is an almost universal demand that the men who so

betrayed the people shall be punished.

Vengeance is what is wanted. The people of the United States desire to see all this corruption in high places and in high finance disclosed and the men who are responsible. for it punished. There is no thought on the for it punished. There is no thought on the part of the people that these things could not have happened if the people had not allowed them to happen. That is beside the mark. The people are always self-righteous. What they want now is punishment for those who wrecked the New Haven and for those who are responsible for other similar disasters; and they are looking for principals—not for subordinates. They want generals—not lieutenants.

generals—not lieutenants.

The man who gets them, who punishes these men—puts them in jail!—will build for himself a popular esteem and recognition that will not be hard to mold into a formidable movement for a presidential nomina-tion. The people will consider him their friend and will help him get anything he

may want.

As the investigation is now conducted, the investigating lawyer is Joseph W. Folk, of Missouri, who is chief lawyer for the Interstate Commerce Commission. In a smaller way Mr. Folk once realized handsomely in a similar situation. When he was prosecuting attorney of St. Louis he uncovered local graft conditions in such a way that he was elected governor of Missouri on the strength of his work and the reputation he gained thereby.

Of course it remains to be seen whether

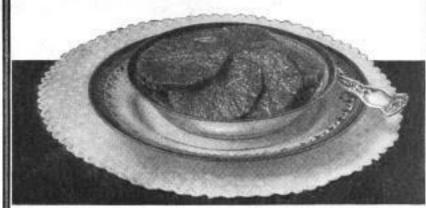

Of course it remains to be seen whether Mr. Folk is large enough for his present big task. It may not come his way to be more than the pioneer. There is a chance that the criminal prosecutions—if any arise—may go to some man now in the Department of Justice, or to some man in the city of New York, where indictments may be found. In any event some man has a chance, and a great chance, to establish himself in line for high promotion.

It was great while it lasted, Jim—this business of predacious plutocrating; but it is about over now.

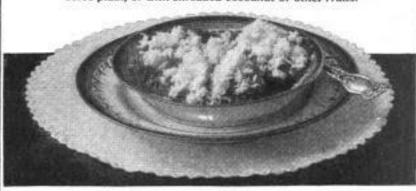

Yours, watching events complaisantly,

# For a Cool Luscious Dessert

Sunkist Valencia Oranges—Sliced

Serve plain, or with shredded cocoanut or other fruits.

Serve them often this way. But be sure to serve Sunkist, for those are the perfect oranges. No other oranges slice so well, for no others are equally tender-meated.

Sunkist are practically seedless. They look best on the table because the slicing is clean-cut.

Note how delicious these oranges are at this season. A deep rich red inside, regardless of exterior color-full flavored, sweet, juicy and with a delicate orange-

lt's a connoisseur's dish-a dish

to delight the whole family, and a dish that needs no added flavor.

But serve with other fruit if you wish, or with shredded cocoanut. There are endless ways to make attractive desserts with oranges.

We have written a book showing 110 ways of using Sunkist Oranges and Lemons. Write for it. See how to prepare these zestful desserts, the most healthful desserts anyone can eat. Sunkist are glove-handled, tissue wrapped and shipped right from the tree, so you get them fresh.

Sunkist Oranges Sunkist Lemons

Sunkist Lemons, like Sunkist Oranges, are the best slicing lemons and look best on the table served with fish or meats. Use the rich juice in place of vinegar in salads and other dishes. Use it for lemonade this summer. There were never better oranges or better lemons, so see that
